ovolo, and under these a neck called the frieze of the capital. In the Ionic capital there is great invention, and a particular character is displayed; indeed, so much so, that it never fails to distinguish itself, even on the most slight and careless observation. It consists of a small and moulded abacus, below which depend to the right and left two spiral volutes; it has also an echinus, which is not unfrequently enriched, and a bead. The Corinthian capital is most richly ornamented, and differs extremely from the others. In this the abacus is hollowed, forming a quadrilateral figure with concave sides, the angles of which are generally truncated. Sometimes the abacus is enriched, but more frequently ornamented with a flower in the middle. Below the abacus the capital has the form of a vase or bell, surrounded with two tiers of the leaves of the acanthus, or, rather, of leaves resembling those of a species of the acanthus plant. Under each angle of the abacus springs a volute, and under the flower in the centre of the abacus there are cauliculi. With regard to the Tuscan capital, there are no authenticated remains of the order; and the precepts of Vitruvius on this head are so very obscure, that the modern compilers of systems of architecture have, of course, varied exceedingly in their designs; the order, therefore, that passes under this name must be regarded rather as a modern than an ancient invention. It has been made to differ from the modern Doric by an air of poverty and rudeness, by the suppression of parts and mouldings. But, though the Tuscan capital is plain and simple in the highest degree, it well becomes that column whose character is strength. The Composite capital is formed by a union of the Ionic and Corinthian. It consists of a vase or bell, a first and second row of acanthus leaves, with some small shoots, a fillet, astragal, ovolo, four volutes, and a hollowed abacus with a flower in its centre."

Columns were used in the interior of buildings, to sustain the beams which supported the ceiling. As both the beams and the entire ceiling were often of stone or marble, which could not be obtained in pieces of so great a length as wood, the columns were in such circumstances frequent in proportion, not being more than about ten or twelve feet apart. The opisthodomos of the Parthenon at Athens, as appears from traces in the remaining ruins, had four columns to support the ceiling. A common arrangement, especially in buildings of an oblong form, was to have two rows of columns parallel to the two sides, the distance from each side to the next row of columns being less than the distance between the rows themselves. This construction was adopted not only in temples, but in palaces (*oikoi*), *i. e.*, in houses of the greatest size and splendour. The great hall of the palace of Ulysses in Ithaca, that of the King of the Phæacians, and that of the palace of Hercules at Thebes,¹ are supposed to have been thus constructed, the seats of honour both for the master and mistress, and for the more distinguished of their guests, being at the foot of certain pillars.² In these regal halls of the Homeric æra, we are also led to imagine the pillars decorated with arms. When Telemachus enters his father's hall, he places his spear against a column, and "within the polished spear-holder," by which we must understand one of the striae or channels of the shaft.³ Around the base of the columns, near the entrance, all the warriors of the family were accustomed to incline their spears; and from the upper part of the same they suspended their bows and quivers on nails or hooks.⁴ The minstrel's lyre hung upon its peg from

1. (vol. ii., p. 301.)—2. (Virg., *Æn.* i., 428.)—3. (Herod., i., 92.)—4. (Dictionary of Architecture, vol. i., s. v. Capital.)

1. (Eurip., *Herc. Fur.*, 975-1013.)—2. (Od., vi., 307; viii., 66 473; xxiii., 90.)—3. (Od., i., 127-129; xvii., 29.—Virg., *Æn.* xii., 92.)—4. (Hom., *Hymn.* in Ap., 8.)

another column nearer the top of the room.¹ The columns of the hall were also made subservient to less agreeable uses. Criminals were tied to them in order to be scourged or otherwise tormented.² According to the description in the *Odyssey*, the beams of the hall of Ulysses were of silver-fir; in such a case, the apartment might be very spacious without being overcrowded with columns.³ Such, likewise, was the hall of the palace of Atreus at Mycenæ: "*Fulget turbæ capax Immane tectum, cujus auratas trabes Variis columnæ nobiles maculis fe-runt.*"⁴

Rows of columns were often employed within a building to enclose a space open to the sky. Beams supporting ceilings passed from above the columns to the adjoining walls, so as to form covered passages or ambulatories (*σποαί*). Such a circuit of columns was called a *peristyle* (*περίστυλον*), and the Roman *atrium* was built upon this plan. The largest and most splendid temples enclosed an open space like an atrium, which was accomplished by placing one peristyle upon another. In such cases, the lower rows of columns being Doric, the upper were sometimes Ionic or Corinthian, the lighter being properly based upon the heavier.⁵ A temple so constructed was called *hypæthral* (*ὑπαίθρος*).

On the outside of buildings columns were by no means destitute of utility. But the chief design in erecting them was the attainment of grandeur and beauty; and, to secure this object, every circumstance relating to their form, proportions, and arrangement was studied with the utmost nicety and exactness. Of the truth of this observation, some idea may be formed from the following list of terms, which were employed to distinguish the different kinds of temples.⁶

I. Terms describing the number and arrangement of the columns.

1. Ἀστύλος, *astyle*, without any columns.⁷
2. Ἐν παραστάσι, *in antis*, with two columns in front between the *antæ*.⁸ (Woodcut, p. 61.)
3. Πρόστυλος, *prostyle*, with four columns in front.
4. Ἀμφιπρόστυλος, *amphiprostyle*, with four columns at each end.
5. Περιπτερος or ἀμφικίων,⁹ *peripteral*, with columns at each end and along each side, the side being about twice as many as the end columns, including two divisions, viz. :
 - a. Ἑξάστυλος, *hexastyle*, with six columns at each end, and either nine or eleven at each side, besides those at the angles. Example, the *Theseum* at Athens.
 - b. Ὀκτάστυλος, *octastyle*, with eight columns at each end, and fifteen at each side, besides those at the angles. Example, the *Parthenon* at Athens.
6. Δίπτερος, *dipteral*, with two ranges of columns (*πεπρά*) all round, the one within the other.
7. Ψευδοδίπτερος, *pseudodipteral*, with one range only, but at the same distance from the walls of the cella as the outer range of a *δίπτερος*.
8. Δεκάστυλος, *decastyle*, with ten columns at each end, which was the case only in *hypæthral* temples.¹⁰

II. Terms describing the distance of the columns from one another, and from the walls of the cella.

1. Πυκνόστυλος, *pycnostyle*, the distance between the columns a diameter of a column and half a diameter.
2. Σύστυλος, *systyle*, the distance between the columns two diameters of a column.

3. Εὐστυλος, *eustyle*, the distance between the columns two diameters and a quarter, except in the centre of the front and back of the building, where each intercolumniation (*intercolumnium*) was three diameters, called *eustyle*, because it was best adapted both for beauty and convenience.

4. Διάστυλος, *diastyle*, the intercolumniation, or distance between the columns, three diameters.

5. Ἀραιόστυλος, *aræostyle*, the distances excessive, so that it was necessary to make the epistyle (*ἐπιστύλιον*), or architrave, not of stone, but of timber.

Columns in long rows were used to convey water in aqueducts,¹ and single pillars were fixed in harbours for mooring ships.² Some of these are found yet standing.

Single columns were also erected to commemorate persons or events. Among these, some of the most remarkable were the *columnæ rostratæ*, called by that name because three ship-beaks proceeded from each side of them, and designed to record successful engagements at sea (*navali surgentes æræ columnæ*).³ The most important and celebrated of those which yet remain is one erected in honour of the consul C. Duilius, on occasion of his victory over the Carthaginian fleet, B.C. 261 (see the annexed woodcut). It was originally placed in the

Forum,⁴ and is now preserved in the museum of the Capitol. The inscription upon it, in great part effaced, is written in obsolete Latin, similar to that of the Twelve Tables.⁵ When statues were raised to ennobel victors at the Olympic and other games, or to commemorate persons who had obtained any high distinction, the tribute of public homage was rendered still more notorious and decisive by fixing their statues upon pillars. They thus appeared, as Pliny observes,⁶ to be raised above other mortals.

But columns were much more commonly used to commemorate the dead. For this purpose they varied in size, from the plain marble pillar bearing a simple Greek inscription,⁷ to those lofty and elaborate columns which are now among the most wonderful and instructive monuments of ancient Rome. The column on the right hand, in the last woodcut, exhibits that which the senate erected to the honour of the Emperor Trajan, and crowned with his colossal statue in bronze. In the pedestal is a door, which leads to a spiral staircase for ascending to

the summit. Light is admitted to the staircase through numerous apertures. A spiral bas-relief is folded round the pillar, which represents the emperor's victories over the Dacians, and is one of the most valuable authorities for archæological inquiries. Including the statue, the height of this monument, in which the ashes of the emperor were deposited, was not less than 130 feet. A similar column, erected to the memory of the Emperor Marcus Aurelius, remains at Rome, and is commonly known by the appellation of the Antonine column. After the death of Julius Cæsar, the people erected to his memory a column of solid marble, 20 feet high, in the Forum, with the inscription *PARENTI PATRIÆ*.¹ Columns still exist at Rome, at Constantinople, and in Egypt, which were erected to other emperors.

COMA (κόμη), the hair of the head. Besides this general term, there are various other words, both in Greek and Latin, signifying the hair, each of which acquires its distinctive meaning from some physical property of the hair itself, or from some peculiarity in the mode of arranging it, the principal of which are as follow: 1. *Ἐθεῖρα*,² a head of hair when carefully dressed.³ 2. *Χαίτη*, properly the mane of a horse or lion, is used to signify long flowing hair.⁴ 3. *Φόβη*, when accurately used, implies the hair of the head in a state of disorder incident to a person under a sense of fear.⁵ 4. *Ποκάς*, from *πέικω* or *πέκα*,⁶ the hair when combed and dressed.⁷ 5. *Θρίξ*, a general term for hair, from the plural of which the Romans borrowed their word *trica*:⁸ *τριχῶσις* and *τρίχωμα* are used in the same sense.⁹ 6. *Κόρη* (Att. *κόρηρ*), from the old word *κόρ*, the head,¹⁰ signifies properly the hair on the top of the head; and hence a particular fashion of arranging the hair among the Greek women was termed *κόρυμβος*,¹¹ or, when worn in the same style by the men, it was designated by another derivative from the same word, *κρόμβυλος*.¹² To produce this effect, the hair was drawn up all round the head from the front and back, and fastened in a bow on the top, as exemplified in the two following busts, one of the Apollo Belvidere, the other of Diana, from the British Museum.¹³

Instead of a band, the people of Athens fastened the bow with an ornamental clasp, fashioned like a grasshopper, to show that they were aborigines.¹⁴ *Κρόμβυλος* is also used for a cap of network, like that represented at p. 187, 271. (*Vid.* CALANTICA.) 7. *Μαλλός*, which properly means wool, was also used for the short, round, curly hair, which resembles the fleece of a lamb, such as is seen in some of the early Greek sculptures, particularly in the heads of

Hercules, one of which is subjoined from a specimen in the British Museum.¹

8. *Κέρας* (*κέρα ἀγλαέ*), a term used when the hair was combed up from the temples on each side, so as to give it the appearance of two horns, as is seen in the heads of fawns and satyrs, and in the bust of Jupiter introduced below. 9. *Κίκιννος*,¹ *πλόκμος*,² *χλιδάι*,³ the hair which falls in ringlets, either natural or artificial, which was sometimes called *βόστρυχος* and *πλόκαμος*.⁴ All these terms, when strictly appropriated, seem to designate that singular style of *coiffure* which is observable in Etruscan and early Greek works, and common to both sexes, as is seen in the casts from the temple of Jupiter Panhellenius in the British Museum.

Besides the generic *coma*, the Romans made use of the following terms, expressive of some peculiar qualities in the hair, or particular mode of arrangement: 1. *Capillus*, according to the old etymologists, *quasi capitis pilus*. 2. *Crimis*, the hair when carefully dressed.⁷ 3. *Casaries*, which is said, though without much probability, to be connected with *cado*, the hair of the male sex, because they wore it short, whereas the women did not. 4. *Cincinnus*, *κίκιννος*,⁸ the hair when platted and dressed in circles, like the head on page 21 (*vid.* ACUS), as it is still worn by the women of Mola di Gaeta (*Formia*). Martial⁹ terms these circles *annuli*, and Claudian¹⁰ *orbes*. 5. *Cirrus*, a lock of curly hair. The locks which fell over the forehead were termed *capronæ*,¹¹ *quasi a capite pronæ*,¹² *προκόμιον*,¹³ those which fell from the temples over the ears, *antia*.¹⁴ Both the *antia* and *capronæ* are accurately traced in the figure of Cupid bending his bow, in the British Museum, from which the following woodcut is taken.¹⁵

All the Greek divinities are distinguished by a characteristic *coiffure*, modified in some respects as the arts progressed, but never altered in character from the original model; so that any person tolerably conversant with the works of Greek art may almost invariably recognise the deity represented from the disposition of the hair. We proceed to specify some of the principal ones.

The head of the lion is the type upon which that

(Chamber vi., No. 22.—Compare xi., 23.)

of Jupiter is formed, particularly in the disposition of the hair, which rises from the forehead, and falls back in loose curls down the sides of the face, until it forms a junction with the beard. This is illustrated by the next two woodcuts, one of which is from a statue of Jupiter in the Vatican, supposed to be a copy of the Phidian Jove; and the other is a lion's head, from the British Museum.¹ The same

disposition of the hair is likewise preserved in all the real or pretended descendants from Jupiter, such as Æsculapius, Alexander, &c.

Pluto or Serapis has the hair longer, straighter, and lower over the forehead, in order to give severity to the aspect, and with the medius on his head, as represented in the next drawing, from the British Museum.² The medius is decorated with an olive branch, for oil was used instead of wine in sacrifices to Pluto.³

The hair of Neptune is cut finer and sharper than that of Jupiter. It rises from the forehead, and then falls down in flakes, as if wet, in the manner represented in the following head, from the British Museum.⁴

Apollo is usually represented with the κρόνυλος; but when the hair is not tied up on the top of the head, it is always long and flowing over the neck and shoulders, as represented in the next woodcut,

1 (Chamber ii., No. 13.)—2. (Chamber vii., No. 68.)—3. (Virg., Æn., vi., 254.)—4. (Chamber xi., No. 27.)

from a very beautiful and early Greek sculpture in

the British Museum.⁵ Hence he is called *intonsus* and ἀκερσεκόμης.²

Bacchus also wears his hair unshorn; for he, as well as Apollo, is typical of perpetual youth:

"*Solis æterna est Phæbo Bacchoque juvenas,*
Nam decet intonsus crinis utrumque Deum."³

In the mature age of Greek art, Mercury has short curly hair, as represented by the head on the left hand in the woodcut below, from a statue in the Vatican, which was for a long time falsely ascribed to Antinous; but in very early Greek works he is

represented with braided hair, in the Etruscan style, and a sharp-pointed beard (see the right hand woodcut, from an altar in the museum of the Capitol at Rome), whence he is termed σφηνοπώγων.⁴

Hercules has short, crisp hair, like the curls between the horns of a bull, the head of which animal formed the model for his, as is exemplified in the subjoined drawings, one being the head of the Farnese Hercules, the other that of a bull, from a bas-relief at Rome, in which all the characteristics of Hercules, the small head, thick neck, and particular form of the hair, are strongly preserved.

The hair of Juno is parted in the front, and on the top of the head is a kind of diadem, called in Latin *corona*, and in Greek σφειρόννη, from its resemblance to a sling, the broad part of which is placed above the forehead, while the two lashes act as bands to confine the hair on the sides of the head, and fasten it behind,⁵ in the manner represented in the next woodcut, from the British Museum.⁶

1. (Chamber iv., No. 2.)—2. (Hom., Hymn. ad Apoll., 134.—Compare 450.)—3. (Tibull., I., iv., 38.—Compare Eurip., Bacch., 455.—Seneca, Hippol., 752.—Id., CEd., 416.)—4. (Pollux, Onom., iv., 143, 145.—Compare Paus., vii., 22, 6 2.)—5. (Eustath. ad Dionys. Perieget. v. 7.)—6. (Chamber xii., No. 1)

Pallas is rarely seen without her helmet; but when portrayed with her head uncovered, the hair is tied up in a knot at some distance from the head, and then falls from the band in long parallel curls.

Venus and Diana are sometimes adorned with the *κόρυμβος* (woodcut, p. 291); but both these divinities are more frequently represented with their hair dressed in the simple style of the young Greek girls,¹ whose hair is parted in front, and conducted round to the back, so as to conceal the upper part of the ears. It is then tied in a plain knot at the nape of the neck, or, at other times, though less frequently, at the top of the head; both of which fashions are represented in the two woodcuts subjoined; one, that on the left, a daughter of Niobe, and the other from a bas-relief at Rome.

For the other styles of Venus and Diana, see the Venus di Medici, and British Museum, Chamber ii., No. 8; iii., 13; iv., 11; xii., 19; and Venus of the central saloon: the other ornaments sometimes seen in statues of Diana are works of a later age.

Fair hair was much esteemed both by the Greeks and Romans; hence, in some of the statues, the hair was gilt, remains of which are discernible in the Venus di Medici, and in the Apollo of the Capitol; and both sexes dyed their hair when it grew gray.²

False hair, or wigs, *φενάκη, πηνίκη, κόμαι προσβέται, τριχὲς προσβέται, galerus*, were also worn by the people of both countries.³

In very early times the Romans wore their hair long, as was represented in the oldest statues during the age of Varro,⁴ and hence the Romans of the Augustan age designated their ancestors *intonsi*⁵ and *capillati*.⁶ But this fashion did not last after the year B.C. 300, as appears by the remaining works of art. The women, too, dressed their hair with simplicity, at least until the time of the emperors, and probably much in the same style as those of Greece; but at the Augustan period a variety of different head-dresses came into fashion, many of which are described by Ovid.⁷ Four specimens of different periods are given below. The

first head on the left represents Octavia, the niece of Augustus, from the museum in the Capitol at Rome; the next, Messalina, fifth wife of the Emperor Claudius; the one below, on the left, Sabina, the wife of Hadrian; and the next, Plautilla, the wife of Caracalla, which three are from the British Museum.¹

Both countries had some peculiar customs connected with the growth of their hair, and illustrative of their moral or physical conditions. The Spartans combed and dressed their heads with especial care when about to encounter any great danger, in which act Leonidas and his followers were discovered by the spies of Xerxes before the battle of Thermopylae.² The sailors of both nations shaved off their hair after an escape from shipwreck or other heavy calamity, and dedicated it to the gods.³ In the earlier ages, the Greeks of both sexes cut their hair close in mourning;⁴ but, subsequently, this practice was more exclusively confined to the women, the men leaving theirs long and neglected,⁵ as was the custom among the Romans.⁶

In childhood, that is, up to the age of puberty, the hair of the males was suffered to grow long among both nations, when it was clipped and dedicated to some river or deity, from thence called *κουροτρόφος* by the poets,⁷ and, therefore, to cut off the hair means to take the toga virilis.⁸ At Athens this ceremony was performed on the third day of the festival Apaturia, which is therefore termed *κουροῦσις*.

In both countries the slaves were shaved as a mark of servitude.⁹

The vestal virgins also cut their hair short upon taking their vows; which rite still remains in the Papal Church, in which all females have their hair cut close upon taking the veil.

*COM'AROS (κόμαρος), the wild Strawberry-tree, or *Arbutus Unedo*. (Vid. *ARBUTUS*.)

*COMBRE'TUM, a plant mentioned by Pliny,¹ who makes it closely resemble the *Bacchar*. Modern botanists, however, taking Pliny's own description as their guide, do not agree with him in opinion on this head. Cæsalpinus makes the *Combretum* (written sometimes *Combetum*) to be the same with a species of rush, called in Tuscany *Herba luiziola*, and which has been referred to the *Luzeola maxima*, L.²

*COME (κομή), a plant, the same with the *τραγοπόγων*, or *Crocifolium Tragopogon*, so called from its leaves resembling those of the *Crocus*. Sibthorp found it growing in Cyprus.³

COMES. The word comes had several meanings in the Latin of the Middle Ages, for which the reader is referred to Du Fresnoy's Glossary and Supplement, s. v. In classical writers, and even to the end of the fourth century, its senses are comparatively few.

First it signified a mere attendant or companion, distinguished from *socius*, which always implied some bond of union between the persons mentioned. Hence arose several technical senses of the word, the connexion of which may be easily traced.

It was applied to the attendants on magistrates, in which sense it is used by Suetonius.⁴ In Horace's time⁵ it was customary for young men of family to go out as *contubernales* to governors of provinces and commanders-in-chief, under whose eye they learned the arts of war and peace. This seems to have led the way for the introduction of the *comites* at home, the maintenance of whom was, in Horace's opinion,⁶ one of the miseries of wealth. Hence a person in the suite of the emperor was termed *comes*. As all power was supposed to flow from the imperial will, the term was easily transferred to the various officers in the palace and in the provinces (*comites palatini, provinciales*). About the time of Constantine it became a regular honorary title, including various grades, answering to the *comites ordinis primi, secundi, tertii*. The power of these officers, especially the provincial, varied with time and place; some presided over a particular department with a limited authority, as we should term them, *commissioners*; others were invested with all the powers of the ancient proconsuls and prætors.

The names of the following officers explain themselves: *Comes Orientis* (of whom there seem to have been two, one the superior of the other), *comes Egypti*, *comes Britannia*, *comes Africa*, *comes rei militaris*, *comes portuum*, *comes stabuli*, *comes domesticorum equitum*, *comes clibanarius*, *comes lintæ vestis* or *vestiarii* (master of the robes). In fact, the emperor had as many *comites* as he had duties: thus, *comes consistorii*, the emperor's privy-councillor; *comes largitionum privatarum*, an officer who managed the emperor's private revenue, as the *comes largitionum sacrarum* did the public exchequer. The latter office united, in a great measure, the functions of the *ædile* and *questor*. The four *comites commerciorum*, to whom the government granted the exclusive privilege of trading in silk with barbarians, were under his control.

COMISSATIO (derived from κόμω), the name of a drinking entertainment, which took place after the cœna, from which, however, it must be distinguished. Thus Demetrius says to his guests, after they had taken their cœna in his own house, "*Quin commissatum ad fratrem imus?*"⁷ and when Habin-

nas comes to Trimalchio's house after taking his cœna elsewhere, it is said that "*Comissator intravit.*"⁸ It appears to have been the custom to partake of some food at the commissatio,² but usually only as a kind of relish to the wine.

The commissatio was frequently prolonged to a late hour at night;³ whence the verb *comissari* means "to revel,"⁴ and the substantive *comissator* a "reveller" or "debauchee." Hence Cicero⁵ calls the supporters of Catiline's conspiracy *comissatores conjurationis*.⁶

COMITIA, or public assemblies of the Roman people (from *com-eo* for *cœeo*), at which all the most important business of the state was transacted, such as the election of magistrates, the passing of laws, the declaration of war, the making of peace, and, in some cases, the trial of persons charged with public crimes. There were three kinds of *comitia*, according to the three different divisions of the Roman people.

I. THE COMITIA CURIATA, or assembly of the *curia*, the institution of which is assigned to Romulus.

II. THE COMITIA CENTURIATA, or assembly of the centuries, in which the people gave their votes according to the classification instituted by Servius Tullius.

III. THE COMITIA TRIBUTA, or assembly of the people according to their division into the local tribes. The first two required the authority of the senate, and could not be held without taking the auspices; the *comitia tributa* did not require these sanctions. We shall consider the three assemblies separately.

I. COMITIA CURIATA. This primitive assembly of the Romans originated at a time when there was no second order of the state. It was a meeting of the *populus*, or original burgesses, assembled in their tribes of houses, and no member of the *plebs* could vote at such a meeting. The ancient *populus* of Rome consisted of two tribes: the *Ramnes* or *Ramnenses*, and the *Titienses* or *Tities*, called after the two patronymic heroes of the state, *Romus*, *Remus*, or *Romulus*, and *Titus Tatius*; to which was subsequently added a third tribe, the *Luceres* or *Lucerenses*. Of these last Festus says, in a passage of some interest and importance, "*Lucerenses et Luceres, quæ pars tertia populi Romani est distributa a Tatío et Romulo, appellati sunt a Lucero, Ardea rege, qui auxilio fuit Romulo adversus Tatium bellanti.*" From which it may be inferred, that as the *Tities* were Sabines, and the *Ramnes* the Romans proper, so the *Luceres* were Latins or of a Tyrrhenian stock. It will be observed, also, that in this passage of Festus the name of Tatius is placed first; so, also, in the same author⁷ we have, "*Quia civitas Romana in sex est distributa partis, in primos secundosque Titenses, Ramnes, Luceres.*" This seems to point to a tradition rather inconsistent with the supposed precedence of "the haughty Ramnes" (*celsi Ramnes*).⁸

The different nations of antiquity had each of them their own regulative political number, or numerical basis; and as 3×4 was this basis with the Ionian tribes, 3×10 seems to have been the basis of the Roman state-system.⁹ The Athenian solar year consisted of 365 days; the Roman cyclic year of 304; and 360, the number of the houses or clans at Athens, bears the same relation to the former year that 300, the number of Roman houses, does to the latter. The three original tribes of the *populus* or *patres* were divided into 30 *curia*, and

each of these into ten houses; and this number of the houses also corresponded to the number of councillors who represented them in the senate. The division into houses was so essential to the patrician order, that the appropriate ancient term to designate that order was a circumlocution, the *patrician gentes* (*gentes patriciae*). "*Plebes dicitur*," according to Capito, "*in qua gentes civium patricia non insunt*."¹ The derivation of *curia* from *cura*, which is given by Festus and Varro, is altogether inadmissible. It is obvious that *curia* means "the assembly of the master-burgesses," "the free householders," "the *patroni*;" the word contains the same element as the Greek *κύριος, κύριος, κυρίδιος, κόρος, κόριανος, κύριος, &c.*² which element also appears in the Latin *quirites, curiates, curiati, &c.* The word *quirites* appears to be nearly identical with *κοῦρητες*, which signifies "noble warriors;" as in Homer,³ *κρηήμενος κοῦρητας ἀριστήας Παναχαιῶν*. The same root is also contained in the Sanscrit *cūras*, "a hero." In the same way as the Greeks used *κύριος* of the head of a family, the Romans spoke of the free burgess and his wife as *patronus* and *matrona* in reference to their children, servants, and clients.⁴ These last, so called from *cluere*—the *clientes*, the *hörigern*, the "hearers" or dependants—were probably, in the first instance, aliens, natives of cities having an isopolitan relation with Rome, who had taken up their franchise there by virtue of the *jus exulandi* and the *jus applicationis*; and most likely their relation to the *patronus*, or man of the *curia*, was analogous to that subsisting between the resident alien and his *προστάτης* in a Greek state. These clients belonged to the *gentes* of their patrons; as, however, the clients and the descendants of freedmen were classed among the *erarians* in reference to the franchise at the *comitia majora*, it is exceedingly improbable that they would vote with their *patroni* at the *comitia curiata*. From the number of houses which they contained, the patrician tribes were called centuries;⁵ and the three new centuries formed by Tarquinius were tribes of houses who voted in the *comitia curiata* like the original patricians. They were united with the old tribes under the name of the *sex suffragia*, or "the six votes"—"*Sex suffragia appellantur in equitum centuriis, quæ sunt adfectæ ei numero centuriarum, quas Priscus Tarquinius rex constituit*."⁶ But the number of *curia* continued the same, according to one or other of the following solutions which Niebuhr has suggested: 1. The 300 houses may have been still complete, and 300 new houses were admitted into the tribes, so as to assign 20 houses to each *curia*; the number of the *curia* continuing unaltered, but 5 *curia* instead of 10 being reckoned to the century. 2. But more probably the houses had fallen short. Suppose there were now only 5 to the *curia*. Then, if the 150 houses were collected into half the number of *curia*, the remaining 15 *curia* might be filled up with newly-adopted houses, the ancient proportion of 10 houses to a *curia* remaining undisturbed. "This latter hypothesis," says Niebuhr,⁷ "is confirmed, and almost established, by the statement that Tarquinius doubled the senate, raising the number from 150 to 300; only here two changes are confounded, between which a considerable interval would probably elapse." Although the number of patrician *curia* remained unchanged by this measure of Tarquinius, it seems indubitable that it was considered as an increase in the number of the patrician tribes of houses, as, indeed, the name implies, and as Festus,⁸ quoted

above, most expressly states; the new and old tribes being distinguished as *first* and *second* Tities, Ramnes, and Luceres.

The *comitia curiata*, which were thus open to the original burgesses alone, were regarded as a meeting principally for the sake of confirming some ordinance of the senate: a *senatus consultum* was an indispensable preliminary; and with regard to elections and laws, they had merely the power of confirming or rejecting what the senate had already decreed.¹ The two principal reasons for summoning the *comitia curiata* were, either the passing of a *lex curiata de imperio*, or the elections of priests. The *lex curiata de imperio*, which was the same as the *auctoritas patrum*,² was necessary in order to confer upon the dictator, consuls, and other magistrates the *imperium*, or military command; without this they had only a *potestas*, or civil authority, and were not allowed to meddle with military affairs. And thus Livy makes Camillus speak of the *comitia curiata, quæ rem militarem continent*, as distinguished from the "*comitia centuriata, quibus consules tribunosque militares creatis*."³ The *comitia curiata* were also held for the purpose of carrying into effect the form of adoption called *adrogatio*, for the confirmation of wills, and for the ceremony called the *detestatio sacrorum*. They were held in that part of the Forum which was called *comitium*, and where the tribunal (*suggestum*) stood. The patrician magistrates properly held the *comitia curiata*; or, if the question to be proposed had relation to sacred rights, the pontifices presided. They voted, not by houses, but by *curia*; this was probably the reason why Tarquinius was careful not to alter the number of the *curia* when he increased the number of the tribes. In after times, when the meetings of the *comitia curiata* were little more than a matter of form, their suffrages were represented by the thirty lictors of the *curia*, whose duty it was to summon the *curia* when the meetings actually took place, just as the classes in the *comitia centuriata* were summoned by a trumpeter (*cornicen* or *classicus*). Hence, when the *comitia curiata* were held for the inauguration of a flamen, for the making of a will, &c., they were called specially the *comitia calata*, or "the summoned assembly."

II. THE COMITIA CENTURIATA, or, as they were sometimes called, the *comitia majora*, were a result of the constitution generally attributed to Servius Tullius, the sixth king of Rome. The object of this legislator seems to have been to unite in one body the *populus* or patricians—the old burgesses of the three tribes, and the *plebs* or pale-burgers—the commonalty who had grown up by their side, and to give the chief weight in the state to wealth and numbers rather than to birth and family pretensions. With a view to this, he formed a plan, by virtue of which the people would vote on all important occasions according to their equipments when on military service, and according to the position which they occupied in the great phalanx or army of the city: in other words, according to their property; for it was this which enabled them to equip themselves according to the prescribed method. In many of the Greek states the heavy-armed soldiers were identical with the citizens possessing the full franchise; and instances occur in Greek history when the privileged classes have lost their prerogatives, from putting the arms of a full citizen into the hands of the commonalty; so that the principle which regulated the votes in the state by the arrangement of the army of the state, was not peculiar to the constitution of Servius. This arrangement considered the whole state as forming a reg

lar army, with its cavalry, heavy-armed infantry, reserve, carpenters, musicians, and baggage-train. The cavalry included, first, the six equestrian centuries, or the *sex suffragia*, which made up the body of the *populus*, and voted by themselves in the *comitia curiata*; to which were added twelve centuries of plebeian knights, selected from the richest members of the commonalty. The foot-soldiers were organized in the following five classes: 1. Those whose property was at least 100,000 *asses*, or pounds' weight of copper. They were equipped in a complete suit of bronze armour. In order to give their wealth and importance its proper political influence, they were reckoned as forming 80 centuries, namely, 40 of young men (*juniores*) from 17 to 45, and 40 of older men (*seniores*) of 45 years and upward. 2. Those whose property was above 75,000 and under 100,000 *asses*, and who were equipped with the wooden *scutum* instead of the bronze *clipeus*, but had no coat of mail. They made up 20 centuries, 10 of *juniores* and 10 of *seniores*. 3. Those whose property was above 50,000 *asses* and below 75,000, and who had neither coat of mail nor greaves. They consisted of the same number of centuries as the second class, similarly divided into *juniores* and *seniores*. 4. Those whose property was above 25,000 *asses* and below 50,000, and who were armed with the pike and javelin only. This class also contained 20 centuries. 5. Those whose property was between 12,500 and 25,000 *asses*, and who were armed with slings and darts. They formed 30 centuries. The first four classes composed the phalanx, the fifth class the light-armed infantry. Those citizens whose property fell short of the qualification for the fifth class were reckoned as supernumeraries. Of these there were two centuries of the *accensi* and *velati*, whose property exceeded 1500 *asses*; one century of the *proletarii*, whose property was under 1500 *asses* and above 375; and one century of the *capite-censi*, whose property fell short of 375 *asses*. All these centuries were classed according to their property: but, besides these, there were three centuries which were classed according to their occupation: the *fabri*, or carpenters, attached to the centuries of the first class; the *cornicines*, or horn-blowers, and the *tubicines* or *liticines*, the trumpeters, who were reckoned with the fourth class. Thus there would be in all 195 centuries, 18 of cavalry, 140 of heavy infantry, 30 of light infantry, four of reserve and camp-followers, and three of smiths and musicians. In voting, it was intended to give the first class and the knights a preponderance over the rest of the centuries, and this was effected as we have just mentioned; for the first class, with the knights and the *fabri*, amounted to 99 centuries, and the last four classes, with the supernumeraries and musicians, to 96 centuries, who were thus outvoted by the others, even though they themselves were unanimous. See the remarkable passage from Cicero,¹ most ingeniously restored by Niebuhr.² Even if we suppose that the *fabri* were expected to vote rather with the lower classes than with the first class to which they were assigned, the first class, with the knights, would still have a majority of one century. The same principle was observed when the army was serving in the field. As the centuries of *seniores* consisted of persons beyond the military age, the *juniores* alone are to be taken into the account here. The first class sent its 40 centuries of *juniores*, of which 30 formed the *principes*, and 10 were posted among the *triarii*, who, as Niebuhr suggests, probably owed their name to the fact that they were made up out of all the three heavy-armed classes; the second

and third classes furnished 20 centuries apiece, i. e., twice the number of their junior votes, and 10 from each class stood among the *triarii*, the rest being *hastati* with shields; the fourth class supplied 10 centuries, the number of its junior votes, who formed the *hastati* without shields; the fifth class furnished 30 centuries, twice the number of its junior votes, who formed the 30 centuries of *rorarii*. To these were added 10 *turme* of cavalry, or 300 men. This was the division and arrangement of the army as a legion. But when it was necessary to vote in the camp, they would, of course, revert to the principles which regulated the division of the classes for the purpose of voting at home, and would reunite the double contingents. In this way, we have 85 centuries of junior votes, or 90 with the five unclassified centuries; that is to say, we have again 3×30, the prevailing number in Roman institutions. Of these, the first class with the *fabri* formed 41 centuries, leaving 49 for the other centuries; but with the first class the 10 *turme* of the cavalry would also be reckoned as ten centuries, and the first class would have 51, thus exceeding the other moiety by 2.

Such were the principles of the classification of the centuries, as it has been developed by Niebuhr. Their *comitia* were held in the *Campus Martius* without the city, where they met as the *exercitus urbanus*, or army of the city; and, in reference to their military organization, they were summoned by the sound of the horn, and not by the voice of the lictors, as was the case with the *comitia curiata*.

On the connexion of this division into centuries with the registration of persons and property, see CENSORS and CENSUS. The general causes of assembling the *comitia centuriata* were, to create magistrates, to pass laws, and to decide capital causes when the offence had reference to the whole nation, and not merely to the rights of a particular order. They were summoned by the king, or by the magistrates in the Republic who represented some of his functions, that is, by the dictator, consuls, prætors, and, in the case of creating magistrates, by the interrex also. The prætors could only hold the *comitia* in the absence of the consuls, or, if these were present, only with their permission. The consuls held the *comitia* for the appointment of their successors, of the prætors, and of the censors. It was necessary that seventeen days' notice should be given before the *comitia* were held. This interval was called a *trinundinum*, or "the space of three market-days" (*tres nundinæ*, "three ninth-days"), because the country people came to Rome to buy and sell every eighth day, according to our mode of reckoning, and spent the interval of seven days in the country (*reliquis septem rura colebant*).³ The first step in holding the *comitia* was to take the auspices. The presiding officer, accompanied by one of the augurs (*augure adhibito*), pitched a tent (*tabernaculum cepit*) without the city, for the purpose of observing the auspices. If the tent was not pitched in due form, all the proceedings of the *comitia* were utterly vitiated, and a magistrate elected at them was compelled to abdicate his office, as in the case mentioned by Livy,⁴ "*Non tamen pro firmato stetit magistratus ejus jus: quia tertio mense, quam inierunt, augurum decreto, perinde ac vitia creati, honore abire: quia C. Curtius, qui comitiis eorum præfuerat, parum recte tabernaculum cepisset*."⁵ The *comitia* might also be broken off by a tempest; by the intercession of a tribune; if the standard, which was set up in the Janiculum, was taken down; or if any one was seized with the *epi-*

Cic., De Nat. Deor., ii., 4.)

lepsy, which was from this circumstance called the *morbus comitialis*.

The first step taken at the *comitia centuriata* was for the magistrate who held them to repeat the words of a form of prayer after the augur. Then, in the case of an election, the candidates' names were read, and, in the case of a law or a trial, the proceedings or bills were read by a herald, and different speakers were heard on the subject. The question was put to them with the interrogation, "*Velitis, jubeatis, Quirites?*" Hence the bill was called *rogatio*, and the people were said *jubere legem*.

The form of commencing the poll was: "*Si vobis videtur, discedite, Quirites,*" or "*Ita in suffragium, bene jurantibus diis, et quæ patres censuerunt, vos jubete.*" The order in which the centuries voted was decided by lot; and that which gave its vote first was called the *centuria prærogativa*.² The rest were called *jure vocata*.³ In ancient times the people were polled, as at our elections, by word of mouth. But at a later period the ballot was introduced by a set of special enactments (the *leges tabellariæ*), having reference to the different objects in voting. These laws are enumerated by Cicero:⁴

"*Sunt enim quattuor leges tabellariæ: quarum prima de magistratibus mandandis; ea est Gabinia, lata ab homine ignoto et sordido. Secuta biennio post Cassia est, de populi judicio, a nobili homine lata L. Cassio, sed (pace familiæ dixerim) dissidente a bonis atque omnes rumculos populari ratione aucupante. Carbonis est tertia, de jubendis legibus et vetandis, seditiosi atque improbi civis, cui ne relictus quidem ab bonis saltem a bonis potuit afferre. Uno in genere relinqui videbatur vocis suffragium, quod ipse Cassius exceperat, perduellionis. Dedit huic quoque judicio C. Calvus tabellam, doluit quoad vixit, se, ut opprimeret C. Popilium, nocuisse reipublicæ."* The dates of these four bills for the introduction of ballot at the *comitia centuriata* are as follow: 1. The Gabinian law, introduced by Gabinus, the tribune, in B.C. 140. 2. The Cassian law, B.C. 138. 3. The Papirian law, introduced by C. Papirius Carbo, the tribune, in B.C. 132. 4. The Cælian law, B.C. 108. In voting, the centuries were summoned in order into a boarded enclosure (*septum* or *ovile*), into which they entered by a narrow passage (*pons*) slightly raised from the ground. There was probably a different enclosure for each century, for the Roman authors generally speak of them in the plural. The *tabella* with which they had to ballot were given to the citizens at the entrance of the *pons* by certain persons called *diribitores*; and here intimidation was often practised. If the business of the day were an election, the *tabella* had the initials of the candidates. If it were the passing or rejection of a law, each voter received two *tabellæ*: one inscribed U. R., i. e., *uti rogas*, "I vote for the law;" the other inscribed A., i. e., *antiquo*, "I am for the old law." Most of the terms are given in the following passage of Cicero:⁵ "*Quoniam dies venisset rogationi ex S. C. ferendæ, concursabant barbatuli juvenes, et populum, ut antiquaret, rogabant. Piso autem consul, lator rogationis, idem erat dissuasor. Operæ Clodine pontes occupant: tabella ministrabantur, ita ut nulla daretur UTI ROGAS."* In the old system of polling, each citizen was asked for his vote by an officer called *rogator*, or "the polling-clerk."⁶ Under the ballot system they threw whichever *tabella* they pleased into a box at the entrance of the booth, and certain officers, called *custodes*, were standing to check off the votes by points (*puncta*) marked on a tablet. Hence *punctum* is used metaphorically to signify "a vote," as in Hor-

ace,¹ "*Discedo Alcæus puncto illius;*" and we have the metaphor at greater length,

"*Centuria seniorum agitant expertia frugis,
Celsi prætereunt austera poemata Ramnes;
Omne tulit punctum qui miscuit utile dulci.*"²

The *diribitores*, *rogatores*, and *custodes* were generally friends of the candidates, who voluntarily undertook these duties.³ But Augustus selected 900 of the equestrian order to perform the latter offices.

The acceptance of a law by the *centuriata comitia* did not acquire full force till after it had been sanctioned by the *comitia curiata*, except in the case of a capital offence against the whole nation, when they decided alone. The plebeians originally made their testaments at the *comitia centuriata*, as the patricians did theirs at the *comitia curiata*; and as the *adrogatio* required a decree of the *curiæ*, so the adoption of plebeians must have required a decree of the *centuriæ*; and as the lictors of the *curiæ* represented them, so those transactions which required five witnesses were originally perhaps carried into effect at the *comitia centuriata*, the five classes being represented by these witnesses.⁴

III. THE *COMITIA TRIBUTA* were not established till B.C. 491, when the plebs had acquired some considerable influence in the state. They were an assembly of the people according to the local tribes, into which the plebs was originally divided: for the plebs or commonalty took its rise from the formation of a domain or territory, and the tribes of the community or pale-burgers were necessarily local, that is, they had regions corresponding to each of them, therefore, when the territory diminished, the number of these tribes diminished also. Now, according to Fabius, there were originally 30 tribes of plebeians, that is, as many plebeian tribes as there were patrician *curiæ*. These 30 tribes consisted of four urban and 26 rustic tribes. But at the admission of the Crustumine tribe there were only 20 of these tribes. So that probably the cession of a third of the territory to Porsena also diminished the number of tribes by one third.⁵ It is an ingenious conjecture of Niebuhr's, that the name of the 30 local tribes was perhaps originally different, and that only 10 of them were called by the name *tribus*; hence, after the diminution of their territory, there would be only two tribes, and the two *tribuni plebis* would represent these two tribes.⁶

Such being the nature of the plebeian tribes, no qualification of birth or property was requisite to enable a citizen to vote in the *comitia tributa*; whoever belonged to a given region, and was, in consequence, registered in the corresponding tribe, had a vote at these comitia. They were summoned by the *tribuni plebis*, who were also the presiding magistrates, if the purpose for which they were called was the election of tribunes or ædiles; but consuls or prætors might preside at the *comitia tributa*, if they were called for the election of other inferior magistrates, such as the *questor*, *proconsul*, or *proprætor*, who were also elected at these comitia. The place of meeting was not fixed. It might be the *Campus Martius*, as in the case of the *comitia majora*, the *Forum*, or the *Circus Flaminius*. Their judicial functions were confined to cases of lighter importance. They could not decide in those referring to capital offences. In their legislative capacity they passed *plebiscita*, or "decrees of the plebs," which were originally binding only on themselves. At last, however, the *plebiscita* were placed on the same footing with the *leges*, by the *Lex Hortensia* (B.C. 288), and from this time they could pass

whatever legislative enactments they pleased, without or against the authority of the senate.¹

COMMEA'TUS, a furlough, or leave of absence from the army for a certain time.² If a soldier exceeded the time allowed him, he was punished as a deserter, unless he could show that he had been detained by illness, or some other cause, which absolutely prevented his return.³

COMMENTARIUS or COMMENTARIUM meant a book of memoirs or memorandum-book, whence the expression *Cæsaris Commentarii* (*Hinc Cæsar libros de bellis a se gestis commentarios inscripsit, quod nudi essent omni ornatu orationis, tanquam veste detracto*). Hence it is used for a lawyer's brief, the notes of a speech, &c.⁴

In the Digest the word *commentarius* frequently occurs in the sense of a recorder or registrar; sometimes, as Valerius Maximus⁵ uses it, for a registrar of prisoners; in other words, a jailer.⁶ A military officer so called is mentioned by Asconius,⁷ who probably had similar duties. The word is also employed in the sense of a notary or secretary of any sort.

Most of the religious colleges had books called *Commentarii*, as *Commentarii Augurum*, *Pontificum*. (*Vid. FASTI.*)

COMMERCIUM. (*Vid. CIVITAS, ROMAN.*)

COMMISSUM. One sense of this word is that of "forfeited," which apparently is derived from that sense of the verb *committere*, which is "to commit a crime," or "to do something wrong." Asconius says that those things are commissæ which are either done or omitted to be done by a heres against the will of a testator, and make him subject to a penalty or forfeiture; thus, commissæ hereditas would be an inheritance forfeited for some act of commission or omission. Cicero⁸ speaks of an hypothecated thing becoming commissæ; that is, becoming the absolute property of the creditor for default of payment. A thing so forfeited was said *in commissum incidere* or *cadere*. Commissum was also applied to a thing in respect of which the vectigal was not paid, or a proper return made to the publicani. A thing thus forfeited (*vectigalium nomine*) ceased to be the property of the owner, and was forfeited, under the Empire, to the fiscus.¹⁰

COMMISSORIA LEX is the term applied to a clause often inserted in conditions of sale, by which a vendor reserved to himself the privilege of rescinding the sale if the purchaser did not pay his purchase-money at the time agreed on. The *lex commissoria* did not make the transaction a conditional purchase; for in that case, if the property were placed in the hands of the purchaser, and damaged or destroyed, the loss would be the loss of the vendor, inasmuch as the purchaser, by non-payment of the money at the time agreed on, would fail to perform the condition; but it was an absolute sale, subject to be rescinded at the pleasure of the vendor if the money was not paid at the time agreed on, and, consequently, if after this agreement the property was in the possession of the vendor, and was lost or destroyed before the day agreed on for payment, the loss fell on the purchaser. If the purchaser intended to take advantage of the *lex commissoria*, it was necessary that he should declare his intention as soon as the condition was agreed on. If he received or claimed any part of the purchase-money after the day agreed upon, it was held that he thereby waived the advantage of the *lex commissoria*. (*Vid. PIGNUS.*)¹¹

COMMUNI DIVIDENDO ACTIO is one of those actions which are called *mixtæ*, from the circumstance of their being partly *in rem* and partly *in personam*; and *duplicia judicia*, from the circumstance of both plaintiff and defendant being equally interested in the matter of the suit,¹ though the person who instituted the legal proceedings was properly the actor. This action was maintainable between those who were joint owners of a corporeal thing which accordingly was called *res communis*; and it was maintainable whether they were owners (*domini*), or had merely a right to the publiciana actio *in rem*; and whether they were *socii*, as in the case of a joint purchase; or not *socii*, as in the case of a thing bequeathed to them (*legata*) by a testament; but the action could not be maintained in the matter of an *hereditas*. In this action an account might be taken of any injury done to the common property, or anything expended on it, or any profit received from it, by any of the joint owners. Any corporeal thing, as a piece of land or a slave, might be the subject of this action.

It seems that division was not generally effected by a sale; but if there were several things, the *judex* would adjudicate (*adjudicare*) them severally² to the several persons, and order (*condemnare*) the party who had the more valuable thing or things to pay a sum of money to the other by way of equality of partition. It follows from this that the things must have been valued; and it appears that a sale might be made, for the *judex* was bound to make partition in the way that was most to the advantage of the joint owners, and in the way in which they agreed that partition should be made; and it appears that the joint owners might bid for the thing, which was common property, before the *judex*. If the thing was one and indivisible, it was adjudicated to one of the parties, and he was ordered to pay a fixed sum of money to the other or others of the parties. This action, and that of *familiæ erciscundæ*, bear some resemblance to the now abolished English writ of partition, and to the bill in equity for partition.³

COMMODATUM is one of those obligations which are contracted *re*. He who lends to another a thing for a definite time, to be enjoyed and used under certain conditions, without any pay or reward, is called *commodans*; the person who receives the thing is called *commodatarius*; and the contract is called *commodatum*. It is distinguished from *mutuum* in this, that the thing lent is not one of those things *quæ pondere, numero, mensuræ constant*, as wine, corn, &c.; and the thing *commodata* does not become the property of the receiver, who is therefore bound to restore the same thing. It differs from *locatio et conductio* in this, that the use of the thing is gratuitous. The *commodatarius* is liable to the *actio commodati* if he does not restore the thing; and he is bound to make good all injury which befalls the thing while it is in his possession, provided it be such injury as a careful person could have prevented, or provided it be any injury which the thing has sustained in being used contrary to the conditions or purpose of the lending. In some cases the *commodatarius* had an *actio contraria* against the *commodans*, who was liable for any injury sustained by the *commodatarius* through his *dolus* or *culpa*; as, for instance, if he knowingly lent him bad vessels, and the wine or oil of the *commodatus* was thereby lost or injured.⁴

COMEDIA (*κωμῳδία*), a branch of dramatic poetry, which originated in Greece, and passed from thence into Italy.

I. GREEK COMEDY, like Greek tragedy, arose from the worship of Bacchus; but comedy sprang from a more ancient part of Bacchic worship than tragedy. A band of Bacchic revellers naturally formed a *comus* (κῶμος); their song or hymn was properly a *καμωδία*, or "comus-song," and it was not till a comparatively late period that the Bacchic ode or dithyramb was performed by a regular chorus. From this regular chorus the Tragedy of Greece arose (*vid.* CHORUS); and to the old *comus* of the Bacchic or phallic revellers we may assign the origin of comedy. It is true that Aristotle derives comedy from κῶμη, "a village;" so that *καμωδία* is "the village song;" but this etymology, like so many others proposed by Greek authors, is altogether inadmissible, however much it may be in accordance with the fact that the Bacchic *comus* did go about from village to village—it was a village or country amusement; but it is clear, from the manner in which Athenian writers speak of this Bacchic procession, that it was a *comus*; thus, in an old law, quoted by Demosthenes,¹ Ὁ κῶμος καὶ οἱ καμωδοί, and Aristophanes,² Φαλῆς, ἑταῖρε Βακχίου, ζῶγκωμε: and as the tragedy sprang from the recitations of the leaders (οἱ ἐξάρχοντες) in the dithyramb, so this *comus*-song, as a branch of dramatic poetry, seems to be due to analogous effusions of the leaders in the phallic *comus*; and thus Antheas the Lindian, according to Athenæus,³ Καὶ καμωδίας ἐποίησε καὶ ἄλλα πολλὰ ἐν τούτῳ τῷ τρόπῳ τῶν ποιημάτων, ἃ ἐξήρχε τοῖς μετ' αὐτοῦ φάλλοφοροῦσι.

This branch of Greek drama was first cultivated by the Icarians, the inhabitants of a little village in Attica, which claimed to have been the first to receive the worship of Bacchus in that part of Greece; and Susarion, a native of Tripodiscus, in Megaris, was the first to win the prize—a basket of figs and a jar of wine—which was given to him as the successful leader of a *comus* of Icarian "glee-singers" (*τρυνωδοί*), so called because they smeared their faces with the lees of wine; a rude disguise, which was sometimes substituted for the mask worn by the *καμωδοί*, when they afterward assumed the form of a regular chorus. The Dorians of Megara seem to have been from the first distinguished for a vein of coarse jocularity, which naturally gave a peculiar turn to the witticisms of the *comus* among them; and thus we find that comedy, in the old sense of the word, first came into being among the Megarians and their Sicilian colonists.⁴ Susarion flourished in the time of Solon, a little before Thespis, but he seems to have stood quite alone; and, indeed, it is not likely that comedy, with its bold spirit of caricature, could have thriven much during the despotism of the Peisistratidæ, which followed so close upon the time of Susarion. The very same causes which might have induced Peisistratus to encourage tragedy, would operate to the prevention of comedy; and, in fact, we find that comedy did not thoroughly establish itself at Athens till after the democratical element in the state had completely asserted its pre-eminence over the old aristocratic principles, namely, in the time of Pericles. The first of the Attic comedians, Chionides, Ecphantides, and Magnes, flourished about the time of the Persian war; and were followed, after an interval of thirty years, by Cratinus, Eupolis, and Aristophanes, whom Horace justly mentions as the greatest authors of the comedy of caricature.⁵ This branch of comedy seems to have been the natural descendant of the satiric iambography of Archilochus and others: it was a combination of the iambic lampoon with the *comus*, in the same way as

tragedy was a union of the epic rhapsody with the dithyrambic chorus. This old comedy ended with Aristophanes, whose last productions are very different from his early ones, and approximate rather to the middle Attic comedy, which seems to have sprung naturally from the old, when the free democratic spirit which had fostered its predecessor was broken and quenched by the events which followed the Peloponnesian war, and when the people of Athens were no longer capable of enjoying the wild license of political and personal caricature. The middle Attic comedy was employed rather about criticisms of philosophical and literary pretenders, and censures of the foibles and follies of the whole classes and orders of men, than about the personal caricature which formed the staple of the old comedy. The writers of the middle comedy flourished between B.C. 380 and the time of Alexander the Great, when a third branch of comedy arose, and was carried to the greatest perfection by Menander and Philemon. The comedy of these writers, or the new comedy, as it is called, went a step farther than its immediate forerunner: instead of criticising some class and order of men, it took for its object mankind in general; it was, in fact, a comedy of *manners*, or a comedy of *character*, like that of Farquhar and Congreve; the object of the poet was, by some ingeniously contrived plot and well-imagined situations, to represent, as nearly as possible, the life of Athens as it went on around him in its every-day routine; hence the well-known hyberbole addressed to the greatest of the new comedians:

ὦ Μένανδρε καὶ βιε,
πότερος ἔρ' ὑμῶν πότερον εὐμήσατο.

The middle and new comedy, though approaching much more nearly to what we understand by the name *comedy*, could scarcely be called by the name *καμωδία* with any strict regard to the original meaning of the word; they had nothing in them akin to the old revelry of the κῶμος: in fact, they had not even the comic chorus, which had succeeded and superseded the κῶμος, but only marked the intervals between the acts by some musical voluntary or interlude. It belongs to a history of Greek literature, and not to a work of this nature, to point out the various steps by which Attic comedy passed from its original boisterous and almost drunken merriment, with its personal invective and extravagant indecency, to the calm and refined rhetoric of Philemon, and the decent and good-tempered Epicureanism of Menander; still less can we enter here upon the literary characteristics of the different writers whose peculiar tendencies had so much influence on the progressive development of this branch of the drama. It is sufficient for our purpose to point out generally the *nature* of Greek comedy, as we have done above, and to enable the student to discriminate accurately between the outward features of Greek comedy and tragedy.

The dance of the comic chorus was called the *κόρδαξ*, and was of the most indecent description; the gestures, and, indeed, the costumes of the choreutæ, were such that even the Athenians considered it justifiable only at the festival of Bacchus, when every one was allowed to be drunk in honour of the god; for, if an Athenian citizen danced the *cordax* sober and unmasked, he was looked upon as the most shameless of men, and forfeited altogether his character for respectability.¹ Aristophanes himself, who did not much scruple at violating common decency, claims some merit for his omission of the *cordax* in the *Clouds*, and for the more modest attire of his chorus in that play.² According to Athenæus,³ the *cordax* was a sort of *hypor-*

1. (c. Mid., p. 517.)—2. (Acharn., 263.)—3. (p. 445, B.)—4. (See Meineke, Hist. Crit. Com. Gr., p. 20, &c.)—5. (Sat., I., iv., 1-5)

1. (Theophrast., Charact., 6.)—2. (v., 537, &c.)—3. (p. 630, D.)

cheme, or imitative dance, in which the choreutæ expressed the words of the song by merry gesticulations.¹ Such a dance was the *hyporcheme* of the Spartan *deiclieta*; a sort of merry-andrews, whose peculiar mimic gestures seem to have formed the basis of the Dorian comedy, which prevailed, as we have seen, in Megaris, and which probably was the parent stock, not only of the Attic, but also of the Sicilian and Italian comedy:

The comic chorus consisted of twenty-four persons, *i. e.*, of half the number of the full tragic chorus; and as the comedians did not exhibit with tetralogies as the tragedians did, this moiety appeared on the stage undivided, so that a comedy had, in this respect, a considerable advantage over a tragedy. The chorus entered the stage in rows of six, and singing the *parodos* as in tragedy; but the *parodos* was generally short, and the *stasima* still less important and considerable. The most important business of the chorus in the old comedy was to deliver the *parabasis*, or address to the audience. In this the chorus turned round from its usual position between the *thymele* and the stage, where the choreutæ stood with their faces turned towards the actors, and made an evolution so as to pass to the other side of the *thymele*. Here they stood with their faces turned towards the spectators, and addressed them in a long series of anapaestic tetrameters, generally speaking in the name of the comic poet himself. When the *parabasis* was complete, it consisted of, 1. The *κομπήτιον*, a short introduction in trochaic or anapaestic verse. 2. A long system of anapaestic tetrameters, called the *πυρίος* or the *μακρόν*. 3. A lyrical strophe, generally in praise of some divinity. 4. The *ἐπιθύρημα*, consisting, according to the rule, of sixteen trochaic verses, in which the chorus indulged in witticisms directed against some individual, or even against the public in general. The *parabasis*, though a good deal refined by the better taste of Aristophanes, retained much of the abusive scurrility of the old rustic *comus*; so that we may regard it as the only living representative of the old wagon-jests of the phallic procession in which comedy originated, and as the type of that predominant element in the old comedy which the Roman satirist Lucilius made the object of his imitation.

II. ITALIAN COMEDY may be traced, in the first instance, to the rude efforts of the Dorian *comus* in Sicily. It has been shown by Müller² that even the Oscan farces, called the *fabula Atellanæ*, which passed from Campania to Rome, may be traced to a Dorian origin, as the names of some of the standing masks in these farces, such as *Pappus*, *Maccus*, and *Simus*, are clearly Greek names. The more complete development of the Sicilian comedy by Epicharmus appears to have paved the way for the establishment of a more regular comic drama in Italy. Imitations of Epicharmus seem to have been common among the cities of Magna Græcia; and so early as B.C. 240, Livius Andronicus exhibited at Rome translations or adaptations of Greek comedies, in which he did not attempt to obliterate the traces of their Greek origin: on the contrary, from first to last, most of the Latin comedies were professedly Greek in all their circumstances; and the translators or imitators, though many of them were men of great genius, did not hesitate to speak of themselves as *barbari* in comparison with their Greek masters, and called Italy *barbaria* in comparison with Athens.³ The Latin comedians, of whom we can judge for ourselves, namely, Plautus and Terence, took their models chiefly from the new comedy of Greece. The latter, as far as we know,

never imitated any other branch of Greek comedy. But Plautus, though he chiefly follows the poets of the middle or new comedy, sometimes approximates more nearly to the Sicilian comedy of Epicharmus, or to the *ἱλαροπαγώδια* of Rhinthon and others. It is doubtful whether the *Amphitryo*, which Plautus himself terms a *tragico-comædia*, is an imitation of Rhinthon or of Epicharmus. That Plautus did imitate Epicharmus is clear from the words of Horace:⁴ "*Dicitur . . . Plautus ad exemplar Sicili proferare Epicharmi*;" and A. W. Schlegel would infer from this passage alone that the *Amphitryo* was borrowed from some play by Epicharmus, who, as is well known, composed comedies on mythical subjects like that of the *Amphitryo* of Plautus.

Although Roman comedy, as far as it has come down to us, is cast entirely in a Greek mould, the Romans had authors who endeavoured to bring forward these foreign comedies in a dress more Roman than Grecian. Comedies thus constructed were called *fabula togata* (from the Roman garb, the *toga*, which was worn by the actors in it), as opposed to the *fabula palliata*, or comedies represented in the Greek costume. From the words of Horace in the passage referred to above, it is sufficiently obvious that the *fabula togata* was only an imitation of the Greek new comedy clothed in a Latin dress:⁵ "*Dicitur Afrani toga convenisse Menandro*." Not that the writers of these comedies absolutely translated Menander or Philemon, like Plautus and Terence; the argument or story seems to have been Roman, and it was only in the method and plan that they made the Greek comedians their model. For this, also, we have Horace's testimony:⁶

"*Nil intentatum nostri liquere poetae* :

Nec minimum meruere decus, vestigia Græca
Ausi deserere, et celebrare domestica facta,
Vel qui prætextas, vel qui docuere togatas."

The *prætextata fabula* alluded to here was a sort of history.

"The *prætextata* merely bore resemblance to a tragedy: it represented the deeds of Roman kings and generals; and hence it is evident that at least it wanted the unity of time of a Greek tragedy—that it was a *history*, like Shakspeare's."⁷ The grammarians sometimes speak of the *prætextata* as a kind of comedy, which it certainly was not. The clearest statement is that of Euanthius (*de fabula*): "*Ilud vero tenendum est, post vñv κωμῳδίαν Latinos multa fabularum genera protulisse: ut togatas, a scenicis atque argumentis Latinis; prætextatas, ab dignitate personarum et Latina historia; Atellanas, a civitate Campaniæ, ubi actæ sunt plurimæ; Rhinthonicas, ab auctoris nomine; tabernarias, ab humilitate argumenti et styli; mimos, ab diuturna imitatione rerum et levium personarum.*" But even here there is a want of discrimination; for the *mimus* was entirely Greek, as the name shows; the Latin style corresponding to it was the *planipes*. Hermann⁸ has proposed the following classification of Roman plays, according as they strictly followed or deviated from their Greek models:

ARGUMENTUM.

Græcum.	Romanum.
<i>Crepidata</i> (τραγῳδία),	<i>Prætextata</i> .
<i>Palliata</i> (κωμῳδία),	<i>Togata</i> , cuius alia <i>tabernata</i> , alia <i>tabernaria</i> .
<i>Satyrica</i> (σάτυροι),	<i>Atellana</i> .
<i>Mimus</i> (μῖμος),	<i>Planipes</i> .

Neukirch⁹ gives a wider extent to Roman comedy, so that it includes all the other species of drama, with the exception of the *crepidata* and the *prætextata*.

1. (Epist. II., i., 58.)—2. (Hor., Epist. II., i., 57.)—3. (Epist. ad Pison. 285, &c.)—4. (Niebuhr, Hist. Rom., vol. i., p. 511 2.)—5. (Opuscula, v., p. 260.)—6. (De Fabula Romanorum &c. gata, p. 58.)

1. (Compare Athenæus, p. 21, D.)—2. (His¹ Lit. Gr., c. xxix., § 4.)—3. (Vid. Festus, p. 36, 372, ed. Müller

I. GRÆCI ARGUMENTI.

1. *Comædia sive palliata*, quæ proprie dicitur.
2. *Tragico-comædia sive Rhinthonica*, Græcis, *ἱλαροτραγῳδία*, sive *Ἰταλικὴ κωμῳδία*.
3. *Mimus*, qui proprie dicitur.

II. LATINI ARGUMENTI.

1. *Trabecata*.
2. *Togata* quæ proprie dicitur, sive *tabernaria*.
3. *Atellana*.
4. *Planipedia*, sive *planipedaria*, sive *planipes* (*riminata*).

And he places the satirical drama in a third class by itself. It is very difficult to come to any certain conclusion on this subject, which is involved in considerable obscurity; the want of materials to enable us to form a judgment for ourselves, and the confusions and contradictions of the scholiasts and other grammarians who have written upon it, leave the classification of Roman comedies in great uncertainty, and we must rest content with some such approximations as those which are here given.

COMOS (κῶμος). (*Vid.* COMÆDIA, p. 299; CHERUS, p. 247.)

COMPENSATIO is defined by Modestinus to be *debiti et crediti inter se contributio*. Compensatio, as the etymology of the word shows (*pend-o*), is the act of making things equivalent. A person who was sued might answer his creditor's demand, who was also his debtor, by an offer of compensatio (*si paratus est compensare*), which, in effect, was an offer to pay the difference, if any, which should appear on taking the account. The object of the compensatio was to prevent unnecessary suits and payments, by ascertaining to which party a balance was due. Originally, compensatio only took place in *bonæ fidei iudiciis* and *ex eadem causa*; but, by a rescript of M. Aurelius, there could be compensatio in *stricti juris iudiciis*, and *ex dispari causa*. When a person made a demand in right of another, as a tutor in right of his pupillus, the debt, or could not have compensatio in respect of a debt due to him from the tutor on his own account. A fidejussor (surety) who was called upon to pay his principal's debt, might have compensatio, either in respect of a debt due by the claimant to himself or to his principal. It was a rule of Roman law, that there could be no compensatio where the demand could be answered by an *exceptio peremptoria*; for the compensatio admitted the demand, subject to the proper deduction, whereas the object of the *exceptio* was to state something in bar of the demand. Set-off in English law, and compensation in Scotch law, correspond to compensatio.¹

COMPITALIA, also called IUDI COMPITALICII, was a festival celebrated once a year in honour of the lares compitales, to whom sacrifices were offered at the places where two or more ways met ("Compitalia, dies attributus laribus compitalibus; ideo ubi viæ competunt, tum in competis sacrificatur. Quotannis is dies concipitur").² This festival is said by some writers to have been instituted by Tarquinius Priscus in consequence of the miracle attending the birth of Servius Tullius, who was supposed to be the son of a lar familiaris.³ We learn from Macrobius⁴ that the celebration of the compitalia was restored by Tarquinius Superbus, who sacrificed boys to Mania, the mother of the lares; but this practice was changed after the expulsion of the Tárquins, and garlic and poppies offered in their stead. In the time of Augustus, the Iudi compitalicii had gone out of fashion, but were restored by him.⁵

The compitalia belonged to the *feriæ conceptivæ*,

that is, festivals which were celebrated on days appointed annually by the magistrates or priests. The exact day on which this festival was celebrated appears to have varied, though it was always in the winter. Dionysius¹ says that it was celebrated a few days after the Saturnalia, and Cicero² that it fell on the Kalends of January (the old editions read iii. Kal. Jan.); but in one of his letters to Atticus³ he speaks of it as falling on the fourth before the nones of January. The exact words in which the announcement of the day on which the compitalia was to be kept, are preserved by Macrobius⁴ and Aulus Gellius:⁵ "DIE NONI (i. e., nono) POPOLO ROMANO QUIRITIBUS COMPITALIA ERUNT QUANDO CONCEPTA FOVERINT (of *foverit*) NEFAS."

COMPLUVIUM. (*Vid.* HOUSE.)

CONCHA (κόγχη), a Greek and Roman liquid measure, of which there were two sizes. The smaller was half the cyathus (= 0.412 of a pint English); the larger, which was the same as the oxybaphum, was three times the former (= 1.238 of a pint).⁶

*CONCHA (κόγχη), a term frequently applied, like *conchylum*, to shell-fish in general, but more particularly to the *Chama*. Horace, it is probable, means the *Chama* in the following line: "*Mitulus et vites pellent obstantia conchæ*."⁷

*CONCHYLUM (κογχύλιον). This term is sometimes used in a lax sense, as applied to the *Testacea* in general, or to their shells separate from their flesh.⁸ Xenocrates uses *κογχυλῶδες* in the same sense.⁹ It is also applied to the *Purpura* in particular, and likewise to the purple colour formed from it. According to Aldrovandus, Horace applies it to oysters in the following line: "*Miscueris elizo simul conchyliis turdis*."¹⁰

CONCILIA'BULUM. (*Vid.* COLONIA.)

CONCUBINA (GREEK). The *παλλακή* οἱ *παλλακίς* occupied at Athens a kind of middle rank between the wife and the harlot (*ἑταίρα*). The distinction between the *ἑταίρα*, *παλλακή*, and legal wife is accurately described by Demosthenes:¹¹ *τὰς μὲν γὰρ ἑταίρας ἡδονῆς ἕνεκ' ἔχομεν τὰς δὲ παλλακὰς, τῆς καθ' ἡμέραν θεραπείας τοῦ σώματος: τὰς δὲ γυναῖκας, τοῦ παιδοποιεῖσθαι γνησίως καὶ τῶν ἐνδόν φύλακα πιστὴν ἔχειν*. Thus Antiphon speaks of the *παλλακή* of Philoneos as following him to the sacrifice,¹² and also waiting upon him and his guest at table.¹³ If her person were violated by force, the same penalty was exigible from the ravisher as if the offence had been committed upon an Attic matron; and a man surprised by the quasi-husband in the act of criminal intercourse with his *παλλακή*, might be slain by him on the spot, as in the parallel case.¹⁴ (*Vid.* AULTERIUM.) It does not, however, appear very clearly from what political classes concubines were chiefly selected, as cohabitation with a foreign (*ξένη*) woman was strictly forbidden by law,¹⁵ and the provisions made by the state for virgins of Attic families must in most cases have prevented their sinking to this condition. Sometimes, certainly, where there were several destitute female orphans, this might take place, as the next of kin was not obliged to provide for more than one; and we may also conceive the same to have taken place with respect to the daughters of families so poor as to be unable to supply a dowry.¹⁶ The dowry, in fact, seems to have been a decisive criterion as to whether the

1. (Dig. 16, tit. 2.)—2. (Varro, De Ling. Lat., vi., 25, ed. Müller.—Festus, s. v.)—3. (Plin., H. N., xxxvi., 70.)—4. (Sat., i., 7.)—5. (Suet., Octav., 31.)

1. (iv., p. 219.)—2. (in Pison., c. 4.)—3. (vii., 7.)—4. (Sat., i., 4.)—5. (x., 24.)—6. (Hussey, p. 207, 209.—Wurm, p. 120.)—7. (Sat., ii., 4, 23.)—8. (Hippocr., De Diet., 9.—De Aliment. ex Aquat., 10.) (Sat., ii., 2, 74.)—11. (c. Neer., p. 1386.)—12. (Acc. de Venet., p. 613.)—13. (Id., p. 614.—Vid. Becker, Charikles, vol. ii., p. 438.)—14. (Lysias, De Cæd. Erastost., p. 93.)—15. (Demosth., c. Neer., p. 1350.)—16. (Demosth., c. Neer., 1384.—Plaut., Trinumm., iii., ii., 63.)

connection between a male and female Athenian, in a state of cohabitation, amounted to a marriage: if no dowry had been given, the child of such union would be illegitimate; if, on the contrary, a dowry had been given, or a proper instrument executed in acknowledgment of its receipt, the female was fully entitled to all conjugal rights.¹ It does not appear that the slave that was taken to her master's bed acquired any political rights in consequence; the concubine mentioned by Antiphon² is treated as a slave by her master, and after his death undergoes a servile punishment.³ (*Vid. ΗΕΤΕΡΑ.*)

CONCUBINA (ROMAN). According to an old definition, an unmarried woman who cohabited with a man was originally called *pellex*, but afterward by the more decent appellation of *concubina*.⁴ This remark has apparently reference to the *Lex Julia et Papia Poppæa*, by which the concubinatus received a legal character. This legal concubinatus consisted in the permanent cohabitation of an unmarried man with an unmarried woman. It therefore differed from *adulterium*, *stuprum*, and *incestus*, which were legal offences; and from *concubernium*, which was the cohabitation of a free man with a slave, or the cohabitation of a male and female slave, between whom there could be no Roman marriage. Before the passing of the *Lex Julia et P. P.*, the name of *concubina* would have applied to a woman who cohabited with a married man who had not divorced his first wife;⁵ but this was not the state of legal concubinage which was afterward established. The offence of *stuprum* was avoided in the case of the cohabitation of a free man and an *ingenua* by this permissive concubinage; but it would seem to be a necessary inference that there should be some formal declaration of the intention of the parties, in order that there might be no *stuprum*.⁶ Heineceus⁷ denies that an *ingenua* could be a *concubina*, and asserts that those only could be *concubinae* who could not be *uxores*; but this appears to be a mistake,⁸ or perhaps it may be said that there was a legal doubt on this subject.⁹ It seems probable, however, that such unions were not often made with *ingenua*.

This concubinage was not a marriage, nor were the children of such marriage, who were sometimes called *liberi naturales*, in the power of their father. Still it established certain legal relations between the two persons who lived in concubinage and their children. Under the Christian emperors concubinage was not favoured, but it still existed, as we see from the legislation of Justinian.

This legal concubinage should not be confounded with illicit cohabitation. It rather resembled the *morganatic marriage* (*ad morganaticam*), in which neither the wife enjoys the rank of the husband, nor the children the rights of children by a legal marriage.¹⁰ Thus it appears that, among the Romans, widowers who had already children, and did not wish to contract another legal marriage, might take a *concubina*, as we see in the case of *Vespasian*,¹¹ *Antoninus Pius*, and *M. Aurelius*.¹²

CONDEMNATIO. (*Vid. Actio*, p. 20.)

CONDICTIO. (*Vid. Actio*, p. 16.)

CONDITORIUM, in its general acceptance, means a place in which property of any kind is deposited—*ubi quid conditum est*—thus *conditorium muradum tormentorum*¹³ is a magazine for the reception of a battering-train when not in active service.

But the word came afterward to be applied more strictly as a repository for the dead.

In the earlier ages of Greek and Roman history, the body was consumed by fire after death (*vid. Bustum*), the ashes only receiving sepulture; and as there could be no danger of infection from these, the sepulchres which received them were all above ground.¹ But subsequently, when this practice fell into partial or entire disuse, it became necessary to inter (*humare*) the dead, or bury them in vaults or chambers under ground; and then the word *conditorium* or *conditum*² was adopted, to express that class of sepulchres to which dead bodies were consigned entire, in contradistinction to those which contained the bones and ashes only. It is so used by *Petronius*³ for the tomb in which the husband of the *Ephesian matron* was laid; by *Pliny*,⁴ for the vault where the body of a person of gigantic stature was preserved entire; and by *Quintilian*,⁵ for the chamber in which a dead body is laid out, "*cubiculum conditorium mortis tue*." In a single passage of *Pliny*⁶ it is synonymous with *monimentum*, and in an inscription,⁷ "*ollas vi. minores in avito conditorio*," the mention of the cinerary *olla* indicates that the tomb alluded to was of the kind called *columbarium*. (*Vid. Columbarium*.) The corresponding word in Greek is *ὑπόγειον* or *ὑπόγειον*,⁸ *hypogeum*.⁹

Conditorium is also used for the coffin in which a body was placed when consigned to the tomb and when used, the same distinction is implied.¹⁰

***CONEION** (*κόνειον*), Hemlock, or *Conium maculatum*. It is called *Cicut* by *Celsus*. This poisonous plant possesses highly narcotic and dangerous qualities, and an infusion of it was given at Athens to those who were condemned to capital punishment. By a decoction of this kind *Socrates* lost his life. The effects of the poison in his case are strikingly described in the *Phædon* of *Plato*. *Sithorpe* found the *κόνειον* between Athens and Megara. It is not unfrequent throughout the Peloponnese also. The modern Greeks call it *Βρομόχορτον*.¹¹

CONFARREATIO. (*Vid. Marriage*.)

CONFESSORIA ACTIO is an *actio in rem*,¹² by which a person claims a *ius in re*, such as the use and enjoyment (*usus fructus*) of a thing, or claims some *servitus* (*ius cundi, agendi, &c.*). The *actio negatoria* or *negativa* is that in which a person disputes a *ius in re* which another claims and attempts to exercise.

If several persons claimed a *servitus*, each might bring his *actio*; if several claimed as *fructuarii*, they must join in the action. None but the owner of the property, to which the *servitus* was alloted to be due, could maintain a *directa actio* for it. The *condemnatio* in the *actio confessoria* was adapted to secure to the *fructuarius* his enjoyment of the thing if he proved his right, and to secure the *servitus* if the plaintiff made out his claim to it.

The *negatoria actio* was that which the owner of a thing had against a person who claimed a *servitus* in it, and at the same time endeavoured to exercise it. The object of this action was to prevent the defendant from exercising his alleged right, and to obtain security (*cautio*) against future attempts, which security it was competent for the *iudex* to require. But this action was extended to the getting rid of a nuisance; as, if a man put a heap of dung against your wall so as to make it damp; or

a neighbour's wall bellied out half a foot or more into your premises; or the wind blew one of his trees so as to make it hang over your ground; or a man cut stones on his own land so that the pieces fell on yours: in all such cases you had a *negatoria actio*, in which you declared *jus ei non esse*, &c., according to the circumstances of the case.¹

CONFUSIO properly signifies the mixing of liquids, or the fusing of metals into one mass. If things of the same or of different kind were confused, either by the consent of both owners or by accident, the compound was the property of both. If the *confusio* was caused by one without the consent of the other, the compound was only joint property in case the things were of the same kind, and perhaps (we may conjecture) of the same quality, as, for instance, wines of the same quality. If the things were different, so that the compound was a new thing, this was a case of what, by modern writers, is called *specificatio*, which the Roman writers expressed by the term *novam speciem facere*, as if a man made *mulsum* out of his own wine and his neighbour's honey. In such a case the person who caused the *confusio* became the owner of the compound, but he was bound to make good to the other the value of his property.

Commixtio applies to cases such as mixing together two heaps of corn; but this is not an instance in which either party acquires property by the *commixtio*. For if the mixture takes place, either accidentally or with mutual consent, or by the act of one alone, in all these cases the property of each person continues as before, for in all these cases it is capable of separation. A case of *commixtio* arises when a man's money is paid without his knowledge and consent, and the money, when paid, is so mixed with other money that it cannot be recognised; otherwise it remains the property of the person to whom it belonged.

The title *confusio* does not properly comprehend the various modes of *acquisitio* which arise from two pieces of property belonging to different persons being materially united; but still it may be convenient to enumerate under this head the various modes of *acquisitio* which belong to the general head of *Accessio*.

Specificatio (which is not a Roman word) took place when a man made a new thing (*nova species*) either out of his own and his neighbour's material, or out of his own simply. In the former case, such man acquired the ownership of the thing. In the latter case, if the thing could be brought back to the rough material (which is obviously possible in very few cases), it still belonged to the original owner, but the specifier had a right to retain the thing till he was paid the value of his labour, if he had acted *bona fide*. If the new species could not be brought back to its original form, the specifier in all cases became the owner; if he had acted *bona fide*, he was liable to the owner of the stuff for its value only; if *mala fide*, he was liable to an action of theft. Of this kind are the cases put by Gaius,² of a man making wine of another man's grapes, oil of his olives, a ship or bench of his timber, and so on. Some jurists (Sabinus and Cassius) were of opinion that the ownership of the thing was not changed by such labour being bestowed on it; the opposite school were of opinion that the new thing belonged to him who had bestowed his labour on it, but they admitted that the original owner had a legal remedy for the value of his property.

Two things, the property of two persons, might become so united as not to be separable without injury to one or both; in this case, the owner of the principal thing became the owner of the accessory.

Thus, in the case of a man building on another man's ground, the building belonged to the owner of the ground (*superficies solo cedit*); or in the case of a tree planted, or seed sown on another man's ground, the rule was the same. If a man wrote, even in letters of gold, on another man's parchment or paper, the whole belonged to the owner of the parchment or paper; in the case of a picture painted on another man's canvass, the canvass became the property of the owner of the picture.³ If a piece of land was torn away by a stream (*avulsio*) from one man's land and attached to another's land, it became the property of the latter when it was firmly attached to it. This is a different case from that of *ALLUVIO*. But in all these cases the losing party was entitled to compensation, with some exceptions as to cases of *mala fides*.

The rules of Roman law on this subject are stated by Brinkmann, *Instit. Jur. Rom.*, § 398, &c.; Mackeldey, *Lehrbuch*, &c., § 245, &c., *Accession*; Rosshirt, *Grundlinien*, &c., § 62.

The term *confusio* had other legal meanings, which it is not necessary to explain here.

*CONGER (κόγγρος), the Conger Eel, or *Muræna conger*, L., called in Italian *Bronco*. "The name of *Conger*," observes Griffith, "was at first given to a species of eel, the *Muræna conger*, after Aristotle and Athenæus, who had called the sea-eel *Κόγγρος*. M. Cuvier has withdrawn this fish from the genus *Anguilla*, and made it the foundation of a sub-genus, under the name of *Conger*. It is very abundant on the coasts of England and France, in the Mediterranean Sea, where it was much sought after by the ancients, and in the Propontis, where it was not long ago in considerable estimation. Those of Sicily were more especially esteemed. The congers are extremely voracious. They live on fish, mollusca, and crustacea, and do not even spare their own species. They are extremely fond of carrion, and are sure to be found in those places into which the carcasses of animals have been thrown.—Among the species of the sub-genus *Muræna* (proper) we may notice here the *Common Muræna*, or *Muræna helena*. This fish is about three feet long, and sometimes more; it weighs as much as twenty or thirty pounds; is very much extended in the Mediterranean; and the ancient Romans, who were well acquainted with it, held it in high estimation under the name of *Muræna*, which we commonly translate by the term 'lamprey.' These *murænae* were carefully reared in vivaria by the Romans. As early as the time of Cæsar, the multiplication of these domestic *murænae* was so great that on the occasion of one of his triumphs, that commander presented six thousand of them to his friends. Crassus reared them so as to be obedient to his voice, and to come and receive their food from his hands; while the celebrated orator Hortensius wept over the loss of a favourite lamprey of which death had deprived him. The Romans are said to have thrown offending slaves into their fish-ponds, as food for these voracious creatures."⁴

CONGIARIUM (*scil. vas, from congius*), a vessel containing a *congius*. (*Vid. CONGIUS*.)

In the early times of the Roman Republic, the *congius* was the usual measure of oil or wine which was, on certain occasions, distributed among the people;⁵ and thus *congiarium*, as Quintilian⁶ says, became a name for liberal donations to the people in general, whether consisting of oil, wine, corn, or money, or other things, while donations made to the soldiers were called *donativa*, though they were

1. (Gaius, ii., 73, &c.)—2. (Griffith's Cuvier, vol. x., p. 544, &c.)—3. (Liv., xxv., 2.)—4. (vi., 3, 52.)—5. (Plin., H. N., xiv., 14, 17; xxxi., 7, 41.—Suet., Octav., 41.—Tib., 20.—Ner., 7.—Plin., Paneg., 25.—Tacit., Ann., xii., 41; xiii., 31.—Liv., xxxvii., 57.)

1. (Dig. 8, tit. 5.—Brissonius, De Formul., 2.) (ii., 29.)

sometimes also termed *congiaria*.¹ *Congiarium* was, moreover, occasionally used simply to designate a present or a pension given by a person of high rank, or a prince, to his friends; and Fabius Maximus called the presents which Augustus made to his friends, on account of their smallness, *hemina* instead of *congiaria*, because *hemina* was only the twelfth part of a *congius*.²

CONGIUS, a Roman liquid measure, which contained six sextarii,³ or the eighth part of the amphora (=5.9471 pints Eng.). It was equal to the larger *χοῦς* of the Greeks. (*Vid.* CHOUS.) Cato tells us that he was wont to give each of his slaves a congius of wine at the Saturnalia and Compitalia.⁴ Pliny relates, among other examples of hard drinking,⁵ that Novellius Torquatus Mediolanensis obtained a cognomen (tricongius, a nine-bottle-man) by drinking three congi of wine at once.

There is a congius in existence, called the congius of Vespasian, or the Farnese congius, bearing an inscription, which states that it was made in the year 75 A.D., according to the standard measure in the Capitol, and that it contained, by weight, ten pounds (*Imp. Cæs. vi. T. Cæs. Aug. F. iii. Cos. Mensura exacta in Capitolio, P. x.*).⁶ By means of this congius the weight of the Roman pound has been ascertained. (*Vid.* LIBRA.) This congius holds, according to an experiment made by Dr. Hase in 1824, 52037.692 grains of distilled water. Now the imperial gallon of eight pints, as determined by act of Parliament in 1824, holds 10 lbs. 3voirdupois, or 70,000 grains of distilled water. Hence

52037.692 × 8
70.000

the number of pints in the congius = 5.9471, as above. Its capacity in cubic inches is 206.1241.

A congius is represented in Fabretti.⁷

*CONI'LE (κονίλη), a plant, most probably, as Sprengel suggests, the *Satureia Græca*, or Greek Savory.⁸

CONNU'BIUM. (*Vid.* MARRIAGE.)

CONOPE'UM (κονωπεῖον), a gnat curtain, *i. e.*, a covering made to be expanded over beds and couches to keep away gnats and other flying insects, so called from κώνωψ, a gnat.

The gnat-curtains mentioned by Horace⁹ were probably of linen, but of the texture of gauze. The use of them is still common in Italy, Greece, and other countries surrounding the Mediterranean. *Conopeum* is the origin of the English word *canopy*.¹⁰

According to Herodotus,¹¹ the Egyptian fishermen used to provide a substitute for gnat-curtains in the following manner: The fisherman, having through the day worked at his employment with his casting-net (ἀμφίβληστρον), in the evening fixed the point of it on the top of an upright pole, so that it might be expanded round him in the form of a tent. Under this he reposed, secure from the attacks of insects, which, as has been lately proved, will not pass through the meshes of a net, though quite wide enough to admit them.¹²

*CONOPS (κόνωψ), a name most properly applied to the *Culex pipiens*, or Gnat. Schneider, however, shows that it is sometimes indiscriminately applied also to the *Ephemera* (Mayfly) and the *Phryganea*.¹³

CONQUISITORES. These were persons employed to go about the country and impress soldiers,

when there was a difficulty in completing a levy.¹ Sometimes commissioners were appointed by a decree of the senate for the purpose of making a *conquisito*.²

CONSANGUINEI. (*Vid.* COGNATI.)

CONSECRATIO. (*Vid.* APOTHEOSIS.)

CONSILIA'RII. (*Vid.* CONVENTUS.)

CONSILIUM. (*Vid.* CONVENTUS.)

CONSTITUTIONES. "Constitutio principis," says Gaius,³ "is that which the emperor has constituted by decretum, edictum, or epistola; nor has it ever been doubted that such constitutio has the force of law, inasmuch as by law the emperor receives the imperium." Hence such laws were often called principales constitutiones.

An imperial constitutio, then, in its widest sense, might mean everything by which the head of the state declared his pleasure, either in a matter of legislation, administration, or jurisdiction. A decretum was a judgment in a matter in dispute between two parties which came before him, either in the way of appeal or in the first instance. Edicta, so called from their analogy to the old edict,⁴ edictales leges, generales leges, leges perpetuæ, &c., were laws binding on all the emperor's subjects. Under the general head of rescripta⁵ were contained epistolæ and subscriptiones,⁶ which were the answers of the emperor to those who consulted him either as public functionaries or individuals.⁷ In the time of Tiberius, the word rescriptum had hardly obtained the legal signification of the time of Gaius.⁸ It is evident that decreta and rescripta could not, from their nature, have the force of leges generales, but, inasmuch as these determinations in particular cases might be of obvious general application, they might gradually obtain the force of law.

Under the early emperors, at least in the time of Augustus, many leges were enacted, and in his time, and that of his successors to about the time of Hadrian, we find mention of numerous senatus consulta. In fact, the emperor, in whom the supreme power was vested from the time of Augustus, exercised his power through the modium of a senatus consultum, which he introduced by an oratio or libellus, and the senatus consultum was said to be made "imperatore auctore." Probably, about the time of Hadrian, senatus consulta became less common, and finally imperial constitutiones became the common form in which a law was made.

At a later period, in the Institutes, it is declared, that whatever the imperator determined (*constituit*) by epistola, or decided judicially (*cognoscens decrevit*), or declared by edict, was law; with this limitation, that those constitutions were not laws which in their nature were limited to special cases.

Under the general head of constitutiones we also read of mandata, or instructions by the Cæsar to his officers.

Many of these constitutions are preserved in their original form in the extant codes. (*Vid.* CODEX THEODOSIANUS, &c.)

CONSUALIA, a festival, with games, celebrated by the Romans, according to Festus, Ovid,¹ and others, in honour of Consus, the god of secret deliberation, or, according to Livy,² of Neptunus Equestris. Plutarch,³ Dionysius of Halicarnassus,⁴ and the Pseudo Asconius, however,⁵ say that Neptunus Equestris and Consus were only different names for one and the same deity. It was solemnized every year in the circus by the symbolical ceremony of uncovering an altar dedicated to the

A., iv., 7.—Ælian, N. A., xiv., 22.)

god, which was buried in the earth. For Romulus, who was considered as the founder of the festival, was said to have discovered an altar in the earth on that spot.¹ The solemnity took place on the 21st of August with horse and chariot races, and libations were poured into the flames which consumed the sacrifices. During these festive games, horses and mules were not allowed to do any work, and were adorned with garlands of flowers. It was at their first celebration that, according to the ancient legend, the Sabine maidens were carried off.² Virgil,³ in speaking of the rape of the Sabines, describes it as having occurred during the celebration of the *Circensian games*, which can only be accounted for by supposing that the great Circensian games, in subsequent times, superseded the ancient Consualia, and that thus the poet substituted games of his own time for ancient ones—a favourite practice with Virgil; or that he only meant to say the rape took place at the well-known festival in the circus (the Consualia), without thinking of the ludi circenses, properly so called.

CONSUL, the joint president of the Roman Republic. "Without doubt the name *consules* means nothing more than simply *colleagues*; the syllable *sul* is found in *præsul* and *exsul*, where it signifies *one who is*; thus *consules* is tantamount to *consentes*, the name given to Jupiter's council of gods."⁴ This is not quite correct. The syllable *sul* contains the root of the verb *salio*, "to go" or "come;" and *con-sil-ium* is merely "a coming together," like *con-ventio*, *contio*. So *consules* are "those who come together," *præsul* "he who goes before," *exsul* "he who goes out." The institution of consuls or joint presidents of the state seems to have been intimately connected with the first principles of the Roman political system. The old tradition with regard to the first two kings seems to point directly to something of the kind, and Servius, in his Constitution, is said to have provided for a restoration of the old division of the sovereign power between two functionaries. They do not, however, appear to have existed under this name till after the expulsion of Tarquinius, when L. Junius Brutus and L. Tarquinius Collatinus (or M. Horatius⁵) were appointed chief magistrates at Rome with this title. At first the consuls were the only supreme officers at Rome, and had all the power of the kings whom they succeeded. Cicero⁶ ascribes to them the *regia potestas*: "Idque in republica nostra maxima valuit, quod ei *regalis potestas* præfuit—quod et in his etiam qui nunc regnant manet." "Quibus autem *regia potestas* non placuit, non ii nemini, sed non semper uni parere voluerunt." Their dress was regal, with the exception of the golden crown, which they did not wear at all, and the *trabea*, which they only wore on the occasion of a triumph. They had ivory sceptres surmounted by eagles; in the public assemblies they sat upon a throne (*sellæ curulis*); they had an elevated seat in the senate, where they presided; they appointed the public treasurers; they made peace and contracted foreign alliances; they had the jurisdiction, *i. e.*, they were the supreme judges in all suits, whence we also find them called *prætores*; and they had the *imperium*, or supreme command of the armies of the state. The most prominent outward symbols of their authority were the *fascēs*, or bundle of rods surrounding an axe, and borne before the consuls by twelve lictors or beadles.

At first each of the consuls had his own twelve lictors; but P. Valerius, called *Publicola*, from his

attention to the wishes of the *populus*, or original burgesses, removed the axe from the *fascēs*, and allowed only one of the consuls to be preceded by the lictors while they were in Rome. The other consul was attended only by a single *accensus*. This division of the honours was so arranged that the consuls enjoyed the outward distinctions alternately from month to month; the elder of the two consuls received the *fascēs* for the first month, and so on, till the reign of Augustus, when it was decreed by the *Lex Julia et Papia Poppæa*, that the precedence should be given to him who had the greater number of children. To this alternation in the honours of the consulate Horace seems to refer indirectly, when he says,

"*Virtus, repulsæ nescia sordida,
Intaminatis fulget honoribus:
Nec sumit aut ponit securus
Arbitrio popularis auræ.*"¹¹

While they were out of Rome, and at the head of the army, the consuls retained the axes in the *fascēs*, and each had his own lictors as before the time of Valerius.

The consuls were for some time chosen only from the *populus* or patricians, and, consequently, always sided with their own order in the long struggle which was carried on between the patricians and the commonalty. The first shock to their power was given by the appointment of the *tribuni plebis*, who were a sort of plebeian consuls, and, like the others, were originally two in number. They presided at the *comitia tributa*, or assemblies of the *plebs*, as the consuls did at the other *comitia*, and had the right of interposing a *veto*, which put a stop to any consular or senatorial measure. The consular office was suspended in B.C. 452, and its functions performed by a board of ten high commissioners (*decemviri*), appointed to frame a code of laws, according to a motion of the tribune Terentius. On the re-establishment of the consulship in B.C. 444, the tribunes proposed that one of the consuls should be chosen from the plebeians, and this gave rise to a serious and long-protracted struggle between the two orders, in the course of which the office of consul was again suspended, and its functions administered by a board of *tribuni militares*, corresponding to the *σπάρταγοι* at Athens. At length, in B.C. 366, the plebeians succeeded in procuring one of the consuls to be elected from their own body, and after that time both consuls were occasionally plebeians.

The prerogatives and functions which were originally engrossed by the consuls, were afterward divided between them, and different magistrates appointed to relieve them under the great pressure of business introduced by the increase of the state. The censors, appointed in B.C. 442, performed some of their duties, and the prætors, first elected in B.C. 365, undertook the chief part of the *jurisdictio*, or judicial functions of the consuls. When a consul was appointed to some command or office out of Rome, he was said *provinciam accipere*; and when the consul was appointed to a foreign command after the expiration of his year of office, he was called *proconsul*. In the Greek writers on Roman history, the consuls are called *ἐπατοὶ*, the proconsuls *ἀνὲπατοὶ*. The consul might also be superseded by the dictator, who was appointed with absolute power for certain emergencies. A similar authority, however, was occasionally vested in the consuls themselves by virtue of the *senatus decretum*, which was worded, *Videant consules ne quid respublica detrimenti capiat, i. e.*, "Let the consuls look to it, that no harm befalls the state."

The consuls were elected some time before they

1. (Compare Niebuhr, *Hist. Rom.*, vol. i., notes 629 and 630.)
—2. (Varro, *De Ling. Lat.*, v., 3.—Dionys., i., 2.—Cic., *De Rep.*, ii., 7.)—3. (Æn., viii., 636.)—4. (Niebuhr, *Hist. Rom.*, i., p. 512.)—5. (Æn., iii., 22.)—6. (*De Leg.*, iii., 2.)

entered upon their office, and till then were called *consules designati*. In later times they entered on their office on the 1st of January, and were obliged to take the oath of office within the five days following, the effect of which they had to repeat in an oath which they took on quitting their office at the end of the year. The commencement of the consulate was always celebrated by a solemn procession to the Capitol, and a sacrifice there to Jupiter Capitolinus, and after that there was a great meeting of the senate. By the *Lex Annalis* (B.C. 181) it was decreed that the consul should be 43 years of age.¹ But many were elected consuls at an earlier age. It was also a law that an interval of ten years should elapse between two elections of the same person to the office of consul; but this law was not strictly observed, and instances occur of five or six re-elections to this office. C. Marius was seven times consul.

The office of consul continued after the downfall of the Republic. In the reign of Tiberius the consuls were no longer elected by the people, but were appointed by the senate; and subsequently the number was increased, and consuls were appointed for a part of the year only, till at last it became only an honorary or complimentary appointment. In these times the consuls were divided into several classes: the *consules ordinarii*, who were the nearest representatives of the older consuls; the *consules suffecti*, appointed by the emperors for the rest of the year; and the *consules honorarii*, who had only the name, without a shadow of authority.

The consuls, like the ἄρχων ἐπώνυμος at Athens, gave their names to the year; calendars or annual registers were kept for this purpose, and called *Fasti Consulares*. The last consul ἐπώνυμος was Basilus junior, in the reign of Justinian, A.U.C. 1294, A.D. 541.

CONTRACTUS. (Vid. OBLIGATIONES)

CONTUBERNALES (σύσκηποι). This word, in its original meaning, signified men who served in the same army and lived in the same tent. It is derived from *taberna* (afterward *tabernaculum*), which, according to Festus, was the original name for a military tent, as it was made of boards (*tabulæ*). Each tent was occupied by ten soldiers (*contubernales*), with a subordinate officer at their head, who was called *decanus*, and in later times *caput contubernii*.²

Young Romans of illustrious families used to accompany a distinguished general on his expeditions or to his province, for the purpose of gaining under his superintendence a practical training in the art of war or in the administration of public affairs, and were, like soldiers living in the same tent, called his *contubernales*.³

In a still wider sense, the name *contubernales* was applied to persons connected by ties of intimate friendship and living under the same roof,⁴ and hence, when a free man and a slave, or two slaves, who were not allowed to contract a legal marriage, lived together as husband and wife, they were called *contubernales*; and their connexion, as well as their place of residence, *contubernium*.⁵ Cicero⁶ calls Cæsar the *contubernalis* of Quirinus, thereby alluding to the fact that Cæsar had allowed his own statue to be erected in the temple of Quirinus.⁷

CONTUBERNIUM. (Vid. CONTUBERNALES, CONGUBINA.)

CONTUS (κοντός, from κεντέω, I prick or pierce)

1. (Cic. Philipp., v., 17, 47.)—2. (Voget., De Re Mil., ii., 8, 13.—Comptare Cic., Pro Ligat., 7.—Hirt., Bell. Alex., 16.—Drakenb. ad Liv., v., 2.)—3. (Cic., Pro Coel., 30.—Pro Planc., 11.—Suet., Jul., 42.—Tacit., Agr., 5.—Frontin., Strateg., iv., 1, 11.—Plutarch, Pomp., 3.)—4. (Cic., ad Fam., ix., 2.—Plin., Epist., ii., 13.)—5. (Colum., xii., 1, 3; i., 8.—Petron., Sat., 96.—Tacit., Hist., i., 43; iii., 74.)—6. (ad Att., xiii., 28.)—7. (Vid. Ep. ad Att., xii., 45.—Suet., Jul., 76.)

was, as Nonius¹ expresses it, a long and strong wooden pole or stake, with a pointed iron at the one end.² It was used for various purposes, but chiefly as a punt-pole by sailors, who, in shallow water, thrust it into the ground, and thus pushed on the boat.³ It also served as a means to sound the depth of the water.⁴ At a later period, when the Romans became acquainted with the huge lances or pikes of some of the northern barbarians, the word *contus* was applied to this kind of weapon; and the long pikes peculiar to the Sarmatians were always designated by this name.⁵

CONVENIRE IN MANUM. (Vid. MARRIAGE.)

CONVENTUS (σύνδοκος, συνουσία, or συναγωγή) is properly a name which may be given to any assembly of men who meet for a certain purpose. But when the Romans had reduced foreign countries into the form of provinces, the word *conventus* assumed a more definite meaning, and was applied to the whole body of Roman citizens who were either permanently or temporarily settled in a province.⁷ In order to facilitate the administration of justice, a province was divided into a number of districts or circuits, each of which was called *conventus, forum, or jurisdictio*.⁸ Roman citizens living in a province were entirely under the jurisdiction of the proconsul, except in the towns which had the *Jus Italicum*, which had magistrates of their own with a jurisdiction, from whom there was, no doubt, an appeal to the proconsul; and at certain times of the year, fixed by the proconsul, they assembled in the chief town of the district, and this meeting bore the name of *conventus (σύνδοκος)*. Hence the expressions, *conventus agere, peragere, convocare, dimittere, ἀγοράσιους* (sc. ἡμέρας) ἄγειν, &c.⁹ At this *conventus* litigant parties applied to the proconsul, who selected a number of judges from the *conventus* to try their causes.¹⁰ The proconsul himself presided at the trials, and pronounced the sentence according to the views of the judges, who were his assessors (*consilium or consiliarii*). As the proconsul had to carry on all official proceedings in the Latin language,¹¹ he was always attended by an interpreter.¹² These *conventus* appear to have been generally held after the proconsul had settled the military affairs of the province; at least, when Cæsar was proconsul of Gaul, he made it a regular practice to hold the *conventus* after his armies had retired to their winter-quarters.

Niebuhr¹³ supposes that, after the peace of Caudium, and before any country had been made a Roman province, the name *conventus* was applied to the body of Roman citizens sojourning or residing at Capua, Cumæ, and eight other Campanian towns.

CONVIVIUM. (Vid. SYMPOSIUM.)

*CONVOLVULUS, I. A species of Caterpillar, mentioned by Pliny¹⁴ as doing great damage to the vineyards. It derives its name from rolling itself up in the leaf, after having half cut through the small stem which connects the latter with the vine. Modern naturalists make it the same with the *Pyralis vitis*.¹⁵

*II. A plant, the Bindweed, of which several kinds are mentioned by the ancient writers. The *C. Arvensis* is the σμίλας of Dioscorides,¹⁶ with the

1. (xviii., 24.)—2. (Virg., Æn., v., 208.)—3. (Hom., Od., ix., 287.—Virg., l. c.—Id., vi., 302.)—4. (Festus, s. v. Percussatio.—Donat. ad Terent., Hec., i., ii., 2.)—5. Gall., i., v., 1; viii., 46.—Act. Apost., xix., 38.)—10. (Cic. in Verr., ii., 13, &c.—Niebuhr, Hist. Rom., iii., p. 732.)—11. (Val. Max., ii., ii., 2.)—12. (Cic. in Verr., ii., 37.—Epist., ad Fam., xiii., 54.)—13. (Hist. Rom., iii., p. 340.)—14. (H. N., xvii., 28.)—15. (Plin., ed. Pancoucke, vol. xi., p. 186.)—16. (iv., 144.)

epithet of *λεια*, in opposition to the *σμίλαξ τραχεία*,¹ the same with the *Smilax lavis* of Pliny.² This species does great injury to the corn, and its roots are not easily eradicated. Billerbeck censures Sibthorp for confounding it with the *περικλύμενον* of Dioscorides.³ The *C. Serpium*, also called *σμίλαξ*, is the *μαλακόκισσος* of the Geoponica,⁴ and the *Convolutulus* of Pliny.⁵ It has white, bell-shaped flowers, and derives its name from growing in hedges, and places adjacent to these ("serpes et vicina omnia implicat"). It is also called *ἰασίωνη*, from *ἰάσω*, the goddess of healing.⁶ Sibthorp found it everywhere in the hedges of Greece. The *C. Scammonia*, or Scammony,⁷ is the plant the inspissated juice of which is the Scammony of the shops, a well-known purgative. This article has been known from a very early period; it is mentioned by Hippocrates, and many peculiar virtues were attributed to it at that time: now, however, it is considered only as an active cathartic. The plant is spread over Syria, Asia Minor, and nearly the whole East. Sibthorp found it growing in many parts of Livadia and the Peloponnesus or Morea.⁸ The *C. Soldanella* is the *Κρήνη θάλασσια*, or Sea-Kale.⁹

**CONUS* (κῶνος), a term applied by Galen¹⁰ and Paul of Ægina¹¹ to the *Pinus sylvestris*, or wild Pine. It is commonly used, however, to signify the *Nux Pineæ*, or the fruit of the Pine-tree. Athenæus says that Theophrastus called the tree *πέκηη*, and the fruit *κῶνος*.¹²

**CONYZA* (κόννυσα), a plant, three species of which are described by Dioscorides.¹³ "Owing to recent changes in the Botanical terminology," observes Adams, "there is now considerable difficulty in applying scientific names to these three species. The older authorities referred them all to the genus *Coryza*, or Fleabane, and Stackhouse still does so, but hesitatingly." Sprengel, upon the whole, prefers the following distribution of them. 1. *Inula viscosa* Ait. 2. *Inula saxatilis*, or *Erigeron graveolens*. 3. *Inula oculus Christi*. Dierbach makes the *κόννυσα* of Hippocrates the *Ambrosia maritima*.¹⁴

COOPTARE. (Vid. COLLEGIUM.)

**COPHINUS* (κόφινος), a large kind of wicker Basket, made of willow branches.¹⁵ From Aristophanes¹⁶ it would seem that it was used by the Greeks as a basket or cage for birds. The Romans used it for agricultural purposes; and Columella,¹⁷ in describing a method of procuring early cucumbers, says that they should be sown in well-manured soil, kept in a cophinus, so that in this case we have to consider it as a kind of portable hot-bed. Juvenal,¹⁸ when speaking of the Jews, uses the expression *cophinus et fœnum* (a truss of hay), figuratively to designate their high degree of poverty. (Vid. CORBIS.)

**CORACINUS* (κορακίνος), a species of Fish, the same with the *σαπέρδης*, according to Athenæus. (Vid. SAPERDA.)

**CORALLIUM* (κοράλλιον). "From the brief notices," observes Adams, "which Arrian,¹⁹ Hesychius,²⁰ and Dionysius,²¹ all of whom mention this term, supply, it is impossible to decide satisfactorily what species of the *Corallina* were known to the ancients."

**CORALLIS*, a stone resembling vermilion, and brought from India and Syene.²² It is supposed to have been red coral. The ancients thought coral

to grow as a vegetable underneath the waves, and to harden into stone when removed from its native element.¹

**CORAX* (κόραξ). I. the Raven, or *Corvus corax*, L. "This," remarks Adams, "is generally held to be the *Corvus* of Virgil; but the latter, according to Pennant, was the Rook, or *Corvus frugilegus*, which, he says, is the only species that is gregarious; and Virgil pointedly refers to flocks of *Corvi*.² This, however, is not strictly correct, for the hooded crow and the jackdaw are often to be seen in flocks. Dr. Trail informs me that he has seen flocks of hooded crows, consisting of many hundreds. Aristotle³ applies this term also to a water bird. It probably was a sort of cormorant."⁴

*II. Probably the *Trigla hirundo*, L., or Tub-fish Gesner, however, makes no distinction between it and the *κορακίνος*. Coray is undecided.⁵

**CORBIS*, dim. *CORBULA*, *CORBYCULA*, a Basket of very peculiar form and common use among the Romans, both for agricultural and other purposes; so called, according to Varro,⁶ "*Quod eo spicas aut aliud quid corruerant*;" or, according to Isidorus,⁷ "*Quia curvatis virgibus contextitur*." It was made of osiers twisted together,⁸ and of a conical or pyramidal shape (*πλέγματα ἐκ λόγων πυραμοειδῶν*).⁹ A basket answering precisely to this description, both in form and material, is still to be seen in every-day use among the Campanian peasantry, which is called, in the language of the country, "*la corbella*," a representation of which is introduced in the lower portion of the annexed woodcut. The hook attached to it by a string is for the

purpose of suspending it to a branch of the tree into which the man climbs to pick his oranges, lemons, olives, or figs. The upper portion of the woodcut¹⁰ represents a Roman farm, in which a farming man, in the shape of a dwarfish satyr, is seen with a pole (*ἀσιλλα*) across his shoulder, to each end of which is suspended a basket resembling in every respect the Campanian *corbella*; all which coincidences of name, form, and description leave no doubt as to the identity of the term with the object represented.

As the corbis was used for a variety of purposes, it is often distinguished by a corresponding epithet, indicating the particular service to which it was applied; as, for instance, *corbis messoria*,¹¹ which was used in husbandry for measuring corn in the ear, and is therefore opposed to the *modius*, in which

(Cic., Pro Sext., 38.)—Compare Varro, De Re Rust., i., 53.—Propert., Eleg., IV., ii., 28.—Ovid Met., xiv., 643.)

the grain was measured after thrashing;¹ *corbis palulatoria*, which held a certain measure of green food for cattle;² *corbis constricta*, when put over the noses of cattle with sore mouths, like a muzzle, to prevent them from rubbing their lips.³ These were all of the larger sort, the same as that mentioned by Plautus,⁴ "*Geriotle amicis vestris aurum corbibus*."

The smaller basket (*corbula*) was used for gathering fruit⁵ (*aliquot corbulae uvarum*⁶); as a bread-basket (*corbula panis*);⁷ for carrying up viands from the kitchen to the *cænaculum*;⁸ and when Nero attempted to cut through the Isthmus of Corinth, he put the earth into a *corbula*, which he took from a soldier, and carried it away on his shoulders (*humum corbulæ congestam*⁹), which identifies the sort of basket termed κόβινος by Josephus,¹⁰ which constituted part of the marching accoutrements of every Roman soldier.

The *corbis* was also used in the Roman navy. Being filled with stones, it afforded a substitute for an anchor in places where the soil was impervious to, or not sufficiently tenacious for, the fluke of an anchor,¹¹ which practice is not yet forsaken, for the writer has repeatedly seen the identical "*corbella*" delineated above so applied in the bay of Mola di Gaeta.

CORBITÆ, merchantmen of the larger class, so called because they bung out a *corbis* at the mast-head for a sign.¹² They were also termed *oneraria*; and hence Plautus, in order to designate the voracious appetites of some women, says, "Corbitam cibi comesse possunt."¹³ They were noted for their heavy build and sluggish sailing,¹⁴ and carried passengers as well as merchandise, answering to the large "felucca" of the present day. Cicero proposed to take a passage in one of these vessels from Rhegium to Patra, which he opposes to the smarter class of packets (*actuariola*¹⁵).

*COR'CHORUS (κόρχορος), a plant, probably the same with the Jews' Mallow, or *Corchorus olitorius*. It is still used as a potherb by the Jews at Aleppo. A Japanese species of this shrub is well known in Great Britain, according to Adams; but the *Corchorus olitorius* is seldom cultivated.¹⁶

*CORDYLUS (κορδύλος), an amphibious animal described by Aristotle.¹⁷ "From the discussions of Belon, Rondelet, Gesner, and Schneider, it would appear to be settled," remarks Adams,¹⁸ "that it was a sort of Lizard, probably a variety of the *Siren Lacertina*."

II. The fry of the Tunny-fish, according to Pliny. Modern naturalists, however, think that it is probably a variety of the *Scomber-thynnus*, L.¹⁹

*CORIANDRUM (κοριάνδρον or κόριον²⁰), Coriander, or *Coriandrum sativum*. It grows wild in Italy. The name is derived from the strong smell of bedbugs (κόρις, "a bedbug") which the seed has when fresh. Theophrastus says there were several kinds.²¹ According to Pliny,²² Coriander-seed, taken in moderate quantities, was good in aiding digestion; and the ancients, therefore, generally took it after eating. Siphonp makes the modern Greek name to be κοριανδρον or κοριανδρός. He found it in Peloponnesus (the Morea) and the island of Cyprus.²³

*CORIS (κόρις) I., a name applied to several species of the genus *Cimex*, or bug. (*Vid. CIMEX*) II. A Plant, the same with the *Hypericum Coris*, L.¹

CORDAX. (*Vid. COMEDIA*, p. 299.)

CORNELIA LEX. (*Vid. MAJESTAS, REPETUN DÆ.*)

CORNELIA FULVIA LEX. (*Vid. AMBITUS.*)

CORNELIA LEX DE FALSIS. (*Vid. FALSA.*)

CORNELIA LEX DE INJURIIS. (*Vid. INJURIA.*)

CORNELIA LEX DE SICARIIS ET VENE-

FCIIS. A law of the Twelve Tables contained some provision as to homicide,² but this is all that we know. It is generally assumed that the law of Numa Pompilius, quoted by Festus,³ "*Si quis hominem liberum dolo sciens morti duit paricida esto*," was incorporated in the Twelve Tables, and is the law of homicide to which Pliny refers; but this cannot be proved. It is generally supposed that the laws of the Twelve Tables contained provisions against incantations (*malum carmen*) and poisoning, both of which offences were also included under parricidium: the murderer of a parent was sewed up in a sack (*culeus* or *culleus*) and thrown into a river. It was under the provisions of some old law that the senate, by a consultum, ordered the consuls P. Scipio and D. Brutus (B.C. 138) to inquire into the murder in the Silva Scantia (*Silva Sila*). The lex Cornelia de Sicariis et Veneficiis was passed in the time of the dictator Sulla, B.C. 82. The lex contained provisions as to death or fire caused by dolus malus, and against persons going about armed with the intention of killing or thieving. The law not only provided for cases of poisoning, but contained provisions against those who made, sold, bought, possessed, or gave poison for the purpose of poisoning; also against a magistratus or senator who conspired in order that a person might be condemned in a judicium publicum, &c.⁵ To the provisions of this law was subsequently added a senatus consultum against mala sacrificia, otherwise called impia sacrificia, the agents in which were brought within the provisions of this lex. The punishment inflicted by this law was the interdictio aquæ et ignis, according to some modern writers. Marcian⁶ says that the punishment was deportatio in insulam et bonorum ademptio. These statements are reconcilable when we consider that the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the times of the writers or the compilers. Besides, it appears that the lex was modified by various senatus consulta and imperial rescripts.

The lex Pompeia de Parricidiis, passed in the time of Cn. Pompeius, extended the crime of parricide to the killing (dolo malo) of a brother, sister, uncle, aunt, and many other relations enumerated by Marcianus;⁷ this enumeration also comprises vitricus, noverca, privignus, privigna, patronus, patrona, an avus who killed a nepos, and a mother who killed a filius or filia; but it did not extend to a father. All privy to the crime were also punished by the law, and attempts at the crime also came within its provisions. The punishment was the same as that affixed by the lex Cornelia de Sicariis,⁸ by which must be meant the same punishment that the lex Cornelia affixed to crimes of the same kind. He who killed a father or mother, grandfather or grandmother, was punished (more majorum) by being whipped till he bled, sewn up in a

N., xx., 20.)—23. (Billorbeck, Flora Classica, p. 76.)

each with a dog, cock, viper, and ape, and thrown into the sea if the sea was at hand, and if not, by a constitution of Hadrian, he was exposed to wild beasts, or, in the time of Paulus, to be burned. The ape would appear to be a late addition. The murderers of a father, mother, grandfather, grandmother only were punished in this manner; other parricides were simply put to death. From this it is clear that the *lex Cornelia* contained a provision against parricide, if we are rightly informed as to the provisions of *Sicariis et Veneficis*, unless there was a separate *Cornelia Lex de Parricidiis*. As already observed, the provisions of those two *leges* were modified in various ways under the emperors.

It appears from the law of Numa, quoted by Festus,² that a parricide was any one who killed another *dolo malo*. Cicero³ appears to use the word in its limited sense, as he speaks of the punishment of the *culleus*. In this limited sense there seems no impropriety in Catilina being called parricide with reference to his country; and the day of the dictator Cæsar's death might be called a parricidium, considering the circumstances under which the name was given.⁴ If the original meaning of parricide be what Festus says, it may be doubted if the etymology of the word (*pater* and *cædo*) is correct; for it appears that parricide or parricida meant murderer generally, and afterward the murderer of certain persons in a near relationship. If the word was originally parricide, the law intended to make all malicious killing as great an offence as parricide, though it would appear that parricide, properly so called, was, from the time of the Twelve Tables at least, specially punished with the *culleus*, and other murders were not.⁵

*CORNIX, the Carrion Crow. (*Vid. CORONE.*)

CORNU, a wind instrument, anciently made of horn, but afterward of brass.⁶ According to Athenæus,⁷ it was an invention of the Etruscans. Like the *tuba*, it differed from the *tibia* in being a larger and more powerful instrument, and from the *tuba* itself in being curved nearly in the shape of a C, with a crosspiece to steady the instrument for the convenience of the performer. In Greek it is called *στρογγύλη σάλπιγξ*. It had no stopples or plugs to adjust the scale to any particular mode;⁸ the entire series of notes was produced without keys or holes, by the modification of the breath and of the lips at the mouthpiece. Probably, from the description given of it in the poets, it was, like our own horn, an octave lower than the trumpet. The *classicum*, which originally meant a signal rather than the musical instrument which gave the signal, was usually sounded with the *cornu*.

"*Sonuit reflexo classicum cornu,
Litiusque aduncis stridulos cantus
Eliis are.*"⁹

1. (Modest., Dig. 49, tit. 9, s. 9.)—2. (s. v. *Parici Quæstores*.) 3. (Pro Ros. Am., c. 25.)—4. (Suet., Cæs., c. 88.)—5. (Dig. 49, tit. 8, 9.—Paulus, Recept. Sentent., v., tit. 24.—Dirksen, Uebersicht, &c., der Zwölftafelgesetze, Leipsig.)—6. (Varro, De Ling. Lat., v., 117, ed. Müller.)—7. (iv., 184, A.)—8. (Burney's Hist. of Music, vol. i., p. 518.)—9. (Sen. CEd., 734.)

From which lines we learn the distinction between the *cornu* and *lituus*, as from Ovid¹ we learn that between the *tuba* and *cornu*:

"*Non tuba directi, non aris cornua flexi.*"

The preceding woodcut, taken from Bartholini,² illustrates the above account.

CORONA (*στέφανος*), a Crown; that is, a circular ornament of metal, leaves, or flowers, worn by the ancients round the head or neck, and used as a festive as well as funereal decoration, and as a reward of talent, military or naval prowess, and civil worth. It includes the synonyms of the species, for which it is often used absolutely, *στέφανη*, *στέφος*, *στέφανωμα*, *corolla*, *sertum*, a garland or wreath.

The first introduction of this ornament is attributed to Janus Bifrons,³ the reputed inventor of ships and coinage, whence many coins of Greece, Italy, and Sicily bear the head of Janus on one side, and a ship or a crown on the reverse.

Judging from Homer's silence, it does not appear to have been adopted among the Greeks of the heroic ages as a reward of merit or as a festive decoration, for it is not mentioned among the luxuries of the delicate Phæacians or of the suitors. But a golden crown decorates the head of Venus in the hymn to that goddess.⁴

Its first introduction as an honorary reward is attributable to the athletic games, in some of which it was bestowed as a prize upon the victor,⁵ from whence it was adopted in the Roman circus. It was the only one contended for by the Spartans in their gymnastic contests, and was worn by them when going to battle.⁶

The Romans refined upon the practice of the Greeks, and invented a great variety of crowns, formed of different materials, each with a separate appellation, and appropriated to a particular purpose. We proceed to enumerate these and their properties, including in the same detail an account of the corresponding ones, where any, in Greece.

I. CORONA OBSIDIONALIS. Among the honorary crowns bestowed by the Romans for military achievements, the most difficult of attainment, and the one which conferred the highest honour, was the *corona obsidionalis*, presented by a beleaguered army after its liberation to the general who broke up the siege. It was made of grass, or weeds and wild flowers,⁷ thence called *corona graminea*,⁸ and *graminea obsidionalis*,⁹ gathered from the spot on which the beleaguered army had been enclosed,¹⁰ in allusion to a custom of the early ages, in which the vanquished party, in a contest of strength or agility,

plucked a handful of grass from the meadow where

1. (Metam., i., 98.)—2. (De Tibiis, p. 403.)—3. (Athen., xv., 45.)—4. (1 and 7.)—5. (Plin., H. N., xv., 39.—Pindar, Olymp., iv., 36.—Argol. in Panvin., De Lud. Circ., i., 16.—Hamilton's Vases, vol. iii., pl. 47.)—6. (Hase, p. 198, 200, transl.)—7. (Plin., H. N., xxii., 7.)—8. (Plin., H. N., xxii., 4.)—9. (Liv., vii., 37.)—10. (Plin., l. c.—Aul. Ge., v., 6.—Festus, s. v. *Obsidionalis*.)

the struggle took place, and gave it to his opponent as a token of victory.¹ A list of the few Romans who gained this honour is given by Pliny.² A representation of the *corona graminea* is introduced in the preceding woodcut.³

II. CORONA CIVICA, the second in honour and importance,⁴ was presented to the soldier who had preserved the life of a Roman citizen in battle,⁵ and therefore accompanied with the inscription "*Ob civem servatum*,"⁶ as seen on the medal of M. Lepidus, introduced in the next woodcut, in which the letters H. O. C. S. stand for *hostem occidit, civem servavit*. It was originally made of the *ilex*, afterward of the *æsculus*, and finally of the *quercus*,⁷ three different sorts of oak, the reason for which choice is explained by Plutarch.⁸ It is represented in the next woodcut,⁹ above which the medal of Lepidus,¹⁰ just mentioned, is placed.

As the possession of this crown was so high an honour, its attainment was restricted by very severe regulations,¹¹ so that the following combinations must have been satisfied before a claim was allowed: To have preserved the life of a Roman citizen in battle, slain his opponent, and maintained the ground on which the action took place. The testimony of a third party was not admissible; the person rescued must himself proclaim the fact, which increased the difficulty of attainment, as the Roman soldier was commonly unwilling to acknowledge his obligation to the prowess of a comrade, and to show him that deference which he would be compelled to pay to his preserver if the claim were established.¹² Originally, therefore, the *corona civica*

was presented by the rescued soldier,¹ after the claim had been thoroughly investigated by the tribune, who compelled a reluctant party to come forward and give his evidence;² but under the Empire, when the prince was the fountain from whence all honours emanated, the civic crown was no longer received from the hands of the person whose preservation it rewarded, but from the prince himself, or his delegate.³

The preservation of the life of an ally, even though he were a king, would not confer a sufficient title for the civic crown. When once obtained, it might always be worn. The soldier who had acquired it had a place reserved next to the senate at all the public spectacles; and they, as well as the rest of the company, rose up upon his entrance. He was freed from all public burdens, as were also his father, and his paternal grandfather; and the person who owed his life to him was bound, ever after, to cherish his preserver as a parent, and afford him all such offices as were due from a son to his father.⁴

A few of the principal characters who gained this reward are enumerated in the following passages: Plin., *H. N.*, vii., 29; xvi., 5.—Liv., vi., 20; x., 46. L. Gellius Publicola proposed to confer it upon Cicero for having detected and crushed the conspiracy of Catiline;⁵ and among the honours bestowed upon Augustus by the senate, it was decreed that a civic crown should be suspended from the top of his house;⁶ hence a crown of oak leaves, with the inscription *ob civem servatos*, is frequently seen on the reverse of the Augustan medals, as also on those of Galba, Vitellius, Vespasian, Trajan, &c., showing that they likewise assumed to themselves a similar honour.

Other chaplets of leaves of many kinds were used both at Rome and in Greece, but they are distinct in character and purpose from the *corona civica*. An oak wreath was given by the Greeks to Jupiter;⁷ but that has no acorns, which formed a prominent feature in the *corona civica*;⁸ and likewise to Hecate;⁹ of ivy to Bacchus,¹⁰ commonly seen in his statues, from which he is termed *Κισσοκόμης*.¹¹ Those who assisted at a sacrifice wore a crown of bay, and the victim a wreath of cypress, pine, or flowers, and leaves of the tree sacred to the deity to whom the offering was made.¹² Romulus bestowed a crown of leaves upon Hostus Hostilius, as the first man who stormed the city of Fidenæ;¹³ and the army paid a similar compliment to P. Decius, by whom it was saved from destruction during the Samnite war.¹⁴

It will not fail to be remarked, as characteristic of Roman manners and early republican virtue, that the two crowns which were the most difficult to obtain, and held in the highest honour, possessed no intrinsic value.

III. CORONA NAVALIS or ROSTRATA, called also CLASSICA.¹⁵ It is difficult to determine whether these were two distinct crowns, or only two denominations for the same one. Virgil¹⁶ unites both terms in one sentence, "*Tempora navali fulgent rostrata corona*." But it seems probable that the former, besides being a generic term, was inferior in dignity to the latter, and given to the sailor who

first boarded an enemy's ship;¹ whereas the latter was given to a commander who destroyed the whole fleet, or gained any very signal victory.² At all events, they were both made of gold; and one, at least (*rostrata*), decorated with the beaks of ships, like the *rostrum* in the Forum,³ as seen in a medal of Agrippa;⁴ the other (*navalis*), with a representation of the entire bow, as shown in the subjoined woodcut.⁵

The Athenians likewise bestowed golden crowns for naval services, sometimes upon the person who got his trireme first equipped, and at others upon the captain who had his vessel in the best order.⁶

IV. CORONA MURALIS. The first man who scaled the wall of a besieged city was presented by his commander with a mural crown.⁷ It was made of gold, and decorated with turrets (*muri pinnis*), as represented in the next woodcut;⁸ and being one of the highest orders of military decorations, was not awarded to a claimant until after a strict investigation.¹⁰

Cybele is always represented with this crown upon her head;¹¹ but in the woodcut annexed¹² the form of the crown is very remarkable, for it includes the whole tower as well as the turrets, thus affording a curious specimen of the ancient style of fortification.

V. CORONA CASTRENSIS OR VALLARIS. The first soldier who surmounted the *vallum*, and forced an entrance into the enemy's camp, was in like manner presented with a golden crown, called *corona*

castrensis or *vallis*,¹ which was ornamented with the palisades (*valli*) used in forming an intrenchment, as represented in the annexed woodcut.²

VI. CORONA TRIUMPHALIS. There were three sorts of triumphal crowns, the first of which was worn round the head of the commander during his triumph. It was made with laurel or bay leaves,³ which plant is frequently met with on the ancient coins, both with the berries and without them. It was the latter kind, according to Pliny,⁴ which was used in the triumph, as is shown in the annexed woodcut, from a medal which commemorates the

Parthian triumph of Ventidius, the lieutenant of Antony.⁵ Being the most honourable of the three, it was termed *laurea insignis*⁶ and *insignis corona triumphalis*.

The second one was of gold, often enriched with jewels, which, being too large and massive to be worn, was held over the head of the general during his triumph by a public officer (*servus publicus*).⁷ This crown, as well as the former one, was presented to the victorious general by his army.

The third kind, likewise of gold and great value, was sent as presents from the provinces to the commander as soon as a triumph had been decreed to him,⁸ and therefore they were also termed *provinciales*.⁹ In the early ages of republican virtue and valour these were gratuitous presents, but before the extinction of the Republic they were exacted as a tribute under the name of *aurum coronarium*, to which none were entitled but those to whom a triumph had been decreed. (*Vid. AURUM CORONARIUM*.) The custom of presenting golden crowns from the provinces to victorious generals was likewise in use among the Greeks, for they were profusely lavished upon Alexander after his conquest of Darius.¹⁰

VII. CORONA OVALIS was another crown of less estimation, appropriated solely to commanders. It was given to those who merely deserved an ovation, which happened when the war was not duly declared, or was carried on against a very inferior force, or with persons not considered by the laws of nations as lawful enemies, such as slaves and pirates; or when the victory was obtained without danger, difficulty, or bloodshed,¹¹ on which account

1. (Plin., H. N., xvi., 3.)—2. (Compare Aul. Gell., v., 6.—Liv., *Epit.*, 129.—Dio Cass., xlix., 14.—Seneca, De Ben., iii., 32.—Festus, s. v. *Navalis Corona*.—Plin., H. 1. (Aul. Gell., v., 6, 5.—Compare Val. Max., i., 8, 6.)—2. (Guichard, de Antiq. Triumphis, p. 266.)—3. (Aul. Gell., v., 6.—Ovid, Pont., ii., 81.—Tibull., l., vii., 7.)—4. (H. N., xv., 39.)—5. (Goltz, Hist. Cæs., xlviii., 2.)—6. (Liv., vii., 13.)—7. (Juv., Sat., x., 41.)—8. (Plut., Paul. *Æmil.*, 34.)—9. (Tertull., De Coron. Mil., c. 13.)—10. (Athen., xii., 54.)—11. (Aul. Gell., v., 6.—Festus, s. v. *Ovalis Corona*.)

it was made of myrtle, the shrub sacred to Venus: "Quod non *Martius*, sed quasi *Veneris* quidam triumphus foret."¹ The myrtle crown is shown in the woodcut annexed, from a medal of Augustus Cæsar.²

VIII. CORONA OLEAGINA. This was likewise an honorary wreath, made of the olive leaf, and conferred upon the soldiers as well as their commanders. According to Gellius,³ it was given to any person or persons through whose instrumentality a triumph had been obtained, but when they were not personally present in the action. It is represented in the next woodcut, from a medal of Lepidus,⁴ and was conferred both by Augustus and the senate upon the soldiery on several occasions.⁵

Golden crowns, without any particular designation, were frequently presented out of compliment by one individual to another, and by a general to a soldier who had in any way distinguished himself.⁶

The Greeks, in general, made but little use of crowns as rewards of valour in the earlier and better periods of their history, except as prizes in the athletic contests; but, previous to the time of Alexander, crowns of gold were profusely distributed, among the Athenians at least, for every trifling feat, whether civil, naval, or military,⁷ which, though lavished without much discrimination as far as regards the character of the receiving parties, were still subjected to certain legal restrictions in respect of the time, place, and mode in which they were conferred. They could not be presented but in the public assemblies, and with the consent, that is, by suffrage, of the people, or by the senators in their council, or by the tribes to their own members, or by the *δημοβουται* to members of their own *δῆμος*. According to the statement of Æschines, the people could not lawfully present crowns in any place except in their assembly, nor the senators except in the senate-house; nor, according to the same authority, in the theatre, which is, however, denied by Demosthenes; nor at the public games; and if any erier there proclaimed the crowns, he was sub-

ject to *ἀργία*. Neither could any person holding an office receive a crown while he was *ὑπεύθυνος*, that is, before he had passed his accounts. But crowns were sometimes presented by foreign cities to particular citizens, which were termed *στεφάνοι ξενικοί*, *coronæ hospitales*. This, however, could not be done until the ambassadors from those cities had obtained permission from the people, and the party for whom the honour was intended had undergone a public investigation, in which the whole course of his life was submitted to a strict inquiry.¹

The principal regulations at Rome respecting these honours have been already mentioned in the account of the different crowns to which they applied.

We now proceed to the second class of crowns, which were emblematical and not honorary, at least to the person who wore them, and the adoption of which was not regulated by law, but custom. Of these there were also several kinds.

I. CORONA SACERDOTALIS, so called by Ammianus Marcellinus.² It was worn by the priests (*sacerdotes*), with the exception of the pontifex Maximus and his minister (*camillus*), as well as the by-standers, when officiating at the sacrifice. It does not appear to have been confined to any one material, but was sometimes made of olive (see preceding woodcut³), sometimes of gold,⁴ and sometimes of ears of corn, then termed *coronæ spicæ*, which kind was the most ancient one among the Romans,⁵ and was consecrated to Ceres,⁶ before whose temples it was customarily suspended.⁷ It was likewise regarded as an emblem of peace,⁸ in which character it appears in the subjoined medal, which commemorates the conclusion of the civil war between Antony and D. Albinus Brutus.⁹

II. CORONA FUNEBRIS ET SEPULCHRALIS. The Greeks first set the example of crowning the dead with chaplets of leaves and flowers,¹⁰ which was imitated by the Romans. It was also provided by a law of the Twelve Tables, that any person who had acquired a crown might have it placed upon his head when carried out in the funeral procession.¹¹ Garlands of flowers were also placed upon the bier, or scattered from the windows under which the procession passed,¹² or entwined about the cinerary urn,¹³ or as a decoration to the tomb.¹⁴ In Greece these crowns were commonly made of parsley (*σέλινον*).¹⁵

III. CORONA CONVIVIALIS. The use of chaplets at festive entertainments sprung likewise from Greece, and owe their origin to the practice of tying a woollen fillet tight round the head, for the purpose of mitigating the effects of intoxication.¹⁶ Thus Mercury in the Amphitryon,¹⁷ when he is about

1. (Æsch., c. Ctes.—Demosth., De Coron.)—2. (xxxix., 5, § 6.)—3. (Stat., Thob., iii., 466.)—4. (Prudent., *Περί Στεφάνου*, x., 1011.—Tertull., De Idol., 18.)—5. (Plin., H. N., xviii., 2.)—6. (Hor., Carm. Sc., 30.—Tibull., II., i., 4; i., 15.)—7. (Tibull., I., i., 16.—Compare Apul., Met., vi., p. 110, ed. Var.)—8. (Tibull., I., 10, 67.)—9. (Goltz, Hist. Cæs., xxii., 2.)—10. (Euphr., Phoen., 1647.—Schol. ad loc.)—11. (Cic., De Leg., ii., 24.—Plin., H. N., xxi., 5.)—12. (Plin., H. N., xxi., 7.—Dionys., xi., 39.)—13. (Plutarch, Marcell., 30.—Demetr., 53.)—14. (Plin., H. N., xxi., 3.—Ovid, Trist., III., ii., 82.—Tibull., II., iv., 48.)—15. (Suidas, s. v.—Plut., Timol., 26.)—16. (Aristot., Erotic. ap. Athen., xv., 16.)—17. (III., iv., 16.)

1. (Aul. Gell., l. c.—Plutarch, Marcell., 22.—Compare Plin., H. N., xv., 39.—Dionys., v., 47.)—2. (Goltz, Hist. Cæs., xvi., 20.)—3. (v., 6.)—4. (Goltz, Hist. Cæs., xxxiii., 5.)—5. (Dion Cass., x. x., 14; xlv., 40.)—6. (Liv., vii., 10, 37; x., 44; xxx., 15.)—7. (Æsch., c. Ctes.—Demosth., De Coron., passim.)

to sham drunk, says, "*Capiam coronam mihi in caput, assimilabo me esse ebrum.*" But, as luxury increased, they were made of various flowers or shrubs, such as were supposed to prevent intoxication; of roses (which were the choicest), violets, myrtle, ivy, *philyra*, and even parsley.¹ The Romans were not allowed to wear these crowns in public, "in usu promiscuo," which was contrary to the practice of the Greeks, and those who attempted to do so were punished with imprisonment.²

IV. CORONA NUPITALIS. The bridal wreath, *στέφος γαμήλιον*,³ was also of Greek origin, among whom it was made of flowers plucked by the bride herself, and not bought, which was of ill omen.⁴ Among the Romans it was made of *verbena*, also gathered by the bride herself, and worn under the *flammeum*,⁵ with which the bride was always enveloped.⁶ The bridegroom also wore a chaplet.⁷ The doors of his house were likewise decorated with garlands,⁸ and also the bridal couch.⁹

V. CORONA NATALITIA, the chaplet suspended over the door of the vestibule, in the houses of both Athens and Rome, in which a child was born.¹⁰ At Athens, when the infant was male, the crown was made of olive; when female, of wool;¹¹ at Rome it was of laurel, ivy, or parsley.¹²

Besides the crowns enumerated, there were a few others of specific denominations, which received their names either from the materials of which, or the manner in which, they were composed. These were:

I. CORONA LONGA,¹³ which is commonly thought to resemble what we call a *festoon*, and, as such, seem to have been chiefly used to decorate tombs, curule chairs, triumphal cars, houses, &c. But the word must have had a more precise meaning, and was probably called *longa* from its greater size, and meant a circular string of anything, like the "rosary" used by the lower orders in Catholic countries to recæon up their prayers, which in Italy is still called *la corona*, doubtless tracing its origin to the *corona longa* of their heathen ancestors, to which description it answers exactly.

II. CORONA ETRUSCA was a golden crown, made to imitate the crown of oak leaves, studded with gems, and decorated with ribands (*lemnisci*) or ties of gold.¹⁴ Any crown fastened with these ribands, whether real or artificially represented, was also termed *corona lemniscata*, a specimen of which is given by Caylus.¹⁵

III. CORONA PACTILIS,¹⁶ probably the same as the *corona plectilis* of Plautus,¹⁷ *corona torta*,¹⁸ *plexa*,¹⁹ *στέφανοι πλεκτοί*,²⁰ and *κυλιστοί στέφανος*.²¹ It was made of flowers, shrubs, grass, ivy, wool, or any flexible material twisted together.

IV. CORONA SUTILIS, the crown used by the Salii at their festivals.²² It was made in the first instance of any kind of flowers sewed together, instead of being wreathed with their leaves and stalks; but subsequently it was confined to the rose only, the choicest leaves of which were selected

from the whole flower, and sewed together by a skilful hand, so as to form an elegant chaplet.¹

V. CORONA TONSA or TONSILIS² was made of leaves only, of the olive or laurel for instance,³ and so called in distinction to *nexilis* and others, in which the whole branch was inserted.

VI. CORONA RADIATA⁴ was the one given to the gods and deified heroes, and assumed by some of the emperors as a token of their divinity. It may be seen on the coins of Trajan, Caligula, M. Aurelius, Valerius Probus, Theodosius, &c., and is given in the woodcut annexed, from a medal of Marc Antony.⁵

VII. The crown of vine leaves (*pampinea*) was appropriated to Bacchus,⁶ and considered a symbol of ripeness approaching to decay; whence the Roman knight, when he saw Claudius with such a crown upon his head, augured that he would not survive the autumn.⁷

*CORONE (κορώνη), the *Corvus Corone*, or Carrion Crow. (*Vid. CORAX*.) The specific name of *ἐνάλιος κορώνη* is applied by Aristotle⁸ and *Ælian*⁹ to a water-bird, which was, no doubt, some species either of the cormorant or coot. It occurs also in the *Odyssey* of Homer¹⁰ as a sea-bird.¹¹

*CORONOPUS (κορωνόπος), a plant, about which there has been some difference of opinion, but which, in all probability, is the same with the Buck's-horn Plantain, or *Plantago Coronopus*.¹²

CORPUS. (*Vid. COLLEGIUM*.)

CORPUS JURIS CIVILIS. The three great compendations of Justinian, the Institutes, the Pandects, and the Code, together with the Novellæ, form one body of law, and were considered as such by the glossators, who divided it into five volumina. The Pandects were distributed into three volumina, under the respective names of *Digestum Vetus*, *Infortiatum*, and *Digestum Novum*. The fourth volume contained the first nine books of the *Codex Repetitæ Prælectionis*. The fifth volume contained the Institutes, the *Liber Authenticorum* or Novellæ; and the last three books of the *Codex*. The division into five volumina appears in the oldest editions; but the usual arrangement now is, the Institutes, Pandects, the *Codex*, and Novellæ. The name *Corpus Juris Civilis* was not given to this collection by Justinian, nor by any of the glossators. Savigny asserts that the name was used in the twelfth century: at any rate, it became common from the date of the edition of D. Gothofredus of 1604.

Most editions of the *Corpus* also contain the following matter: Thirteen edicts of Justinian, five constitutions of Justin the younger, several constitutions of Tiberius the younger, a series of consti-

1. (Mart., *Epigr.* xlii., 127.—Hor., *Carm.*, II., vii., 24.—Id., Sat., II., iii., 256.—Id., *Carm.*, I., xxxviii., 2.—Juv., Sat., v., 36.—Virg., *Eclog.* vi., 16.—Ovid, *Fast.*, v., 335, 337, 341.—Tacit., *Ann.*, ii., 57.—Capitola., *Verus*, 5.)—2. tutions of Justinian, Justin, and Tiberius; 113 Novellæ of Leo, a constitution of Zeno, and a number of constitutions of different emperors, under the name of *Βασιλικά Διατάξεις*, or *Imperatoriae Constitutiones*; the *Canones Sanctorum et venerandorum Apostolorum, Libri Feudorum*, a constitution of the Emperor Frederic II., two of the Emperor Henry VII., called *Extravagantes*, and a *Liber de pace Constantiæ*. Some editions also contain the fragments of the Twelve Tables, of the prætorian edict, &c.

Some editions of the *Corpus Juris* are published with the glossæ, and some without. The latest edition with the glossæ is that of J. Fehius, Lugd., 1627, six vols. folio. Of the editions without the glossæ, the most important are, that of Russardus, Lugd., 1561, 2 vols. folio, which was several times reprinted; Contius, Lugd., 1571 and 1581, 15 vols. 12mo; Lud. Charondæ, Antw., 1575, folio; Dionys. Gothofredi, Lugd., 1583, 4to, of which there are various editions; one of the best is that of Sim. Van Leuwen, Amst., 1663, folio; G. Chr. Gebaueri, cura G. Aug. Spangenberg, Goetting., 1776-1797, 2 vols. 4to; Schrader, of which only the Institutes are yet published.

*CORRU'DA, the name by which the wild Asparagus was known among the Romans (*ἀσπράγος ἀγρίος*, or *πετραίος*). According to Pliny,¹ some called it *Libyca*; the Attics, *horminium*. Another Greek name was *myacanthus*. The name in modern Greece is *σπαράγγι* or *σπαράγγια*. Sibthorp found it in Bithynia and the Peloponnesus.²

CORTINA, in its primary sense, a large circular vessel for containing liquids, and used in dyeing wool,³ and receiving oil when it first flows from the press.⁴

II. CORTINA also signified a vase in which water was carried round the circus during the games,⁵ as some think, for the refreshment of the spectators in the *cavea*, but more probably to be used in the course, when required either for the horses, drivers, or attendants; in which interpretation gains confirmation from the ancient bas-reliefs, in most of which men or children are represented with a water-jug in their hands attending the course, as represented in the woodcut in page 253, in which two of the children thrown down by the horses are furnished with a vessel of this kind.

III. CORTINA was also the name of the table or hollow slab, supported by a tripod, upon which the priestess at Delphi sat to deliver her responses: and hence the word is used for the oracle itself.⁶ The Romans made tables of marble or bronze after the pattern of the Delphian tripod, which they used as we do our sideboards, for the purpose of displaying their plate at an entertainment, or the valuables contained in their temples, as is still done in Catholic countries upon the altars. These were termed *cortina Delphica*, or *Delphica* simply.⁷

IV. From the conical form of the vessel which contains the first notion of the word, it came also to signify the vaulted part of a theatre over the stage (*magni cortina theatrî*), such as is in the Odeion of Pericles, the shape of which we are expressly told was made to imitate the tent of Xerxes;⁸ and thence metaphorically for anything which bore the appearance of a dome, as the vault of heaven;⁹ or of a circle, as a group of listeners surrounding any object of attraction.¹¹

CORYBANTES (*Κορύβαντες*). The history and explanation of the deities bearing this name, in the early mythology of Greece, cannot be given in this place, as it would lead us to enter into historical and mythological questions beyond the limits of this Dictionary. The Corybantes, of whom we have to speak here, were the ministers or priests of Rhea or Cybele, the great mother of the gods, who was worshipped in Phrygia. In their solemn festivals they displayed the most extravagant fury in their dances in armour, as well as in the accompanying music of flutes, cymbals, and drums.¹ Hence *κορυβαντισμός* was the name given to an imaginary disease, in which persons felt as if some great noise were rattling in their ears.²

CORYBANTICA (*Κορυβαντική*), a festival and mysteries celebrated at Cnossus in Crete, in commemoration of one Corybas,³ who, in common with the Curetes, brought up Zeus, and concealed him from his father Cronos in that island. Other accounts say that the Corybantes, nine in number, independent of the Curetes, saved and educated Zeus; a third legend⁴ states that Corybas was the father of the Cretan Apollo who disputed the sovereignty of the island with Zeus. But to which of these three traditions the festival of the Corybantica owed its origin is uncertain, although the first, which was current in Crete itself, seems to be best entitled to the honour. All we know of the Corybantica is, that the person to be initiated was seated on a throne, and that those who initiated him formed a circle and danced around him. This part of the solemnity was called *θρόνωσις* or *θρονισμός*.⁵

CORYMBUS (*κόρυμβος*) was a particular mode of wearing the hair among the Greek women, which is explained in the article *COMA* (p. 291). The following woodcut, taken from Millingen,⁶ represents a woman whose hair is dressed in this manner.

Corymbium is used in a similar sense by Petronius.⁷

CORYS (*κόρυς*). (*Vid. GALEA*.)

CORVUS, I. a sort of crane, used by C. Duilius against the Carthaginian fleet in the battle fought off Mylae, in Sicily (B.C. 260). The Romans, we are told, being unused to the sea, saw that their

only chance of victory was by bringing a sea-fight to resemble one on land. For this purpose they invented a machine, of which Polybius¹ has left a minute, although not very perspicuous, description. In the fore part of the ship a round pole was fixed perpendicularly, twenty-four feet in height and about nine inches in diameter; at the top of this was a pivot, upon which a ladder was set, thirty-six feet in length and four in breadth. The ladder was guarded by crossbeams, fastened to the upright pole by a ring of wood, which turned with the pivot above. Along the ladder a rope was passed, one end of which took hold of the *corvus* by means of a ring. The *corvus* itself was a strong piece of iron, with a spike at the end, which was raised or lowered by drawing in or letting out the rope. When an enemy's ship drew near, the machine was turned outward, by means of the pivot, in the direction of the assailant. Another part of the machine, which Polybius has not clearly described, is a breastwork, let down (as it would seem) from the ladder, and serving as a bridge, on which to board the enemy's vessel.² By means of these cranes, the Carthaginian ships were either broken or closely locked with the Roman, and Duilius gained a complete victory.

The word *corvus* is also applied to various kinds of grappling-hooks, such as the *corvus demolitor*, mentioned by Vitruvius³ for pulling down walls, or the terrible engine spoken of by Tacitus,⁴ which, being fixed on the walls of a fortified place, and suddenly let down, carried off one of the besieging party, and then, by a turn of the machine, put him down within the walls. The word is used by Celsus for a scalpel. It is hardly necessary to remark that all these meanings have their origin in the supposed resemblance of the various instruments to the beak of a raven.

*CORVUS, the Crow. (Vid. CORONE.)

*CORYLUS (κόρυλος), the Hazel-tree, or *Corylus Avellana*. (Vid. AVELLANA NUX.)

CORYTOS or CORYTUS (γωρυτός, κωρυτός), a Bow-case. This was worn suspended by a belt (vid. BALTEUS) over the right shoulder,⁵ and it frequently held the arrows as well as the bow (*sagittiferi corythi*).⁶ On this account, it is often confounded with the PHARETRA or quiver.

It is generally carried by the armed Persians, who are represented on the Persepolitan bas-reliefs; and in this, as in many other respects, we observe the agreement between them and the European nations situated to the north of the Euxine Sea :

*‘In quibus est nemo, qui non corytōn et arcum
Telaque vipereo lurida felle gerat.’*¹¹

Though its use was comparatively rare among the Greeks and Romans, we find it exhibited in a bas-relief in the Museo Pio-Clementino,² which adorned the front of a temple of Hercules near Tibur. (Vid. AECUS.) This bow-case seems to be of leather. See the preceding woodcut.

COSMETÆ, a class of slaves among the Romans, whose duty it was to dress and adorn ladies.³ Some writers on antiquities, and among them Böttiger in his *Sabina*,⁴ have supposed that the *cosmetæ* were female slaves, but the passage of Juvenal is alone sufficient to refute this opinion; for it was not customary for female slaves to take off their tunics when a punishment was to be inflicted upon them. There was, indeed, a class of female slaves who were employed for the same purposes as the *cosmetæ*; but they were called *cosmetria*, a name which Nævius chose as the title for one of his comedies.⁵

COSMI (κοσμοί). The social and political institutions of Crete were so completely Dorian in character, and so similar to the Spartan, that it was a disputed point among the ancients whether the Spartan constitution had its origin there, or the Cretan was transferred from Laconia to Crete. The historian Ephorus⁶ expressly states that the Spartan institutions had their origin in Crete, but were perfected and completed in Sparta; so that there is good reason for the assertion of Müller⁷ “that the constitution founded on the principles of the Doric race was there first moulded into a consistent shape, but even in a more simple and unqualified form than in Sparta at a subsequent period.” Thus much, at any rate, we know for certain, that there were various Dorian cities in the island, the political arrangements of which so closely resembled each other, that one form of government was ascribed to all.⁸ In the earliest ages of which we have historical information, this was an aristocracy consisting of three component bodies, the *cosmi*, the *gerusia*, and the *ecclesia*. The *cosmi* were ten in number, and are by Aristotle, Ephorus, and Cicero⁹ compared to the ephors at Sparta. Müller, however,¹⁰ compares them with the Spartan kings, and supposes them to have succeeded to the functions of the kingly office; which Aristotle (probably alluding to the age of Minos) tells us was at one time established in Crete. These *cosmi* were ten in number, and chosen, not from the body of the people, but from certain *γένη* or houses, which were probably of more pure Doric or Achaean descent than their neighbours. The first of them in rank was called *protocosmus*, and gave his name to the year. They commanded in war, and also conducted the business of the state with the representatives and ambassadors of other cities. With respect to the domestic government of the state, they appear to have exercised a joint authority with the members of the *γενοβασία*, as they are said to have consulted with them on the most important matters.¹¹ In the times subsequent to the age of Alexander, they also performed certain duties which bore a resemblance to the introduction of the lawsuits into court by the Athenian magistrates.¹² Their period of office was a year; but any of them during that time might resign, and was also liable to deposition by his colleagues. In some cases, too, they might be indicted for neglect of their duties

1. (Ovid, *Trist.*, v., vii., 15.)—2. (Tom. iv., tav. 43.)—3. (Juv., Sat., vi., 476.)—4. (i., 22.)—5. (See Varro, *De Ling. Lat.*, vi., 3, p. 92, ed. Bip., where *cosmetria* is to be read instead of *cosmotia*, and Heindorf ad Horat., Sat., i., ii., 98.)—6. (ap. Strab., x., 4.)—7. (Dorians, iii., 1, § 8.)—8. (Thirlwall, *Hist. Greece*, i., 294.)—9. (De Rep., ii., 33.)—10. (iii., 8, § 1.)—11. (Ephor. ap. Strab., x., 4.)—12. (Müller, l. c.)

On the whole, we may conclude that they formed the executive and chief power in most of the cities of Crete.

The *γερανοία*, or council of elders, called by the Cretans *βουλή*, consisted, according to Aristotle,¹ of thirty members who had formerly been cosmi, and were in other respects approved of (*τὰ ἀλλὰ δόκιμοι κρινόμενοι*²). They retained their office for life, and are said to have decided in all matters that came before them according to their own judgment, and not agreeably to any fixed code of laws. They are also said to have been irresponsible, which, however, hardly implies that they were independent of the "unwritten law" of custom and usage, or uninfluenced by any fixed principles.³ On important occasions, as we have before remarked, they were *ξύμβουλοι*, or councillors of the cosmi.

The democratic element of the ecclesia was almost powerless in the constitution; its privileges, too, seem to have been merely a matter of form; for, as Aristotle observes, it exercised no function of government except ratifying the decrees of the *γέροντες* and the *κατοί*. It is, indeed, not improbable that it was only summoned to give its sanction to these decrees; and, though this may appear to imply the power of withholding assent, still the force of habit and custom would prevent such an alternative being attempted, or, perhaps, even thought of.⁴

From these observations, it is clear that the Cretan constitution was formerly a Dorian aristocracy, which, in the age of Aristotle, had degenerated to what he calls a *δυναστεία*, i. e., a government vested in a few privileged families. These quarrelled one among the other, and raised factions or parties, in which the demus joined, so that the constitution was frequently broken up, and a temporary monarchy, or, rather, anarchy, established on its ruins. The cosmi were, in fact, often deposed by the most powerful citizens, when the latter wished to impede the course of justice against themselves (*μὴ δοῦναι δίκας*), and an *ἀκοσμία* then ensued, without any legal magistrates at the head of the state.

In the time of Polybius, the power of the aristocracy had been completely overthrown; for he tells us that the election of the magistrates was annual, and determined by democratical principles.⁵ In other respects, also, he points out a difference between the institutions of Crete and those of Lycurgus at Sparta, to which they had been compared by other writers.

Müller observes that the cosmi were, so far as we know, the chief magistrates in all the cities of Crete, and that the constitution of these cities was in all essential points the same; a proof that their political institutions were determined by the principles of the governing, i. e., the Doric, race.

We will now briefly explain some of the social relations of the Cretans, which were almost identical with those of the Spartans.

The inhabitants of the Dorian part of the island were divided into three classes, the freemen, the *periæci* or *ὑπήκοοι*, and the slaves. The second class was as old as the time of Minos, and was undoubtedly composed of the descendants of the conquered population; they lived in the rural districts, round the *πόλεις* of the conquerors; and, though personally free, yet exercised none of the privileges or influence of citizens, either in the administration and enactment of the laws, or the use of heavy arms. They occupied certain lands, for which they paid a yearly tribute or rent, supposed, from a statement in Athenæus,⁶ to have been an Æginetic stat-

er. The expression of Dosiadas, from whom Athenæus quotes, namely, *τῶν δούλων ἑκάστος*, probably refers to the *periæci*, *δούλοι* being used as a generic term for those who were not full and free citizens.

The slaves were divided into two classes, the public bondsmen (*ἡ κοινὴ δουλεία*), and the slaves of individuals. The former were called the *μνοῖα*, *μνωῖα*, or *Μινωῖα σύναδος*: the latter, *ἀφαιμῶνται* or *κλαρώται*. The *ἀφαιμῶνται* were so named from the cultivation of the lots of land, or *ἀφαιμῖαι*, assigned to private citizens, and were therefore agricultural bondsmen (*οἱ κατ' ἄγρον*⁷). The *μνωῖα* was distinguished, by more precise writers, both from the *periæci* and the *aphaimiotæ*; so that it has been concluded that every state in Crete possessed a public domain, cultivated by the *μνωῖα*, just as the private allotments were by the bondsmen of the individual proprietors. We would here observe, with Mr. Thirlwall, that the word *μνωῖα* is more probably connected with *δμῶς* than Minos.

The origin of the class called *μνωῖα*, and the *κλαρώται*, was probably twofold; for the analogy of other cases would lead us to suppose that they consisted partly of the slaves of the conquered freemen of the country, and partly of such freemen as rose against the conquerors, and were by them reduced to bondage. But, besides these, there was also a class of household servants employed in menial labours, and called *χρυσόνηται*: they were, as their name denotes, purchased, and imported from foreign countries.

**COSSYPHUS* or *COPSTICHUS* (*κόσσυφος*, *κόψιχος*), the Blackbird or Merle, the *Turdus Merula*, L. It is the same with the *Merula vulgaris* of the later authorities on Natural History. Aristotle also makes mention of a white species found among the mountains of Arcadia.

**COSTUM* (*κόστος*), an aromatic shrub, which yielded a fragrant ointment, commonly supposed to be Spikenard. Woodville says of it: "Some have thought the Zedoary to be the *κόστος* of Dioscorides," the *Guiduar* of Avicenna, and the *Zerumbet* of Serapion." After comparing the descriptions of Dioscorides and Serapion, Adams is satisfied that the *Zerumbet* of Serapion is the *Zedoary*, but that it is not the *κόστος* of the Greeks; for both Serapion and Rhases, according to him, treat separately of the *κόστος* by name in another place. "Geoffrey," remarks Adams, "confesses his ignorance of it. Sprengel and Stackhouse name it the *Costus Arabicus* (a plant, by-the-way, so rare, that Linnæus had never seen it). Dr. Hüll, however, was of a different opinion regarding it: he says, 'Our *Costus Arabicus* does not seem to be the same with either of the kinds mentioned by the Greeks and Arabians.' Upon the whole, there is not an article in the *Materia Medica* of the ancients about which there is greater uncertainty. We shall only add regarding it, that although, as we have already stated, *Zedoary* be not the same substance as the ancient *Costus*, it would appear that the one was sometimes used as a substitute for the other in the composition of the *Mithradate*."⁸

COTHURNUS (*κόθορνος*), a Boot. This was a particular kind of covering for the foot, included under the general term *Calceus*; whence Pliny says,⁹ *calceatus cothurnis*, i. e., wearing boots. Its essential distinction was its height; it rose above the middle of the leg, so as to surround the calf (*alte suras vineire cothurno*¹⁰), and sometimes it reached as high as the knees.⁶ It was worn principally by horsemen, by hunters, and by men of rank and authority. The ancient marbles, representing these

1. (Polit., ii., 7.).—2. (Ephor. ap. Strab., i. c.)—3. (Thirlwall, Hist. Greece, i., 186.).—4. (Thirlwall, i. c.—Goettling, Excurs. ad Aristot., ii., 7.).—5. (Polyb., vi., 44.).—6. (iv., 143.)

1. (Sesier. ap. Athen., vi., 263.).—2. (i., 15.).—3. (Adams, Ap. read., s. v.).—4. (H. N., vii., 20.).—5. (Virg., Æn., i., 337.).—6. (Millin, Vases Ant., vol. i., pl. 19 and 72.)

different characters, show that the cothurnus was often ornamented in a very tasteful and elaborate manner. The boots of the ancients were laced in front, and it was the object in so doing to make them fit the leg as closely as possible. The paws and head of the wild animal out of whose hide they were made, sometimes turned down like flaps on the side of the wearer's leg. The skin or leather was dyed purple (*purpureo cothurno*¹), or of other splendid colours. The patricians of Rome wore a small ivory crescent (*luna*) attached to their boots.

It is evident, from the various representations of the cothurnus in ancient statues, that its sole was commonly of the ordinary thickness. But it was sometimes made much thicker than usual, probably by the insertion of slices of cork.² The object was to add to the apparent stature of the wearer; and this was done either in the case of women who were not so tall as they wished to appear,³ or of the actors in Athenian tragedy, who assumed the cothurnus as a grand and dignified species of calceamentum, and had the soles made unusually thick, as one of the methods adopted in order to magnify their whole appearance.⁴ Hence tragedy in general was called *cothurnus*.⁵

As the cothurnus was commonly worn in hunting, it is represented both by poets and statuary as a part of the costume of Diana.⁶ It was also attributed to Bacchus⁷ and to Mercury.⁸ The accompanying woodcut shows two cothurni from statues in the Museo Pio-Clementino.⁹ That on the left hand is from a statue of Diana Succincta, *i. e.*, with the chlamys girt round her breast, and attired for the chase (*vid. CHLAMYD*), and that on the right is from a statue of the goddess Roma, agreeing with the description of her in Sidonius Apollinaris.¹⁰

*COTINOS (κότινος), the wild Olive, or *Olca sylvestris*, L. called also *Ἐλαία ἄγρια*, *ἀγριελαία*, *ἀγριέλαιος*, and *Oleaster*. The name given to it by the modern Greeks is *ἀγροέλαια*, and by the Turks *Jaban Zeitan Agagi*. It is a wild sort of olive-tree, differing in some respects from the domesticated olive, as crabs do from apples. It is smaller besides, has prickly branches, a short, hard leaf, and small, bitter fruit. According to Theophrastus, it was but little improved by pruning and transplanting. The crown given at the Olympic Games was made of it, probably on account of its being more enduring than the domesticated kind. The legend, however, was, that Hercules brought this tree into Greece from the banks of the Ister. The *φύλλα* of Homer is a vari-

ety of the *κότινος*. "That plant," observes Martyn, "which is cultivated in our gardens under the name of *Oleaster*, is not an olive. Tournefort refers it to his genus of *Elæagnus*. It grows in Syria, Ethiopia, and on Mount Lebanon. Crusius observed it in great plenty, also, near Guadix, a city in the kingdom of Granada, as also in the south of France and in Germany. It is thought to be the Cappadocian Jujubes, which are mentioned by Pliny among the coronary flowers: '*Zizipha, quæ et Cappadocia vocantur: his odoratus similis olearum floribus*.' The flowers of the *Elæagnus* are much like those of the Olive, but the ovary of the *Elæagnus* is placed below the petal, whereas that of the Olive is contained within the petal. They are very sweet, and may be smelt at a distance."¹¹

*COTO'NEUM MALUM, another name for the *Cydonium malum*, or Quince. (*vid. CYDONIUM MALUM*.)

COT'TABUS (κότταβος, Ionic *κόσσαβος* or *ὀτταβος*), a social game, which was introduced from Sicily into Greece,² where it became one of the favourite amusements of young people after their repasts. The simplest way in which it originally was played was this: One of the company threw out of a goblet a certain quantity of pure wine, at a certain distance, into a metal basin, endeavouring to perform this exploit in such a manner as not to spill any of the wine. While he was doing this, he either thought of or pronounced the name of his mistress,³ and from the more or less full and pure sound with which the wine struck against the metal basin, the lover drew his conclusions respecting the attachment of the object of his love. The sound, as well as the wine by which it was produced, were called *λάταξ* or *κότταβος*: the metal basin had various names, either *κοττάβιον*, or *κοτταβέιον*, or *λαγαγέιον*, or *χάλκειον*, or *λεκάνη*, or *σκάφη*.⁴ The action of throwing the wine, and sometimes the goblet itself, was called *ἀγκύλη*, because the persons engaged in the game turned round the right hand with great dexterity, on which they prided themselves. Hence Æschylus spoke of *κότταβοι ἀγκύλητοί*.⁵ Thus the cottabus, in its simplest form, was nothing but one of the many methods by which lovers tried to discover whether their love was returned or not. But this simple amusement soon assumed a variety of different characters, and became, in some instances, a regular contest, with prizes for the victor. One of the most celebrated modes in which it was carried on is described by Athenæus,⁶ and in the *Etymologicon Magnum*, and was called *δι' ὀξυβάφω*. A basin was filled with water, with small empty bowls swimming upon it. Into these the young men, one after another, threw the remnant of the wine from their goblets, and he who had the good fortune to drown most of the bowls obtained the prize (*κοττάβιον*), consisting either of simple cakes, sweetmeats, or sesame-cakes.

A third and more complicated form of the cottabus is thus described by Suidas:⁷ A long piece of wood being erected on the ground, another was placed upon it in a horizontal direction, with two dishes hanging down from each end; underneath each dish a vessel full of water was placed, in each of which stood a gilt brazen statue, called *μάνης*. Every one who took part in the game stood at a distance, holding a cup full of wine, which he endeavoured to throw into one of the dishes, in order that, struck down by the weight, it might knock against the head of the statue which was concealed under the water. He who spilled least of the wine

gained the victory, and thereby knew that he was loved by his mistress.¹

A fourth kind of cottabus, which was called *κότταβος κατακτός* (ἀπὸ τοῦ κατὰ γινεὶν τὸν κότταβον), is described by Pollux,² the scholiast on Aristophanes,³ and Athenæus.⁴ The so-called *μύνης* was placed upon a pillar similar to a candelabrum, and the dish hanging over it must, by means of wine projected from the goblet, be thrown upon it, and thence fall into a basin filled with water, which, from this fall, gave forth a sound; and he who produced the strongest was the victor, and received prizes, consisting of eggs, cakes, and sweetmeats.

This brief description of four various forms of the cottabus may be sufficient to show the general character of this game; and it is only necessary to add, that the chief object to be accomplished, in all the various modifications of the cottabus, was to throw the wine out of the goblet in such a manner that it should remain together and nothing be spilled, and that it should produce the purest and strongest possible sound in the place where it was thrown. In Sicily, the popularity of this game was so great, that houses were built for the especial purpose of playing the cottabus in them. Those readers who wish to become fully acquainted with all the various forms of this game, may consult Athenæus,⁵ the Greek lexicographers, and, above all, Groddeck,⁶ who has collected and described nine different forms in which it was played.⁷ Becker is of opinion that all of them were but modifications of two principal forms.⁸

*COTTUS (κόττος), a species of Fish, supposed to be the *Zeus Faber*, L., or the Doree. The name in the common editions of Aristotle occurs at H. A., iv., 8, where, however, Schneider reads *βοίτος*, and refers it to the river Gudgeon.⁹

*COTTYPHUS (κόττυφος), a species of Fish, the same with the *Labrus merula*, called in French the *Merle*.¹⁰

*COTURNIX. (Vid. PERDIX.)

COTYTIA or COTTYTES (κοτύττια, κόττυτες), a festival which was originally celebrated by the Edonians of Thrace, in honour of a goddess called Cotys or Cotytto.¹¹ It was held at night, and, according to Strabo, resembled the festivals of the Cabiri and the Phrygian Cybele. But the worship of Cotys, together with the festival of the Cotytia, were adopted by several Greek states, chiefly those which were induced by their commercial interest to maintain friendly relations with Thrace. Among these Corinth is expressly mentioned by Suidas, and Strabo¹² seems to suggest that the worship of Cotys was adopted by the Athenians, who, as he observes, were as hospitable to foreign gods as they were to foreigners in general.¹³ The priests of the goddess were formerly supposed to have borne the name of baptæ; but Buttman has shown that this opinion is utterly groundless. Her festivals were notorious among the ancients for the dissolute manner and the debaucheries with which they were celebrated.¹⁴ Another festival of the same name was celebrated in Sicily,¹⁵ where boughs hung with cake and fruit were carried about, which any person had a right to pluck off if he chose; but we have no mention that this festival was polluted with any

of the licentious practices which disgraced those of Thrace and Greece, unless we refer the allusion made by Theocritus to the Cotytia, to the Sicilian festival.¹

COTYLA (κοτύλη) was a measure of capacity among the Romans and Greeks: by the former it was also called *hemina*; by the latter, *τροβίλιον* and *ήμίνα* or *ήμίμνα*. It was the half of the sextarius or *ξίστης*, and contained 6 cyathi, = (on Mr. Hussey's computation) .4955 of a pint English.

This measure was used by physicians with a graduated scale marked on it, like our own chemical measures, for measuring out given weights of fluids, especially oil. A vessel of horn, of a cubic or cylindrical shape, of the capacity of a cotyla, was divided into twelve equal parts by lines cut on its side. The whole vessel was called *litra*, and each of the parts an ounce (*uncia*). This measure held nine ounces (by weight) of oil, so that the ratio of the weight of the oil to the number of ounces it occupied in the measure would be 9 : 12 or 3 : 4.²

*COTYLE'DON (κοτυλήδων), a plant, called in English Navelwort. The two species described by Dioscorides³ may be confidently referred, according to Adams, to the *Cotyledon umbilicus* of C. serrata.

*KOYKIO'OPON ΔΕΝΑΡΟΝ (κοκκιοφόρον δένδρον), a sort of Palm-tree. Stackhouse suggests that it may have been the *Palma Thebaica*, called "Doom-tree" in Bruce's Travels.⁴

COVINUS (Celtic *kovain*), a kind of car, the spokes of which were armed with long sickles, and which was used as a scythe-chariot chiefly by the ancient Belgians and Britons.⁵ The Romans designated by the name of covinus a kind of travelling carriage, which seems to have been covered on all sides with the exception of the front. It had no seat for a driver, but was conducted by the traveller himself, who sat inside.⁶ There must have been a great similarity between the Belgian scythe-chariot and the Roman travelling carriage, as the name of the one was transferred to the other, and we may justly conclude that the Belgian car was likewise covered on all sides except the front, and that it was occupied by one man, the covinarius only, who was, by the structure of his car, sufficiently protected. The *covinarii* (this word occurs only in Tacitus) seem to have constituted a regular and distinct part of a British army.⁷

COUREUS (κουρεύς). (Vid. BARBA.)

*GRAMBE. (Vid. BRASSICA.)

*CRANON (κραγών), formerly held to be a species of *Squilla*. "The term is now used in a generic sense by late naturalists," observes Adams: "thus the common shrimp is named the *Crangon vulgaris*. It is worthy of remark, however, that Cuvier and Schneider contend that the *κραγών* of the Greeks corresponds to the *Cancer digitalis*."¹

*CRANIA or CRANEIA (κράνια, κρᾶνεα). "All agree," remarks Adams, "that the *κράνεα ἄρρη* is the *Cornus mascula*, L., called in English the Cornelian Cherry, or Male Cornel-tree." For the other, see *THELYCRANEIA* (θηλυκρᾶνεα).²

CRANOS. (Vid. GALEA.)

*CRATÆGUS (κραταιός). Sprengel refers the tree described by Theophrastus under this name to the Azorola, or *Cratægus Azorolus*, but Stackhouse to the *C. terminalis*. The plant of this name

described by Theophrastus in another part of his work was most probably the same as the *Cratagion* (κραταίονον).¹

*CRATÆGONON (κραταίονον), a plant, to which Stephens gives the French name of *Courage*. Stackhouse refers it to the *Euphrasia odontitis*, now called *Bartsia odontitis*. Sprengel, however, prefers the *Polygonum Persicaria*.²

CRATER (κρατήρ, Ionic κρητήρ; Lat. *crater* or *cratera*, from κρανννμ, I mix), a vessel in which the wine, according to the custom of the ancients, who very seldom drank it pure, was mixed with water, and from which the cups were filled. In the Homeric age the mixture was always made in the dining-room by heralds or young men (κοῦροι³). The use of the vessel is sufficiently clear from the expressions so frequent in the poems of Homer: κρητήρα κεράσασθαι, i. e., οἶνον καὶ ὕδωρ ἐν κρητῆρι μίγειν: πίνειν κρητήρα (to empty the crater); κρητήρα στήσασθαι (*cratera statuere*, to place the filled crater near the table); κρητήρας ἐπιστήθεσθαι ποτοῖο (to fill the craters to the brim⁴). The crater, in the Homeric age, was generally of silver,⁵ sometimes with a gold edge,⁶ and sometimes all gold or gilt.⁷ It stood upon a tripod, and its ordinary place in the *uēgáron* was in the most honourable part of the room, at the farthest end from the entrance, and near the seat of the most distinguished among the guests.⁸ The size of the crater seems to have varied according to the number of guests; for where their number is increased, a larger crater is asked for.⁹ It would seem, at least at a later period (for in the Homeric poems we find no traces of the custom), that three craters were filled at every feast after the tables were removed. They must, of course, have varied in size according to the number of guests. According to Suidas,¹⁰ the first was dedicated to Hermes, the second to Charisius, and the third to Zeus Soter; but others called them by different names; thus the first, or, according to others, the last, was also designated the κρατήρ ἀγαθοῦ δαίμονος, the crater of the good genius,¹¹ κρατήρ ὑγιείας and μετανιπτρίς or μετάνιπτρον, because it was the crater from which the cups were filled after the washing of the hands.¹²

Craters were among the first things on the embellishment of which the ancient artists exercised their skill. Homer¹³ mentions, among the prizes proposed by Achilles, a beautifully-wrought silver crater, the work of the ingenious Sidonians, which, by the elegance of its workmanship, excelled all others on the whole earth. In the reign of Cræsus, king of Lydia, the Lacedæmonians sent to that king a brazen crater, the border of which was all over ornamented with figures (ζώδια), and which was of such an enormous size that it contained 300 amphoræ.¹⁴ Cræsus himself dedicated to the Delphic god two huge craters, which the Delphians believed to be the work of Theodorus of Samos, and Herodotus¹⁵ was induced, by the beauty of their workmanship, to think the same. It was about OI. 35 that the Samians dedicated six talents (the tenth of the profits made by Colæus on his voyage to Tartessus) to Hera, in the shape of an immense brazen crater, the border of which was adorned with projecting heads of griffons. This crater, which Herodotus¹⁶ calls Argive (from which we must infer that the Argive artists were celebrated for their craters),

was supported by three colossal brazen statues, seven yards long, with their knees closed together.

The number of craters dedicated in temples seems everywhere to have been very great. Livius Andronicus, in his *Equus Trojanus*, represented Agamemnon returning from Troy with no less than 3000 craters,¹ and Cicero² says that Verres carried away from Syracuse the most beautiful brazen craters, which most probably belonged to the various temples of that city. But craters were not only dedicated to the gods as anathemata, but were used on various solemn occasions in their service. Thus we read in Theocritus:³ "I shall offer to the muses a crater full of fresh milk and sweet olive-oil." In sacrifices the libation was always taken from a crater;⁴ and sailors, before they set out on their journey, used to take the libation with cups from a crater, and pour it into the sea.⁵ The name crater was also sometimes used as synonymous with σιτήριον, *silula*, a pail in which water was fetched.⁶

The Romans used their *crater* or *cratera* for the same purposes for which it was used in Greece; but the most elegant specimens were, like most other works of art, made by Greeks.⁷

CRATES (ράπος), a Hurdle, used by the ancients for several purposes. First, in war, especially in assaulting a city or camp, they were placed before or over the head of the soldier, to shield off the enemy's missiles.⁸ From the *plutei*, which were employed in the same way, they differed only in being without the covering of raw hides. A lighter kind was thrown down to make a bridge over fosses, for examples of which see Cæsar, *De Bell. Gall.*, vii., 81, 86. By the besieged⁹ they were used joined together, so as to form what Vegetius calls a *metella*, and filled with stones: these were then poised between two of the battlements, and, as the storming party approached upon the ladders, overturned on their heads.¹⁰

A capital punishment was called by this name, whence the phrase *sub cratē necari*. The criminal was thrown into a pit or well, and hurdles laid upon him, over which stones were afterward heaped.¹¹

Crates, called *ficario*, were used by the country people upon which to dry figs, grapes, &c., in the rays of the sun.¹² These, as Columella informs us, were made of sedge or straw, and also employed as a sort of matting to screen the fruit from the weather. Virgil¹³ recommends the use of hurdles in agriculture to level the ground after it has been turned up with the heavy rake (*rastrum*). Any texture of rods or twigs seems to have been called by the general name *crates*.

CREPIDA (κρηπίς), *dim.* CREPIDULA, a Slipper. Slippers were worn with the pallium, not with the toga, and were properly characteristic of the Greeks, though adopted from them by the Romans. Hence Suetonius says of the Emperor Tiberius,¹⁴ "*Deposito patrio habitu, redegit se ad pallium et crepidas.*" They were also worn by the Macedonians,¹⁵ and with the chlamys.¹⁶ As the coturnus was assumed by tragedians, because it was adapted to be easy of a grand and stately attire, the actors of comedy, on the other hand, wore crepidæ and other cheap and common coverings for the feet. ΒΑΧΧΑ, ΣΟΚΚΟΣ.) Also, whereas the ancients had their more finished boots and shoes made right and left, their slippers, on the other hand, were made to fit both feet indifferently.¹

*CRETA, in a general sense, means any whitish earth or clay, such as potter's clay, pipe-clay, &c. Thus Columella² speaks of a kind of *Creta* out of which wine-jars and dishes were made: Virgil³ calls it "tough" (*tenax*); and the ancient writers on Agriculture give the same epithet to marl which was employed to manure land.⁴ In a more special sense, several varieties of *Creta* occur in the ancient writers. Thus: I. *Creta*, properly so called (*Terra Creta*, Κρητική γῆ), is our chalk, which obtained its name from the island of Crete, where it abounded. The ancients employed it in medicine, as weaker than the *Terra Chia*; and they were also acquainted with its use as a cleanser of silver vessels.⁵—II. *Creta annularia*. "The earth called *annularia*, spoken of by Pliny in connexion with Selinusian, and which was stained with woad to produce an imitation of *Indicum*,"⁶ is probably," observes Dr. Moore, "the same with the *annulare* (*viridum*) mentioned afterward⁷ by the same writer, and which was so called because made of clay coloured with common green ring-stones. This, at least, strange as it is, appears to be the only sense we can extract from Pliny's words, the meaning of which Beckmann acknowledges he had not been able to discover.⁸ The same author inclines to think that the earth called *annularia* received its name from its use in sealing, a purpose to which certain kinds of earth were anciently applied."⁹—III. *Creta Cimolia*. (*Vid.* CIMOLIA TERRA.)—IV. *Creta Eretria*, a species of earth obtained from the neighbourhood of Eretria, in the island of Eubœa. It is, according to Hill, a fine pure earth, of a grayish white, moderately heavy, and of a smooth surface, not staining the hands, and readily crumbling between the fingers. It burns to a perfect whiteness, acquiring a stony hardness and an acrimonious taste, and in a violent fire runs into a very pure pale blue glass. What distinguishes it, however, in a more marked manner from other earths is, that if a little be wetted and drawn over a plate of brass or copper, so as to mark a line, the mark will in a little time appear bluish. This is a character originally recorded of it by Dioscorides, and which Hill explains by assigning the earth in question alkaline property in a much stronger degree than other earths possess. In the *Materia Medica* of former days, it was used as an astrigent and sudorific. The ancients mention another Eretrian earth of a pure white, but this appears to have been no other than the true white Boile of Armenia¹⁰—V. *Creta Sarda*, a species of earth obtained from the island of Sardinia. Pliny calls it "*vilissima omnium cimolia generum*," the cheapest kind of Cimolite. It was, however, used in the first place to cleanse garments that were not dyed, which were then fumigated with sulphur, and finally scoured with Cimolia Terra.¹¹—VI. *Creta Selinusia*, an earth obtained from the neighbourhood of Selinus in Sicily, whence its name. It is now found in various parts of the globe; the finest kind, however, is the Sicilian. Dioscorides describes it as of a very bright and shining white, friable, and very readily disuniting and diffusing itself in water. It was used by the ancient physicians as an astrigent, and among females as a cosmetic.¹²

*CREX (κρέξ), a species of Bird with a creaking

note, whence its name. Some commentators suppose it the same as the *ορνυγομήτρα* of Aristotle, who treats of them separately. "It is generally held," says Adams, "to be the Land Rail or Corn Crane, namely, the *Rallus Crex*, L., or *Ortygometra Crex* of later naturalists; but if Tzetzes was correct in describing it as a sea-bird, resembling the Egyptian ibis, this opinion must be admitted to be untenable. Dr. Trail suggests that the one may have been the Land, and the other the Water Rail."¹

CRE'TIO HEREDITA'TIS. (*Vid.* HEREDITAS.)

CRIMEN. Though this word occurs so frequently, it is not easy to fix its meaning. Crimen is often equivalent to *accusatio* (*κατηγορία*); but it frequently means an act which is legally punishable. In this latter sense there seems to be no exact definition of it given by the Roman jurists. According to some modern writers, *crimina* are either public or private; but if this definition is admitted, we have still to determine the notions of public and private. The truth seems to be, that there was a want of precise terminology as to what, in common language, are called criminal offences among the Romans; and this defect appears in other systems of jurisprudence. Crimen has been also defined by modern writers to be that which is capitalis (*vid.* CAPUT), as murder, &c.; delictum that which is a private injury (*privata noxa*); a distinction founded apparently on Dig. xxi., tit. 1, s. 17, § 15.

Delicts (*delicta*) were *maleficia*, wrongful acts,¹ and the foundation of one class of obligations: these delicts, as enumerated by Gaius,² are *furtum*, *rapina*, *damnum*, *injuria*; they gave a right of action to the individual injured, and entitled him to compensation. These delicts were sometimes called *crimina*.⁴ Crimen, therefore, is sometimes applied to that class of *delicta* called *privata*; and, accordingly, *crimen* may be viewed as a genus, of which the *delicta* enumerated by Gaius are a species. But *crimen* and *delictum* are sometimes used as synonymous.⁶ In one passage⁷ we read of *majora delicta* (which, of course, imply *minora*), which expression is coupled with the expression *omnia crimina* in such a way that the inference of *crimen* containing *delictum* is, so far as concerns this passage, necessary; for the *omnia crimina* comprehend (in this passage) more than the *delicta majora*.

Some *judicia publica* were *capitalia*, and some were not. *Judicia*, which concerned *crimina*, were not, for that reason only, *publica*. There were, therefore, *crimina* which were not tried in *judicia publica*. This is consistent with what is stated above as to those *crimina* (*delicta*) which were the subject of actions. Those *crimina* only were the subject of *judicia publica* which were made so by special laws; such as the *Julia de adulteris*, *Cornelia de sicariis et veneficis*, *Pompeia de parricidiis*, *Julia peculatus*, *Cornelia de testamentis*, *Julia de vi privata*, *Julia de vi publica*, *Julia de ambitu*, *Julia repetundarum*, *Julia de annonæ*.⁸ So far as Cicero's⁹ enumerates *causæ criminum*, they were *causæ publici judicii*; but he adds,¹⁰ "*crimen est multitudo infinita*." Again, *infamia* was not the consequence of every *crimen*, but only of those *crimina* which were "*publici judicii*." A condemnation, therefore, for a *crimen*, not *publici judicii*, was not followed by *infamia*, unless the *crimen* laid the foundation of an *actio*, in which, even in the case of a *privatum judicium*, the condemnation was followed by *infamia*; as *furtum*, *rapina*, *injuria*.¹¹ Crimen, then, must be an act which, if

(*Dig.* 48, tit. 19, s. 1.)—7. (*Dig.* 48, tit. 19, s. 5.)—8. (*Dig.* 48, tit. 1, s. 1.)—9. (*De Orat.*, p., 25.)—10. (*ii.*, 31.)—11. (*Dig.* 48, tit. 1, s. 7.)

proved against the offender, subjected him to some punishment, the consequence of which was infamia; but it would not therefore follow that infamia was only the consequence of a crimen.

Most modern writers on Roman law have considered delicta as the general term, which they have subdivided into delicta publica and privata. The legal consequences of delicta in this sense were compensation, punishment, and infamia as a consequence of the other two. The division of delicta into publica and privata had, doubtless, partly its origin in the opinion generally entertained of the nature of the delict; but the legal distinction must be derived from a consideration of the form of obtaining redress for, or punishing, the wrong. Those delicta which were punishable according to special leges, senatus consulta, and constitutions, and were prosecuted in judicia publica, were apparently more especially called crimina; and the penalties, in case of conviction, were loss of life, of freedom, of civitas, and the consequent infamia, and sometimes pecuniary penalties also. Those delicta not provided for as above mentioned, were punishable by action (actiones penales), and were the subjects of judicia privata, in which pecuniary compensation was awarded to the injured party. At a later period, we find a class of crimina extraordinaria,¹ which are somewhat vaguely defined. They are offences which in the earlier law would have been the foundation of actions, but were assimilated, as to their punishment, to crimina publici iudicii. This new class of crimina (new as to the form of judicial proceedings) must have arisen from a growing opinion of the propriety of not limiting punishment, in certain cases, to compensation to the party injured. The person who inquired judicially extra ordinem, might affix what punishment he pleased, within reasonable limits.² Thus, if a person intended to prosecute his action, which was founded on malefîcium (delict), for pecuniary compensation, he followed the jus ordinarium; but if he wished to punish the offender otherwise (extra ordinem ejus rei pœnam exerceri (e?) velit), then he took criminal proceedings, "subscriptis in crimen."³

Delicta were farther distinguished as to the penalties as follows: Compensation might be demanded of the heredes of the wrong-doer; but the pœna was personal. The nature of the punishment also, as above intimated, formed a ground of distinction between delicta. Compensation could be sued for by the party injured: a penalty, which was not a direct benefit to the injured party, was sued for by the state, or by those to whom the power of prosecution was given, as in the case of the lex Julia de adulteris, &c. In the case of delicta publica, the intention of the doer was the main thing to be considered: the act, if done, was not for that reason only punished; nor if it remained incomplete, was it for that reason only unpunished. In the case of delicta privata, the injury, if done, was always compensated, even if it was merely culpa. (Vid. CULPA.)

CRIMINA EXTRAORDINARIA. (Vid. CRIMEN.)

*CRIMNUS or -UM (κρίμνος or -ον), the larger granules of bruised grains, called Groats in English. Damm, however, says it was also applied to Barley itself. He contends that κρι in Homer is a contraction from κρίμνος, and not from κρίθη.⁴

*CRINANTHEUM (κρινάνθημον), probably the *Sempervivum tectorum*, or House-leek. Such, at least, is the opinion of Sprengel and Dierbach.⁵

*CRINON (κρίνον), the Lily. (Vid. LILUM.)

*CRIOS (κρίος), I., a military engine. (Vid. ARI-

ES.)—II. The Ram. (Vid. OVIS.)—III. (κρίος or κρείος), A large fish, mentioned by Oppian and Ælian. It cannot be satisfactorily determined.¹—IV. (κρίος ἐρέβινθος), A species of the *Cicer arietanum*. (Vid. EREBINTHUS.)²

CRISTA. (Vid. GALEA.)

CRITAI (κριται), (judges). This name was applied by the Greeks to any person who did not judge of a thing like a δικαστής, according to positive laws, but according to his own sense of justice and equity.³ But at Athens a number of κριται were chosen by ballot from a number of selected candidates at every celebration of the Dionysia, and were called οἱ κριται, κατ' ἐξοχήν. Their office was to judge of the merits of the different choruses and dramatic poems, and to award the prizes to the victors.⁴ Their number is stated by Suidas (s. v. Ἐν πέντε κριτῶν γούνασι) to have been five for comedies; and G. Hermann has supposed, with great probability, that there were, on the whole, ten κριται, five for comedy and the same number for tragedy, one being taken from every tribe. The expression in Aristophanes, ἡλικὴν πᾶσι τοῖς κριταῖς, signifies to gain the victory by the unanimous consent of the five judges. For the complete literature of this subject, see K. F. Hermann's *Manual of the Pol. Ant. of Greece*, § 149, n. 13.

CROBYLOS. (Vid. COMA, p. 291.)

*CROCODILUS (κροκόδειλος), the Crocodile. The name properly denotes a small species of Lizard, and was merely given by the Greeks to the Crocodile itself, from the resemblance which the latter bore to this small creature,¹ just as our *Alligator* is the Portuguese "*al legado*," the Lizard. Hence Aristotle calls the Crocodile κοκκόδειλος ὁ ποτάμιος, and the Lizard κροκόδειλος ὁ χερσαῖος. The Egyptians, says Herodotus, called the Crocodile χάμινος: this, however, is a mere corruption in Greek of the Egyptian name *Misah* or *Emsooh*, which the Copts still retain in *Amsah*, and from which the Arabs have derived their modern appellation *Temsáh*. The ancient writers have left us accounts of this animal, but they are more or less imperfect. Thus Herodotus says² it is blind in the water; an evident error, unless he mean by the Greek term τυφλός, not "blind," but merely "dim-sighted," or "comparatively weak of sight," i. e., when compared with its keenness of vision on the land. So, again, Herodotus says it has no tongue. This, however, is a popular error: it has a tongue, like the rest of animals, but this is connected by a rough skin with the lower jaw; and, not being extensible, nor easily seen at first view, since it completely fills the cavity of the jaw between the two rows of teeth, it has been supposed to have no actual existence. Again, the Crocodile, according to Herodotus, does not move its lower jaw, but brings the upper one down in contact with it. Now the truth is just the other way: the lower jaw alone is moved, and not the upper. The lower jaw extends farther back than the skull, so that the neck must be somewhat bent when it is opened. The appearance thus produced has led to the very common error of believing that the Crocodile moves its upper jaw, which is, in fact, incapable of motion, except with the rest of its body. "Naturalists describe four species of the Crocodile, namely, *Crocodylus alligator*, *C. cayman*, *C. gaval*, and *C. candiverbera*. The third of these being found only in India, and the fourth being peculiar to America, it follows that the ancients could have had little acquaintance with any other species than the *Alliga-*

1. (Dig. 47, tit. 11.)—2. (Dig. 48, tit. 19, s. 13.)—3. (Dig. 47, tit. 1, s. 3.)—4. (Damm, *Lex. Hom.*, s. v.—Adams, *Append.*, s. v.)—5. (Hippocr., *Morb. Mulier.*—Adams, *Append.*, s. v.)

tor and the *Cayman*. Ælian, however, must be supposed to allude to the *Gavial* when he mentions the Crocodile of the Ganges. Both Linnæus and Buffon reckon the first two as mere varieties, but they are now generally held to be distinct species. Bochart, with great learning, has proved that the *Leviathan* of Job is the Crocodile.¹ Athenæus ranks the Crocodile and the Hippopotamus with the *κῆτη*.² Among the Egyptians, the Crocodile was peculiarly sacred to the god Savak. Its worship, however, did not extend to every part of Egypt; some places considering it the representative of the Evil Being, and bearing the most deadly animosity to it, which led to serious feuds between neighbouring towns. Such was the cause of the quarrel between the Ombites and the Tentyrites, as described by Juvenal; and the same animal which was worshipped at Ombos, was killed and eaten by the inhabitants of Apollinopolis.³ The Crocodile enjoyed great honours at Coptos, Ombos, and Crocodilopolis or Arthribis, in the Thebaid. In Lower Egypt, it was particularly sacred at a place called the City of Crocodiles (Crocodilopolis), and afterward Arsinoë, the capital of a nome, now the province of Fyoom. The animals were there kept in the Lake Mæris, and were buried in the under-ground chambers of the famous Labyrinth. The Crocodile is now seldom eaten, the flesh being bad. Indeed, in former times, it seems rather to have been eaten as a mark of hatred towards the Evil Being, of whom it was the emblem, than as an article of food.⁴ The Crocodile at present is found in the Nile only towards the region of Upper Egypt, where it is extremely hot, and where this animal never falls into a lethargic state. Formerly, when it was wont to descend the branches of the river which water the Delta, it used to pass the four winter months in caverns, and without food. Of this fact we are informed by Pliny and other ancient naturalists.—In the year 58 B.C., the ædile Scæurus exhibited at Rome five crocodiles of the Nile; and subsequently, the Emperor Augustus had a circus filled with water, and exhibited there to the people thirty-six crocodiles, which were killed by an equal number of men who were habituated to fight with these animals.⁵

*ΚΡΟΚΟΔΕΥΛΩΣ (*χέρσαιος* or *σκιῖκος*), the Skink, or Land Crocodile. There are two species of the Skink with which the ancients may be supposed to have been well acquainted, namely, *Scincus officinalis* and *S. Algiriensis*. Moses Charraz says of them, "The Skinks are little animals like to lizards, or, rather, like to little crocodiles, by which name they are known."⁶

*CROCODELIUM (*κροκοδείλιον*), a species of plant. Matthioli informs us that it had been supposed to be the *Eryngium marinum*, or Sea Eringo, and the *Carlina*, or Carline Thistle; but he rejects both these suppositions, admitting, however, at the same time, his own want of acquaintance with it. Sprengel, on the other hand, inclines to think it the *Eryngium*.⁷

*CROCUS (*κρόκος*), the Saffron Crocus, or *Crocus sativus*. The genuine Saffron grows wild in the Levant and in Southern Europe. Sibthorp found it in the fields of Greece and on the mountains around Athens. The flower of the *C. sativus* is of a violet colour, and appears in autumn; hence the epithet *autumnalis*. The best Saffron came from Corycus in Cilicia and from Mount Tmolus in Lydia. The Lycian Olympus and the island of Sicily also produced a very good sort. Saffron was much used

by the Romans as a condiment in various articles of food, as it still is by many Oriental nations. It was also put into wine. Saffron, diluted in water or wine, was sprinkled as a perfume in the theatre and other places, and also on the funeral pile. It was also made into an unguent (*Crocium unguentum*). Saffron-coloured garments were also much in vogue.¹

CROCOTTA (sc. *vestis*: *κροκωτόν*, sc. *ἱμάτιον*, or *κροκωτός*, sc. *χιτών*) was a kind of gala-dress, chiefly worn by women on solemn occasions, and in Greece especially at the festival of the Dionysia.² It was also worn by the priests of Cybele,³ and sometimes by men of effeminate character.⁴ It is evident, from the passage of Virgil, that its name was derived from *crocus*, one of the favourite colours of the Greek ladies, as we still see in the pictures discovered at Herculaneum and Pompeii. The circumstance that dresses of this colour were in Latin commonly called *vestes crocate* or *croceæ*, has induced some writers on antiquities to suppose that *crocota* was derived from *κροκή* (wool or web) or *κροκίς* (a flake of wool or cotton on the surface of the cloth), so that it would be a soft and woolly kind of dress.⁵ But the passages above referred to are sufficient to refute this opinion, and the name *crocota* was, like many others, adopted by the Romans from the Greeks.⁶

*CROCOTTAS (*κροκόττας*), an animal mentioned by the ancient writers, and said to be produced from the wolf and dog, but to be much more ferocious than either of these animals. Such, at least, is the account of Artemidorus,⁷ Diodorus Siculus,⁸ and Agatharchides.⁹ But the coupling of the wolf and dog, though easy, and often effected in menageries at the present day, produces no durable species. It is more probable, therefore, that the *Crocottas* answers to the Hyena, since the latter has very strong teeth, and breaks bones with the greatest ease, as the *Crocottas* is said to have done. The earliest passage respecting the *Crocottas* is found in Ctesias, and the description there given is almost the same with that by which the Oriental writers describe the Hyena.¹⁰

*CROMYON or CROMMYON (*κρόμμιον*, *κρόμμιον*), the *Allium cepa*, or Garlic. (*Vid. ALLIUM*.)

CRONIA (*κρόνια*), a festival celebrated at Athens in honour of Cronos, whose worship was said to have been introduced into Attica by Cecrops. He had a temple in common with Rhea.¹¹ The festival was held on the twelfth of the month of Hecatomæon,¹² which, at an early period of the history of Attica, bore the name of *μην Κρόνιος*.¹³

The Rhodians also celebrated a festival in honour of Cronos, perhaps the Phœnician Moloch, to whom human sacrifices, generally consisting of criminals, were offered. This festival was held on the sixteenth of Metageitnion.¹⁴

Greek writers, when speaking of the Roman Saturnalia, apply to them the name *Κρόνια*.¹⁵

CROTALUM, a kind of Cymbal, erroneously supposed by Scaliger and Brodæus to be the same with the *sistrum*. The mistakes of learned men on this

point are refuted at length by Lampe.¹ From Suidas and the scholiast on Aristophanes,² it appears to have been a split reed or cane, which clattered when shaken with the hand. According to Eustathius,³ it was made of shell and brass as well as of wood. Clemens Alexandrinus farther says that it was an invention of the Sicilians.

Women who played on the crotalum were termed *crotalistræ*. Such was Virgil's Cōpa,

"*Crispum sub crotalo docta movere latus*."⁴

The line alludes to the dance with *crotala* (similar to castanets), for which we have the additional testimony of Macrobius.⁵ The annexed woodcut, taken from the drawing of an ancient marble in Spon's *Mysellanea*,⁶ represents one of these *crotalistræ* performing.

The words *κρόταλος* and *κρόταλον* are often applied, by an easy metaphor, to a noisy, talkative person.⁷

*CROTON (*κρότων*), I. an insect found on oxen and dogs, and sometimes on men, namely, the *Acarus reduvius*, L., or Tick.⁸—II. According to Galen, the same with the *κίκι*.⁹ (*Vid. CICIT.*)

CRYPTEIA (*κρυπτεία*, also called *κρυπτία* or *κρυπτή*) was, according to Aristotle,¹⁰ an institution introduced at Sparta by the legislation of Lycurgus. Its character was so cruel and atrocious, that Plutarch only with great reluctance submitted to the authority of Aristotle in ascribing its introduction to the Spartan lawgiver. The description which he gives of it is this: The ephors, at intervals, selected from among the young Spartans those who appeared to be best qualified for the task, and sent them in various directions all over the country, provided with daggers and their necessary food. During the daytime these young men concealed themselves; but at night they broke forth into the high-roads, and massacred those of the Helots whom they met, or whom they thought proper. Sometimes, also, they ranged over the fields (in the daytime), and despatched the strongest and best of the Helots. This account agrees with that of Heraclides of Pontus,¹¹ who speaks of the practice as one that was still carried on in his own time, though he describes its introduction by Lycurgus only as a report.

The *crypteia* has generally been considered either as a kind of military training of the Spartan youths, in which, as in other cases, the lives of the Helots were unscrupulously sacrificed, or as a means of lessening the numbers and weakening the power of the slaves. But Müller,¹² who is anxious to soften the notions generally current respecting the relations between the Helots and their masters, supposes that Plutarch and Heraclides represent the institution of the *crypteia* "as a war which the ephors themselves, on entering upon their yearly office, proclaimed against the Helots." Heraclides, how-

ever, does not mention this proclamation at all, and Plutarch, who mentions it on the authority of Aristotle, does not represent it as identical with the *crypteia*. Müller also supposes that, according to the received opinion, this chase of the slaves took place regularly every year; and showing at once the absurdity of such an annual proclamation of war and massacre among the slaves, he rejects what he calls the common opinion altogether, as involved in inextricable difficulties, and has recourse to Plato to solve the problem. But Thirlwall¹ much more judiciously considers that this proclamation of war is not altogether groundless, but only a misrepresentation of something else, and that its real character was most probably connected with the *crypteia*. Now if we suppose that the thing here misrepresented and exaggerated into a proclamation of war was some promise which the ephors, on entering upon their office, were obliged to make: for instance, to protect the state against any danger that might arise from too great an increase of the numbers and power of the Helots—a promise which might very easily be distorted into a proclamation of war—there is nothing contrary to the spirit of the legislation of Lycurgus; and such an institution, by no means surprising in a slaveholding state like Sparta, where the number of free citizens was comparatively very small, would have conferred upon the ephors the legal authority *occasionally* to send out a number of young Spartans in chase of the Helots.² That on certain occasions, when the state had reason to fear the overwhelming number of slaves, thousands were massacred with the sanction of the public authorities, is a well-known fact.³ It is, however, probable enough that such a system may at first have been carried on with some degree of moderation; but after attempts had been made by the slaves to emancipate themselves and put their masters to death, as was the case during and after the earthquake in Laconia, it assumed the barbarous and atrocious character which we have described above.⁴ If the *crypteia* had taken place *annually*, and at a *fixed time*, we should indeed have reason, with Müller, to wonder why the Helots, who in many districts lived entirely alone, and were united by despair for the sake of common protection, did not every year kindle a most bloody and determined war throughout the whole of Laconia; but Plutarch, the only authority on which this supposition can rest, does not say that the *crypteia* took place *every year*, but *διὰ χρόνον*, i. e., "at intervals," or occasionally.⁵ The difficulties which Müller finds in what he calls the common account of the *crypteia*, are thus, in our opinion, removed, and it is no longer necessary to seek their solution in the description given by Plato,⁶ who proposed for his Cretan colony a similar institution, under the name of *crypteia*. From the known partiality of Plato for Spartan institutions, and his inclination to represent them in a favorable light, it will be admitted that, on a subject like this, his evidence will be of little weight. And when he adopted the name *crypteia* for his institution, it by no means follows that he intended to make it in every respect similar to that of Sparta; a partial resemblance was sufficient to transfer the name of the Spartan institution to that which he proposed to establish; and it is sufficiently clear, from his own words, that his attention was more particularly directed to the advantages which young soldiers might derive from such hardships as the *κρυπτοί* had to undergo. But even Plato's colony would not have

been of a very humane character, as his *κρυπτοί* were to go out in arms and make free use of the slaves.

CRUX (*σταυρός, σκόλοψ*), an instrument of capital punishment used by several ancient nations, especially the Romans and Carthaginians. The words *σταυρώω* and *σκολοπιζώ* are also applied to Persian and Egyptian punishments, but Casanbon¹ doubts whether they describe the Roman method of crucifixion. From Seneca² we learn the latter to have been of two kinds, the less usual sort being rather impalement than what we should describe by the word crucifixion, as the criminal was transfixed by a pole, which passed through the back and spine, and came out at the mouth.

The cross was of several kinds; one in the shape of an X, called *cruz Andreana*, because tradition reports St. Andrew to have suffered upon it; another was found like a T, as we learn from Lucian,³ who makes it the subject of a charge against the letter.

The third, and most common sort, was made of two pieces of wood crossed, so as to make four right angles. It was on this, according to the unanimous testimony of the fathers, who sought to confirm it by Scripture itself,⁴ that our Saviour suffered. The punishment, as is well known, was chiefly inflicted on slaves and the worst kind of malefactors.⁵ The manner of it was as follows: The criminal, after sentence pronounced, carried his cross to the place of execution: a custom mentioned by Plutarch⁶ and Artemidorus,⁷ as well as in the Gospels. From Livy⁸ and Valerius Maximus,⁹ scourging appears to have formed a part of this, as of other capital punishments among the Romans. The scourging of our Saviour, however, is not to be regarded in this light, as Grotius and Hammond have observed it was inflicted before sentence was pronounced.¹⁰ The criminal was next stripped of his clothes, and nailed or bound to the cross. The latter was the more painful method, as the sufferer was left to die of hunger. Instances are recorded of persons who survived nine days. It was usual to leave the body on the cross after death. The breaking of the legs of the thieves, mentioned in the Gospels, was accidental; because by the Jewish law, it is expressly remarked, the bodies could not remain on the cross during the Sabbath-day.¹¹

CRYPTA (from *κρύπτειν*, to conceal), a Crypt. Among the Romans, any long narrow vault, whether wholly or partially below the level of the earth, is expressed by this term; such as a sewer (*crypta Subura*¹²) (*vid. CLOACA*), the *carceres* of the circus (*vid. CIRCUS*, p. 254), or a magazine for the reception of agricultural produce.¹³

The specific senses of the word are:

I. A covered portico or arcade, called more definitely *crypto-porticus*, because it was not supported by open columns like the ordinary portico, but closed at the sides, with windows only for the admission of light and air.¹⁴ These were frequented during summer for their coolness. A portico of this kind, almost entire, is still remaining in the suburban villa of Arrius Diomedes at Pompeii.

Some theatres, if not all, had a similar portico attached to them for the convenience of the performers, who there rehearsed their parts or practised their exercises.¹⁶ One of these is mentioned

by P. Victor¹ as the *crypta Balbi*, attached to the theatre built by Cornelius Balbus at the instigation of Augustus,² which is supposed to be the ruin now seen in the Via di S. Maria di Cacaberis, between the church of that name and the S. Maria di Pianto.

II. A grotto, particularly one open at both extremities, forming what in modern language is denominated a "tunnel," like the grotto of Pausilippo, well known to every visitant of Naples. This is a tunnel excavated in the *tufo* rock, about 20 feet high and 1800 long, forming the direct communication between Naples and Pozzuoli (*Puteoli*), called by the Romans *crypta Neapolitana*, and described by Seneca³ and Strabo.⁴

A subterranean vault used for any secret worship, but more particularly for the licentious rites consecrated to Priapus, was also called *crypta*.⁵

III. When the practice of consuming the body by fire was relinquished (*vid. BUSTUM, CONDITORIUM*), and a number of bodies was consigned to one place of burial, as the catacombs, for instance, this common tomb was called *crypta*.⁶ One of these, the *crypta Neapolitana*, which was in the *vicus Patricius*, under the Esquiline,⁷ was used by the early Christians, during the times of their persecution, as a place of secret worship.⁸

CRYPTOPORTICUS. (*vid. CRYPTA*.)

*CRYSTALLUS or -UM (*κρύσταλλος*), Crystal. The ancients were of opinion that crystal was only water congealed in a long period of time into an ice more durable than common; and Pliny⁹ thought it was nowhere to be found but in excessively cold regions. "That it is ice is certain," says this writer, "and hence the Greeks have given it its name." In accordance with the etymology here alluded to, *κρύσταλλος* is thought to come from *κρύος*, "ice," or from *κρυστάω* (*κρυσταίνω*), "to freeze." "This ancient notion," observes Dr. Moore, "will appear less ridiculous if we consider that, although water really converted into a solid crystalline mass, by exposure to a very ordinary degree of cold, resumes its fluid state when the heat of which it was deprived is again restored; yet the results of chemical analysis teach us that water, in a permanently solid state, constitutes a considerable portion of many crystalline substances. Of the hydrate of magnesia, for example, it forms near one third; and of the sulphate of soda, considerably above one half. Rock-crystal is one among the very few minerals whose crystalline form Pliny has remarked. He mentions one remarkable use of crystal in applying actual cautery, the crystal having been used as a lens. This, however, was known long before, mention of it having been made in the Clouds of Aristophanes, and in the poem of the pseudo-Orpheus on the properties of Stones."¹⁰

CUBEIA. (*vid. TESSERA*.)

CUBICULARII were slaves who had the care of the sleeping and dwelling rooms. Faithful slaves were always selected for this office, as they had, to a certain extent, the care of their master's person. When Julius Cæsar was taken by the pirates, he dismissed all his other slaves and attendants, only retaining with him a physician and two cubicularii.¹¹ It was the duty of the cubicularii to introduce visitors to their master,¹² for which purpose they appear to have usually remained in an ante-room.¹³ Under the later emperors, the cubicularii belonging

to the palace were called *præpositi sacro cubiculo*, and were persons of high rank.¹

CUBICULUM usually means a sleeping and dwelling room in a Roman house (*vid. House*), but is also applied to the pavilion or tent in which the Roman emperors were accustomed to witness the public games.² It appears to have been so called, because the emperors were accustomed to recline in the cubicula, instead of sitting, as was anciently the practice, in a sella curulis.³

CUBISTETERES (κυβιστήητες), were a particular kind of dancers or tumblers, who in the course of their dance flung themselves on their heads and alighted again on their feet (ὡς περ οἱ κυβιστῶντες καὶ εἰς ὁρβὴν τὰ σκέλη περιφερόμενοι κυβιστῶσι κύκλῳ⁴). We read of κυβιστήητες as early as the time of Homer.⁵ These tumblers were also accustomed to make their somerset over knives or swords, which was called κυβιστῆν εἰς μαχαίρας.⁶ The way in which this feat was performed is described by Xenophon, who says⁷ that a circle was made quite full of upright swords, and that the dancer εἰς ταῦτα ἐκubίστατε καὶ ἐξεκubίστα ὑπὲρ αὐτῶν. We find many representations of these tumblers, both male and female, in ancient works of art.⁸

Κυβιστήητες were frequently introduced at convivial entertainments to amuse the guests; but Socrates condemns the practice, as attended with too much danger to be pleasing on such occasions.⁹

CUBITUS (πῆχυς), a Greek and Roman measure of length, originally the length of the human arm from the elbow to the wrist, or to the knuckle of the middle finger. It was equal to a foot and a half, which would give, according to Mr. Hussey's computation, 1 foot 5.4744 inches Eng. for the Roman, and 1 foot 6.2016 inches for the Greek cubit.¹⁰

CUBUS (κύβος), a Cube; a name given also to a vessel (called likewise *quadrantal*), the sides of which were formed by six equal squares (including the top), each square having each of its sides a foot long. The solid contents of the cube were equal to the amphora.

"*Pes longo in spatio latoque altoque notetur :
Angulus ut par sit, quem claudat linea triplex,
Quatuor et medium quadris cingatur inane :
Amphora fit cubus.*"¹¹

*CUCULUS, the Cuckoo. (*Vid. Coccox*.)

CUCULLUS, a Cowl. As the cowl was intended to be used in the open air, and to be drawn over the head to protect it from the injuries of the weather, instead of a hat or cap, it was attached only to garments of the coarsest kind. Its form may be conceived from the woodcut at page 132. It is there represented as worn by a Roman shepherd, agreeably to the testimony of Columella.¹² The cucullus was also used by persons in the higher circles of society, when they wished to go abroad without being known.¹³

The use of the cowl, and also of the cape (*vid. BRUVUS*), which served the same purpose, was allowed to slaves by a law in the Codex Theodosianus.¹⁴ Cows were imported into Italy from Saintes, in France (*Santonico cucullo*),¹⁵ and from the country of the Bardæi, in Illyria.¹⁶ Those from the latter locality were probably of a peculiar fashion,

which gave origin to the term *Bardocucullus*. "Liburnici cuculli" are mentioned by Martial.¹

*CUCUMIS, the Cucumber. (*Vid. COLOCYNTHES* and *SICYS*.)

*CUCURBITA, the Gourd. (*Vid. COLOCYNTHES*.)

CUDO or CUDON, a Scull-cap, made of leather, or of the rough, shaggy fur of any wild animal,² such as were worn by the *velites* of the Roman armies,³ and apparently synonymous with *galerus*⁴ or *galericulus*.⁵

In the sculptures on the column of Trajan, some of the Roman soldiers are represented with the skin of a wild beast drawn over the head, in such a manner that the face appears between the upper and lower jaws of the animal, while the rest of the skin falls down behind over the back and shoulders, as described by Virgil.⁶ This, however, was an extra defence,⁷ and must not be taken for the *cudo*, which was the cap itself; that is, a particular kind of *galea*. (*Vid. GALEA*.) The following representation of a *cudo* is taken from Choul's *Castramen des Anciens Romains*, 1581.

CULEUS or CULLEUS, a Roman measure, which was used for estimating the produce of vineyards. It was the largest liquid measure used by the Romans, containing 20 amphoræ, or 118 gallons 7.546 pints.

"*Est et, bis decies quem conficit amphora nostra,
Culleus : hac major nulla est mensura liquoris.*"⁸

CULEUS or CULLEUS. (*Vid. CORNELIA LEX* DE SICARIIS.)

*CULEX, the Gnat. (*Vid. CONOPS*.)

CULINA, in its most common acceptation, means a place for cooking victuals, whether the kitchen of a private habitation (*vid. HOUSE*), or the offices attached to a temple, in which the flesh of the victim was prepared for the sacred feasts or for the priesthood.⁹

It signifies also a convenience, *cabinet d'aisance*, *secessum*, ἀφεδρόν.¹⁰ "Quædam quotidie, ut culina et caprile . . . debent emundari;" unless the conjecture of Schneider is admitted, who proposed to read "*suile* et caprile."

Lastly, it is used for a particular part of the funeral pyre, or of the *bustum*, on or in which the viands of the funeral feast were consumed.¹¹ Compare an anonymous poet in *Catalect*.

"*Neque in culinam et uncta compitalia
Dapesque ducis sordidas ;*"

in which sense it corresponds with the Greek εὐστρα.¹²

Ἐν ταῖσιν εὐστραις κοινύλοις ἡρμωτόμην.

CULIX (κύλιξ, *dim. κυλίσκη, κυλίσκιον*), a common Greek drinking-cup,¹³ called by the Romans *calix*. The name was sometimes applied to large

cups or vessels,¹ but was generally restricted to small drinking-cups used at symposia and on similar occasions (*ἦν ἡμῖν οἱ παῖδες μικραῖς κύλινξ πικρὰ ἐπιφακάωσι*²). The *κύλινξ* is frequently seen in paintings on ancient vases which represent drinking scenes, and when empty, is usually held upright by one of its handles, as shown in the annexed woodcut.

Athenæus³ informs us that these cups were usually made of earthenware, and that the best kind were manufactured in Attica and Argolis.

CULPA. The general notion of *damnum*, and the nature of *dolus malus*, are most conveniently explained under this head.

Damnum is injury done by one man to the property of another, and done illegally (*injuria*, i. e., *contra jus*); for this is the meaning of *injuria* in the *actio damni injuriæ* given by the *lex Aquilia*;⁴ and *injuria*, in this sense, must not be confounded with the *actio injuriarum*.⁵ This *damnum*, *injuria* of the *lex Aquilia*, is done by *culpa* or by *dolus malus*; for *damnum* done without *culpa* or *dolus malus* is casual (*casus*), and the doer is not punishable. *Damnum*, in fact, implies *injuria*; and, generally, a man is not bound to make good the damage done by him to another man's property, except on the ground of contract, or on the ground of illegal act where there is no contract, that is *culpa* or *dolus*.

Neither *culpa* nor *dolus* can be taken as a genus which shall comprehend the species *culpa* and *dolus*, though some writers have so viewed these terms. *Dolus malus* is thus defined by *Labeo*:⁶ "*Dolus malus est omnis calliditas, fallacia, machinatio ad circumveniens, fallendum, decipiendum alterum adhibita.*" *Dolus malus*, therefore, has reference to the evil design with which an act is accomplished to the injury of another; or it may be the evil design with which an act is omitted that ought to be done. The definition of *Aquilius*, a learned jurist, the friend of *Cicero*, and his colleague in the prætorship,⁷ labours under the defect of the definition of *Servius*, which is criticised by *Labeo*.⁸ This seems to be the *Aquilius* who, by the edict, gave the action of *dolus malus* in all cases of *dolus malus* where there was no legislative provision, and there was a *justa causa*.⁹

It is generally considered that *culpa* may be either an act of commission or omission; and that an act of commission may fall short of *dolus*, as not coming within the above definition, but it may approach very near to *dolus*, and so become *culpa dolò proxima*. But the characteristic of *culpa* is omission. It is true that the *damnum*, which is

The following woodcut, which is referred to in several articles, is taken from *Millin*,⁴ and represents a symposium. Three young and two older men are reclining on a couch (*κλίνη*), with their left arms resting on striped pillows (*προσκεφάλαια ἢ ὑπαγκώνια*). Before the couch are two tables. Three of the men are holding the *κύλινξ* suspended by one of the handles to the fore-finger; the fourth holds a *φιάλη* (*vid. PHIALA*); and the fifth a *φιάλη* in one hand and a *ρνθόν* in the other. (*vid. RYTON*) In the middle *Komos* is beating the *tympānum*.⁵

necessary to constitute the *culpa*, is the consequence of some act; but the act derives its culpable character from an act omitted; otherwise it might be *casus*, or casual damage.

Culpa, then, being characterized by an act of omission (*negligentia*), or *omissio diligentia*, the question always is, how far is the person charged with *culpa* bound to look after the interest of another, or to use *diligentia*. There is no such general obligation, but there is such obligation in particular cases. *Culpa* is divided into *lata*, *levis*, and *levissima*. *Lata culpa* "est nimia negligentia, id est, non intelligere quod omnes intelligunt."⁶ If, then, one man injured the property of another by gross carelessness, he was always bound to make good the damage (*damnum præstare*). Such *culpa* was not *dolus*, because there was not intention or design, but it was as bad in its consequences to the person charged with it.

Levis culpa is negligence of a smaller degree, and the responsibility in such case arises from contract. He who is answerable for *levis culpa*, is answerable for injury caused to the property of another by some omission, which a careful person could or might have prevented. For instance, in the case of a thing lent (*vid. COMMODATUM*), a man must take at least as much care of it as a careful man does of his own property. There is never any *culpa* if the person charged with it has done all that the most careful person could do to prevent loss or damage. *Levissima culpa* came within the meaning of the term *culpa* in the *lex Aquilia*; that is, any injury that happened to one man's property through the conduct of another, for want of such care as the most careful person would take, was a *culpa*, and therefore punishable.

The word *culpa* occurs very frequently in the Latin writers in a great variety of meanings; but the characteristic of such meanings is "carelessness" or "neglect." Hence may be explained the passage of *Horace*,⁴

"*Post hoc ludus erat culpa potare magistra;*" which means to have no magister at all, or, as the

1. (Herod., iv., 70.)—2. (Xen., Sympos., ii., 26.)—3. (xi., p. 489.)—4. (Gaius, iii., 210.)—Dig. 9, tit. 2, s. 5.)—5. (Gaius, iii., 220.)—6. (Dig. 4, tit. 3, s. 1.)—7. (Off., iii., 14.)—8. (Dig. 4, tit. 3, s. 1.)—9. (Cic., De Nat. Deor., iii., 30.)

1. (Peintures de Vases Antiques, vol. ii., pl. 58.)—2. (Becker Charities, vol. i., p. 505; vol. ii., p. 499.)—3. (Dig. 50, tit. 18 s. 213.)—4. (Sat., ii., ii., 123.)

scholiast explains it, "libere potare." The absurdity of the explanation grafted on this scholium, is only equalled by the absurdity of Bentley's emendation of *cupa* for *culpa*.

CULTER (probably from *cello*, *percello*; dim. *cultellus*, Engl. *coulter*; in southern Germany, *das koller*; French, *couteau*; Greek, *μάχαρα*, *κοπίς*, or *σπαγίς*), a knife with only one edge, which formed a straight line. The blade was pointed and its back curved. It was used for a variety of purposes, but chiefly for killing animals, either in the slaughter-house, or in hunting, or at the altars of the gods.¹ Hence the expressions *bovem ad cultrum emere*, "to buy an ox for the purpose of slaughtering it;"² *me sub cultro linquit*, "he leaves me in a state like that of a victim dragged to the altar;"³ *se ad cultrum locare*, "to become a bestiarius."⁴ From some of the passages above referred to, it would appear that the culter was carried in a kind of sheath. The priest who conducted a sacrifice never killed the victim himself; but one of his ministri, appointed for that purpose, who was called either by the general name *minister*, or the more specific *papa* or *cultrarius*.⁵ A tombstone of a cultrarius is still extant, and upon it 'wo cultri are represented,⁶ which are copied in the annexed woodcut.

The name culter was also applied to razors⁷ and kitchen-knives.⁸ That in these cases the culter was different from those above represented, and most probably smaller, is certain; since, whenever it was used for shaving or domestic purposes, it was always distinguished from the common culter by some epithet, as *culter tonsorius*, *culter coquina-rius*. Fruit-knives were also called cultri; but they were of a smaller kind (*cultelli*), and made of bone or ivory.⁹ Columella, who¹⁰ gives a very minute description of a *falx vinitoria*, a knife for pruning vines, says that the part of the blade nearest to the handle was called culter on account of its similarity to an ordinary culter, the edge of that part forming a straight line. This culter, according to him, was to be used when a branch was to be cut off which required a hard pressure of the hand on the knife. The name culter, which was also applied to the sharp and pointed iron of the plough,¹¹ is still extant in English, in the form *coulter*, to designate the same thing. (*Vid. ARATRUM*.)

The expression *in cultrum* or *in cultro collocatus*¹² signifies placed in a perpendicular position.

CULTRARIUS. (*Vid. CULTER*.)

1. (Liv., iii., 48.—Scribonius, Compos. Med., 13.—Suet., Octav., 9.—Plaut., Rud., i., ii., 45.—Virg., Georg., iii., 492.—Ovid, Fast., i., 321.)—2. (Varro, De Re Rust., ii., 5.)—3. *CUMINUM or CYMINUM (κῦμινον), 'Cumin, an umbelliferous plant, of annual duration, found wild in Egypt and Syria, and cultivated from time immemorial for the sake of its agreeable aromatic fruit, which, like that of caraway, dill, anise, &c., possesses well-marked stimulating and carminative properties." The seeds were used by the ancients as a condiment, and the mode of preparing what was termed the *cuminatum* is given by Apicius.¹ Drinking a decoction of cumin produced paleness, and hence the allusion in Horace to the "*ex sanguine cuminum*."² Pliny³ says it was reported that the disciples of Porcius Latro, a famous master of the art of speaking, used it to imitate that paleness which he had contracted from his studies.⁴ The ancients used to place cumin on the table in a small vessel, like salt; the penurious were sparing of its use in this way, whence arose the expressions *κνινοπρίστης*, "a splitter of cumin-seed," analogous to *καράμογ-λίθος*, "a cutter or scraper of cresses," and in Latin *cuminisector*, to denote a sordid and miserly person.⁵ It can admit of no doubt, according to Adams, that the *κῦμινον ἡμερον* of Dioscorides, which is the only species treated of by Hippocrates and Galen, was the *Cuminum cyminum*, L. Of the two varieties of the *κῦμινον ἄγριον* described by Dioscorides, the first, according to Matthioli and Sprengel, is the *Lagacia cuminoides*, L.; the other, most probably, the *Nigella arvensis*, or wild Fennel flower.

CUNEUS was the name applied to a body of foot-soldiers, drawn up in the form of a wedge, for the purpose of breaking through an enemy's line. The common soldiers called it a *caput porcinum*, or pig's head.

The wedge was met by the "forfex" or shears, a name given to a body of men drawn up in the form of the letter V, so as to receive the wedge between two lines of troops.⁶ The name cuneus was also applied to the compartments of seats in circular or semicircular theatres, which were so arranged as to converge to the centre of the theatre, and diverge towards the external walls of the building, with passages between each compartment.

CUNICULUS (ὄπνονος). A mine or passage under ground was so called, from its resemblance to the burrowing of a rabbit. Thus Martial⁷ says,

"Gaudet in effossis habitare cuniculus antris,
Monstravit tacitas hostibus ille vias."

Fidenæ and Veii are said to have been taken by mines, which opened, one of them into the citadel, the other into the Temple of Juno.⁸ Niebuhr⁹ observes that there is hardly any authentic instance of a town being taken in the manner related of Veii, and supposes that the legend arose out of a tradition that Veii was taken by means of a mine, by which a part of the wall was overthrown.

*CUNICULUS, the Rabbit, the same with the Greek *δασύπους*. (*Vid. DASYPUS*.)

*CUNTILA, Savory, or wild Marjoram, a plant of which there are several kinds: 1. The *Sativa* is also called *Satureia*, and was used as a condiment. (*Vid. THYMELÆA*.)—2. The *Bubula* is the wild Origanum. (*Vid. ORIGANUS*.)—3. The *Gallinacea* is the same with *Cumilago*, or Flea-bane.¹⁰

*CUPRESSUS (κνπρίσσοος), the Cypress, or *Cupressus sempervirens*, L. The Cypress was a funeral tree among the ancients. Branches of this tree were placed at the doors of deceased persons. It was consecrated to Pluto, because, according to popular belief, when once cut, it never grew again, and it was also accustomed to be placed around

the funeral piles of the noble and wealthy. Its dark foliage also gave it a funereal air.¹

*CUPRUM, Copper. (*Virid. Æs* and *CHALCOS*.)

CURA. (*Virid. CURATOR.*)

CURATELA. (*Virid. CURATOR.*)

CURATIO. (*Virid. CURATOR.*)

CURATOR. Up to the time of puberty, every Roman citizen was incapable of doing any legal act, or entering into any contract which might be injurious to him. The time when puberty was attained was a matter of dispute; some fixed it at the commencement of the age of procreation, and some at the age of fourteen.² In all transactions by the impubes, it was necessary for the auctoritas of the tutor to be interposed. (*Virid. AUCTORITAS, Tutor.*) With the age of puberty, the youth attained the capacity of contracting marriage and becoming a paterfamilias: he was liable to military service, and entitled to vote in the comitia; and, consistently with this, he was freed from the control of a tutor. Females who had attained the age of puberty became subject to another kind of tutela, which is explained in its proper place. (*Virid. TUTELA.*)

With the attainment of the age of puberty by a Roman youth, every legal capacity was acquired which depended on age only, with the exception of the capacity for public offices, and there was no rule about age, even as to public offices, before the passage of the lex Villia. (*Virid. ÆDILES, p. 25.*) It was, however, a matter of necessity to give some legal protection to young persons, who, owing to their tender age, were liable to be overreached; and, consistently with the development of Roman jurisprudence, this object was effected without interfering with the old principle of full legal capacity being attained with the age of puberty. This was accomplished by the lex Plætoria (the true name of the lex, as Savigny has shown), the date of which is not known, though it is certain that the law existed when Plautus wrote.⁴ This law established a distinction of age, which was of great practical importance, by forming the citizens into two classes, those above and those below twenty-five years of age (*minores viginti quinque annis*), whence a person under the last-mentioned age was sometimes simply called *minor*. The object of the lex was to protect persons under twenty-five years of age against all fraud (*dolus*). The person who was guilty of such a fraud was liable to a *iudicium publicum*,⁵ though the offence was such as in the case of a person of full age would only have been matter of action. The punishment fixed by the lex Plætoria was probably a pecuniary penalty, and the consequential punishment of infamia or loss of political rights. The minor who had been fraudulently led to make a disadvantageous contract might protect himself against an action by a plea of the lex Plætoria (*exceptio legis Plætorie*). The lex also appears to have farther provided that any person who dealt with a minor might avoid all risk of the consequences of the Plætoria lex, if the minor was aided and assisted in such dealing by a curator named or chosen for the occasion. But the curator did not act like a tutor: it can hardly be supposed that his consent was even necessary to the contract; for the minor had full legal capacity to act, and the business of the curator was merely to prevent his being defrauded or surprised.

The prætorian edict carried still farther the principle of the lex Plætoria, by protecting minors generally against positive acts of their own, in all cases in which the consequences might be injurious to them. This was done by the "in integrum restituti-

o." the prætor set aside transactions of this description, not only on the ground of fraud, but on a consideration of all the circumstances of the case. But it was necessary for the minor to make application to the prætor, either during his minority or within one year after attaining it, if he claimed the restitutio; a limitation probably founded on the lex Plætoria. The provisions of this lex were thus superseded or rendered unnecessary by the jurisdiction of the prætor, and, accordingly, we find very few traces of the Plætorian law in the Roman jurists.

Ulpian and his contemporaries speak of adolescents, under twenty-five years of age, being under the general direction and advice of curatores, as a notorious principle of law at that time.¹ The establishment of this general rule is attributed by Capitolinus² to the Emperor M. Aurelius, in a passage which has given rise to much discussion. We shall, however, adopt the explanation of Savigny, which is as follows: Up to the time of Marcus Aurelius there were only three cases or kinds of curatela: 1. That which was founded on the lex Plætoria, by which a minor who wished to enter into a contract with another, asked the prætor for a curator, stating the ground or occasion of the petition (*reddita causa*). One object of the application was to save the other contracting party from all risk of judicial proceedings in consequence of dealing with a minor. Another object was the benefit of the applicant (the minor); for no prudent person would deal with him, except with the legal security of the curator³ ("Lex me perdit quinavicenaria: metuunt credere omoes"). 2. The curatela, which was given in the case of a man wasting his substance, who was called "prodigus." 3. And that in the case of a man being of unsound mind, "demens," "furiosus." In both the last-mentioned cases provision was made either by the law or by the prætor. Curatores who were determined by the law of the Twelve Tables were called *legitimi*; those who were named by the prætor were called *honorarii*. A *furiosus* and *prodigus*, whatever might be their age, were placed under the cura of their agnati by the law of the Twelve Tables. When there was no legal provision for the appointment of a curator, the prætor named one. Curatores appointed by a consul, prætor, or governor of a province (*præses*), were not generally required to give security for their proper conduct, having been chosen as fit persons for the office. What the lex Plætoria required for particular transactions, the Emperor Aurelius made a general rule, and all minors, without exception, and without any special grounds or reasons (*non redditis causis*), were required to have curatores.

The following is the result of Savigny's investigations into the curatela of minors after the constitution of M. Aurelius. The subject is one of considerable difficulty, but it is treated with the most consummate skill, the result of complete knowledge and unrivalled critical sagacity. The minor only received a general curator when he made application to the prætor for that purpose: he had the right of proposing a person as curator, but the prætor might reject the person proposed. The curator, on being appointed, had, without the concurrence of the minor, as complete power over the minor's property as the tutor had up to the age of puberty. He could sue in respect of the minor's property, get in debts, and dispose of property like a tutor. But it was only the property which the prætor intrusted to him that he managed, and not the acquisitions of the minor subsequent to his appointment; and herein he differed from a tutor, who had the care of all the

¹ (Plin., H. N., xvi., 33.—Virg., Æn., v., 64.—Horat., Carm., ii., 14, 23.)—² (Gaus, i., 190.)—³ (Pseudolus, i., 3, 69.)—⁴ (Cic., De Nat. Deor., iii., 30.)

¹ (Dig. 4, tit. 4.—De Minoribus xxv. Annis.—² (M. Aurelius, c. 10.)—³ (Plaut., Pseudolus, i., 3, 69.)

property of the pupillus. If it was intended that the curator should have the care of that which the minor acquired after the curator's appointment, by will or otherwise, a special application for this purpose was necessary. Thus, as to the property which was placed under the care of the curator, both as regards alienation and the getting in of debts, the minor was on the same footing as the prodigus: his acts in relation to such matters, without the curator, were void. But the legal capacity of the minor to contract debts was not affected by the appointment of a curator, and he might be sued on his contract either during his minority or after. Nor was there any inconsistency in this: the minor could not spend his actual property by virtue of the power of the curator, and the preservation of his property during minority was the object of the curator's appointment. But the minor would have been deprived of all legal capacity for doing any act if he could not have become liable on his contract. The contract was not in its nature immediately injurious, and when the time came for enforcing it against the minor, he had the general protection of the restitution. If the minor wished to be adrogated (*vid. ADOPTIO*), it was necessary to have the consent of the curator. It is not stated in the extant authorities what was the form of proceeding when it was necessary to dispose of any property of the minor by the *mancipatio* or in *jure cessio*; but it may be safely assumed that the minor acted (for he alone could act on such an occasion) and the curator gave his consent, which, in the case supposed, would be analogous to the *auctoritas* of the tutor. But it would differ from the *auctoritas* in not being, like the *auctoritas*, necessary to the completion of the legal act, but merely necessary to remove all legal objections to it when completed.

The cura of spendthrifts and persons of unsound mind, as already observed, owed its origin to the laws of the Twelve Tables. The technical word for a person of unsound mind in the Twelve Tables is *furius*, which is equivalent to *demens*; and both words are distinguished from *insanus*. Though *furius* implies violence in conduct, and *dementia* only mental imbecility, there was no legal difference between the two terms, so far as concerned the cura. *Insania* is merely weakness of understanding (*stultitia constantia, id est, sanitate vacans*), and it was not provided for by the laws of the Twelve Tables. In later times, the pretor appointed a curator for all persons whose infirmities required it. This law of the Twelve Tables did not apply to a pupillus or pupilla. If, therefore, a pupillus was of unsound mind, the tutor was his curator. If an agnatus was the curator of a *furius*, he had the power of alienating the property of the *furius*.¹ The prodigus only received a curator upon application being made to a magistratus, and a sentence of interdiction being pronounced against him (*ei bonis interdictum est*).² The form of the interdictio was thus: "Quando tibi bona paterna avitave nequitia tua disperdis, liberoseque tuos ad egestatem perducis, ob eam rem tibi ea re commercioque interdicco." The cura of the prodigus continued till the interdict was dissolved. It might be inferred from the form of the interdict, that it was limited to the case of persons who had children; but perhaps this was not so.

It will appear from what has been said, that, whatever similarity there may be between a tutor and a curator, an essential distinction lies in this, that the curator was specially the guardian of property, though in the case of a *furius* he must also have been the guardian of the person. A curator must, of course, be legally qualified for his functions,

and he was bound, when appointed, to accept the duty, unless he had some legal exemption (*excusatio*). The curator was also bound to account at the end of the curatela, and was liable to an action for misconduct.

The word cura has also other legal applications:

1. *Cura bonorum*, in the case of the goods of a debtor, which are secured for the benefit of his creditors.
2. *Cura bonorum et ventris*, in the case of a woman being pregnant at the death of her husband.
3. *Cura hereditatis*, in case of a dispute as to who is the heres of a person, when his supposed child is under age.
4. *Cura hereditatis jacentis*, in the case of a property, when the heres had not yet declared whether or not he would accept the inheritance.
5. *Cura bonorum absentis*, in the case of property of an absent person who had appointed no manager of it.

This view of the curatela of minors is from an essay by Savigny, who has handled the whole matter in a way equally admirable, both for the scientific precision of the method, and the force and perspicuity of the language.¹

CURATORES were public officers of various kinds under the Roman Empire, several of whom were first established by Augustus.² The most important of them were as follow:

I. CURATORES ALVEI ET RIPARUM, who had the charge of the navigation of the Tiber. The duties of their office may be gathered from Ulpian.³ It was reckoned very honourable, and the persons who filled it received afterward the title of comites.

II. CURATORES ANNONÆ, who purchased corn and oil for the state, and sold it again at a small price among the poorer citizens. They were also called *curatores emendi frumenti et olei*, and *σιτῶναι* and *ἐλαιώναι*.⁴ Their office belonged to the *personalia munera*; that is, it did not require any expenditure of a person's private property; but the curatores received from the state a sufficient sum of money to purchase the required amount.⁵

III. CURATORES AQUARUM. (*Vid. AQUÆ DUCTUS*, p. 75.)

IV. CURATORES KALENDARII, who had the care in municipal towns of the *kalendaria*, that is, the books which contained the names of the persons to whom public money, which was not wanted for the ordinary expenses of the town, was lent on interest. The office belonged to the *personalia munera*.⁶ These officers are mentioned in inscriptions found in municipal towns.⁷

V. CURATORES LUDORUM, who had the care of the public games. Persons of rank appear to have been usually appointed to this office.⁸ In inscriptions, they are usually called *curatores muneris gladiatorii*, &c.

VI. CURATORES OPERUM PUBLICORUM, who had the care of all public buildings, such as the theatres, baths, aqueducts, &c., and agreed with the contractors for all necessary repairs to them. Their duties, under the Republic, were discharged by the *ædiles* and censors. (*Vid. CENSORES*, p. 229.) They are frequently mentioned in inscriptions.⁹

VII. CURATORES REGIONUM, who had the care of the fourteen districts into which Rome was divided

I. (Von dem Schutz der Minderjährigen, Zeitschrift, x.—Savigny, Vom Beruf, &c., p. 102.—Gaius, i., 197.—Ulp., Frag., xii.—Dirksen, Übersicht, &c., Tab. v., Frag. 7.—Mackeldey, Lehrbuch des heutigen Römischen Rechts.—Thibaut, System des Pandekten-Rechts.—Marezoll, Lehrbuch, &c.—A reference to these authorities will enable the reader to carry his investigations farther, and to supply what is purposely omitted in the above sketch.)—2. (Suet., Oc. iv., 37.—3. (Dig. 43, tit. 15.)—4. (Dig. 50, tit. 5, s. 18, § 5.)—5. (Dig. 50, tit. 8, s. 9, § 5.)—6. (Dig. 50, tit. 4, s. 18, § 2; tit. 8, s. 9, § 7.—Heinecc. Antiq. Rom., iii., 15, 4.)—7. (Orelli, Inscript., No. 3940, 4491.)—8. (Tacit., Ann., xi., 35; xiii., 22.—Suet., Cal., 27.)—9. (Orelli, Inscript., No. 24, 1506, 2273.)

1. (Cic., Tusc. Quæst., iii., 5.)—2. (Gaius, ii., 64.)—3. (Compare Cic., De Senec., c. 7.)

under the emperors, and whose duty it was to prevent all disorder and extortion in their respective districts. This office was first instituted by Augustus.¹ There were usually two officers of this kind for each district; Alexander Severus, however, appears to have appointed only one for each; but these were persons of consular rank, who were to have jurisdiction in conjunction with the præfectus urbi.² We are told that Marcus Antoninus, among other regulations, gave special directions that the curatores regionum should either punish, or bring before the præfectus urbi for punishment, all persons who exacted from the inhabitants more than the legal taxes.³

VIII. CURATORES REIPUBLICÆ, also called *LOGISTÆ*, who administered the landed property of municipia.⁴ Ulpian wrote a separate work, *De Officio Curatoris Reipublicæ*.

IX. CURATORES VIARUM. (*Vid. VIÆ.*)

KYRBES (*κύρεις*). (*Vid. AXONES.*)

CURIA. (*Vid. CURIÆ.*)

CURIÆ. The accounts which have come down to us of the early ages of Rome, represent the burghers or proper citizens (the *populus* of the *Annals*) to have been originally divided into three tribes, the Ramnes, Titienses, and Luceres.⁵ (*Vid. TRIBUS.*) Each of these tribes was composed of a union of ten curiæ (*φάρπριαι*) or wards, so that the whole number of the latter was thirty. Again, each of these thirty curiæ was formed of gentes or houses, the families constituting which were not of necessity related; just as at Athens the *γεννήται* or members of a *γένος*, also called *ὁμογύλακτες*, were no way akin, but bore this name solely in consequence of their union.⁶ Dionysius⁷ farther informs us that Romulus divided the curiæ into decads, *i. e.*, decads of gentes or houses, at the head of which were officers called decurions: each of the three tribes, therefore, was originally composed of one hundred gentes (*vid. GENS*); and as in the old legion the three centuries of horse corresponded to the three tribes, so did the thirty centuries of foot represent the same number of curiæ. We need not, however, infer from this that the number of soldiers in each century was always a hundred.⁸

The curiæ whose names have come down to us are only seven: the Forensis, Raptæ, Fautia or Sautia, Tatiensis, Titata, Velitensis, and Velita. According to Livy,⁹ these names were derived from the Sabine women carried off during the consualia; according to Varro,¹⁰ from their leaders (*ἀνδρες ἡγέμονες*), by which he may mean Heroes Eponymi;¹¹ others, again, connect them with the neighbouring places.¹² The poetical story of the rape of the Sabine women probably indicates, that at one time no *convivium*, or right of intermarriage, existed between the Romans and the Sabines till the former extorted it by force of arms. A more intimate union would, of course, be the consequence.

Each of these thirty curiæ had a president (*curio*), who performed the sacred rights, a participation in which served as a bond of union among the members.¹³ The curiones themselves, forming a college of thirty priests, were presided over by the *curio maximus*. Moreover, each of these corporations had its common hall, also called curia, in which the citizens met for religious and other purposes.¹⁴ But, besides the halls of the old corporations, there were also other curiæ at Rome used for a variety of purposes: thus we read of the *Curia Saliorum*, on the

Palatine;¹ of the *Curia Calabra*, on the Capitoline, said to have been so called from *calare*, because the pontifex minor there proclaimed to the people the number of days between the kalends and the nones of each month.² But the most important of all was the curia in which the senate generally met; sometimes simply called curia, sometimes distinguished by the epithet Hostilia, as it was said to have been built by Tullus Hostilius. This, however, was destroyed by fire, and in its place Augustus erected another, to which he gave the name of Curia Julia, though it was still occasionally called the Curia Hostilia.³

The reader of Niebuhr will be aware that the curiæ (we are now speaking of the corporations) were formed of the original burghers of the three patrician tribes, whose general assembly was the comitia curiata, and whose representatives originally formed the smaller assembly or senate. They were, in fact, essentially exclusive bodies, in whose hands were the whole government and property of the state; for the plebs which grew up around them, formed as it was of various elements, but not included in the curiæ, had for a long time no share in the government of the state or its property. Our own country, before the alteration in the laws relating to the franchise and municipal government, exhibited a parallel to this state of things. The free-men in many instances enjoyed the franchise, and possessed the property of their respective boroughs, though their unprivileged fellow-citizens often exceeded them both in numbers and influence. But it is the nature of all exclusive corporations to decline in power and everything else: and so it was at Rome; for in the later ages of the Republic, the curiæ and their comitia were little more than a name and a form. The *oblatio curiæ*, under the emperors, seems to show that to belong to a curia was then no longer an honour or an advantage, but a burden.⁴

In later ages, curia signified the senate of a colony in opposition to the senatus of Rome. (*Vid. COLONIA*, p. 282.) Respecting the etymology of the word, see *COMITIA*, p. 295.

CURIA'TA COMITIA. (*Vid. COMITIA.*)

CURIO. (*Vid. CURIÆ.*)

KYRIOS (*κύριος*) signifies generally the person that was responsible for the welfare of such members of a family as the law presumes to be incapable of protecting themselves; as, for instance, minors and slaves, and women of all ages. Fathers, therefore, and guardians, husbands, the nearest male relatives of women, and masters of families, would all bear this title in respect of the vicarious functions exercised by them in behalf of the respective objects of their care. The qualifications of all these, in respect of which they can be combined in one class, designated by the term *κύριος*, were the male sex, years of discretion, freedom, and, when citizens, a sufficient share of the franchise (*ἐμπριψία*) to enable them to appear in the law-courts as plaintiffs or defendants in behalf of their several charges; in the case of the *κύριος* being a resident alien, the deficiency of franchise would be supplied by his Athenian patron (*προστάτης*). The duties to be performed, and, in default of their performance, the penalties incurred by guardians, and the proceedings as to their appointment, are mentioned under their more usual title. (*Vid. ΕΠΙΤΡΟΠΟΙ.*)

The business of those who were more especially designated *κύριοι* in the Attic laws was, to protect the interests of women, whether spinsters or widows, or persons separated from their husbands. If a citizen died intestate, leaving an orphan daughter,

the son, or the father, of the deceased was bound to supply her with a sufficient dowry, and give her in marriage; and take care, both for his own sake and that of his ward, that the husband made a proper settlement in return for what his bride brought him in the way of dower (*ἀπορίμμημα*, Harpocr.). In the event of the death of the husband or of a divorce, it became the duty of the *κύριος* that had betrothed her to receive her back and recover the dowry, or, at all events, alimony from the husband or his representatives. If the father of the woman had died intestate, without leaving such relations as above mentioned surviving, these duties devolved upon the next of kin, who had also the option of marrying her himself, and taking her fortune with her, whether it were great or small.¹ If the fortune were small, and he were unwilling to marry her, he was obliged to make up its deficiencies according to a regulation of Solon;² if it were large, he might, it appears, sometimes even take her away from a husband to whom she had been married in the lifetime and with the consent of her father.

There were various laws for the protection of female orphans against the neglect or cruelty of their kinsmen; as one of Solon's,³ whereby they could compel their kinsmen to endow or marry them; and another, which, after their marriage, enabled any Athenian to bring an action *κακώσεως*, to protect them against the cruelty of their husbands;⁴ and the archon was specially intrusted with power to interfere in their behalf upon all occasions.⁶ (*Vid. CAECOSIS.*)

*CURMA, CURMI, CORMA, and CURMON, a species of Ale mentioned by Sulpicius and Dioscorides. (*Vid. CEREVISIA.*)

CURSORES were slaves, whose duty it was to run before the carriage of their masters, for the same purpose as our outriders. They were not used during the times of the Republic, but appear to have first come into fashion in the middle of the first century of the Christian æra. The slaves employed for this purpose appear to have frequently been Numidians.⁶ The word cursors was also applied to all slaves whom their masters employed in carrying letters, messages, &c.⁷

CURSUS. (*Vid. CIRCUS*, p. 256.)

*CURUCA or CURRU'CA, a bird mentioned by Aristotle under the name of *ῥοῦαζός*.⁶ Gaza translates this Greek term by *Curuca*. Gesner inclines to the opinion that it is the Titlark, or *Anthus pratensis*, Bechstein.

CURULIS SELLA. (*Vid. SELLA CURULIS.*)

CURRUS, *dim. CURRICULUM* (*ἄρμα*), a Chariot, a Car. These terms appear to have denoted those two-wheeled vehicles for the carriage of persons which were open overhead, thus differing from the *carpentum*, and closed in front, in which they differed from the *cistum*. One of the most essential articles in the construction of the currus was the *ἄντρος*, or rim; and it is accordingly seen in all the chariots which are represented either in this article, or at p. 66, 209, 253. (*Vid. ANTRYX.*) Another indispensable part was the axle, made of oak (*φύγιονος ἔξων*), and sometimes also of ilex, ash, or elm.¹⁰ The cars of Juno and Neptune have metallic axles (*σπιδρεός, χαλκεός ἔξων*).¹¹ One method of making a chariot less liable to be overturned was to lengthen its axle, and thus to widen the base on which it stood. The axle was firmly fixed under the body

of the chariot, which, in reference to this circumstance, was called *ὑπερτερία*, and which was often made of wicker-work, enclosed by the *ἀντρος*.¹ Fat (*λίπος*) and pressed olives (*amurca*) were used to grease the axle.

The wheels (*κύκλα, τροχοί, rotæ*) revolved upon the axle,⁴ as in modern carriages; and they were prevented from coming off by the insertion of pins (*ἐμβόλοι*) into the extremities of the axle (*ἄκραξονία*). Pelops obtained his celebrated victory over CENOMANUS through the artifice of Hippodamia, who, wishing to marry Pelops, persuaded Myrtilus, the charioteer of his adversary, to omit inserting one of the linchpins in the axle of his car, or to insert one of wax.⁵ She thus caused the overthrow and death of her father CENOMANUS, and then married the conqueror in the race.

Sir W. Gell describes, in the following terms, the wheels of three cars which were found at Pompeii: "The wheels light, and dished much like the modern, 4 feet 3 inches diameter, 10 spokes, a little thicker at each end."⁶ These cars were probably intended for the purposes of common life. From Xenophon we learn that the wheels were made stronger when they were intended for the field of battle. After each excursion the wheels were taken off the chariot, which was laid on a shelf or reared against a wall; and they were put on again whenever it was wanted for use.⁷

The parts of the wheel were as follows:

(a.) The nave, called *πλήμνη, ῥονικίς, modiolus*.⁹ The last two terms are founded on the resemblance of the nave to a modius or bushel. The nave was strengthened by being bound with an iron ring, called *πλημνόδετον*.¹⁰

(b.) The spokes, *κνήμαι* (literally, *the legs*), *radii*. We have seen that the spokes were sometimes ten in number. In other instances they were eight (*κύκλα ὀκτάκνημα*), six, or four. Instead of being of wood, the spokes of the chariot of the sun, constructed by Vulcan, were of silver (*radiorum argenteus ordo*).¹²

(c.) The felly, *ῥυξ*.¹³ This was commonly made of some flexible and elastic wood, such as poplar¹⁴ or the wild fig, which was also used for the rim of the chariot; heat was applied to assist in producing the requisite curvature.¹⁵ The felly was, however, composed of separate pieces, called arcs (*ὑψίδες*).¹⁶ Hence the observation of Plutarch, that, as a "wheel revolves, first one apsis is at the highest point, and then another." Hesiod¹⁷ evidently intended to recommend that a wheel should consist of four pieces.

(d.) The tire, *ἐπίσπρων, canthus*. Homer¹⁸ describes the chariot of Juno as having a tire of bronze upon a golden felly, thus placing the harder metal in a position to resist friction, and to protect the softer. On the contrary, Ovid's description is more ornamental than correct: "*Aurea summa curvatura rotæ*."¹⁹ The tire was commonly of iron.²⁰

All the parts now enumerated are seen in an ancient chariot preserved in the Vatican, a representation of which is given in the following woodcut.

This chariot, which is in some parts restored, also shows the pole (*δρυμός, temo*). It was firmly fixed at its lower extremity to the axle, whence the destruction of Phæthon's chariot is represented

tween the two *ἀντιγες*, and proceeding from the front of the chariot on each side of the middle horse. These probably assisted in attaching the third or extra horse.

The Latin name for a chariot and pair was *biga*. (*Vid. BIGA*.) When a third horse was added, it was called *triga*; and, by the same analogy, a chariot and four was called *quadriga*; in Greek, *τετραορία* or *τέθριππος*.

The horses were commonly harnessed in a quadriga after the manner already represented, the two strongest horses being placed under the yoke, and the two others fastened on each side by means of ropes. This is implied in the use of the epithets *σειραιός* or *σειραφόρος*, and *funalis* or *funarius*, for a horse so attached.¹ The two exterior horses were farther distinguished from one another as the right and the left trace-horse. In a chariot-race described by Sophocles,² the driver, aiming to pass the goal, which is on his left hand, restrains the nearest horse, and gives the reins to that which was farthest from it, viz., the horse in traces on the right hand (*δεξιὸν δ' ἀνείξῃ σειραῖον ἵππον*). In the splendid triumph of Augustus after the battle of Actium, the trace-horses of his car were ridden by two of his young relations. Tiberius rode, as Suetonius relates, "sinisteriore funali equo," and Mævelius "dexteriore funali equo." As the works of ancient art, especially fictile vases, abound in representations of quadrigæ, numerous instances may be observed in which the two middle horses (*ὁ μέσος δεξιὸς καὶ ὁ μέσος ἀριστερός*) are yoked together as in a biga; and, as the two lateral ones have collars (*λέπαννα*) equally with the yoke-horses, we may presume that from the top of these proceeded the ropes which were tied to the rim of the car, and by which the trace-horses assisted to draw it. The first figure in the annexed woodcut is the chariot of Aurora, as painted on a vase found at Canosa.⁴ The reins of the two middle horses pass through

by the circumstance of the pole and axle being torn asunder (*temone revulsus axis*). At the other end (*ἀκροβόρμιον*) the pole was attached to the yoke, either by a pin (*ἐμβολός*), as shown in the chariot above engraved, or by the use of ropes and bands. (*Vid. JUCUM*.)

Carriages with two, or even three poles were used by the Lydiars.² The Greeks and Romans, on the other hand, appear never to have used more than one pole and one yoke, and the currus thus constructed was commonly drawn by two horses, which were attached to it by their necks, and therefore called *δίγυες ἵπποι*,³ *συνωρίς*,⁴ "gemini jugales,"⁵ "equi bijuges."⁶

If a third horse was added, as was not unfrequently the case, it was fastened by traces. It may have been intended to take the place of either of the yoke horses (*ζύγοι ἵπποι*) which might happen to be disabled. The horse so attached was called *παρήγορος*. When Patroclus returned to battle in the chariot of Achilles, two immortal horses, Xanthus and Balaus, were placed under the yoke; a third, called Pedasus, and mortal, was added on the right hand; and, having been slain, caused confusion, until the driver cut the harness by which this third horse was fastened to the chariot.⁷ Ginzrot⁸ has published two drawings of chariots with three horses from Etruscan vases in the collection at Vienna. The *ἵππος παρήγορος* is placed on the right of the two yoke horses. (See woodcut at top of next column.) We also observe traces passing be-

rings at the extremities of the yoke. All the particulars which have been mentioned are still more distinctly seen in the second figure, taken from a terra-cotta at Vienna.⁹ It represents a chariot

overthrown in passing the goal at the circus. The charioteer having fallen backward, the pole and yoke are thrown upward into the air; the two trace-horses have fallen on their knees, and the two yoke-horses are prancing on their hind legs.

If we may rely on the evidence of numerous

1. (Ovid, Met., ii., 310.)—2. (Æschyl., Pers., 47.)—3. (Hom., Il., v., 195; x., 473.)—4. (Xen., Hell., i., 2, § 1.)—5. (Virg., Æn., vii., 280.)—6. (Georg., iii., 91.)—7. (Hom., Il., xvi., 148-154, 467-474.)—8. (Wägen und Fahrwerke, vol. i, p. 342.)—9. (Ginzrot, v. ii., p. 107, 108.)

works of art, the currus was sometimes drawn by four horses without either yoke or pole; for we see two of them diverging to the right hand and two to the left, as in the beautiful cameo on p. 334, 1st col., which exhibits Apollo surrounded by the signs of the zodiac. If the ancients really drove the quadriga thus harnessed, we can only suppose the charioteer to have checked its speed by pulling up the horses, and leaning with his whole body backward, so as to make the bottom of the car at its hindmost border scrape the ground, an act and an attitude which seem not unfrequently to be intended in antique representations.

The currus, like the cisium, was adapted to carry two persons, and on this account was called in Greek *δίπρος*. One of the two was, of course, the driver. He was called *ἥνιοχος*, because he held the reins, and his companion *παραιβάτης*, from going by his side or near him. Though in all respects superior, the *παραιβάτης* was often obliged to place himself behind the *ἥνιοχος*. He is so represented in the biga at p. 66, and in the Iliad¹ Achilles himself stands behind his charioteer Automedon. On the other hand, a personage of the highest rank may drive his own carriage, and then an inferior may be his *παραιβάτης*, as when Nestor conveys Machaon (*πᾶρ δὲ Μαχάων βαίνει*²), and Juno, holding the reins and whip, conveys Minerva, who is in full armour.³ In such cases a kindness, or even a compliment, was conferred by the driver upon him whom he conveyed, as when Dionysius, tyrant of Sicily, "himself holding the reins, made Plato his *παραιβάτης*."⁴ In the contest which has been already referred to, and which was so celebrated in Greek mythology, Ænomaus intrusts the reins to the unfaithful Myrtilus, and assumes the place of his *παραιβάτης*, while Pelops himself drives with Hippodamia as his *παραιβάτης*, thus honouring her in return for the service she had bestowed.⁵

The Persepolitan sculptures, and the innumerable paintings discovered in Egyptian tombs, concur with the historical writings of the Old Testament, and with the testimony of other ancient authors, in showing how commonly chariots were employed on the field of battle by the Egyptians, the Persians, and other Asiatic nations. The Greek poetry of the heroic ages proves with equal certainty the early prevalence of the same custom in Greece. The *ἀριστῆες*, i. e., the nobility, or men of rank, who wore complete suits of armour, all took their chariots with them, and in an engagement placed themselves in front.⁶ Such were the *ἱππεῖς*, or cavalry of the Homeric period; the precursors of those who, after some centuries, adopted the less expensive and ostentatious practice of riding on horseback, but who, nevertheless, in consideration of their wealth and station, still maintained their own horses, rather to aid and exhibit themselves individually on the field than to act as members of a compact body. In Homer's battles we find that the horseman, who, for the purpose of using his weapons, and in consequence of the weight of his armour, is under the necessity of taking the place of *παραιβάτης* (see the woodcut of the triga, p. 332), often assails or challenges a distant foe from the chariot; but that, when he encounters his adversary in close combat, they both dismount, "springing from their chariots to the ground," and leaving them to the care of the *ἥνιοχοι*.⁷ So likewise Turnus is described by Virgil, "Desiluit Turnus bijugis; pedes apparat ire Comminus."⁸ As soon as the hero had finished the trial of his strength with his oppo-

nent, he returned to his chariot, one of the chief uses of which was to rescue him from danger. When Automedon prepares to encounter both Hector and Æneas, justly fearing the result, he directs his charioteer, Alcimedon, instead of driving the horses to any distance, to keep them "breathing on his back,"⁹ and thus to enable him to effect his escape in case of need.

These chariots, as represented on bas-reliefs and fictile vases, were exceedingly light, the body often consisting of little besides a rim fastened to the bottom and to the axle. Unless such had been really their construction, it would be difficult to imagine how so great a multitude of chariots could have been transported across the Ægean Sea. Homer also supposes them to be of no greater weight; for, although a chariot was large enough to convey two persons standing, not sitting, and on some occasions was also used to carry off the armour of the fallen,² or even the dead body of a friend,³ yet Diomed, in his nocturnal visit to the enemy's camp, deliberates⁴ whether to draw away the splendid chariot of Rhesus by the pole, or to carry it off on his shoulder. The light and simple construction of war-chariots is also supposed by Virgil,⁵ when he represents them as suspended with all kinds of armour on the entrance to the temple of the Laurentian Pæus.

We have already seen that it was not unusual, in the Homeric battles, to drive three horses, one being a *παρῆρος*: in a single instance, that of Hector, four are driven together.⁶ In the games, the use of this number of horses was, perhaps, even more common than the use of two. The form of the chariot was the same, except that it was more elegantly decorated. But the highest style of ornament was reserved to be displayed in the quadrigæ, in which the Roman generals and emperors rode when they triumphed. The body of the triumphal car was cylindrical, as we often see it represented on medals. It was enriched with gold (*aureo curru*)⁷ and ivory.⁸ The utmost skill of the painter and the sculptor was employed to enhance its beauty and splendour. More particularly the extremities of the axle, of the pole, and of the yoke, were highly wrought in the form of animals' heads. Wreaths of laurel were sometimes hung round it (*currum laurigerum*)⁹, and were also fixed to the heads of the four snow-white horses.¹⁰ The car was elevated so that he who triumphed might be the most conspicuous person in the procession, and, for the same reason, he was obliged to stand erect (*in curru stans æburno*)¹¹. A friend, more especially a son, was sometimes carried in the same chariot by his side.¹² When Germanicus celebrated his triumph, the car was "loaded" with five of his children in addition to himself.¹³ The triumphal car had, in general, no pole, the horses being led by men who were stationed at their heads.

The chariot was an attribute not only of the gods, but of various imaginary beings, such as Victory, often so represented on coins, vases, and sculptures (*biga, cui Victoria insisterat*)¹⁴; Night (*Nox bigis subnecta*)¹⁵; and Aurora, whom Virgil represents as driving either two horses¹⁶ or four,¹⁷ in this agreeing with the figure in our last woodcut. In general, the poets are more specific as to the number of horses in the chariots of the deities, and it rarely exceeded two. Jupiter, as the father of the gods,

1. (ix., 397.)—2. (ii., xi., 512, 517.)—3. (v., 720-775.)—4. (Ælian, v., ii., iv., 18.)—5. (Apollon. Rhod., i., 752-758.)—6. (Vid. p. 94, 97.)—7. (ii., iii., 29; xvi., 423, 427; xvii., 480-483.)—8. (Hesiod, Scut. Herc., 370-372.)—9. (Æa. x., 453.)

drives four white horses when he goes armed with his thunderbolt to resist the giants: Pluto is drawn by four black horses. The following line,

"*Quadrijugis et Phæbus equis, et Delia bigis,*"¹¹

is in accordance not only with numerous passages of the poets, but with many works of art. A bronze lamp² shows the moon, or Diana, descending in a biga, and followed by Apollo, who is crowned with rays as he rises in a quadriga. The same contrast is exhibited in the annexed woodcut, showing the devices on two gems in the royal collection at Berlin. That on the left hand, representing Apollo encircled by the twelve signs, calls to mind the en-

graving on the seal of Amphitryon, "*Cum quadrijugis sol exoriens.*"³ In the *Æneid*,⁴ Latinus drives a chariot and four to express his claim to be descended from Apollo. The chariots of Jupiter and of the Sun are, moreover, painted on ancient vases with wings proceeding from the extremities of the axle (*πτερόν ἄμα*; ⁵ *volucrum currum*⁶).

These supernatural chariots were drawn not only by horses, but by a great variety of brute or imaginary beings. Thus Medea received from the Sun a car with winged dragons.⁷ Juno is drawn by peacocks,⁸ Diana by stags,⁹ Venus by doves or swans, Minerva by owls, Mercury by rams, and Apollo by griffons. To the car of Bacchus and, consequently, of Ariadne (*vid. CAPISTRUM*, p. 209), are yoked centaurs, tigers and lynxes:

"*Tu bijugum pictis insignia frenis*

Colla premis lyncum."¹⁰

Chariots executed in terra-cotta (*quadrigæ fictiles*¹¹), in bronze, or in marble, an example of which last is shown in the annexed woodcut from an ancient chariot in the Vatican, were among the most beautiful ornaments of temples and other public edifices.

No pains were spared in their decoration; and Pliny informs us¹² that some of the most eminent artists were employed upon them. In numerous instances they were designed to perpetuate the fame of those who had conquered in the chariot-race.¹³ As the emblem of victory, the quadriga was

sometimes adopted by the Romans to grace the triumphal arch by being placed on its summit; and even in the private houses of great families, *cyathos* were displayed as the indications of rank, or the memorials of conquest and of triumph.¹

CUSTODES. (*vid. COMITIA*, p. 297.)

CYATHUS (*κύαθος*), a Greek and Roman liquid measure, containing one twelfth of the *sextarius*, or .0825 of a pint English. It was, in later times at least, the measure of the common drinking-glass among the Romans, who borrowed it from the Greeks.² The form of the cyathus used at banquets was that of a small ladle, by means of which the wine was conveyed into the drinking-cups from the large vessel (*κρατήρ*) in which it was mixed.³ Two of these cyathi are represented in the annexed woodcut from the Museo Borbonico, vol. iv., p. 12

The cyathus was the *uncia*, considered with reference to the *sextarius* as the unit: hence we have *sextans* used for a vessel containing the sixth of the *sextarius*, or two cyathi, *quadrans* for one containing three cyathi, *triens* for four cyathi, *quincunx* for five cyathi, &c.⁴

*CYCLAMINUS (*κυκλάμινος*), a plant, of which Dioscorides mentions two species. The first appears to be the *Cyclamen Europæum*, or common Sow-bread. About the second there has been much difference of opinion. Dodonæus and Hardouin conclude that it was the Bitter-sweet (*Solanum dulcamara*); but Sprengel follows Gesner in referring it to the *Lonicera periclymenum*, or Woodbine.⁵

*CYCNUS (*κύκνος*). This appellation, as Adams remarks, is generally applied to the *Anas Cygnus*, L., or Wild Swan; but sometimes also to the *Anas Olor*, or Tame Swan. It is to the wild swan that the Homeric epithet *δωλιχόδερος*, "long-necked," is particularly applicable.⁶ "It is to this species (the *Anas Cygnus*)," observes Griffith, "that the ancients attributed so melodious a voice: but this opinion, however accredited, was not universal. It was contested by Lucian, Pliny, and Ælian; and even Virgil speaks only of the disagreeable cries of the swan. Some moderns have, notwithstanding, adopted the popular notions of the ancients on this subject, and even in contradiction to the evidence of their senses, have endeavoured to persuade themselves of its truth. It is sufficient to observe, from all credible evidence, that the opinion is utterly unfounded. The swan neither sings during its lifetime, nor, as some assert, just before its death. The comparatively modern discovery of the Black Swan seems to lead to the conclusion that the *Cygnus Niger* of antiquity was not altogether a fabulous creature."⁷

*CYDONIUM MALUM, the Quince, the fruit of the *Pirus Cydonia*. The name arose from that of the city of Cydon, in Crete, whence they were first brought to Greece. Cato first gave it the appellation of *Cotoneum malum*, and Pliny followed him. The ancient writers mention several varieties of the Quince: thus the true ones (*κυδώνια*) were small and round; another kind, the *στρούθεια*, was of a large size, and sweeter than the former. Columella enumerates three kinds, namely, *Struthea*, *Mustea*, and *Chrysomela*. The last, however, belongs to the orange family. The Quince-tree is still called *κυδωνία* in northern Greece. According to Sibthorp, it is cultivated in gardens with the apple-tree.¹

*CYMINDIS (*κυμινδής*). (Vid. *HIERAX*.)

CYCLAS (*κυκλᾶς*) was a circular robe worn by women, to the bottom of which a border was affixed, inlaid with gold.

"*Hæc nunc aurata cyclade signat humum.*"²

Alexander Severus, in his other attempts to restrain the luxury of his age, ordained that women should only possess one *cyclas* each, and that it should not be adorned with more than six unciae of gold.³ The *cyclas* appears to have been usually made of some thin material (*tenui in cyclade*).⁴ It is related, among other instances of Caligula's effeminacy, that he sometimes went into public in a garment of this description.⁵ For the literature of this subject, see Ruperti, *ad Juv.*, vi., 259.

CYMBA (*κύμβα*) is derived from *κύμβος*, a hollow, and is employed to signify any small kind of boat used on lakes, rivers, &c.⁶ It appears to have been much the same as the *ἀκάτιον* and *scapha*. (Vid. *ACATION*.)

CYMBALUM (*κύμβαλον*), a musical instrument, in the shape of two half globes, which were held, one in each hand, by the performer, and played by being struck against each other. The word is originally Greek, being derived from *κύμβος*, a hollow, with which the Latin *cymba*, *cymbium*, &c., seem to be connected. In Greek it has several other significations, as the cone of a helmet;⁷ it is also used for *ἀρδανία*,⁸ the vessel of purification placed at the door of a house where there had been death.⁹ Besides this, it is often employed metaphorically for an empty, noisy person, as in 1 Corinthians, xiii., 1, or, as Tiberius Cæsar called Apion the grammarian, *Cymbalum mundi*.¹⁰ In the middle-age Latin it is used for a church or convent-bell, and sometimes for the dome of a church.¹¹

Several kinds of cymbals are found on ancient monuments, and, on the other hand, a great many names have been preserved by the grammarians and lexicographers; but the descriptions of the latter are so vague, that it is impossible to identify one with the other. A large class of cymbals was termed *κρούματα*, which, if they were really distinct from the *κρόταλα*, as Spohn and Lampe suppose, cannot now be exactly described. (Vid. *ΚΡΟΤΑΛUM*.) The preceding drawing of a *κρούμα* is taken from an ancient marble, and inserted on the authority of Spohn.¹

The *κρέμβαλα* mentioned in the Homeric hymn to Apollo² were of this kind, played on by a chorus of *Diæans*. The *scabilla* or *κρουπέλια* were also on the same principle, only played with the foot, and inserted in the shoe of the performer; they were used by flute-players, perhaps to beat time to their music.³

Other kinds of cymbals were, the *πλαταγή*, an invention of Archytas, mentioned by Aristotle,⁴ and its diminutive *πλαταγώνιον*, which, from the description of Julius Pollux and Hesychius,⁵ appears to have been a child's rattle; *δξύαφα*, the two parts of which Suidas tells us⁶ were made of different materials, for the sake of variety of sound; *κοτύλαι*, mentioned in the fragments of Æschylus, with several others noted by Lampe in his work *De Cymbalis*, but perhaps without sufficient authority.

The cymbal was usually made in the form of two half globes, either running off towards a point so as to be grasped by the whole hand, or with a handle. It was commonly of bronze, but sometimes of baser material, to which Aristophanes alludes.⁷ The subjoined woodcut of a cymbalistris is taken from an ancient marble, and given on the authority of Lampe. See also the figure in page 189.

The cymbal was a very ancient instrument, being used in the worship of Cybele, Bacchus, Juno, and all the earlier deities of the Grecian and Roman mythology. It probably came from the East, from whence, through the Phœnicians, it was conveyed to Spain.⁸ Among the Jews it appears (from 2 Chron., v., 12, 13. — Nehem., xii., 27) to have been an instrument in common use. At Rome we first hear of it in Livy's account of the Bacchic orgies, which were introduced from Etruria.⁹

For *sistrum*, which some have referred to the class of *cymbala*, see *SISTRUM*.

*CYNOCEPHALI (*κυνοκέφαλοι*), a fabulous race, with the heads of dogs, mentioned by Pliny and others as dwelling in the interior of Africa. The Cynocephali of the ancients, however, were in reality a species of large baboon, with elongated, dog-like head, flat and compressed cheeks, projecting and strong teeth, and a forehead depressed below

the level of the superior margins of the orbits. Notwithstanding this close approximation to the shape of the dog's head, the form and position of the eyes, combined with the similarity of the arms and hands, gave to these creatures a resemblance to humanity as striking as it is disgusting.¹

*CYNOGLOSSUM (κυνόγλωσσον or -ος), the Hounds'-tongue, or *Cynoglossum officinale*. Culpepper, the English herbalist, says, with respect to the etymology of the word, "it is called Hounds'-tongue because it ties the tongues of dogs; whether true or not, I have never tried."²

II. The name of a fish mentioned by Athenæus. Rondelet supposes it a species of the Bouglossus or Sole.³

*CYNOCRAMBE (κυνοκράμβη), a plant, which Sprengel, in his history of Botany, sets down as the *Chenopodium album*, or white Goose-foot; but in his edition of Dioscorides he joins Bauhin in holding it to be the *Thelygonum cynocrambe*.⁴

*CYNOMYIA (κυνομυία), the Dog-fly, or *Musca canina*.⁵

*CYNORAISTES (κυνοραιστής), the Dog-tick, or *Acarus Ricinus*, L.⁶

*CYNOR'ODON (κυνόροδον). "None of the commentators," observes Adams, "offer any explanation of what it was; but, as the word signifies the Dog-rose, or *Rosa canina*, it is probable that it was the same as the *κυνόδοταν*."⁷

*CYNOSBATUM (κυνόσβατον). "The commentators are not quite agreed respecting this plant," observes Adams. "Dierbach makes it to be the *Rosa pomifera*; Sprengel follows Dodonæus in referring it to the *Rosa canina*, or Hep-tree; and Stackhouse at first inclines to this opinion, but afterward decides in favour of the *Rubus Idæus*. I am of opinion that it was most probably the *Rosa canina*."⁸

*CYNOPS (κύνωψ). Both Sprengel and Stackhouse call this plant *Plantago Cynops*, but the latter hesitates about making it the *P. Psyllium*, or Fleawort.⁹

*CYPERUS (κύπερος or -ον), the *Cyperus rotundus*, a plant still very common on the Greek islands. It is mentioned by Theocritus as an agreeable plant, and is also noticed by Homer and Nicander. According to Dodwell, the roots are taken medicinally for disorders of the stomach. The leaves are used for stringing and bringing the roots to Athens, and for tying the wild figs on the cultivated tree.¹⁰

*CYPRUS (κύπρος), a plant; according to Pliny, the same with the *Ligustrum*. Martyn, however, remarks, that Prosper Alpinus found plenty of plants in Egypt answering to Dioscorides' description of the Cyprus, but at the same time declared that the Italian Ligustrum, or Privet, did not grow in Egypt. It has since been settled, according to Adams, that it is a species of *Lawsonia*, either the *incensis* or the *alba*, Lam.¹¹

*CYTISUS (κύτιςος). "There has been considerable diversity of opinion respecting this plant. The point, however, seems at last to have been settled by Martyn and Sprengel in favour of the *Medicago arborea*, or Tree Medick." Sibthorp found the *M. arborea* growing among the rocks around Athens.¹²

D.

DACTYLIOTHE'CA (δακτυλιοθήκη), a case or box where rings were kept.¹ The name was also applied to a cabinet or collection of jewels. We learn from Pliny² that Scæurus, the stepson of Sulla, was the first person at Rome who had a collection of this kind, and that his was the only one till Pompey brought to Rome the collection of Mithradates, which he placed in the Capitol. Julius Cæsar also placed six dactyliothecæ in the Temple of Venus Genetrix.³

DACTYLUS (δάκτυλος). (Vid. PÆS).

DADU'CHUS (δάδουχος). (Vid. ELEUSINIA).

DÆDA'LA (Δαίδαλα), a festival celebrated in Bœotia in honour of Hera, surnamed *Νυμφενομένη* or *Τελεία*.⁴ Its origin and mode of celebration are thus described by Pausanias:⁵ Hera was once angry with Zeus, and withdrew herself to Eubœa. Zeus not being able to persuade her to return, went to Cithæron, who then governed Plataeæ, and who was said to be unequalled in wisdom. He advised Zeus to get a wooden statue, to dress and place it upon a chariot, and to say that it was Plataeæ, the daughter of Asopus, whom he was going to marry. Zeus followed the advice of Cithæron, and no sooner had Hera heard of her husband's projected marriage than she returned. But when, on approaching the chariot and dragging off the coverings, she saw the wooden statue, she was pleased with the device, and became reconciled to Zeus. In remembrance of this reconciliation, the Plataeans solemnized the festival of the dædala, which owes its name to Δαίδαλα, the appellation by which, in ancient times, statues and other works of ingenious and curious workmanship were designated.⁶ Pausanias was told that the festival was held every seventh year; but he believes that it took place at shorter intervals, though he was unable to discover the exact time.

We have to distinguish between two festivals of this name: one, which was celebrated by the Plataeans alone, was called the *lesser Dædala* (Δαίδαλα μικρά), and was held in the following manner: In the neighbourhood of Alalcomene was the greatest oak-forest of Bœotia, and in it a number of oak-trunks. Into this forest the Plataeans went, and exposed pieces of cooked meat to the ravens, attentively watching upon which tree any of the birds, after taking a piece of the meat, would settle; and the trees on which any of the ravens settled were cut down and worked into dædala, i. e., roughly-hewn statues.

The *great Dædala* (Δαίδαλα μέγала), in the celebration of which the Plataeans were joined by the other Bœotians, took place every sixtieth year; because at one time, when the Plataeans were absent from their country, the festival had not been celebrated for a period of sixty years. At each of the lesser Dædala fourteen statues were made in the manner described above, and distributed by lot among the towns of Plataeæ, Coronea, Thespiæ, Tanagra, Chæronea, Orchomenos, Lebadea, and Thebes; the smaller towns took one statue in common. The Bœotians assembled on the banks of the Asopus; here a statue of Hera was adorned and raised on a chariot, and a young bride led the procession. The Bœotians then decided by lot in what order they were to form the procession, and drove their chariots away from the river and up Mount Cithæron, on the summit of which an altar was erected of square pieces of wood, fitted together like stones. This altar was covered with a quanti-

ty of dry wood, and the towns, persons of rank, and other wealthy individuals, offered each a heifer to Hera and a bull to Zeus, with plenty of wine and incense, and at the same time placed the *dædala* upon the altar. For those who did not possess sufficient means, it was customary to offer small sheep; but all their offerings were burned in the same manner as those of the wealthier persons. The fire consumed both offerings and altar, and the immense flame thus kindled was seen far and wide.

The account of the origin of the *dædala* given by Pausanias agrees in the main points with the story related by Plutarch,¹ who wrote a work on the Platæan *dædala*; the only difference is, that Plutarch represents Zeus as receiving his advice to deceive Hera from Alalcomenes, and that he calls the wooden statue by which the goddess was to be deceived *Dædala* instead of Platæa. Plutarch also adds some remarks respecting the meaning of the festival, and thinks that the dispute between Zeus and Hera had reference to the physical revolutions to which Bœotia, at a very remote period, had been subject, and their reconciliation to the restoration of order in the elements.²

*DACRYD'ION (*δάκρυδιον*), a name for Scammony, given to it by Alexander of Tralles. (*Vid. SCAMMONIA*.)³

*DACT'YLI (*δάκτυλοι*), the fruit of the Palm-tree. The earlier Greek writers called this by the names of *φοίνικες*, *φοίνικος βάλανοι*, and *φοινικοβήλανοι*. The appellation *δάκτυλοι* occurs first in the works of the medical authors, but came afterward into general use; from it the name of the fruit in question is derived in all the modern languages of Europe. Thus they are called *dactyles* in Spanish, *dattili* in Italian, *datteln* in German, and *dates* in French and English. (*Vid. PHEENIX*.)⁴

*DAMASO'NIUM (*δαμασώνιον*), a plant, the name, according to Galen, with the *ἑλιμα* of Dioscorides. Stephens calls it *Plantago aquatica*. Cordus Sprengel, and Sibthorp accordingly acknowledge it as the Water Plantain, or *Alisma plantago*, J.⁵

DAMNI INJURIA ACTIO. The Aquilia lex, in the first chapter, provided that, if a man unlawfully (*injuria*) killed a slave or quadruped (*quæ pecudum numero sit*) which belonged to another, he was bound to pay to the owner the highest value that the slave or animal had within the year preceding the unlawful act. By the third chapter he was bound to pay the highest value that the slave or animal had within the thirty days preceding the unlawful act. A person whose slave was killed (*injuria*) might either prosecute the offender capitally (*capitali crimine*), or might bring his action for damage under this lex. The actions of the lex Aquilia (*actiones directæ*) were limited to damage done by actual contact (*corpore*), and only the owner of the thing damaged could sue. Afterward, an *actio utilis* was given in the case where the injury was done *corpore* but not *corpore*; as if a man persuaded a neighbour's slave to get up a tree, and he fell down and died, or was injured: such *actio* was also given to him who had a jus in re.⁶

DAMNUM signifies generally any injury to a person's property, and it is either *damnum factum*, datum, damage done, or *damnum infectum*, metuendum, damage apprehended. (*Vid. DAMNUM INFECTUM*.) Damage done to our actual property is simply called *damnum*; that damage which is caused by our being prevented from acquiring a

certain gain is called *lucrum cessans*: both are sometimes comprehended under the phrase "*id quod interest*," though this expression is more frequently applied to that compensation which a man claims beyond the bare value of the thing damaged, and sometimes it signifies the bare loss only. To make good any damage done is called *damnum præstare*.

The causes of *damnum* are either chance (*casus*) or the acts of human beings, which, when characterized by *dolus malus* or *culpa*, become *damnum* in the restricted and legal sense. (*Vid. CULPA*.) Delay (*mora*) is included by some writers under the causes of *damnum*, but it might be appropriately considered as a form of *culpa*.

DAMNUM INFECTUM is damage not done, but apprehended. For instance, if a man feared that mischief might happen to his property from the dilapidated state of his neighbour's buildings, he could require from the owner, or from the occupier who had a jus in re, or even from the possessor, security (*cautio*) against the mischief that was apprehended. The mode of obtaining this *cautio* was by the *damni infecti actio*. The actor was obliged to swear that he did not require the *cautio*, *calumniæ causa*. If the *cautio* was not given within the time named by the *judex*, the actor was permitted to take possession of the ruinous edifice. If a man's house fell and injured the house of a neighbour before any *cautio* had been given, the sufferer had no right of action, if the person whose house had tumbled down was content to relinquish all right to what had fallen on his neighbour's premises.¹

DAMOS'IA (*δαμοσία*), the escort or suite of the Spartan kings in time of war. It consisted of his tent comrades (*σύσκηποι*), to whom the polemarchs, Pythians, and three of the equals (*ἰσμοιοί*) also belonged;² of the prophets, surgeons, flute-players, volunteers in the army,³ Olympian conquerors,⁴ public servants, &c. The two ephors who attended the king on military expeditions also formed part of the *damosia*.⁵

DANA'KE (*δανῆκη*), the name of a foreign coin, according to Hesychius⁶ worth a little more than an obolus. According to some writers it was a Persian coin.⁷ This name was also given to the obolus which was placed in the mouth of the dead to pay the ferryman in Hades.⁸ At the opening of a grave at Sarnæ in Cephallenia, a coin was found between the teeth of the corpse.⁹

DANE'ION. (*Vid. INTEREST OF MONEY*.)

*DAPHNE (*δάφνη*), the *Laurus* of the Romans, and our Bay-tree; not the *Laurel*, as it is frequently rendered. "Translators," observes Martyn, "frequently confound the Laurel and the Bay, as if they were the same tree, and what the Romans called *Laurus*. Our Laurel was hardly known in Europe till the latter end of the sixteenth century, about which time it appears to have been brought from Trebizond to Constantinople, and thence into most parts of Europe. The Laurel has no fine smell, which is a property ascribed to the *Laurus* by Virgil. Nor is the Laurel remarkable for crackling in the fire, of which there is abundant mention with regard to the *Laurus*. These characters agree very well with the Bay-tree, which seems to be most certainly the *Laurus* of the ancients, and is at this time frequent in the woods and hedges of Italy. The first discoverers of the *Laurus* gave it the name of *Laurocerasus*, because it has a leaf something like a bay and a fruit like a cherry."¹⁰

(Martyn *ad Virg.*, *Georg.*, i., 306.)

II. short, as Adams remarks, the δάφνη is the *Laurus nobilis*, L. The δάφνη Ἀλεξάνδρεια of Dioscorides is unquestionably, according to the same authority, the Butcher's Broom, or Alexandrian Laurel, i. e., *Ruscus Hypoglossum*.¹

DAPHNEPHORIA (Δαφνηφορία), a festival celebrated every ninth year at Thebes in honour of Apollo, surnamed Ismenius or Galaxius. Its name was derived from the branches of bay (δάφνη) which were carried by those who took part in its celebration. A full account of the festival is given by Proclus.² At one time all the Æolians of Arne and the adjacent districts, at the command of an oracle, laid siege to Thebes, which was at the same time attacked by the Pelasgians, and ravaged the neighbouring country. But when the day came on which both parties had to celebrate a festival of Apollo, a truce was concluded, and on the day of the festival they went with bay-boughs to the temple of the god. But Polematas, the general of the Boeotians, had a vision, in which he saw a young man who presented to him a complete suit of armour, and who made him vow to institute a festival, to be celebrated every ninth year, in honour of Apollo, at which the Thebans, with bay-boughs in their hands, were to go to his temple. When, on the third day after this vision, both parties again were engaged in close combat, Polematas gained the victory. He now fulfilled his promise, and walked himself to the temple of Apollo in the manner prescribed by the being he had seen in his vision. And ever since that time, continues Proclus, this custom has been strictly observed. Respecting the mode of celebration, he adds: At the daphnephoria they adorn a piece of olive-wood with garlands of bay and various flowers; on the top of it a brazen globe is placed, from which smaller ones are suspended; purple garlands, smaller than those at the top, are attached to the middle part of the wood, and the lowest part is covered with a crocus-coloured envelope. By the globe on the top they indicate the sun, which is identical with Apollo; the globe immediately below the first represents the moon; and the smaller suspending globes are symbols of the stars. The number of garlands being 365, indicates the course of the year. At the head of the procession walked a youth, whose father and mother must be living. This youth was, according to Pausanias,³ chosen priest of Apollo every year, and called δαφνηφόρος: he was always of a handsome figure and strong, and taken from the most distinguished families of Thebes. Immediately before this youthful priest walked his nearest kinsman, who bore the adorned piece of olive-wood, which was called κωῶν. The priest followed, bearing in his hand a bay-branch, with dishevelled and floating hair, wearing a golden crown on his head, a magnificent robe which reached down to his feet (ποδῆρης), and a kind of shoes, called ἱφικράτιδες, from the general, Iphicrates, who had first introduced them. Behind the priest there followed a choir of maidens, with boughs in their hands and singing hymns. In this manner the procession went to the Temple of Apollo Ismenius or Galaxius. It would seem from Pausanias that all the boys of the town wore laurel garlands on this occasion, and that it was customary for the sons of wealthy parents to dedicate to the god brazen tripods, a considerable number of which were seen in the temple by Pausanias himself. Among them was one which was said to have been dedicated by Amphitryon, at the time when Heracles was daphnephorus. This last circumstance shows that

the daphnephoria, whatever changes may have been subsequently introduced, was a very ancient festival.

There was a great similarity between this festival and a solemn rite observed by the Delphians, who sent every ninth year a sacred boy to Tempe. This boy went on the sacred road,⁴ and returned home as bay-bearer (δαφνηφόρος) amid the joyful songs of choruses of maidens. This solemnity was observed in commemoration of the purification of Apollo at the altar in Tempe, whither he had fled after killing the Python, and was held in the month of Thargelion (probably on the seventh day). It is a very probable conjecture of Müller,⁵ that the Boeotian daphnephoria took place in the same month and on the same day on which the Delphian boy broke the purifying bay-boughs in Tempe.

The Athenians seem likewise to have celebrated a festival of the same nature, but the only mention we have of it is in Proclus,⁶ who says that the Athenians honoured the seventh day as sacred to Apollo; that they carried bay-boughs, and adorned the basket (κάνεον, see ΚΑΝΕΡΗΘΟΣ) with garlands, and sang hymns to the god. Respecting the astronomical character of the daphnephoria, see Müller, *Orchom.*, p. 220; and Creuzer, *Symbol. und Mythol.*, ii., p. 160.

*DAPHNOIDES (δαφνοειδής) according to Sprenkel, the *Daphne Alpina*; and the χαμαιδάφνη of Dioscorides, the *Ruscus Racemosus*.⁴

DARE ACTIO'NEM. (*Vid.* Actio, p. 18.)

DARICUS (δαρεικός), a gold coin of Persia, stamped on one side with the figure of an archer crowned and kneeling upon one knee, and on the other with a sort of quadrata incusa or deep cleft. The origin of this coin is doubtful. We know from Herodotus⁵ that Darius reformed the Persian currency, and stamped gold of the purest standard; whence it has been supposed that the daricus was so called from him. Harporation, however, says⁶ that the name was older than this Darius, and taken from an earlier king. Gesenius⁷ supposes the name to be derived from an ancient Persian word signifying king, or royal palace, or the bow of the king, in allusion to the figure stamped upon it.

This coin had a very extensive circulation, not only in the Persian empire, but also in Greece. The pay given by Cyrus to the soldiers of Clearchus was a daricus a month;⁸ and the same pay was offered to the same troops by Thimbrion, a Lacedæmonian general.⁹ In the later books of the Old Testament, the daricus is supposed to be mentioned under the names of adarkon (אֲדַרְכּוֹן) and darke-mon (דַּרְכְּמוֹן).¹⁰

Harporation says that, according to some persons, the daricus was worth twenty silver drachmæ; which agrees with the statement of Xenophon,¹¹ who informs us that 3000 darics were equal to ten talents, which would consequently make the daricus equal to twenty drachmæ. The value of the daricus in our money, computed from the drachma, is 16s. 3d.; but if reckoned by comparison with our gold money, it is worth much more. The darics in the British Museum weigh 128·4 grains and 128·6 grains respectively. Hussey¹² calculates the daricus as containing on an average about 123·7 grains of pure gold, and therefore equal in value to $\frac{123.7}{115.12}$

of a sovereign, or about 1l. 1s. 10d. 1·76 farthings. Very few darics have come down to us; their

4. (Plut., Quæst. Gr., 12.)—5. (Dor., ii., 8, § 4.)—6. (ap. Photium, p. 987.)—7. (Adams, Append., s. v.)—8. (iv., 166.)—9. (s. v.)—7. (Hebr. Lexicon.)—8. (Xen., Anab. i., 3, § 21.)—9. (Ibid., vii., 6, § 1.)—10. (Vid. i Chron., xix., 7.—Ezra, viii., 27, u., 69.—Nehem., vii., 70, 72.)—11. (Anab., i., 7, § 18.—12. (Ancient Weights, &c., vii., 3.)

1. (Dioscor., i., 106.—Galen, De Simpl., vi.—Bauhin's Pinax, 603.—Adams, Append. s. v.)—2. (Chrestomath., p. 11.)—3. (ix., 10, § 4.)

scarcity may be accounted for by the fact that, after the conquest of Persia, they were melted down and recoined under the type of Alexander.

There are also silver coins which go by the name of darics, on account of their bearing the figure of an archer; but they were never called by this name in ancient times. Aryandes, who was appointed governor of Egypt by Cambyses, is supposed to have been the first who struck these silver coins, in imitation of the gold coinage of Darius Hystaspis.¹

GOLO DARIC. BRITISH MUSEUM. ACTUAL SIZE.

SILVER DARIC. BRITISH MUSEUM. ACTUAL SIZE.

*DASCILLUS (*δάσκιλλος*), the name of a fish mentioned by Aristotle. Rondelet and Gesner connect their inability to determine what kind of fish it was.²

*DASYPUS (*δασύπους*), a term sometimes applied to the common Hare, or *Lepus timidus*, but more particularly to the *Lepus cuniculus*, the Coney or Rabbit. "The *Saphon* of the Bible," observes Adams, "has been generally taken for the Coney, but Biblical commentators seem now agreed that it was rather the *Ashkoko*, an animal first described accurately by the traveller Bruce."³

*DAUCUS (*δαῦκος*), a plant, three species of which are described by Dioscorides. The first of these is, according to Sprengel, the *Athamanta Cretenensis*; the 2d, the *Athamanta cervaria*; and the 3d, the *Seseli ammoides*. Dierbach agrees with Sprengel. Stephens makes the first species to be the "wild Carrot." Galen states that it is the same as the *σαφύλλινος*. Stackhouse suggests that the *δαῦκον φάρμακον* of Theophrastus may be the *Thapsia*.⁴ DE'BITOR. (*Vid.* NEXUS.)

DECADOUCHOI (*δεκαδούχοι*), the members of a council of Ten, who succeeded the Thirty in the supreme power at Athens, B.C. 403.⁵ They were chosen from the ten tribes, one from each,⁶ but, though opposed to the Thirty, sent ambassadors to Sparta to ask for assistance against Thrasybulus and the exiles. They remained masters of Athens till the party of Thrasybulus obtained possession of the city, and the democracy was restored.⁷

DECAR'CHIA (*δεκαρχία*) or DECADAR'CHIA (*δεκαδαρχία*), was a supreme council established in many of the Grecian cities by the Lacedaemonians, who intrusted to it the whole government of the state under the direction of a Spartan harmost. It always consisted of the leading members of the aristocratical party.⁸ This form of government appears to have been first established by Lysander at Ephesus.⁹

DECASMOS (*δεκάσμος*), Bribery. There were

two actions for bribery at Athens: one, called *δεκάσμοι γραφή*, lay against the person who gave the bribe; and the other, called *δάρων* or *δωροδοκίας γραφή*, against the person who received it.¹ These actions applied to the bribery of citizens in the public assemblies of the people (*συνδεδάξαν την ἐκκλησίαν*), of the *Heliaea* or any of the courts of justice, of the *βουλή*, and of the public advocates (*συνήγοροι*).² Demosthenes,⁴ indeed, says that orators were forbidden by the law not merely to abstain from receiving gifts for the injury of the state, but even to receive any present at all.

According to Aristotle,³ Anytus was the first person at Athens who bribed the judges; and we learn from Plutarch⁶ that he did so, when he was charged with having been guilty of treachery at Pylos, at the end of the Peloponnesian war. Other writers say that Melitus was the first person who bribed the judges.⁷

Actions for bribery were under the jurisdiction of the thesmothetæ.⁸ The punishment on conviction of the defendant was death, or payment of ten times the value of the gift received, to which the court might add an additional punishment (*προστήμιμα*). Thus Demosthenes was sentenced to a fine of 50 talents by an action for bribery, and also thrown into prison.⁹

DECATE (*δεκάτη*). (*Vid.* DECUMÆ.)

DECATE'LOGOI (*δεκατηλόγοι*). (*Vid.* DECUMÆ.)

DECATEUTAI (*δεκατευται*). (*Vid.* DECUMÆ.)

DECATEUTE'RION (*δεκατευτήριον*). (*Vid.* DECUMÆ.)

DECATO'NAI (*δεκατώναι*). (*Vid.* DECUMÆ.)

DECEMBER. (*Vid.* CALENDAR, ROMAN.)

DECE'MPEDA, a pole ten feet long, used by the agrimensores (*vid.* AGRIMENSORES) in measuring land.¹⁰ Thus we find that the agrimensores were sometimes called *decempedatores* (*L. Antonius, qui fuerat aquissimus agri privati et publici decempedator*).¹¹

DECE'MVIRI, the name of various magistrates and functionaries at Rome.

I. DECEMVIRI LEGIBUS SCRIBENDIS were ten persons who were appointed to draw up a code of laws, and to whom the whole government of the state was intrusted. As early as B.C. 460, a law was proposed by Caius Terentilius Harsa, that commissioners should be appointed for drawing up a body of laws; but this was violently opposed by the patricians;¹² and it was not till after a struggle of nine years that the patricians consented to send three persons to Greece, to collect such information respecting the laws and constitutions of the Greek states as might be useful to the Romans.¹³ They were absent a year; and on their return, after considerable dispute between the patricians and plebeians, ten commissioners of the patrician order were appointed, with the title of "decemviri legibus scribendis," to whom the revision of the laws was committed. All the other magistracies were suspended, and they were intrusted with supreme power in the state.¹⁴ Niebuhr, however, supposes that the tribuneship was not given up till the second decemvirate; but Dionysius expressly says that it was superseded in the first.

The decemviri entered upon their office at the beginning of the year 449 B.C. They consisted of Appian Claudius and Titus Genucius, the new con-

auls, of the ward n of the city, and of the two quæstors parricidii, as Niebuhr conjectures, and of five others chosen by the centuries. They discharged the duties of their office with diligence, and dispensed justice with impartiality. Each administered the government day by day in succession, as during an interregnum; and the fasces were only carried before the one who presided for the day.¹ They drew up a body of laws, distributed into ten sections, which, after being approved of by the senate and the comitia, were engraven on tables of metal, and set up in the comitium.

On the expiration of their year of office, all parties were so well satisfied with the manner in which they had discharged their duties, that it was resolved to continue the same form of government for another year; more especially as some of the decemvirs said that their work was not finished. Ten new decemvirs were accordingly elected, of whom Appius Claudius alone had belonged to the former body;² and of his nine new colleagues Niebuhr thinks that five were plebeians. These magistrates framed several new laws, which were approved of by the centuries, and engraven on two additional tables. They acted, however, in a most tyrannical manner. Each was attended by twelve lictors, who carried, not the rods only, but the axe, the emblem of sovereignty. They made common cause with the patrician party, and committed all kinds of outrages upon the persons and property of the plebeians and their families. When their year of office expired, they refused to resign or to appoint successors. Niebuhr, however, considers it certain that they were appointed for a longer period than a year, since otherwise they would not have been required to resign their office, but interreges would at the expiration of the year have stepped into their place. This, however, does not seem conclusive, since the decemvirs were at the time in possession of the whole power of the state, and would have prevented any attempt of the kind. At length the unjust decision of Appius Claudius in the case of Virginia, which led her father to kill her with his own hands to save her from prostitution, occasioned an insurrection of the people. The decemvirs were in consequence obliged to resign their office, B.C. 447, after which the usual magistracies were re-established.³

The ten tables of the former, and the two tables of the latter decemvirs, together form the laws of the Twelve Tables, of which an account is given in a separate article. (*VID. TWELVE TABLES.*)

II. DECEMVIRI LITIRUS JUDICANDIS. (*VID. PRÆTOR.*)

III. DECEMVIRI SACRIS FACIUNDIS, sometimes called simply DECEMVIRI SACRORUM, were the members of an ecclesiastical collegium, and were elected for life. Their chief duty was to take care of the Sibylline books, and to inspect them on all important occasions by command of the senate.⁴ Virgil⁵ alludes to them in his address to the Sibyl: "*Lectos sacro viros.*"

Under the kings the care of the Sibylline books was committed to two men (*dumviri*) of high rank,⁶ one of whom, called Atilius or Tullius, was punished by Tarquinius for being unfaithful to his trust, by being sewed up in a sack and cast into the sea.⁷ On the expulsion of the kings, the care of these books was intrusted to the noblest of the patricians, who were exempted from all military and civil duties. Their number was increased about the year 365 B.C. to ten, of whom five were chosen from

the patricians and five from the plebeians.¹ Subsequently their number was still farther increased to fifteen (*quindecimviri*), but at what time is uncertain. As, however, there were decemviri in B.C. 82, when the Capitol was burned,² and we read of decemviri in the time of Cicero,³ it appears probable that their number was increased from ten to fifteen by Sulla, especially as we know that he increased the numbers of several of the other ecclesiastical corporations. Julius Cæsar added one more to their number;⁴ but this precedent was not followed, as the collegium always appears to have consisted afterward of only fifteen.

It was also the duty of the decemviri and quindecimviri to celebrate the games of Apollo⁵ and the secular games.⁶ They were, in fact, considered priests of Apollo, whence each of them had in his house a bronze tripod dedicated to that deity.⁷

DECIMATIO was the selection, by lot, of every tenth man for punishment, when any number of soldiers in the Roman army had been guilty of any crime. The remainder usually had barley allowed to them instead of wheat.⁸ This punishment does not appear to have been often inflicted in the early times of the Republic, but is frequently mentioned in the civil wars and under the Empire. It is said to have been revived by Crassus, after being discontinued for a long time (*Πάτριόν τι τούτο διά πολλῶν χρόνων κόλασμα τοῖς στρατιώταις ἐπαγαγόν*).⁹ For instances of this punishment, see Liv., ii, 59.—Suet., Aug., 24; Galba, 12.—Tacit., Hist., i, 37.—Dio, xli, 35; xlix., 27, 38.

Sometimes only the twentieth man was punished (*vicesimatio*), or the hundredth (*centesimatio*).¹⁰

DECRETUM seems to mean that which is determined in a particular case after examination or consideration. It is sometimes applied to a determination of the consuls, and sometimes to a determination of the senate. A decretum of the senate would seem to differ from a senatus consultum in the way above indicated: it was limited to the special occasion and circumstances, and this would be true whether the decretum was of a judicial or a legislative character. But this distinction in the use of the two words, as applied to an act of the senate, was, perhaps, not always observed. Cicero¹¹ opposes edictum to decretum, between which there is in this passage apparently the same analogy as between a consultum and decretum of the senate. A decretum, as one of the parts or kinds of constitutio, was a judicial decision in a case before the sovereign. (*VID. CONSTITUTIO.*) Gaius,¹² when he is speaking of interdicta, says that they are properly called decreta, "cum (prætor aut consul) fieri aliquid jubet, et interdicta when he forbids. A juxta is said "condemnare," not "decernere," a word which in judicial proceedings is appropriate to a magistratus who has jurisdictio.

DECUMÆ (se. *partes*) formed a portion of the vectigalia of the Romans, and were paid by subjects whose territory, either by conquest or *deditio*, had become the property of the state (*ager publicus*). They consisted, as the name denotes, of a tithe or tenth of the produce of the soil, levied upon the cultivators (*aratores*) or occupiers (*possessores*) of the lands, which, from being subject to this payment, were called agri decumani. The tax of a tenth was, however, generally paid by corn lands plantations and vineyards, as requiring no seed and less labour, paid a fifth of the produce.¹³

We also find the expression "decumates agri"

1. (Liv., iii., 33.)—2. (Liv., iii., 35.—Dionys., x., 53.)—3. (Niebuhr, Hist. Rome, vol. ii., p. 309–356, transl.—Arnold; Hist. of Rome, vol. i., p. 250–313.)—4. (Liv., vii., 27; xxi., 62; xxxi., 12.)—5. (Æn., vi., 73.)—6. (Dionys., iv., 62.)—7. (Dionys., i., c.—Val. Max., i., 1, § 13.)

Civ., i., 7.)

applied to districts in Germany which were occupied by Roman soldiers or auxiliaries, after the expulsion of the old proprietors, subject to the payment of a tenth part of the produce. It is probable that there were many such; and if so, it is useless to inquire where the lands so called were situated.¹ Tacitus merely says of them that they lay beyond the Rhine and the Danube. The name of decumani was also applied to the farmers of these tributes, who purchased them from the state, and then collected them on their own account. (*Vid. PUBLICANI.*)

The system of exacting a tenth of the produce from the occupiers of land which had become the property of the state, seems to have been of great antiquity: thus a tradition is preserved of the Romans themselves having at one time paid a tenth to the Etruscans, a story which Niebuhr² refers to the surrender (*deditio*) of the city to Porsenna.³ The practice is best illustrated by the case of Sicily. It appears from Cicero⁴ that the Romans, on reducing this island to a province, allowed to the old inhabitants the continuance of their ancient rights (*ut eodem jure essent, quo fuissent*), and that, with some few exceptions, the territory of all the states (*omnis ager Sicilia civitatum*) was subjected, as formerly, to the payment of a tithe on corn, wine, oil, and the "fruges minutæ," it was farther determined that the place and time of paying these tithes to the decumani should "be and continue" as settled by the law of King Hiero (*lex Hieronica*), which enacted severe penalties against any arator who did not pay as due, as well as against the decumani who exacted more than their tenth. It is interesting to remark, that the coloni, who afterward occupied the lands of the Romish Church in Sicily, and were mixed out along with the smaller plots of land to "conductores" or lessees of the Church, paid rent a fixed portion of the produce, which was sometimes delivered in kind, sometimes bought off with money. A letter of Gregory VII. shows that these coloni suffered the same sort of grievances as the aratores under the prætor Verres.⁵ Exactions of this kind were not, however, peculiar to the foreign provinces of Rome: they were also levied on public lands in Italy; as, for instance, on the "ager Campanus," which we read of as being *vegitigalis*, before it was apportioned to a number of Roman citizens by a *lex agraria* of Julius Cæsar.⁶ (*Vid. AGRARIÆ LEGES.*)

A similar system existed in Greece also; the tithes being paid as a usufruct on property which was not freehold, though the right of occupation might be acquired by inheritance or purchase: thus a tyrannus demanded tithes from his subjects in his right as proprietor of the lands they occupied; Peisistratus, for instance, imposed a tax of a tenth on the lands of the Athenians, which the Peisistratidæ lowered to a twentieth.⁷ We use the word "usufruct," in the previous sentence, in its common acceptance; but the "*usus fructus*" of Roman law seems to be the same as "*usus et fructus*." The profit which the state derived from the land was termed "*fructus*," and the occupation for which it was paid, "*usus*."⁸ The same principle was also applied to religious purposes: thus Xenophon subjected the occupiers (*τοὺς ἔχοντας καὶ καρποῦμενους*) of the land he purchased near Scillus to a payment of tithes in support of a temple of Artemis, the goddess to whom the purchase-money was dedicated; the Delian Apollo also received tenths from the Cyclades.⁹ That many such charges originated in

conquest, or something similar, may be inferred from the statement of Herodotus,¹ that at the time of the Persian war the confederate Greeks made a vow, by which all the states who had surrendered themselves to the enemy were subjected to the payment of tithes for the use of the god at Delphi.

The tenth (*τὸ ἐπιδέκατον*) of confiscated property was also sometimes applied to similar objects.² The tithes of the public lands belonging to Athens were farmed out, as at Rome, to contractors, called *δεκατῶναι*: the term *δεκατῆλογοι* was applied to the collectors; but the callings were, as we might suppose, often united in the same person. The title *δεκατενταί* is applied to both. A *δεκάτη*, or tenth of a different kind, was the arbitrary exaction imposed by the Athenians (B.C. 410) on the cargoes of all ships sailing into or out of the Pontus. They lost it by the battle of Ægospotami (B.C. 405), but it was re-established by Thrasybulus about B.C. 391.

This tithe was also let out to farm.³ The tithe-house for the receipt of this duty was called *δεκατεντήριον*: to sail by necessity to it, *παραγωγιάζειν*.⁴

DECURIONES. (*Vid. COLONIA, p. 282.*)

DECUSSIS. (*Vid. AS, p. 111.*)

DEDITIO. (*Vid. DEDITICII.*)

DEDITICII are one of the three classes of *libertini*. The *lex Ælia Sentia* provided that, if a slave was put in bonds by his master as a punishment, or branded, or put to the torture for an offence and convicted, or delivered up to fight with wild beasts, or sent into a ludus (*gladiatorius*), or put in confinement (*custodia*), and then manumitted either by his then owner or by another owner, he merely acquired the status of a peregrinus dediticius, and had not even the privileges of a Latinus. The peregrini dediticii were those who, in former times, had taken up arms against the Roman people, and, being conquered, had surrendered themselves. They were, in fact, a people who were absolutely subdued, and yielded conditionally to the conquerors, and, of course, had no other relation to Rome than that of subjects. The form of *deditio* occurs in Livy.⁵

The dediticii existed as a class of persons who were neither slaves, nor cives, nor Latini, at least as late as the time of Ulpian. Their civil condition, as is stated above, was formed by analogy to the condition of a conquered people, who did not individually lose their freedom, but as a community lost all political existence. In the case of the Volsci, Livy inclines to the opinion that the four thousand who were sold were slaves, and not dediti.⁶

DEDUCTORES. (*Vid. AMBITUS, p. 46.*)

DEICELISTAI (*δευκελισται* or *δευκελισται*: *Lacedæmonian, δεικελίσται*, from *δεικελος*, imitating), a name which was, indeed, sometimes applied by the Spartans to any class of actors on the stage;⁷ but it properly belonged to a class of buffoons or improvisators, who, in the language of the common people, and in a very artless manner, imitated some comic event. This kind of amusement, according to Sosibius,⁸ was very old at Sparta, and consisted in imitating some foreign physician, or persons (probably boys) who stole fruit in the autumn, or the remains of meals, and were caught with their goods.⁹ The play itself is called by Pollux a mimic dance;

1. (Tacit. Ger., 29.—Ann., xiii., 54, ed. Walther.)—2. (Hist. Rom., i., 546, transl.)—3. (Tacit. Hist., iii., 72.)—4. (c. Verr., act. ii., lib. iii.)—5. (Savigny, Philol. Mus., ii., 129.)—6. (Suet., Cæs., 20.)—7. (Thucyl., vi., 54.)—8. (Niebuhr, Rom. Hist.)—9. (Xen., Anab., v, 3, § 11.—Callim., Hymn. Del., 272, ed. Spanheim.)

1. (vii., 132.)—2. (Xen., Hell., i., 7, § 11.)—3. (Demosth., c. Leptin., 475, ed. Bekker.—Xen., Hellen., iv., 8, § 27, 31.)—4. (Böckh, vol. ii., p. 41, transl.)—5. (ii., 37.)—6. (Gaius, i., 13, &c.—Ulp., Frag., tit. i., s. 11.)—7. (Plut., Agesil., 21.—Læcon. Apophth., p. 185.)—8. (ap. Athen., xiv., p. 621.)—9. (Pollux, Onom., iv., 14, 104, compared with Suidas, s. v. *Σωβίσιος*.)

but, from the words of Sosibius, we must conclude that the action represented was only alternating with comic dances, or accompanied by them. Athenæus¹ gives a list of names by which these mimic actors, who were extremely popular among the ancients generally, were designated in various parts of Greece. It is highly probable that the representations of the *δεικελισται* were peculiar to some religious festival, and it has been supposed that they were connected with the celebration of the Dionysia at Sparta.²

DEIGMA (*δείγμα*), a particular place in the Peiræus, as well as in the harbours of other states, where merchants exposed samples of their goods for sale.³ The samples themselves were called *δείγματα*.⁴

DEJECTUM EFFUSUM. (*Vid. DEJECTI EFFUSIVE ACTIO.*)

DEJECTI EFFUSIVE ACTIO. This was an action given by the prætor's edict against a person who threw or poured out anything from a place or upper chamber (*cœnaculum*) upon a road which is frequented by passengers, or on a place where people use to stand. The action was against the occupier, not the owner. If several persons inhabited a *cœnaculum*, and any injury was done to another by a thing being thrown or poured out of it, he had a right of action against any of them, if the doer was uncertain. The damages recoverable were to double the amount of the damage, except in the case of a *liber*, when they were fifty aurei if he was killed; if he was only injured in his person, they were "quantum ob eam rem æquum iudici videbitur eum cum quo agatur condemnari," which included the expenses of a medical attendant, loss of time, &c., but not damage done to his apparel, &c. If injury was caused by a thing being thrown from a ship, there was an actio; for the words of the edict are, "Uxor in eum locum quo volgo iter fiat vel in quo consistatur, dejectum," &c.

As many of the houses in Rome were lofty, and inhabited to the top by the poor,⁵ and probably as there were very imperfect means for carrying off rubbish and other accumulations, it was necessary to provide against accidents which might happen by such things being thrown through the window. According to Labeo's opinion, the edict only applied to the daytime, and not to the night, which, however, was the more dangerous time for a passer-by.⁶

DEILE (*δείλη*). (*Vid. DIES.*)

ΔΕΙΛΙΑΣ ΓΡΑΦΗ (*δειλίας γραφή*), the name of a suit instituted against soldiers who had been guilty of cowardice.⁷ The presidency of the court belonged to the strategi, and the court was composed of soldiers who had served in the campaign.⁸ The punishment, on conviction, appears to have been *ἀτιμία*. Compare ΑΣΤΡΑΤΕΙΑΣ ΓΡΑΦΗ.

DEIPNON (*δείπνον*). The present article is designed to give a sketch of Grecian meals, and customs connected with them. The materials for such an account, during the classical period of Athens and Sparta, are almost confined to incidental allusions of Plato and the comic writers. Several ancient authors, termed *δειπνόλογοι*, are mentioned by Athenæus; but, unfortunately, their writings only survive in the fragments quoted by him. His great work, the *Deipnosophists*, is an inexhaustible treasury of this kind of knowledge, but ill arranged,

and with little attempt to distinguish the customs of different periods.

The poems of Homer contain a real picture of early manners, in every way worthy of the antiquarian's attention. As they stand apart from all other writings, it will be convenient to exhibit in one view the state of things which they describe. It is not to be expected that the Homeric meals at all agree with the customs of a later period; indeed, it would be a mere waste of time to attempt adapting the one to the other. Athenæus,¹ who has entered fully into the subject, remarks on the singular simplicity of the Homeric banquets, in which kings and private men all partake of the same food. It was common even for royal personages to prepare their own meals;² and Ulysses³ declares himself no mean proficient in the culinary art:

Πῦρ τ' εὖ νῆσαι, διὰ δὲ ξύλα δανὰ κέσσαι
Δαιτρεύσας τε καὶ ὑπὸ τῆσσι καὶ οἰνοχοῦσαι.

Three names of meals occur in the *Iliad* and *Odyssey*: *ἄριστον*, *δείπνον*, *δόρπον*. This division of the meals is ascribed, in a fragment of Æschylus quoted by Athenæus,⁴ to Palamedes, *καὶ ταξιάρχας καὶ στρατάρχας καὶ ἑκατοντάρχας ἑταῖρα· σίτον δ' εἰδέναι δῶριστα, ἄριστα, δείπνα, δόρπα δ' αἰρείσθαι τρία*. The word *ἄριστον* uniformly means the early (*ἔμ' ἡρώς*), as *δόρπον* does the late meal; but *δείπνον*, on the other hand, is used for either,⁵ apparently without any reference to time. We should be careful, however, how we argue from the unsettled habits of a camp to the regular customs of ordinary life.

From numerous passages in the *Iliad* and *Odyssey*, it appears to have been usual to sit during meal-times. In the palace of Telemachus, before eating, a servant brings Minerva, who is habited as a stranger, the *χέρνυψ*, or lustral water, "in a golden pitcher, pouring it over a silver vessel."⁷ Beef, mutton, and goat's flesh were the ordinary meats, usually eaten roasted; yet from the lines⁸

Ὅς δὲ λῆθης ζεῖ ἐνδον, ἐπειγόμενος πυρὶ πολλῷ
Κνίσσῃ μελδόμενος ἀπαλοτρέφους σάβλοιο,

we learn that boiled meats were held to be far from unsavoury. Cheese, flour, and occasionally fruits, also formed part of the Homeric meals. Bread, brought on in baskets,⁹ and salt (*ἄλς*, to which Homer gives the epithet *θεῖος*), are mentioned: from *Od.*, xvii., 455, the latter appears, even at this early period, to have been a sign of hospitality; in *Od.*, xi., 122, it is the mark of a strange people not to know its use.

Each guest appears to have had his own table, and he who was first in rank presided over the rest. Menelaus, at the marriage feast of Hermione, begins the banquet by taking in his hands the side of a roasted ox, and placing it before his friends.¹⁰ At the same entertainment music and dancing are introduced: "The divine minstrel hymned to the sound of the lyre, and two tumblers (*κυβισσητήρες*) began the festive strain, wheeling round in the midst." It was not beneath the notions of those early days to stimulate the heroes to battle,¹¹

Ἐδῶν τε, κρέαςιν τε, ἰδὲ πλείους δαπείεσσαν:

and Ajax, on his return from the contest with Hector, is presented by Agamemnon with the *ῶτα δηνεκέα*.

The names of several articles of the festive board occur in the *Iliad* and *Odyssey*. Knives, spits, cups of various shapes and sizes, bottles made of goat-skin, casks, &c., are all mentioned. Many sorts of wine were in use among the heroes; some of Nestor's is remarked on as being eleven years old. The

Maronean wine, so called from Maron, a hero, was especially celebrated, and would bear mingling with twenty times its own quantity of water. It may be observed that wine was seldom, if ever, drunk pure. When Nestor and Machaon sit down together, "a woman," like unto a goddess, sets before them a polished table, with a brazen tray, *ἐπὶ δὲ κρίνον ποτὶ ὄψον*. Then she mingles a cup of Pramnian wine in Nestor's own goblet, and cuts the cheese of goat's milk with a steel knife, scattering white flour over it. The guests drank to one another: thus the gods¹ *δοιέχαρ' ἀλλήλους*, and Ulysses pledged Achilles, saying, *χαίρ', Ἀχιλῆυ*.² Wine was drawn from a larger vessel (*vid.* CRATER) into the cups from which it was drunk, and before drinking, libations were made to the gods by pouring some of the contents on the ground.³

The interesting scene between Ulysses and the swineherd⁴ gives a parallel view of early manners in a lower grade of life. After a welcome has been given to the stranger, "The swineherd cleaves the wood, and they place the swine of five years old on the hearth. In the goodness of his heart, Eumæus forgets not the immortal gods, and dedicates the firstling lock with a prayer for Ulysses's return. He next smites the animal with a piece of cleft oak, and the attendants singe off the hair. He then cuts the raw meat all round from the limbs, and laying it in the rich fat, and sprinkling flour upon it, throws it on the fire as an offering (*ἀπαρχή*) to the gods; the rest the attendants cut up and pierce with spits, and, having cooked it with cunning skill, draw off all, and lay the mess on the tables. Then the swineherd stands up to divide the portions, seven portions in all, five for himself and the guests, and one apiece to Mercury and the nymphs."

There is nothing more worthy of remark in the Homeric manners than the hospitality shown to strangers. Before it is known who they are, or whence they come, it is the custom of the times to give them a welcome reception.⁵ When Nestor and his sons saw the strangers, "They all came in a crowd, and saluted them with the hand, and made them sit down at the feast on the soft fleeces by the seashore."

The Greeks of a later age usually partook of three meals, called *ἀκράτεια*, *ἄριστον*, and *δείπνον*. The last, which corresponds to the *δάρπνον* of the Homeric poems, was the evening meal or dinner; the *ἄριστον* was the luncheon; and the *ἀκράτεια*, which answers to the *ἄριστον* of Homer, was the early meal or breakfast.

The *ἀκράτεια* was taken immediately after rising in the morning (*ἐξ εὐνῆς, ἔωθε*).⁶ It usually consisted of bread dipped in unmix'd wine (*ἀκρατός*), whence it derived its name.⁷

Next followed the *ἄριστον* or luncheon; but the time at which it was taken is uncertain. It is frequently mentioned in Xenophon's *Anabasis*, and appears to have been taken at different times, as would naturally be the case with soldiers in active service. Suidas⁸ says that it was taken about the third hour, that is, about nine o'clock in the morning; but this account does not agree with the statements of other ancient writers. We may conclude from many circumstances that this meal was taken about the middle of the day, and that it answered to the Roman *prandium*, as Plutarch⁹ asserts. Besides which, the time of the *πλήθουσα ἀγορά*, at which provisions seem to have been bought for the *ἄριστον*, was from nine o'clock till noon. This agrees with the account of Aristophanes,¹⁰ who

introduces Philocleon describing the pleasure of returning home after attending the courts, and partaking of a good *ἄριστον*. The courts of justice could scarcely have finished their sittings by nine o'clock. Timæus also defines *δέλη πρώτη*, which we know to have been the early part of the afternoon (*vid.* DIES), as the time before the *ἄριστον*. The *ἄριστον* was usually a simple meal, but, of course, varied according to the habits of individuals. Thus Ischomachus, who describes his mode of life to Socrates, who greatly approves of it, says, *Ἀριστὸν ὅσα μήτε κενὸς μήτε ἄγαν πλήρης διημερεύειν*.¹

The principal meal, however, was the *δείπνον*, which ought, therefore, according to our notions, to be translated, like the Latin *cæna*, by our word "dinner." It was usually taken rather late in the day, frequently not before sunset.² Aristophanes³ says,

Σοὶ δὲ μέλει,
ὅταν ἢ δεκάπουν τὸ στοιχεῖον λιπαρὸν χωρεῖν ἐπὶ
δείπνον.

But, in order to ascertain the time meant by *δεκάπουν τὸ στοιχεῖον*, the reader is referred to the article HOROLOGIUM.

The Athenians were a social people, and were very fond of dining in company. Entertainments were usually given, both in the heroic ages and later times, when sacrifices were offered to the gods, either on public or private occasions; and also on the anniversary of the birthdays of members of the family, or of illustrious persons, whether living or dead. Plutarch⁴ speaks of an entertainment being given on the anniversary of the birthdays both of Socrates and Plato.

When young men wished to dine together, they frequently contributed each a certain sum of money, called *συμβολή*, or brought their own provisions with them. When the first plan was adopted, they were said *ἀπὸ συμβολῶν δεῖπνεῖν*, and one individual was usually intrusted with the money to procure the provisions, and make all the necessary preparations. Thus we read in Terence,⁵

*"Heri aliquot adolescentuli coimus in Piræo,
In hunc diem ut de symbolis essemus. Chæream ei
τῆι
Præcimus: dati annuli: locus, tempus constitutum est."*

This kind of entertainment, in which each guest contributed to the expense, is mentioned in Homer⁶ under the name of *ἐπανός*.

An entertainment in which each person brought his own provisions with him, or, at least, contributed something to the general stock, was called a *δείπνον ἀπὸ σπυρίδος*, because the provisions were brought in baskets.⁷ This kind of entertainment is also spoken of by Xenophon.⁸

The most usual kind of entertainments, however, were those in which a person invited his friends to his own house. It was expected that they should come dressed with more than ordinary care, and also have bathed shortly before; hence, when Socrates was going to an entertainment at Agathon's, we are told that he both washed and put on his shoes—things which he seldom did.⁹ As soon as the guests arrived at the house of their host, their shoes or sandals were taken off by the slaves, and their feet washed (*ὑπολύειν* and *ἀπوییειν*). In ancient works of art we frequently see a slave or other person represented in the act of taking off the shoes of the guests, of which an example is given, from a terra-cotta in the British Museum, in p. 276.

1. (Il., iv., 4.)—2. (Il., ix., 225.)—3. (Il., vii., 480.)—4. (Od., xiv., 420.)—5. (Od., i., 125, &c.)—6. (Aristoph., *Aves*, 1286.)—7. (Plut., *Symp.*, viii., 6, § 4.—Schol. ad Theoc., i., 51.—Athenæus, i., p. 11.)—8. (s. v. *Δείπνον*.)—9. (Symp., viii., 6, § 5.)—10. (Vesp., 605–612.)

After their feet had been washed, the guests reclined on the κλῖναι or couches (Καὶ ἔμην ἐφ' ὧν ἔκειν τὸν παῖδα, ἵνα κατακέοιτο).¹

It has been already remarked that Homer never describes persons as reclining, but always as sitting at their meals; but at what time the change was introduced is uncertain. Müller² concludes from a fragment of Alcman, quoted by Athenæus,³ that the Spartans were accustomed to recline at their meals as early as the time of Alcman. The Dorians of Crete always sat; but the Athenians, like the Spartans, were accustomed to recline. The Greek women and children, however, like the Roman (vid. Cœna, p. 276), continued to sit at their meals, as we find them represented in ancient works of art.

It was usual for only two persons to recline on each couch. Thus Agathon says to Aristodemus, Σὺ δ', Ἀριστόδημε, παρ' Ἐρμύμαχον κατακλίνου: and to Socrates, Δεῦρο, Σώκρατες, παρ' ἐμὲ κατέκεισο.⁴ Also, at a banquet given by Attagnus of Thebes to fifty Persians and fifty Greeks, we are told that one Persian and one Greek reclined on each couch. In ancient works of art we usually see the guests represented in this way; but sometimes there is a larger number on one long κλίνη, as in the woodcut in page 326. The manner in which they reclined, the σχῆμα τῆς κατακλίσεως, as Plutarch⁵ calls it, will be understood by referring to the woodcut already mentioned, where the guests are represented reclining with their left arms on striped pillows (ὕπαγκῶνια), and having their right free; whence Lucian⁶ speaks of ἐπ' ἀγκῶνος δεῖναιεν.

After the guests had placed themselves on the κλῖναι, the slaves brought in water to wash their hands (ὕδωρ κατὰ χεῖρας ἐδόθη). The subsequent proceedings of the dinner are briefly described in two lines of Aristophanes,⁷

“Ὑδὼρ κατὰ χεῖρας· τὰς τραπέζας εἰσφέρειν·
Δειτνοῦμεν ἄπονευμμένῃ ἡδὴ σπένδονμεν.

The dinner was then served up; whence we read, in Aristophanes and elsewhere, of τὰς τραπέζας εἰσφέρειν, by which expression we are to understand, not merely the dishes, but the tables themselves.⁸ It appears that a table, with provisions upon it, was placed before each κλίνη: and thus we find, in all ancient works of art which represent banquets or symposia, a small table or tripod placed before the κλίνη, and when there are more than two persons on the κλίνη, several of such tables. (See woodcuts in p. 276, 326). These tables are evidently small enough to be moved with ease.

In eating, the Greeks had no knives or forks, but made use of their fingers only, except in eating soups or other liquids, which they partook of by means of a spoon, called μυστίλη, μύστρον, or μύστρος. Sometimes they used, instead of a spoon, a hollowed piece of bread, also called μυστίλη.⁹ After eating, they wiped their fingers on pieces of bread, called ὑπομαγάλαια.¹⁰ They did not use any cloths or napkins; the χερσόμακτρα and ἐκμαγεία, which are sometimes mentioned,¹¹ were towels, which were only used when they washed their hands.

It appears that the arrangement of the dinner was intrusted to certain slaves.¹² The one who had the chief management of it was called τραπέζοις or τραπέζοκος.¹³

It would exceed the limits of this work to give

an account of the different dishes which were introduced at a Greek dinner, though their number is far below those which were usually partaken of at a Roman entertainment. The most common food among the Greeks was the μῆζα (Dor. μῆδα), a kind of frumenty or soft cake, which was prepared in different ways, as appears by the various names which were given to it.¹ The μῆζα is frequently mentioned by Aristophanes. The φωντὴ μῆζα, of which Philocleon partakes on returning home from the courts,² is said by the scholiast to have been made of barley and wine. The μῆζα continued to the latest times to be the common food of the lower classes. Wheat or barley bread was the second most usual species of food; it was sometimes made at home, but more usually bought at the market of the ἀροστοῖαι or ἀροστοῦλιδες. The vegetables ordinarily eaten were mallows (μαλάχη), lettuces (θρίδαξ), cabbages (ράφανοι), beans (κύαμοι), lentils (φακαί), &c. Pork was the most favourite animal food, as was the case among the Romans (vid. Cœna, p. 275); Plutarch³ calls it τὸ δικαϊότατον κρέας. Sausages, also, were very commonly eaten (vid. Botulus). It is a curious fact, which Plato⁴ has remarked, that we never read in Homer of the heroes partaking of fish. In later times, however, fish was one of the most favourite articles of food among the Greeks, inasmuch so that the name of ὄψον was applied to it κατ' ἐξοχήν.⁵ A minute account of the fishes which the Greeks were accustomed to eat is given at the end of the seventh book of Athenæus, arranged in alphabetical order.

The ordinary meal for the family was cooked by the mistress of the house, or by the female slaves under her direction; but for special occasions professional cooks (μάγειροι) were hired, of whom there appear to have been a great number.⁶ They are frequently mentioned in the fragments of the comic poets; and those who were acquainted with all the refinements of their art were in great demand in other parts of Greece besides their own country. The Sicilian cooks, however, had the greatest reputation,⁷ and a Sicilian book on cookery by one Mithæcus is mentioned in the Gorgias of Plato;⁸ but the most celebrated work on the subject was the Γαστρολογία of Archestratus.⁹

A dinner given by an opulent Athenian usually consisted of two courses, called respectively πρώτη τραπέζαι and δεύτεραι τραπέζαι. Pollux,¹⁰ indeed, speaks of three courses, which was the number at a Roman dinner (vid. Cœna, p. 275; and in the same way we find other writers under the Roman Empire speaking of three courses at Greek dinners; but before the Roman conquest of Greece, and the introduction of Roman customs, we only read of two courses. The first course embraced the whole of what we consider the dinner, namely, fish, poultry, meat, &c.; the second, which corresponds to our dessert and the Roman *bellaria*, consisted of different kinds of fruit, sweetmeats, confections, &c.

When the first course was finished, the tables were taken away (αἶρειν, ἀπαίρειν, ἐπαίρειν, ἀφαίρειν, ἐκφέρειν, βαστάζειν τὰς τραπέζας), and water was given to the guests for the purpose of washing their hands. Crowns made of garlands of flowers were also then given to them, as well as various kinds of perfumes.¹¹ Wine was not drunk till the first course was finished; but, as soon as the guests had washed their hands, unmixed wine was introduced in a large goblet, called μετάνιπτρον or μετανιπτρίς, of which each drank a little, after pouring

out a small quantity as a libation. This libation was said to be made to the "good spirit" (*ἀγαθὸν δαίμονος*), and was usually accompanied by the singing of the pæan and the playing of flutes. After this libation, mixed wine was brought in, and with their first cup the guests drank to *Διὸς Σωτήρος*.¹ With the *σπονδαί*, the *δεῖπνον* closed; and at the introduction of the dessert (*δευτέρα τραπέζαι*) the *πότος*, *συμπόσιον*, or *κώμος* commenced, of which an account is given in the article *Symposium*.²

DELA'TOR, an informer. The delatores, under the emperors, were a class of men who gained their livelihood by informing against their fellow-citizens.³ They constantly brought forward false charges to gratify the avarice or jealousy of the different emperors, and were, consequently, paid according to the importance of the information which they gave. In some cases, however, the law specified the sums which were to be given to informers. Thus, when a murder had been committed in a family, and any of the slaves belonging to it had run away before the quaestor, whoever apprehended such slaves received, for each slave whom he apprehended, a reward of five aurei from the property of the deceased, or else from the state, if the sum could not be raised from the property of the deceased.⁴ In the *senatus consultum* quoted by Frontinus,⁵ the informer received half of the penalty in which the person was fined who transgressed the decree of the senate. There seems also to have been a fixed sum given to informers by the *lex Papia*, since we are told that Nero reduced it to a fourth.⁶

The number of informers, however, increased so rapidly under the early emperors, and occasioned so much mischief in society, that many of them were banished, and punished in other ways, by Titus, Domitian, and Trajan.⁷

DELECTUS. (*Vid.* ARMV, ROMAN.)

DELIA (*δέλια*) is the name of festivals and games celebrated at the great panegyris in the island of Delos, the centre of an amphictyony, to which the Cyclades and the neighbouring Ionians on the coasts belonged.⁸ This amphictyony seems originally to have been instituted simply for the purpose of religious worship in the common sanctuary of Apollo, the *θεὸς πατρώος* of the Ionians, who was said to have been born at Delos. The Delia, as appears from the Hymn on Apollo,⁹ had existed from very early times, and were celebrated every fifth year,¹⁰ and, as Böckh supposes, with great probability, on the sixth and seventh days of Thargelion, the birthdays of Apollo and Artemis. The members of the amphictyony assembled on these occasions (*ἐθεωροῦν*) in Delos, in long garments, with their wives and children, to worship the god with gymnastic and musical contests, choruses, and dances. That the Athenians took part in these solemnities at a very early period, is evident from the Deliaestæ (afterward called *θεωροί*) mentioned in the laws of Solon;¹¹ the sacred vessel (*θεωρίς*), moreover, which they sent to Delos every year, was said to be the same which Theseus had sent after his return from Crete.¹² The Delians, during the celebration of these solemnities, performed the office of cooks for those who visited their island, whence they were called *ἑλεούδται*.¹³

In the course of time, the celebration of this an-

cient panegyris in Delos had ceased, and it was not revived until Ol. 88, 3, when the Athenians, after having purified the island in the winter of that year, restored the ancient solemnities, and added horse-races, which had never before taken place at the Delia.¹ After this restoration, Athens being at the head of the Ionian confederacy, took the most prominent part in the celebration of the Delia; and though the islanders, in common with Athens, provided the choruses and victims, the leader (*ἀρχιθέωρος*), who conducted the whole solemnity, was an Athenian,² and the Athenians had the superintendence of the common sanctuary. (*Vid.* AMPHICTYONS.)

From these solemnities, belonging to the great Delian panegyris, we must distinguish the *lesser Delia*, which were mentioned above, and which were celebrated every year, probably on the 6th of Thargelion. The Athenians, on this occasion, sent the sacred vessel (*θεωρίς*), which the priest of Apollo adorned with bay branches, to Delos. The embassy was called *θεωρία*, and those who sailed to the island, *θεωροί*; and before they set sail, a solemn sacrifice was offered in the Delion at Marathon, in order to obtain a happy voyage.³ During the absence of the vessel, which on one occasion lasted 30 days,⁴ the city of Athens was purified, and no criminal was allowed to be executed. The lesser Delia were said to have been instituted by Theseus, though in some legends they are mentioned at a much earlier period, and Plutarch⁵ relates that the ancient vessel used by the founder himself, though often repaired, was preserved and used by the Athenians down to the time of Demetrius Phalereus.⁶

DELECTUM. (*Vid.* CRIMEN.)

DELPHINIA (*δελφίνια*), a festival of the same expiatory character as the Apollonia, which was celebrated in various towns of Greece, in honour of Apollo, surnamed Delphinus, who was considered by the Ionians as their *θεὸς πατρώος*. The name of the god, as well as that of his festival, must be derived from the belief of the ancients, that in the beginning of the month of Munychion (probably identical with the Æginetan Delphinus) Apollo came through the defile of Parnassus to Delphi, and began the battle with Delphyne. As he thus assumed the character of a wrathful god, it was thought necessary to appease him, and the Delphinia, accordingly, were celebrated at Athens, as well as at other places where his worship had been adopted, on the 6th of Munychion. At Athens seven boys and girls carried olive-branches, bound with white wool (called the *κεκτηρία*), into the Delphinium.⁷

The Delphinia of Ægina are mentioned by the scholiast on Pindar,⁸ and, from his remark on another passage, it is⁹ clear that they were celebrated with contests.¹⁰ Concerning the celebration of the Delphinia in other places, nothing is known; but we have reason to suppose that the rites observed at Athens and in Ægina were common to all festivals of the same name.¹¹

DELPHIS or DELPHIN (*δελφίς* or *δελφίν*), an instrument of naval warfare. It consisted of a large mass of iron or lead suspended on a beam, which projected from the mast of the ship like a yard-arm. It was used to sink or make a hole in an enemy's vessel, by being dropped upon it when alongside.¹²

There seems no necessity for supposing that it

was made in the shape of a dolphin. Bars of iron used for ballast are at the present day called "pigs," though they bear no resemblance to that animal. Probably the *δελφίνες* were hoisted aloft only when going into action. We may also conjecture that they were fitted, not so much to the swift (*ραγδαί*) triremes, as to the military transports (*στρατιώτιδες, οπλιτάγωγοι*), for the sailing of the former would be much impeded by so large a weight of metal. At any rate, those that Thucydides speaks of were not on the triremes, but on the *ἐλκιάδες*.

*DELPHIS, DELPHIN, or DELPHINUS, the Dolphin, or *Delphinus Delphis*, L.¹ "This animal," says Cuvier, speaking of the *D. Delphis*, "found in numerous troops in every sea, and celebrated for the velocity of its movements, which sometimes cause it to precipitate itself on the helms of vessels, appears to have been really the Dolphin of the ancients. The entire organization of the brain indicates that degree of docility which they universally attributed to this animal."² The internal organization of the ear also renders this animal susceptible of great attention: it produces a sensibility to musical sounds, and enables the Dolphin to distinguish, at a considerable distance, the cries of joy or alarm of its congeners. "Some authors," observes Griffith,³ "more especially the ancients, have not only celebrated the mutual friendship subsisting among the Dolphins themselves, but have also asserted that they have a lively and natural affection towards the human species, with which they are easily led to familiarize; and they have recounted many marvellous stories on this subject. All that is known on this point with certainty is, that when these animals perceive a ship at sea, they rush in a crowd before it, surround it, and express their confidence by rapid, varied, and repeated evolutions; sometimes bounding, leaping, and manœuvring in all manner of ways, sometimes performing complicated circumvolutions, and exhibiting a degree of grace, agility, dexterity, and strength which is perfectly astonishing. We must not, however, be deceived by such external show of affection. These animals, represented as susceptible of so much attachment to man, are thoroughly carnivorous, and if they follow the track of vessels, it is, perhaps, with no other view than the hope of preying on something that may fall from them." The Grampus (a fish in nature nearly allied to the Dolphin) would seem to be the *Ora* of Pliny. "It is not noticed," observes Adams, "by the Greek authors, unless, as some have supposed, it be the *δρύνς* of Strabo."⁴

*DELPHINIUM (*δελφίνιον*), a plant. Sprengel recognises the two species described by Dioscorides as being the *Delphinium Ajacis*, or common Larkspur, and the *D. tenuissimum* of Sibthorp. From the circumstance of the Delphinium not being noticed in the *Materia Medica* of Galen, Oribasius, or Paul of Ægina, Matthioli is disposed to regard as spurious the two chapters of Dioscorides⁵ in which mention is made of it. "Among the synonyms of the *δελφίνιον* in Dioscorides, we find," remarks Adams, in continuation, "*ύκινθος* and *βούκινθος* μινor of the Romans. It has, therefore, been supposed that the '*vaccinia nigra*' of Virgil were Larkspurs."⁶

DELUBRUM. (*Vid. Templum*.)

DEMARCHI. These officers were the head boroughs or chief magistrates of the demi in Attica, and are said to have been first appointed by Cleisthenes. Their duties were various and important. Thus, they convened meetings of the demus, and

took the votes upon all questions under consideration; they had the custody of the *ληξιαρχικὸν γράμματιον*, or book in which the members of the demus were enrolled; and they made and kept a register of the landed estates (*χωρία*) in their districts, whether belonging to individuals or the body corporate; so that, whenever an *εἰσφορά*, or extraordinary property-tax was imposed, they must have been of great service in assessing and collecting the quota of each estate.¹ Moneys due to the demus for rent, &c., were collected by them,² and it may safely be allowed that they were employed to enforce payment of various debts and dues claimed by the state.³ For this purpose they seem to have had the power of distraining, to which allusion is made by Aristophanes.⁴ In the duties which have been enumerated, they supplanted the naucrari of the old constitution; their functions, however, were not confined to duties of this class, for they also acted as police magistrates: thus, in conjunction with the dicasts of the towns (*δικασταὶ κατὰ δῆμον*), they assisted in preserving peace and order,⁵ and were required to bury, or cause to be buried, any dead bodies found in their district: for neglect of this duty they were liable to a fine of 1000 drachmae.⁶ Lastly, they seem to have furnished to the proper authorities a list of the members of the township who were fit to serve in war (*καταλόγους ἐποιήσαντο*). (*Vid. Demus*.)

DEMENS. (*Vid. Curator*, p. 329.)

DEMENSUM was an allowance of corn, which was given to Roman slaves monthly or daily.⁷ Donatus⁸ says that every slave received four modii of corn a month; but Seneca¹⁰ speaks of five modii as the allowance.¹¹

DEMENTIA. (*Vid. Curator*, p. 329.)

DEMETRIA (*δημητρία*), an annual festival which the Athenians, in 307 B.C., instituted in honour of Demetrius Poliorcetes, who, together with his father Antigonus, were consecrated under the title of saviour gods. It was celebrated every year in the month of Munychion, the name of which, as well as that of the day on which the festival was held, was changed into Demetrian and Demetrias. A priest ministered at their altars, and conducted the solemn procession, and the sacrifices and games with which the festival was celebrated.¹² To honour the new god still more, the Athenians at the same time changed the name of the festival of the Dionysia into that of Demetria, as the young prince was fond of hearing himself compared to Dionysus. The Demetria mentioned by Athenaeus¹³ are probably the Dionysia. Respecting the other extravagant flatteries which the Athenians heaped upon Demetrius and Antigonus, see Athen., vi, p. 252; Herm., *Polit. Ant. of Greece*, § 175, n. 6, 7, and 8; and Thirlwall, *Hist. of Greece*, vii, p. 331.

DEMINUTIO CAPITIS. (*Vid. Caput*.)

DEMIOPRATA (*δημιόπρατα*, sc. *πράγματα* or *κτήματα*) was property confiscated at Athens and sold by public auction. The confiscation of property was one of the most common sources of revenue in many of the Grecian states; and Aristophanes¹⁴ mentions the *δημιόπρατα* as a separate branch of the public revenue at Athens. An account of such property was presented to the people in the first assembly of every prytaneia;¹⁵ and lists of it were posted upon tablets of stone in different pla-

ees, as was the case at Eleusis, with the catalogue of the articles which accrued to the temple of Demeter and Persephone, from persons who had committed any offence against these deities.¹ Many monuments of this kind were collected by Greek antiquarians, of which an account is given by Böckh.²

DEMIUS (*δήμιος*). (Vid. BASANOS, p. 140.)

DEMIURGI (*δημιουργοί*). These magistrates, whose title is expressive of their doing the service of the people, are by some grammarians stated to have been peculiar to Dorian states; but, perhaps, on no authority except the form *δαμιουργοί*. Müller³ observes, on the contrary, that "they were not uncommon in the Peloponnesus, but they do not occur often in the Dorian states." They existed among the Eleians and Mantinæans, with whom they seem to have been the chief executive magistracy (*οἱ δημιουργοὶ καὶ ἡ βουλὴ*, κ. τ. λ.⁴). We also read of *demurgi* in the Achaian league, who probably ranked next to the *strategi*,⁵ and put questions to the vote in the general assembly of the confederates.⁶ Officers named *epidemiurgi*, or upper *demurgi*, were sent by the Corinthians to manage the government of their colony at Potidæa.⁷

DEMONSTRATIO. (Vid. ACTIO, p. 19.)

DEMOPOIETUS (*δημοποίητος*) was the name given to a foreigner who was admitted to the rights of citizenship at Athens by a decree of the people, on account of services rendered to the state. Such citizens were, however, excluded from the *phratræ*, and could not hold the offices of either *archon* or *priest*,⁸ but were registered in a *phyle* and *deme*. (Vid. CIVITAS, GREEK, p. 259.)

DEMOSIOI (*δημόσιοι*) were public slaves at Athens, who were purchased by the state. Some of them filled subordinate places in the assembly and courts of justice, and were also employed as heralds, checking clerks, &c. They were usually called *δημόσιοι οἰκῆται*, and, as we learn from Ulpian,⁹ were taught at the expense of the state to qualify them for the discharge of such duties as have been mentioned.¹⁰ As these public slaves did not belong to any one individual, they appear to have possessed certain legal rights which private slaves had not.¹¹

Another class of public slaves formed the city guard; it was their duty to preserve order in the public assembly, and to remove any person whom the *πρυτανεῖς* might order.¹² They are generally called *bowmen* (*τοξόται*); or, from the native country of the majority, Scythians; and also *Spensinians*, from the name of the person who first established the force.¹³ There were also among them many Thracians and other barbarians. They originally lived in tents in the market-place, and afterward upon the *Areiopagus*. Their officers had the name of *toxarchs* (*τοξάρχαι*). Their number was at first 300, purchased soon after the battle of Salamis, but was afterward increased to 1200.¹⁴

DEMUS. The word *δῆμος* originally indicated a district or tract of land, and is by some derived from *dêo*, as if it signified an "enclosure marked off from the waste," just as our word *town* comes, according to Horne Tooke, from the Saxon verb "ty-nan," to enclose.¹⁵ It seems, however, more simple

to connect it with the Doric *dā* for *γᾶ*. In this meaning of a country district, inhabited and under cultivation, *δῆμος* is contrasted with *πόλις*: thus we have *ἀνδρῶν δῆμόν τε πόλιν τε*;¹ but the transition from a locality to its occupants is easy and natural, and hence, in the earlier Greek poets, we find *δῆμος* applied to the outlying country population, who tilled the lands of the chieftains or inhabitants of the city; so that *δῆμος* and *πολίται* came to be opposed to each other, the former denoting the subject peasantry (*δῆμον φιλοδέσποτον*²); the latter, the nobles in the chief towns.³

We now proceed to treat of the *demi* or country parishes of Attica. The word *δῆμος*, in the sense which we have here expressed by "parish," is by some rendered "borough," by others, "township." Of these terms, the former is certainly not appropriate; and as a parish may include townships and hamlets, we prefer this word to "township." In the first place, we may remark that, whatever uncertainty there may be about the nature and origin of the four tribes in that country as they existed before the age of Cleisthenes, there is scarcely any about the alterations he introduced with respect to them. His object was to effect a revolution, by which the power of the aristocracy would be diminished; for this purpose he broke up the four tribes of the old constitution, and substituted in their place ten local tribes (*φυλαὶ τοπικαί*), each named from some Attic hero.⁴ These were subdivided into ten *demi* or country parishes, possessing each its principal town; and in some one of these *demi* were enrolled all the Athenian citizens resident in Attica, with the exception, perhaps, of those who were natives of Athens itself.⁵ These subdivisions corresponded in some degree to the *ναυκραρίαι* of the old tribes, and were, according to Herodotus, one hundred in number; but, as the Attic *demi* amounted in the time of Strabo⁶ to 174, doubts have been raised about this statement. Niebuhr has inferred from it that the tribes of Cleisthenes did not originally include the whole population of Attica, and "that some of the additional 74 must have been cantons, which had previously been left in a state of dependance; by far the chief part, however, were houses (*γῆν*) of the old aristocracy," which were included in the four Ionian tribes, but, according to Niebuhr, were not incorporated in the ten tribes of the "rural commonalty" till after the time of Cleisthenes. (Vid. TRIBUS.)

This inference, however, seems very questionable; for the number of the *demi* might increase from a variety of causes, such as the growth of the population, the creation of new tribes, and the division of the larger into smaller parishes, to say nothing of the improbability of the coexistence of two different orders of tribes. "Another fact, more difficult to account for, is the transposition by which demes of the same tribe were found at opposite extremities of the country."⁷ The names of the different demes were taken, some from the chief towns in them, as Marathon, Eleusis, and Acharnæ; some from the names of houses or clans, such as the *Dædalidæ*, *Boutadæ*, &c. A complete list of them is given in Wachsmuth.⁸ The largest of all was the *demos* of Acharnæ, which in the time of the Peloponnesian war was so extensive as to supply a force of no less than three thousand heavy-armed men. Thucydides⁹ says of it, that it was the *χαρίον μέγιστον τῆς Ἀττικῆς τῶν δῆμων καλούμενον*.

In explanation of their constitution and relation to the state in general, we may observe, that they

independent corporations, and had each their several magistrates, landed and other property, with a common treasury. They had, likewise, their respective convocations or "parish meetings," convened by the demarchi, in which was transacted the public business of the demus, such as the leasing of its estates, the elections of officers, the revision of the registers or lists of δημόται, and the admission of new members. Moreover, each demus appears to have kept what was called a πίναξ ἐκκλησιαστικός, or list of those δημόται who were entitled to vote at the general assemblies of the whole people. In a financial point of view, they supplanted the old "naucraries" of the four tribes, each demus being required to furnish to the state a certain quota of money and contingent of troops whenever necessary.¹ Independent of these bonds of union, each demus seems to have had its peculiar temples and religious worship (δημοτικά ἱερά²), the officiating priests in which were chosen by the δημόται;³ so that, both in a civil and religious point of view, the demi appear as minor communities, whose magistrates, moreover, were obliged to submit to a δοκιμασία, in the same way as the public officers of the whole state. But, besides the magistrates, such as demarchs and treasurers (ταμίαι), elected by each parish, we also read of judges, who were called δικάσται κατὰ δήμους: the number of these officers, originally thirty, was afterward increased to forty, and it appears that they made circuits through the different districts, to administer justice in all cases where the matter in dispute was not more than ten drachmæ in value, more important questions being reserved for the δαιτυκταί.⁴

We will now treat of the δημόται, or members of each demus, their privileges, and relations to the body corporate, of which they formed a constituent part. We are told by Aristotle⁵ that, on the first institution of the demi, Cleisthenes increased the strength of the δήμος or commonalty by making many new citizens, among whom are said to have been included not only strangers and resident foreigners, but also slaves. His words are, Ἰλλοὺς ἐφύλετευσσε ξένους καὶ (δούλους) μετοίκους. We strongly suspect, however, that δούλους is an interpolation. The admission of slaves would, we conceive, have been very unpopular. Now admission into a demus was necessary, before any individual could enter upon his full rights and privileges as an Attic citizen; and though, in the first instance, every one was enrolled in the register of the demus in which his property and residence lay, this relation did not continue to hold with all the δημόται; for, since a son was registered in the demus of his real or adoptive father, and the former might change his residence, it would often happen that the members of a demus did not all reside in it. Still this would not cause any inconvenience, since the meetings of each parish were not held within its limits, but at Athens.⁶ No one, however, could purchase property situate within a parish to which he did not himself belong, without paying to the demarchs a fee for the privilege of doing so (ἐγκλητικόν), which would, of course, go to the treasury of the parish.⁷

Two of the most important functions of the general assemblies of the demi were the admission of new members and the revision of the names of members already admitted. The register of enrolment was called ληξιαρχικὸν γραμματεῖον, because any person whose name was inscribed in it could enter upon an inheritance and enjoy a patrimony, the expression for which in Attic Greek was τῆς

λήξεως ἄρχειν: λαγχάνειν κληρὸν, being equivalent to the Roman phrase *adire hereditatem*. These registers were kept by the demarchs, who, with the approbation of the members of the demus assembled in general meeting, inserted or erased names according to circumstances. Thus, when a youth was proposed for enrolment, it was competent for any demote to object to his admission on the ground of illegitimacy, or non-citizenship by the side of either parent. The demotes decided on the validity of these objections under the sanction of an oath, and the question was determined by a majority of votes.¹ The same process was observed when a citizen changed his parish in consequence of adoption.² Sometimes, however, a demarch was bribed to place, or assist in placing, on the register of a demus, persons who had no claim to citizenship.³ To remedy this admission of spurious citizens (παρεγγραπτοί), the διαψήφισις was instituted. (*Vid* DIAPSEPHISIS.)

Lastly, crowns and other honorary distinctions could be awarded by the demi in the same way as by the tribes. A decree of the demus of the Peiræus is given in Böckh,⁴ by which certain privileges were granted to Callidamas of Cholidæ: one of these was the exemption from the payment of the ἐγκλητικόν, if he should acquire property in that parish. The words are, Τελεῖν δε αὐτὸν τὰ αὐτὰ τέλη ἐν τῷ δήμῳ ἅπερ ἂν καὶ Πειραιεῖς, καὶ μὴ ἐκλέγειν πορ' αὐτοῦ τὸν δήμαρχον τὸ ἐγκλητικόν. The decree is taken from an inscription in Chandler.⁵ (*Vid* DEMARCHI.)

DENARIUS, the principal silver coin among the Romans, was so called because it was originally equal to ten asses; but on the reduction of the weight of the as (*vid*. As), it was made equal to sixteen asses, except in military pay, in which it was still reckoned as equal to ten asses.⁶ The denarius was first coined five years before the first Punic war, B.C. 269. (*Vid* ARGENTUM.) There were originally 84 denarii to a pound,⁷ but subsequently 96. At what time this reduction was made in the weight of the denarius is uncertain, as it is not mentioned in history. Some have conjectured that it was completed in Nero's time; and Mr. Hussey⁸ justly remarks, that Suetonius⁹ proves that 84 denarii went still to the pound about the year B.C. 50; since, if we reckon 96 to the pound, the proportion of the value of gold to silver is 7·8 to 1, which is incredibly low; while the value on the other supposition, 8·9 to 1, is more probable. (*Compare* ARGENTUM, *sub fin.*)

BRITISH MUSEUM. ACTUAL SIZE. WEIGHT 60·6 GRS

BRITISH MUSEUM. ACTUAL SIZE. WEIGHT 58·5 GRS

Mr. Hussey calculates the average weight of the denarii coined at the end of the Commonwealth at

1. (Wachsmuth, § 83.)—2. (Paus., i., 31.—Pollux, Onom., viii., 108.)—3. (Demosth., c. Eubul., 1313.)—4. (Hudtwalker, p. 37.)—5. (Pol., iii., 1.)—6. (Demosth., c. Eubul., 1302.)—7. (Böckh, Publ. Econ. of Athens, vol. ii., p. 3, transl.)

60 grains, and those under the Empire at 52·5 grains. If we deduct, as the average, $\frac{1}{30}$ th of the weight for alloy from the denarii of the Commonwealth, there will remain 58 grains of pure silver; and since the shilling contains 80·7 grains of pure silver, the value of the best denarii will be $\frac{58}{80\cdot7}$ of a shilling, or 8·6245 pence; which may be reckoned in round numbers 8½d. If the same method of reckoning be applied to the later denarius, its value will be about 7·5 pence, or 7½d.¹

The Roman coins of silver went at one time as low down as the fortieth part of the denarius, the *teruncius*. They were, the *quinarius*, or half denarius; the *sestertius*, or quarter denarius (*vid. Sester-*); the *libella*, or tenth of the denarius (equal to the as); the *sempella*, or half libella; and the *teruncius*, or quarter libella.

The *quinarius* was also called *victoriat*,² from the impression of a figure of Victory which it bore. Pliny³ says that *victoriati* were first coined at Rome in pursuance of the *lex Clodia*, and that previous to that time they were imported as an article of trade from Illyria. The *Clodius* who proposed this law is supposed to have been the person who obtained a triumph for his victories in Istria, whence he brought home a large sum of money,⁴ which would fix the first coinage of the *victoriati* at Rome B.C. 177, that is, 92 years after the first silver coinage.

If the denarius weighed 60 grains, the *teruncius* would only have weighed 1½ grs., which would have been so small a coin that some have doubted whether it was ever coined in silver, for we know that it was coined in copper. (*Vid. As*, p. 110.) But Varro⁵ names it among the silver coins with the *libella* and *sempella*. It is, however, improbable that the *teruncius* continued to be coined in silver after the as had been reduced to $\frac{1}{10}$ th of the denarius; for then the *teruncius* would have been $\frac{1}{60}$ th of the denarius, whereas Varro only describes it as a subdivision of *libella*, when the latter was $\frac{1}{10}$ th of the denarius. In the time of Cicero, the *libella* appears to have been the smallest silver coin in use;⁶ and it is frequently used, not merely to express a silver coin equal to the as, but any very small sum.⁷ Gronovius,⁸ however, maintains that there was no such coin as the *libella* when Varro wrote, but that the word was used to signify the tenth part of a *sestertius*. No specimens of the *libella* are now found.

If the denarius be reckoned in value 8½d., the other coins which have been mentioned will be of the following value:

	Pence.	Farth.
Teruncius		53125
Sempella		1·0625
Libella		2·125
Sestertius	2	5
Quinarius or Victoriat	4	1
Denarius	8	2

It has been frequently stated that the denarius is equal in value to the drachma, but this is not quite correct. The Attic drachma was almost equal to 9½d., whereas we have seen that the denarius was but little above 8½d. The later drachmæ, however, appear to have fallen off in weight; and there can be no doubt that they were at one time nearly enough equal to pass for equal. Gronovius has given all the authorities upon the subject in his *De Sestertiis*.⁹

The earliest denarii have usually, on the obverse, the head of Rome with a helmet, the *Dioscuri*, or

the head of Jupiter. Many have, on the reverse, chariots drawn by two or four horses (*bigæ*, *quadrigæ*), whence they are called respectively *bigati* and *quadrigati*, sc. *nummi*. (*Vid. Bigatus*.) Some denarii were called *serrati*,¹ because their edges were notched like a saw, which appears to have been done to prove that they were solid silver, and not plated. Many of the family denarii, as those of the Ælian, Calpurnian, Papinian, Tullian, and numerous other families, are marked with the numeral X, in order to show their value.

Pliny² speaks of the *denarius aureus*. Gronovius³ says that this coin was never struck at Rome; but there is one of Augustus in the British Museum, weighing 60 grains, and others of less weight. The average weight of the common aureus was 120 grains. (*Vid. Aurum*, p. 129.) In later times, a copper coin was called *denarius*.⁴

*DENDRACHA'TES (δενδραχάτης), a species of Agate, the veins of which resemble a small tree. It is our Dendritic agate. A description of it is given in the Orphic poem under the name of ἀχάτης δένδρῆς.⁵

*DENDROLIB'ANUS (δενδρολίβανος), a term occurring only in the Pharmaceutical work of Myrepsus. It is applied to the Rosemary.⁶

*ΔΕΝΔΡΥΦΙΑ ΚΕΡΑΤΙΝΑ (δενδρύφια κεράτινα), apparently, says Adams, a kind of Coral. It is mentioned by Theophrastus.⁷ Stackhouse conjectures it to be the *Gorgonia nobilis*, or Red Coral.⁸

DENTIFRICIUM (δοντότριμμα), a dentifrice or tooth-powder, appears to have been skillfully prepared and generally used among the Romans. A variety of substances, such as the bones, hoofs, and horns of certain animals, crabs, egg-shells, and the shells of the oyster and the nuxæ, constituted the basis of the preparation. Having been previously burned, and sometimes mixed with honey, they were reduced to a fine powder. Though fancy and superstition often directed the choice of these ingredients, the addition of astringents, such as myrrh, or of nitre and of hartshorn ground in a raw state, indicates science which was the result of experience, the intention being not only to clean the teeth and to render them white, but also to fix them when loose, to strengthen the gums, and to assuage tooth-ache.⁹ Pounded pumice was a more dubious article, though Pliny¹⁰ says, "*Utilissima sunt ex his dentifricia*."

DEPENSUS ACTIO. (*Vid. SPONSOR*.)

DEPORTATIO. (*Vid. BANISHMENT, ROMAN*.)

DEPOSITI ACTIO. (*Vid. DEPOSITUM*.)

DEPOSITUM. A depositum is that which is given by one man to another to keep until it is demanded back, and without any reward for the trouble of keeping it. The party who makes the depositum is called *deponens* or *depositor*, and he who receives the thing is called *depositorius*. The act of deposit may be purely voluntary, or it may be from necessity, as in the case of fire, shipwreck, or other casualty. The *depositorius* is bound to take care of the thing which he has consented to receive. He cannot use the thing unless he has permission to use it, either by express words or by necessary implication. If the thing is one "*quæ usu non consumitur*," and it is given to a person to be used, the transaction becomes a case of *locatio* and *conductio* (*vid. LOCATIO*), if money is to be paid for the use of it; or a case of *commodatum* (*vid. COMMODATUM*), if nothing is to be paid for the use. If a bag of money not sealed up is the subject of

1. (Hussey, p. 141, 142.)—2. (Cic., *Pro F. n. t.*, 5.)—3. (H. N., xxxiii., 13.)—4. (Liv., xli., 13.)—5. (Varro, *De Ling. Lat.*, v., 174, ed. Müller.)—6. (Cic., *Pro Rosc. Com.*, c. 4.)—7. (Plaut., *Cas.*, ii., v., 7.—Capt., i., 27.)—8. (De *Sestertiis*, ii. 2.)—9. (iii., 2.)

1. (Tacit., *Germ.*, 5.)—2. (H. N., xxxiii., 13.)—3. (De *Sestertiis*, iii., 15.)—4. (Ducange, s. v. *Denarius*.)—5. (Plin., H. N., xxxvii., 54.—Orph., Lith., v., 230.—Moore's *Anc. Mineral.*, p. 178.)—6. (Adams, *Append.*, s. v.)—7. (H. P., iv., 8.)—8. (Adams, *Append.*, s. v.)—9. (Plin., H. N., xxvii., 49; xxxi., 46; xxxii., 21, 26.)—10. (xxvii., 42.)

the depositum, and the depositarius at any time asks for permission to use it, the money becomes a loan (*vid. Mutuum*) from the time when the permission is granted; if the deponens proffers the use of the money, it becomes a loan from the time when the depositarius begins to use it. If money is deposited with the condition that the same amount be returned, the use of it is tacitly given; but the depositum does not therefore become mutuum. If the depositum continues purely a depositum, the depositarius is bound to make good any damage to it which happens through *dolus* or *culpa lata*; and he is bound to restore the thing on demand to the deponens, or to the person to whom the deponens orders it to be restored. The remedy of the deponens against the depositarius is by an *actio depositi directa*. The depositarius is entitled to be secured against all damage which he may have sustained through any *culpa* on the part of the deponens, and to all costs and expenses incurred by his charge; and his remedy against the deponens is by an *actio depositi contraria*. The *actio* was in *duplum* if the deposit was made from necessity; if the depositarius was guilty of *dolus*, *infamia* was a consequence.¹

DESERTOR is defined by Modestinus to be one "qui per prolixum tempus vagatus, reducitur," and differs from an *emansor* "qui diu vagatus ad castra egreditur."² Those who deserted in time of peace were punished by loss of rank, corporeal chastisement, fines, ignominious dismissal from the service, &c. Those who left the standards in time of war were usually punished with death. The *transfuga*, or deserters to the enemy, when taken, were sometimes deprived of their hands or feet,³ but generally were put to death.⁴

DESIGNATOR. (*vid. FONS*.)

DESMOTERION (*δεσμοτήριον*). (*vid. CARCER*.)

DESPOSITIONAUTAI (*δεσποσιοναῦται*). (*vid. CIVITAS, GREEK*.)

DESULTOR (*ὑψιππος, ἀναβάτης, μεταβάτης*), a rider. Although riding on horseback is never mentioned among the martial exercises of the early Greeks, it was often practised by them as a swift and easy method of conveyance from place to place; and that they had attained to great skill in horsemanship is manifest from a passage in the *Iliad*,⁵ describing a man who keeps four horses abreast at full gallop, and leaps from one to another, amid a crowd of admiring spectators. The Roman desultor generally rode only two horses at the same time, sitting on them without a saddle, and vaulting upon either of them at his pleasure.⁶ He wore a hat or cap made of felt. The taste for these exercises was carried to so great an extent, that young men of the highest rank not only drove bigæ and quadrigæ in the circus, but exhibited these feats of horsemanship.⁷ Besides performing publicly for the amusement of the spectators, the Roman riders were employed to convey messages with the greatest possible despatch, relieving either horse, when fatigued, by vaulting upon the other.⁸ Among other nations, this species of equestrian dexterity was applied to the purposes of war. Livy mentions a troop of horse in the Numidian army, in which each soldier was supplied with a couple of horses, and in the heat of battle, and when clad in armour, would leap with the greatest ease and celerity from that which was wearied or disabled upon the back of the horse which was still sound and fresh.⁹ The Scythians,

Armenians, and some of the Indians, were skilled in the same art.

The annexed woodcut shows three figures of desultores, one from a bronze lamp, published by Bartoli,¹ the others from coins. In all these the rider

wears a pileus, or cap of felt, and his horse is without a saddle; but these examples prove that he had the use both of the whip and the rein. On the coins we also observe the wreath and palm-branch as ensigns of victory.

DETESTATIO SACRORUM. (*vid. SACRA*.)

DEVERSORIUM. (*vid. CAUPONA*.)

DEUNX. (*vid. As*, p. 110.)

DEXTANS. (*vid. As*, p. 110.)

DIADEMA (*διάδημα*), a white fillet used to encircle the head (*ascia alba*).²

The invention of this ornament is by Pliny³ attributed to "Liber Pater." Diodorus Siculus adds,⁴ that he wore it to assuage headache, the consequence of indulging in wine. Accordingly, in works of ancient art, Bacchus wears a plain bandage on his head, as shown in the woodcut at p. 208.

Whether we reject or admit the conjecture of Diodorus, we may safely consider the diadem, even in its simplest form, as a decoration which was properly Oriental. It is commonly represented on the heads of Eastern monarchs. Justin⁵ relates that Alexander the Great adopted the large diadem of the kings of Persia, the ends of which fell upon the shoulders, and that this mark of royalty was preserved by his successors.⁶ Antony assumed it in his luxurious intercourse with Cleopatra in Egypt.⁷ Ælian says⁸ that the kings of that country had the figure of an asp upon their diadems.

In process of time, the sculptors placed the diadema on the head of Jupiter, and various other divinities besides Bacchus (see examples at p. 245, 292), and it was also gradually assumed by the sovereigns of the Western world. It was tied behind in a bow; whence Tacitus⁹ speaks of the Euphrates rising in waves "white with foam, so as to resemble a diadem." By the addition of gold and gems,¹⁰ and of pearls from the Erythrean Sea,¹¹ and by a continual increase in richness, size, and splendour, this bandage was at length converted into the crown which has been for many centuries the badge

of sovereignty in modern Europe. It must have been merely in joke that the surname of Diadematus was given to L. Metellus, who, in order to conceal an ulcer, had his head for a long time surrounded with a bandage.¹

DIABATERIA (διαβατήρια) was a sacrifice offered to Zeus and Athena by the Kings of Sparta upon passing the frontiers of Lacedæmon with the command of an army. If the victims were unfavourable, they disbanded the army and returned home.²

DIADICASIA (διαδικασία), in its most extended sense, is a mere synonyme of *δικη*: technically, it denotes the proceedings in a contest for preference between two or more rival parties; as, for instance, in the case of several claiming to succeed as heirs or legatees to the estate of a deceased person. Upon an occasion of this kind, it will be observed that, as all claimants are similarly situated with respect to the subject of dispute, the ordinary classification of the litigants as plaintiffs and defendants becomes no longer applicable. This, in fact, is the essential distinction between the proceedings in question and all other suits in which the parties appear as immediately opposed to each other; but, as far as forms are concerned, we are not told that they were peculiarly characterized. Besides the case above mentioned, there are several others to be classed with it in respect of the object of proceedings being an absolute acquisition of property. Among these are to be reckoned the claims of private creditors upon a confiscated estate, and the contests between informers claiming rewards proposed by the state for the discovery of crimes, &c., as upon the occasion of the mutilation of the Hermæ³ and the like. The other class of causes included under the general term consists of cases like the antiodosis of the trierarchs (*vid. ANTIDOTOS*), contests as to who was to be held responsible to the state for public property alleged to have been transferred on one hand and denied on the other,⁴ and questions as to who should undertake a choregia, and many others, in which exemptions from personal or pecuniary liabilities to the state were the subject of claim by rival parties. In a diadicasia, as in an ordinary *δικη*, the proper court, the presiding magistrate, and the expenses of the trial, mainly depended upon the peculiar object of the proceedings, and present no leading characteristics for discussion under the general term.⁵

DIADOSEIS (διαδόσεις). (*Vid. DIANOMAI*)

DIÆTA. (*Vid. HOUSE.*)

DIÆTETICA or DIÆTETICE (διαιτητική), one of the three principal branches into which the ancients divided the art and science of medicine. (*Vid. MEDICINA.*) The word is derived from *διαίτα*, which meant much the same as our word *diet*. It is defined by Celsus⁶ to signify that part of medicine *quæ victu medetur*, "which cures diseases by means of regimen and diet;" and a similar explanation is given by Plato.⁷ Taken strictly in this sense, it would correspond very nearly with the modern *dietetics*, and this is the meaning which (as far as the writer is aware) it always bears in the earlier medical writers, and that which will be adhered to in the present article; in some of the later authors it seems to comprehend Celsus's second grand division, *φαρμακευτική*, and is used by Scribonius Largus⁸ simply in opposition to *chirurgia*, so as to answer exactly to the province of our *physician*.

No attention seems to have been paid to this branch of medicine before the date of Hippocrates; or, at least, it would seem that, whether Homer meant to represent it as it was in his own time, or as he supposed it to have been during the Trojan war, it must have been (according to our modern notions) very defective and erroneous. For instance, he represents Machaon, who had been wounded in the shoulder by an arrow,¹ and forced to quit the field, as taking a draught composed of wine, goat's-milk cheese, and flour,² which certainly no modern surgeon would prescribe in such a case.³ Hippocrates seems to claim for himself the credit of being the first person who had studied this subject, and says the "ancients had written nothing on it worth mentioning."⁴ Among the works commonly ascribed to Hippocrates, there are four that bear upon this subject, viz.: 1. *Περὶ Διαιτῆς Ὑγιεινῆς*, *De Salubri Victus Ratione*; 2. *Περὶ Διαιτῆς*, *De Victus Ratione*, in three books; 3. *Περὶ Διαιτῆς Ὁσίων*, *De Ratione Victus in Morbis Acutis*; and 4. *Περὶ Τροφῆς*, *De Alimento*. Of these the third only is considered to be undoubtedly genuine; but the first was probably written by his son-in-law Polybus; the second, though evidently not all composed by the same author, is supposed to be as old as Hippocrates; and the fourth, if not the work of Hippocrates himself, is nevertheless very ancient.⁵ There is also a good deal of matter on this subject in his other works, as regimen and diet was the first, the chief, and often the only remedy that he employed. Besides these treatises by Hippocrates and his contemporaries, on the first, third, and fourth of which Galen has left a commentary, the following works on the subject by later authors are still extant: Galen, *Περὶ Τροφῶν Ἀνθρώπου*, *De Alimento Facultatibus*; *Id.*, *Περὶ Εὐχυσίας καὶ Κακοχυσίας Τροφῶν*, *De Probis et Prævis Alimentoium Succis*; *Id.*, *Περὶ τῆς κατὰ τὸν Ἱπποκράτην Διαιτῆς ἐπὶ τῶν Ὁσίων Νοσημάτων*, *De Victus Ratione in Morbis Acutis ex Hippocratæ Sententiâ*; Michael Psellus, *Περὶ Διαιτῆς*, *De Victus Ratione*; Theodorus Priscianus, *Dietæ, sive de Salutaribus Rebus*; Constantinus Afer, *De Victus Ratione Variorum Morborum*. To these may be added the famous *Regimen Sanitatis Salernitanum*; a treatise by Isaac (*Isak Ben Solomon*), *De Dietis Universalibus et Particularibus*, another corruptly entitled *Tacuin Sanitatis Elluchasem Elimithar de Sex Rebus non Naturalibus*; and another by the celebrated Maimonides (*Mosheh Ben Maimon*), *De Regimine Sanitatis*: besides several chapters in the works of Haly Abbas, Avicenna, and Mesue. It would be out of place here to attempt anything like a complete account of the opinions of the ancients on this point; those who wish for more detailed information must be referred to the different works on medical antiquities, while in this article mention is made of only such particulars as may be supposed to have some interest for the general reader.

In the works above enumerated, almost all the articles of food used by the ancients are mentioned, and their real or supposed properties discussed, sometimes quite as fancifully as by Burton in his *Anatomy of Melancholy*. In some respects they appear to have been much less delicate in their tastes than the moderns, as we find the flesh of the fox, the dog, the horse, and the ass spoken of as common articles of food.⁶ With regard to the quantity of wine drunk by the ancients, we may arrive at something like certainty from the fact that Cælius

(Platner, Process und Klagen, ii., p. 17, s. 9.)—6. (De Medic., Prafat. in lib. i.)—7. (ap. Diog. Laert., iii., 1, § 85.)—8. (De Compos. Medicam., § 200.)

1. (II., xi., 507.)—2. (Ibid., 638.)—3. (See Plato, De Republ., iii., p. 405, 406.—Max. Tyr., Sermon., 29.—Athenæus, i., § 17, p. 10.)—4. (De Rat. Vict. in Morb. Acut., tom. ii., p. 26, ed. Kühn.)—5. (Vid. Fabric., Bibl. Gr., vol. ii., ed. Harles.)—6. (Pseudo-Hippocr., De Vict. Rat., lib. ii., tom. i., p. 679, 680.)

Aurelianus mentions it as something extraordinary that the famous Asclepiades, at Rome, in the seventh century A.U.C., sometimes ordered his patients to double and treble the quantity of wine, till at last they drank half wine and half water,¹ from which it appears that wine was commonly diluted with five or six times its quantity of water. Hippocrates recommends wine to be mixed with an equal quantity of water, and Galen approves of the proportion; but Le Clerc² thinks that this was only in particular cases. In one place³ the patient, after great fatigue, is recommended *μεθυσθῆναι ἀπὸς ἡ δός*, in which passage it has been much doubted whether actual intoxication is meant, or only the "drinking freely and to cheerfulness," in which sense the same word is used by St. John⁴ and the LXX.⁵ According to Hippocrates, the proportions in which wine and water should be mixed together vary according to the season of the year; for instance, in summer the wine should be most diluted, and in winter the least so.⁶ Exercise of various sorts, and bathing, are also much insisted upon by the writers on diet and regimen; but for farther particulars on these subjects, the articles *BATHS* and *Gymnasium* must be consulted. It may, however, be added, that the bath could not have been very common, at least in private families, in the time of Hippocrates, as he says⁷ that "there are few houses in which the necessary conveniences are to be found."

Another very favourite practice with the ancients, both as a preventive of sickness and as a remedy, was the taking of an emetic from time to time. The author of the treatise *De Victus Ratione*, falsely attributed to Hippocrates, recommends it two or three times a month.⁸ Celsus considers it more beneficial in the winter than in the summer,⁹ and says that those who take an emetic twice a month had better do so on two successive days than once a fortnight.¹⁰ At the time in which Celsus wrote, this practice was so commonly abused, that Asclepiades, in his work *De Sanitate Tuenda*, rejected the use of emetics altogether: "*Offensus*," says Celsus,¹¹ "*eorum consuetudine, qui quotidie ejicendo vorandi facultatem moluntur.*"¹² It was the custom among the Romans to take an emetic immediately before their meals, in order to prepare themselves to eat more plentifully; and again soon after, so as to avoid any injury from repletion. Cicero, in his account of the day that Cæsar spent with him at his house in the country,¹³ says, "*Accubavit, ἐμετικὴν ἤγεbat, itaque et edit et bibit dōcēs et jucunde*:" and this seems to have been considered a sort of compliment paid by Cæsar to his host, as it intimated a resolution to pass the day cheerfully, and to eat and drink freely with him. He is represented as having done the same thing when he was entertained by King Deiotarus.¹⁴ The glutton Vitellius is said to have preserved his own life by constant emetics, while he destroyed all his companions who did not use the same precaution,¹⁵ so that one of them, who was prevented by illness from dining with him for a few days, said, "I should certainly have been dead if I had not fallen sick." Even women, after bathing before supper, used to drink wine and throw it up again, to sharpen their appetite

so that it might truly be said, in the strong language of Seneca,¹ "*Vomunt, ut edant; edunt, ut vomant.*"² By some the practice was thought so effectual for strengthening the constitution, that it was the constant regimen of all the athletes, or professed wrestlers, trained for the public shows, in order to make them more robust. Celsus, however,³ warns his readers against the too frequent use of emetics without necessity, and merely for luxury and gluttony, and says that no one who has any regard for his health, and wishes to live to old age, ought to make it a daily practice.⁴

DIAGRAPHÆIS (διαγραφῆς). (Vid. EISPHORA.)

DIAITETAI (διαίτηται). The διαίτηται, or arbitrators mentioned by the Athenian orators, were of two kinds; the one public, and appointed by lot (κληρωτοί), the other private, and chosen (αἰρετοί) by the parties who referred to them the decision of a disputed point, instead of trying it before a court of justice; the judgments of both, according to Aristotle, being founded on equity rather than law (ὁ γὰρ διαίτητής τὸ ἐπιεικὲς ὁρᾷ, ὃ δὲ δικαστής τὸν νόμον⁵). We shall, in the first place, treat of the διαίτηται κληρωτοί, following, as closely as possible, the order and statements of Hudtwalcker in his treatise "*Ueber die öffentlichen und Privat-Schiedsrichter Diäteten in Athen, und den Process vor denselben.*"

According to Suidas,⁶ the public διαίτηται were required to be not less than 50 years of age; according to Pollux⁷ and Hesychius, not less than 60. With respect to their number there is some difficulty, in consequence of a statement of Ulpian,⁸ according to which it was 440, i. e., 44 for each tribe (ἦσαν δὲ τέσσαρες καὶ τεσσαράκοντα, καθ' ἑκάστην φυλὴν). This number, however, appears so unnecessarily large, more especially when it is considered that the Attic orators frequently speak of only one arbitrator in each case, that some writers have, with good reason, supposed the reading should be, ἦσαν δὲ τεσσαράκοντα, τέσσαρες κ. ἑ. ρ. At any rate, litigious as the Athenians were, it seems that 440 must have been enough for all purposes.

The words καθ' ἑκάστην φυλὴν imply that each tribe had its own arbitrator; an inference which is supported by Demosthenes,⁹ where he speaks of the arbitrators of the Eneid and Erechtheid tribes; as well as by Lysias,¹⁰ who, in the words προσκλησάμενος αὐτὸν πρὸς τοὺς τῇ Ἰπποβοωντίδι δικάζοντας, is thought to allude to the διαίτηται of the Hippoboon-tid tribe. With regard to the election of these officers, it is doubtful whether they were chosen by the members of the tribe for which they adjudicated, or in a general assembly of the people. Hudtwalcker inclines to the latter supposition, as being more probable; we do not think so; for it seems just as likely, if not more so, that the four arbitrators of each tribe were chosen in an assembly of the tribe itself. Again, whether they were appointed for life, or only for a definite period, is not expressly mentioned by the orators; but as none of the Athenian magistrates, with the exception of the Areopagites, remained permanently in office, and Demosthenes¹¹ speaks of the last day of the 11th month of the year as being the last day of the διαίτηται (ἡ τελευταία ἡμέρα τῶν διαίτητῶν), it seems almost certain that they were elected for a year only. The only objection to this conclusion arises from a statement in a fragment of Isæus,¹² where an arbitrator is spoken of as being engaged on a suit for two years (δύο ἔτη τοῦ διαίτητοῦ τὴν δίκην ἔχοντος): if, however, we admit the conjectural reading τῶν διαίτητῶν.

the meaning would be in accordance with what we infer from other authorities, and would only imply that the same cause came before the arbitrators of two different years, a case which might not unfrequently happen; if, on the contrary, the reading of the text is correct, we must suppose that it was sometimes necessary or convenient to re-elect an arbitrator for the decision of a particular case.

After discussing this subject, Hudtwalcker raises the question whether or not the public *διαιτηταί* took any general oath before entering upon their duties. The point is not one of great importance, and therefore we shall only observe that such a guarantee would seem to be unnecessary; for we read of their taking oaths previous to giving judgment in the particular cases which came before them.¹ From this circumstance we should infer that no oath was exacted from them before they entered upon office: Hudtwalcker is of the contrary opinion, and suggests that the purport of their oath of office (*αμτισειδ*) was the same as that of the Heliastic oath given by Demosthenes.²

The *διαιτηταί* of the different tribes appear to have sat in different places; as temples, halls, and courts of justice, if not wanted for other purposes. Those of the Ceneid and the Erechtheid tribes met in the heliæa;³ we read of others holding a court in the delphinium,⁴ and also in the *στοά ποικιλή*.⁵ Again we are told of slaves being examined by the *διαιτηταί*, sitting for that purpose, under the appellation of *βασανισταί* (*vid. BASANOS*), in the hephaisteium, or Temple of Hephaistos.⁶ Moreover, we are told of private arbitrators meeting in the Temple of Athena on the Acropolis; and, if the amended reading of Pollux⁷ is correct, we are informed by him, in general terms, that the arbitrators formerly held their courts in the temples (*Διόντων ἐν ἱεροῖς πόλαιοι*). Harpocration also⁸ contrasts the dicasts with the arbitrators, observing that the former had regularly appointed courts of justice (*ἀποδεδειγμένα*).

Another point of difference was the mode of payment, inasmuch as the dicasts received an allowance from the state, whereas the only remuneration of the *διαιτηταί* was a drachma deposited as a *παράστας*⁹ by the complainant on the commencement of the suit, the same sum being also paid for the *ἀντομοσία*, and every *ὑπεμοσία* sworn during the proceedings.¹⁰

The *παράστας* of which we have been speaking is the same as the *δραχμή τοῦ λειπομαρτυρίου* mentioned by Demosthenes.¹¹ The defendant in this case had failed to give evidence as he ought to have done, and therefore the plaintiff commenced proceedings against him for this arbitrary neglect before the arbitrators in the principal suit, the first step of which was the payment of the *παράστας*.

The public arbitrators were *ὑπειθνήνιοι*, i. e., every one who had, or fancied he had, a cause of complaint against them for their decisions, might proceed against them by *εἰσαγγελία*, or information laid before the senate. For this purpose, says Ulpian, whose statement is confirmed by Demosthenes¹² in the case of Straton, the public *διαίτῃ* were, towards the close of their year of office, and during the latter days of the month Thargelion, required to present themselves in some fixed place, probably near the senate-house, that they might be ready to answer any charge brought against them, of which

they received a previous notice. The punishment, in case of condemnation, was *ἀτιμία*, or the loss of civic rights. Harpocration,¹ however, informs us that the *εἰσαγγελία* against the arbitrators was brought before the dicasts or judges of the regular courts; but this probably happened only on appeal, or in cases of great importance, inasmuch as the *βουλή* could not inflict a greater penalty than a fine of 500 drachmæ with *ἀτιμία*.

We may now discuss the competency of the *διαίτῃ*, i. e., the extent of their jurisdiction, with respect to which Pollux² states, that in former times no suit was brought into a court before it had been investigated by the *διαίτῃ* (*πάσαι οὐδεμία δίκη πρὶν ἐπὶ διαίτητῃς ἔλθειν εἰσάγετο*). There can be but little doubt that the word *πάσαι* here refers to a time which was ancient with reference to the age of the Athenian orators, and therefore that this previous investigation was no longer requisite in the days of Demosthenes and his contemporaries. Still we find the *διαίτῃ* mentioned by them in very many cases of civil actions, and it is not unlikely that the magistrates, whose duty it was to bring actions into court (*εἰσάγειν*), encouraged the process before the arbitrators, as a means of saving the state the payment which would otherwise have been due to the dicasts.³ Hudtwalcker is accordingly of opinion that the *διαίτῃ* were competent to act in all cases of civil action for restitution or compensation, but not of penal or criminal indictments (*γραφῆ*); and, moreover, that it rested with the complainant whether his cause was brought before them in the first instance, or sent at once to a higher court of judicature.⁴

But, besides hearing cases of this sort, the *διαίτηται* sat as commissioners of inquiry on matters of fact which could not be conveniently examined in a court of justice,⁵ just as what is called an "issue" is sometimes directed by our own Court of Chancery to an inferior court, for the purpose of trying a question of fact, to be determined by a jury. Either party in a suit could demand or challenge (*προκαλεῖσθαι*) an inquiry of this sort before an arbitrator, the challenge being called *πρόκλησις*: a term which was also applied to the "articles of agreement" by which the extent and object of the inquiry were defined.⁶ Many instances of these *πρόκλησεις* are found in the orators; one of the most frequent is the demand or offer to examine by torture a slave supposed to be cognizant of a matter in dispute, the damage which might result to the owner of the slave being guarantied by the party who demanded the examination.⁷ See also Demosthenes⁸ who observes that the testimony of a slave, elicited by torture, was thought of more value by the Athenians than the evidence of freemen. (*Vid. BASANOS*.) Another instance, somewhat similar to the last, was the *πρόκλησις εἰς μαρτυρίαν*,⁹ where a party proposed to his opponent that the decision of a disputed point should be determined by the evidence of a third party.¹⁰ Sometimes, also, we read of a *πρόκλησις*, by which a party was challenged to allow the examination of documents, as wills,¹¹ deeds, bankers' books, &c.¹²

It is manifest that the forms and objects of a *πρόκλησις* would vary according to the matter in dispute, and the evidence which was producible; we shall therefore content ourselves with adding that the term was also used when a party challenged his adversary to make his allegation under

the sanction of an oath, or offered to make his own statements under the same obligation.¹

The presumption or prepossession which might arise from a voluntary oath in the last case, might be met by a similar *πρόκλησις*, tendered by the opposite party, to which the original challenger appears to have had the option of consenting or not, as he might think proper.² In all cases where any of these investigations or depositions were made before the *διαίτεται*, we may conclude with Hudtwalcker,³ that they might be called as witnesses in subsequent stages of the action, either to state the evidence they had taken, or to produce the documents they had examined, and which were deposited by them in an echinus. (*Vid. APPELLATIO, GREEK.*)

We will now speak of the proceedings in the trials before the public arbitrators; these were of two sorts: 1st. When two parties agreed by a regular contract to refer a matter in dispute to a judge or judges selected from them. 2dly. When a cause was brought before a public arbitrator, without any such previous compromise, and in the regular course of law. The chief difference seems to have been that, in case of a reference by contract between two parties, the award was final, and no appeal could be brought before another court, though the unsuccessful party might, in some instances, move for a new trial (*τὴν μὴ οὖσαν ἀντιλαχεῖν*).⁴ Except in this point of non-appeal, an arbitrator who was selected from the public *διαίτηται* by litigant parties, seems to have been subject to the same liabilities, and to have stood in the same relation to those parties as an arbitrator appointed by lot: the course of proceeding also appears to have been the same before both,⁵ an account of which is given below. It must, however, be first stated, that there are strong reasons in support of Hudtwalcker's opinion, that whenever a suitor wished to bring an action before one or more of the public *διαίτεται*, he applied to one of the many officers called *εἰσαγωγεῖς*,⁶ whose duty it was to bring the cause (*εἰσάγειν*) into a proper court. By some such officer, at any rate, a requisite number of arbitrators was allotted to the complainant, care being taken that they were of the same tribe as the defendant.⁷ Pollux⁸ informs us that if a *διαίτητής* refused to hear a cause, he might be punished with *ὑμῖα*: but it appears that under extraordinary circumstances, and after hearing the case, a *διαίτης* sometimes refused to decide himself, and referred the parties to a court of justice (*οὐκ ἀπέγνω τῆς δίκης, ἀλλ' ἐφῆκεν ἡμᾶς εἰς τὸ δικαστήριον*).⁹

We may now state the process before the public *διαίτεται*. After complaint made, and payment of the *παράστας*, the plaintiff supported his averment by an oath, to the effect that his accusation was true, which the defendant met by a like oath as to the matter of his defence. When the oath (*ἀνθρωπότης*) had been thus taken by the parties, the arbitrators entered upon the inquiry, heard witnesses, examined documents, and held as many conferences (*σύνδοσι*) with the parties as might be necessary for the settlement of the question.¹⁰ The day of pronouncing judgment (*ἡ ἀπόφασις τῆς δίκης*)¹¹ was probably fixed by law, if we may judge from the name (*ἡ κυρία* scil. *ἡμέρα*) by which it is called in the orators; it might, however, with consent of both parties, be postponed. The verdict given was

countersigned by the proper authorities, perhaps by the *εἰσαγωγεῖς*, and thereby acquired its validity. The archons, mentioned by Demosthenes¹ as having signed a judgment, were probably thesmothetai, as the action was a *δίκη κακῆγορίας*, which is, moreover, called an *ἀτίμητος δέκα μῶν δίκη*, i. e., an action where the plaintiff was not required to assess the damages (*ἀξιμάρε ἵεμν*), the penalty, in case of a verdict for him, being determined by law: this alone is sufficient to prove that the *διαίτεται* sometimes decided in cases where the plaintiff sued for damages, as distinguished from those in which he sought restitution of rights or property; nor, indeed, does there seem any reason for supposing that their jurisdiction was not extended to the *ἡγῶνες τιμητοί*, or actions where the plaintiff was required to assess or lay his damages, provided the assessment did not exceed some fixed amount. In support of this opinion we may adduce the authority of Pollux,² who expressly states that the plaintiff might assess his damages before the arbitrators, when the law did not do so for him (*ἐνέγραψεν ἐν τῷ γραμματεῖ τὸ ἐγκλημα καὶ τὴν τιμην*).

If the defendant were not present on the proper day to make his last defence, judgment went against him by default (*ἐρήμην ὀφλε*), the arbitrator being obliged to wait till the evening (*ὄψε ἡμέρας*).³ Sometimes, however, the time of pronouncing sentence was deferred in consequence of a deposition (*ὑπωμοσία*)⁴ alleging a satisfactory cause for postponement, such as sickness, absence from town, military service, or other reasons. To substantiate these, the applicant, when possible, appeared personally; but if a party was prevented from appearing on the day of trial by any unexpected event, the *ὑπωμοσία* might be made on oath by authorized friends.⁵ The *ὑπωμοσία* might be met by a counter-statement (*ἰσθιπυωμοσία*) from the opposite party, affirming his belief that the reasons alleged were fictitious or colourable. In connexion with this point, we may observe that, according to Pollux,⁶ the motion for a new trial could only be sustained in cases where the applicant had made a *ὑπωμοσία*, and demurred either personally or by proxy against the passing of judgment on the regular day. Moreover, it was incumbent on the party who wished for a new trial to move for it within ten days after judgment had been pronounced, and even then he was obliged to take a kind of *ὑπωμοσία*, to the effect that his absence on the proper day was involuntary (*ὁμοσας μὴ ἐκὼν ἐκλείπειν τὴν διαίταν*).⁷ In default of compliance with these conditions, the previous sentence was confirmed.⁸ We are told also by Photius,⁹ that it was competent for plaintiff as well as defendant to move for a new trial on the grounds we have mentioned. When it was granted, the former verdict was set aside (*ἡ ἐρήμη ἐλύετο*), and the parties went again before an arbitrator, probably through the instrumentality of the *εἰσαγωγεῖς*, to whom application had been made in the first instance. The process itself is called *ἀντιλήξις* in Greek, and does not seem to have been confined to trials before the *διαίτηται*: the corresponding term in Roman law is *restitutio criminis*.

This, however, was not the only means of setting aside a judgment, inasmuch as it might also be effected by an *ἔφεσις*, or appeal to the higher courts (*vid. APPELLATIO, GREEK*), and if false evidence had been tendered, by a *δίκη κακοτεχνιών*.¹⁰ For an account of the proceedings consequent upon non-com-

pliance with a final judgment, see *ENECHYRA* and *ΕΚΟΥΛΕΣ ΔΙΚΗ*.

We will now speak of the strictly private arbitrators, chosen by mutual agreement between contending parties, and therefore generally distinguished by the title *αἰρετοί*, of whom it must be understood that they were not selected from the *διαίτηται* of the tribes. The powers with which they were invested were, as we might suppose, not always the same; sometimes they were merely *διαλλακταί*, or chosen to effect a compromise or reconciliation: thus Isæus¹ speaks of arbitrators offering either to bring about a reconciliation if they could, without taking an oath, or to make an award (*ἀποφαίνεσθαι*) upon oath. Sometimes, on the other hand, they were purely referees, and then their powers depended upon the terms of the agreement of reference; if these powers were limited, the arbitration was a *διαίτα ἐπὶ ῥητοῖς*.² The agreement was not merely a verbal contract (*stipulatio*), but drawn up in writing (*ἐπιτροπή κατὰ συνθήκας*),³ and signed by the parties; it fixed the number of referees (generally three), determined how many unanimous votes were necessary for a valid decision, and probably reserved or prohibited, as the case might be, a right of appeal to other authorities.⁴

If there were no limitations, these *διαίτηται* were then, so to speak, arbitrators proper, according to the definition of Festus:⁵ "*Arbitrator dicitur iudex, quod totius rei habcat arbitrium et potestatem.*" Moreover, no appeal could be brought against their judgment;⁶ though we read of an instance of a party having persuaded his opponent to leave a matter to the arbitration of three persons; and afterward, when he found they were likely to decide against himself, going before one of the public arbitrators (*Ἐπὶ τὸν κληρωτὸν διαίτητὴν ἐλθών*). We should, however, suppose that in this case there was no written *συνθήκη*. The award was frequently given under the sanction of an oath, and had the same force as the judgment which proceeded from a court of law, so that it might be followed by a *δίκη ἐξούλης*.⁷ We may add, that these private *διαίτηται* are spoken of as sitting *ἐν τῷ ἱερῷ*, *ἐν τῷ Ἱφιαστείῳ*, and that in some cases it was customary to give notice of their appointment to the proper archon or magistrate (*ἀποφέρειν πρὸς τὴν ἀρχήν*), who, as Hudtwalcker suggests, may have acted as an *εἰσαγωγεὺς* in the case.⁸

DIAMARTYRIA (*διαμαρτυρία*) was a solemn protest against the proceedings at the anacrisis, in nearly all causes, whether public or private. It purported that the action pending could or could not be brought into court, and operated as a hindrance to its farther progress until this question was decided. The protest was, like all the other proceedings at an anacrisis, put in writing, together with the evidence requisite for its corroboration, and the question raised by it was decided by the tribunal that had cognizance of the original cause. The only peculiarity in the conduct of the trial seems to have been, that the party against whom the protest was made was the first to address the court. According to Harpocration, the plaintiff was entitled to adopt this method of proceeding first, and the protest was only allowed to the defendant upon his antagonist's omitting to do so; but, besides the two original parties, we are told that a third (*ὁ βουλευόμενος*) might interpose by protest, and thus *pro tempore* substitute himself for one of the litigants. It seems probable that the epo-

belia, or sixth part of the damages estimated in the original cause, was forfeited in some *diamartyria*; when the protester failed in obtaining a fifth of the voices of the dicasts; and in others, a deposit (*παράκαταβολή*)⁹ was forfeited by the unsuccessful party to his opponent.³

DIAMASTIGOSIS (*διαμαστίγωσις*) was a solemnity performed at Sparta at the festival of Artemis Orthia, whose temple was called *Limnæon*, from its situation in a marshy part of the town.⁴ The solemnity was this: Spartan youths (*ἐφηβοί*) were scourged on the occasion at the altar of Artemis, by persons appointed for the purpose, until their blood gushed forth and covered the altar. The scourging itself was preceded by a preparation, by which those who intended to undergo the *diamastigosis* tried to harden themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the *diamastigosis*, in the following manner: A wooden statue of Artemis, which Orestes had brought from Tauris, was found in a bush by Astrabanes and Alpeceus, the sons of Irbus. The two men were immediately struck mad at the sight of it. The Limnæans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth human victims were selected by lot and offered to Artemis, until Lyncurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The *diamastigosis*, according to this account, was a substitute for human sacrifice, and Lyncurgus made it also serve his purpose of education, in so far as he made it a part of the system of hardening the Spartan youths against bodily sufferings.⁵ According to another far less probable account, the *diamastigosis* originated in a circumstance, recorded by Plutarch,⁶ which happened before the battle of Platææ.

The worship of Artemis Orthia was unquestionably very ancient, and the *diamastigosis* only a step from barbarism towards civilization. Many anecdotes are related of the courage and intrepidity with which young Spartans bore the lashes of the scourge; some even died without uttering a murmur at their sufferings, for to die under the strokes was considered as honourable a death as that on the field of battle.⁷

DIANOMAI or *DIA'DOSEIS* (*διανομαί* or *διαδόσεις*) were public donations to the Athenian people, which corresponded to the Roman *congiaria*. (*Vid. CONGIARIUM*.) To these belong the free distributions of corn,⁸ the cleruchiae (*vid. CLERUCHI*), the revenues from the mines, and the money of the theaica. (*Vid. THEAICON*.)⁹

DIAPHANE EIMATA (*διαφανή εἴματα*) were garments similar to the celebrated *Coæ vestes* of the Romans; but as they are mentioned in Aristophanes and the earlier Greek writers (*διαφανή χιτῶνια*,¹⁰ *ἱμάτια διαφαινόντα*), they were probably made of muslin and not of silk, which is supposed to be the material of which the *Coæ vestes* were made. (*Vid. COA VESTES*.)¹²

DIAPSEPHISIS (*διαψήφισις*), a political institution at Athens, the object of which was to prevent aliens, or such as were the offspring of an unlawful

marriage, from assuming the rights of citizens. As usurpations of this kind were not uncommon at Athens,¹ various measures had been adopted against them (*vid.* GRAFHAIXENIAS and DOROXENIAS); but as none of them had the desired effect, a new method, the *διαψήφισις*, was devised, according to which the trial on spurious citizens was to be held by the demotæ, within whose deme intruders were suspected to exist; for if each deme separately was kept clear of intruders, the whole body of citizens would naturally feel the benefit. Every deme, therefore, obtained the right or duty at certain times to revise its lexiarchic registers, and to ascertain whether any had entered their names who had no claims to the rights of citizens. The assembly of the demotæ, in which these investigations took place, was held under the presidency of the demarch, or some senator belonging to the deme;² for, in the case brought forward in the oration of Demosthenes against Eubulides, we do not find that he was demarch, but it is merely stated that he was a member of the *βουλὴ*. When the demotæ were assembled, an oath was administered to them, in which they promised to judge impartially, without favour towards, or enmity against those persons on whom they might have to pass sentence. The president then read the names of the demotæ from the register, asking the opinion of the assembly (*διαψηφίζεσθαι*) respecting each individual, whether they thought him a true and legitimate citizen or not. Any one, then, had the right to say what he thought or knew of the person in question; and when any one was impeached, a regular trial took place.³ Pollux⁴ says that the demotæ on this occasion gave their votes with leaves, and not with pebbles, as was usual; but Demosthenes simply calls them *ψῆφοι*. If a person was found guilty of having usurped the rights of a citizen (*ἀποψηφίζεσθαι*), his name was struck from the lexiarchic register, and he himself was degraded to the rank of an alien. But if he did not acquiesce in the verdict, but appealed to the great courts of justice at Athens, a heavier punishment awaited him, if he was found guilty there also; for he was then sold as a slave, and his property was confiscated by the state.⁵

If by any accident the lexiarchic registers had been lost or destroyed, a careful scrutiny of the same nature as that described above, and likewise called *διαψηφισις*, took place, in order to prevent any spurious citizen from having his name entered in the new registers.⁶

It is commonly believed that the *διαψηφισις* was introduced at Athens in B.C. 419, by one Demophilus.⁷ But it has justly been remarked by Siebelis on Philochorus,⁸ that Harpocration,⁹ the apparent authority for this supposition, cannot be interpreted in this sense. One *διαψηφισις* is mentioned by Plutarch¹⁰ as early as B.C. 445. Clinton¹¹ has, moreover, shown that the *διαψηφισις* mentioned by Harpocration, in the archonship of Archias, does not belong to B.C. 419, but to B.C. 347. Compare Hermann,¹² and Schömann,¹³ whose lengthened account, however, should be read with great care, as he makes some statements which seem to be irreconcilable with each other, and not founded on good authority. The source from which we derive most information on this subject is the oration of Demosthenes against Eubulides.

DIASIA (*Διάσια*), a great festival celebrated at Athens, without the walls of the city (*ἔξω τῆς πόλεως*), in honour of Zeus, surnamed *Μετῆλχος*.¹ The whole people took part in it, and the wealthier citizens offered victims (*ιερπεῖα*), while the poorer classes burned such incense as their country furnished (*θύματα ἐπιχώρια*), which the scholiast on Thucydides erroneously explains as cakes in the shape of animals.² The diasia took place in the latter half of the month of Anthesterion,³ with feasting and rejoicings, and was, like most other festivals, accompanied by a fair.⁴ It was this festival at which Cylon was enjoined by an oracle to take possession of the acropolis of Athens; but he mistook the oracle, and made the attempt during the celebration of the Olympian games.⁵ The etymology of *διάσια*, given by most of the ancient grammarians (from *Διός* and *ἄση*), is false; the name is a mere derivative from *διός*, as *Ἀπολλώνια* from *Ἀπόλλων*.

DIALOUS. (*Vid.* STADIUM.)

DIAZOMA. (*Vid.* SUBLIGACULUM.)

DICASTERION (*δικαστήριον*) indicates both the aggregate judges that sat in court, and the place itself in which they held their sittings. For an account of the former, the reader is referred to the article *DICASTES*; with respect to the latter, our information is very imperfect. In the earlier ages there were five celebrated places at Athens set apart for the sittings of the judges, who had cognizance of the graver causes in which the loss of human life was avenged or expiated, viz. the areiopagites and the epheṭæ. These places were the Areiopagus (*vid.* ΑΡΕΙΟΠΑΓΟΣ), and the ἐπὶ Παλλάδιῳ, ἐπὶ Δελφίνῳ, ἐπὶ Πρωτανεῖῳ, and ἐν Φρεαττοῖ. The antiquity of these last four is sufficiently vouched for by the archaic character of the division of the causes that were appropriated to each: in the first we are told that accidental deaths were discussed; in the second, homicides confessed, but justified; in the third there were quasi trials of inanimate things, which, by falling and the like, had occasioned a loss of human life; in the fourth, homicides who had returned from exile, and committed a fresh manslaughter, were appointed to be tried. With respect to these ancient institutions, of which little more than the name remained when the historical age commenced, it will be sufficient to observe that, in accordance with the ancient Greek feeling respecting murder, viz., that it partook more of the nature of a ceremonial pollution than a political offence, the presiding judge was invariably the king archon, the Athenian rex sacrorum; and that the places in which the trials were held were open to the sky, to avoid the contamination which the judges might incur by being under the same roof with a murderer.⁶ The places, however, remained after the office of the judges who originally sat there was abolished; and they appear from Demosthenes⁷ to have been occasionally used by the ordinary Heliastic judges when trying a cause of the kind to which they were originally appropriated. The most important court in later ages was the Helia, in which, we are told by the grammarians, the weightiest causes were decided; and if so, we may conclude the thesmothetæ were the presiding magistrates. Besides this, ordinary Heliastic courts sat in the Odeum, in the courts Trigonon, the Greater (*Μεῖζον*), the Middle (*Μέσον*), the Green, the Red, that of Metiochus, and the Parabyston; but of these we are unable to fix the localities, or to what magistracies it was usual to apportion them. They were

all painted with their distinctive colours ; and, it appears, had a letter of the alphabet inscribed over the doorway. With the exception of the *Heliaea*, and those in which causes of murder were tried, they were probably protected from the weather. The dicasts sat upon wooden benches, which were covered with rugs or matting (*ψαβία*), and there were elevations or tribunals (*βήματα*), upon which the antagonist advocates stood during their address to the court. The space occupied by the persons engaged in the trial was protected by a railing (*δορυφάκτοις*) from the intrusion of the by-standers ; but in causes which bore upon the violation of the mysteries, a farther space of fifty feet all round was enclosed by a rope, and the security of this barrier guaranteed by the presence of the public slaves.¹

DICASTES (*δικαστής*), in its broadest acceptance a judge, more peculiarly denotes the Attic functionary of the democratic period, who, with his colleagues, was constitutionally empowered to try and pass judgment upon all causes and questions that the laws and customs of his country pronounced susceptible of judicial investigation. In the circumstance of a plurality of persons being selected from the mass of private citizens, and associated temporarily as representatives of the whole body of the people, adjudicating between its individual members, and of such delegates swearing an oath that they would well and truly discharge the duties intrusted to them, there appears some resemblance between the constitution of the Attic dicasterion and an English jury, but in nearly all other respects the distinctions between them are as great as the intervals of space and time which separate their several nations. At Athens the conditions of his eligibility were, that the dicast should be a free citizen, in the enjoyment of his full franchise (*ἐπιτιμία*), and not less than thirty years of age ; and of persons so qualified six thousand were selected by lot for the service of every year. Of the precise method of their appointment our notices are somewhat obscure ; but we may gather from them that it took place every year under the conduct of the nine archons and their official scribe ; that each of these ten personages drew by lot the names of six hundred persons of the tribe assigned to him ; that the whole number so selected was again divided by lot into ten sections of 500 each, together with a supernumerary one, consisting of a thousand persons, from among whom the occasional deficiencies in the sections of 500 might be supplied. To each of the ten sections, one of the first ten letters of the alphabet was appropriated as a distinguishing mark, and a small tablet (*πινάκιον*), inscribed with the letter of the section and the name of the individual, was delivered as a certificate of his appointment to each dicast. Three bronze plates found in the Piræus, and described by Dodwell,² are supposed to have served this purpose ; the inscriptions upon them consist of the following letters : Δ. ΔΙΟΔΩΡΟΣ ΦΡΕΑ, Ε. ΔΕΙΝΙΑΣ ΑΛΑΙΕΥΣ, and Β. ΑΝΤΙΧΑΡΜΟΣ ΑΛΑΜΙΛ, and bear, besides, representations of owls and Gorgon heads, and other devices symbolic of the Attic people. The thousand supernumeraries had, in all probability, some different token ; but of this we have no certain knowledge.

Before proceeding to the exercise of his functions, the dicast was obliged to swear the official oath ; which was done in the earlier ages at a place called *Ardettus*, without the city, on the banks of the Ilissus, but in after times at some other spot, of which we are not informed. In the time of Demosthenes, the oath (which is given at full length in *Demosth., c. Timoc.*, 746) asserted the qualification

of the dicast, and a solemn engagement by him to discharge his office faithfully and incorruptibly in general, as well as in certain specified cases which bore reference to the appointment of magistrates, a matter in no small degree under the control of the dicast, inasmuch as few could enter upon any office without having had their election submitted to a court for its approbation (*vid. DOXIMASIA*) ; and, besides these, it contained a general promise to support the existing constitution, which the dicast would, of course, be peculiarly enabled to do, when persons were accused before him of attempting its subversion. This oath being taken, and the divisions made as above mentioned, it remained to assign the courts to the several sections of dicasts in which they were to sit. This was not like the first, an appointment intended to last during the year, but took place under the conduct of the thesmothetæ, *de novo*, every time that it was necessary to empanel a number of dicasts. In ordinary cases, when one, two, or more sections of 500 made up the complement of judges appropriated to trying the particular kind of cause in hand, the process was extremely simple. Two urns or caskets (*κληρωτήρια*) were produced, one containing tickets inscribed with the distinctive letters of the sections, the other furnished, in like manner, with similar tickets, to indicate the courts in which the sittings were to be held. If the cause was to be tried by a single section, a ticket would be drawn simultaneously from each urn, and the result announced, that section B, for instance, was to sit in court Γ ; if a thousand dicasts were requisite, two tablets would, in like manner, be drawn from the urn that represented the sections, while one was drawn from the other as above mentioned, and the announcement might run that sections A and B were to sit in court Γ, and the like. A more complicated system must have been adopted when fractional parts of the section sat by themselves, or were added to other whole sections ; but what this might have been we can only conjecture, and it is obvious that some other process of selection must have prevailed upon all those occasions when judges of a peculiar qualification were required ; as, for instance, in the trial of violators of the mysteries, when the initiated only were allowed to judge ; and in that of military offenders, who were left to the justice of those only whose comrades they were, or should have been, at the time when the offence was alleged to have been committed. It is pretty clear that the allotment of the dicasts to their several courts for the day took place, in the manner above mentioned, in the market-place, and that it was conducted in all cases, except one, by the thesmothetæ ; in that one, which was when the magistrates and public officers rendered an account of their conduct at the expiration of their term of office, and defended themselves against all charges of malversation in it (*vid. EUTHYMAL*), the logistæ were the officiating personages. As soon as the allotment had taken place, each dicast received a staff, on which was painted the letter and the colour of the court awarded him, which might serve both as a ticket to procure admittance, and also to distinguish him from any loiterer that might endeavour clandestinely to obtain a sitting after business had begun. While in court, and probably from the hand of the presiding magistrate (*ἡγέμων δικαστηρίου*), he received the token or ticket that entitled him to receive his fee (*δικαστικόν*) from the *κολακρέται*. This payment is said to have been first instituted by Pericles, and was originally a single obolus ; it was increased by Cleon to thrice that amount about the 88th Olympiad.¹

DICASTICON. (*Vid. DICASTES.*)

1. (Meier, Att. Proc., 125, &c.)

DIKE (*δίκη*) signifies generally any proceedings at law by one party directly or mediately against others.¹ The object of all such actions is to protect the body politic, or one or more of its individual members, from injury and aggression; a distinction which has in most countries suggested the division of all causes into two great classes, the public and the private, and assigned to each its peculiar form and treatment. At Athens the first of these was implied by the terms public *δίκαι* or *ἀγῶνες*, or still more peculiarly by *γραφαί*: causes of the other class were termed private *δίκαι* or *ἀγῶνες*, or simply *δίκαι* in its limited sense. There is a still farther subdivision of *γραφαί* into *δημοσίαι* and *ἰδίας*, of which the former is somewhat analogous to impeachments for offences directly against the state; the latter to criminal prosecutions, in which the state appears as a party mediately injured in the violence or other wrong done to individual citizens. It will be observed that cases frequently arise, which, with reference to the wrong complained of, may with equal propriety be brought before a court in the form of the *γραφή* last mentioned, or in that of an ordinary *δίκη*, and under these circumstances the laws of Athens gave the prosecutor an ample choice of methods to vindicate his rights by private or public proceedings,² much in the same way as a plaintiff in modern times may, for the same offence, prefer an indictment for assault, or bring his civil action for trespass on the person. It will be necessary to mention some of the principal distinctions in the treatment of causes of the two great classes above mentioned, before proceeding to discuss the forms and treatment of the private lawsuit.

In a *δίκη*, only the person whose rights were alleged to be affected, or the legal protector (*κύριος*) of such person, if a minor, or otherwise incapable of appearing *suo jure*, was permitted to institute an action as plaintiff; in public causes, with the exception of some few in which the person injured or his family were peculiarly bound and interested to act, any free citizen, and sometimes, when the state was directly attacked, almost any alien, was empowered to do so. In all private causes, except those of *ἐξούλης*, *βιαιῶν*, and *ἐξαιρέσεως*, the penalty or other subject of contention was exclusively recovered by the plaintiff, while in most others the state alone, or jointly with the prosecutor, profited by the pecuniary punishment of the offender. The court fees, called *prytaneia*, were paid in private, but not in public causes, and a public prosecutor that compromised the action with the defendant was in most cases punished by a fine of a thousand drachmæ and a modified disfranchisement, while there was no legal impediment at any period of a private lawsuit to the reconciliation of the litigant parties.³

The proceedings in the *δίκη* were commenced by a summons to the defendant (*πρόσκλησις*) to appear on a certain day before the proper magistrate (*εἰσαγωγὴς*), and there answer the charges preferred against him.⁴ This summons was often served by the plaintiff in person, accompanied by one or two witnesses (*vid. CLETERES*), whose names were endorsed upon the declaration (*λῆξις* or *ἐγκλημα*). If there were an insufficient service of the summons, the lawsuit was styled *ἀπρόσκλητος*, and dismissed by the magistrate. From the circumstance of the same officer that conducted the anacrisis being also necessarily present at the trial, and as there were, besides, *dies nefasti* (*ἀποφράδες*) and festivals, during which none, or only some special causes could be commenced, the power of the plaintiff in

selecting his time was, of course, in some degree limited; and of several causes, we know that the time for their institution was particularized by law.⁵ There were also occasions upon which a personal arrest of the party proceeded against took the place of, or, at all events, was simultaneous with, the service of the summons; as, for instance, when the plaintiff doubted whether such party would not leave the country to avoid answering the action; and, accordingly, we find that, in such cases,⁶ an Athenian plaintiff might compel a foreigner to accompany him to the polemarch's office, and there produce bail for his appearance, or, failing to do so, submit to remain in custody till the trial. The word *κατεγγυάν* is peculiarly used of this proceeding. Between the service of the summons and appearance of the parties before the magistrate, it is very probable that the law prescribed the intervention of a period of five days.⁷ If both parties appeared, the proceedings commenced by the plaintiff putting in his declaration, and at the same time depositing his share of the court fees (*πρυτανεία*), the non-payment of which was a fatal objection to the farther progress of a cause.⁸ These were very trifling in amount. If the subject of litigation was rated at less than 100 drachmæ, nothing was paid; if at more than 100 drachmæ and less than 1000 drachmæ, 3 drachmæ was a sufficient deposit, and so on in proportion. If the defendant neglected or refused to make his payment, it is natural to conclude that he underwent the penalties consequent upon non-appearance; in all cases, the successful party was reimbursed his *prytaneia* by the other.⁹ The *παρακαταβολή* was another deposit in some cases, but paid by the plaintiff only. This was not in the nature nor of the usual amount of the court fees, but a kind of penalty, as it was forfeited by the suitor in case he failed in establishing his cause. In a suit against the treasury, it was fixed at a fifth; in that of a claim to the property of a deceased person by an alleged heir or devisee, at a tenth of the value sought to be recovered.⁶ If the action was not intended to be brought before an heliastic court, but merely submitted to the arbitration of a *diætes* (*vid. ΔΙΑΙΤΕΤΑΙ*), a course which was competent to the plaintiff to adopt in all private actions,⁷ the drachma paid in the place of the deposit above mentioned bore the name of *παρίστασις*. The deposits being made, it became the duty of the magistrate, if no manifest objection appeared on the face of the declaration, to cause it to be written out on a tablet, and exposed for the inspection of the public on the wall or other place that served as the cause-list of his court.⁸

The magistrate then appointed a day for the farther proceedings of the anacrisis (*vid. ANACRISIS*), which was done by drawing lots for the priority, in case there was a plurality of causes instituted at the same time; and to this proceeding the phrase *λαγχάνειν δίκην*, which generally denotes to bring an action, is to be primarily attributed. If the plaintiff failed to appear at the anacrisis, the suit, of course, fell to the ground; if the defendant made default, judgment passed against him.⁹ Both parties, however, received an official summons before their non-appearance was made the ground of either result. An affidavit might at this, as well as at other periods of the action, be made in behalf of a person unable to attend upon the given day, and this would, if allowed, have the effect of postponing farther proceedings (*ὑπομολία*); it might, however, be

1. (Aristoph., Nub., 1190.)—2. (Demosth., c. Zenoth., 800.—c. Aristog., 778.)—3. (Meier, Att. Process, 580.)—4. (Matth., De Jud. Ath., 261.)—5. (Meier, Att. Process, 613.)—6. (Matth., De Jud. Ath., 260.)—7. (Hudtw., De Dietet., 35.)—8. (Meier, Att. Process, 605.)—9. (Meier, Att. Process, 623.)

combated by a counter-affidavit to the effect that the alleged reason was unfounded or otherwise insufficient (*ἀνθυπωμοσία*); and a question would arise upon this point, the decision of which, when adverse to the defendant, would render him liable to the penalty of contumacy.¹ The plaintiff was in this case said *ἐρήμην ἔλειν*: the defendant, *ἐρήμην ὀβλέειν*, *δικην* being the word omitted in both phrases. If the cause were primarily brought before an umpire (*διαιτητής*), the anacrisis was conducted by him; in cases of appeal it was dispensed with as unnecessary. The anacrisis began with the affidavit of the plaintiff (*προωμοσία*), then followed the answer of the defendant (*ἀντωμοσία* or *ἀντιγραφή*) (*vid. ANTIGRAPHÉ*), then the parties produced their respective witnesses, and reduced their evidence to writing, and put in originals, or authenticated copies of all the records, deeds, and contracts that might be useful in establishing their case, as well as memoranda of offers and requisitions then made by either side (*προκλήσεις*). The whole of the documents were then, if the cause took a straightforward course (*εὐθουδικία*), enclosed on the last day of the anacrisis in a casket (*ἐχίνος*), which was sealed and intrusted to the custody of the presiding magistrate till it was produced and opened at the trial. During the interval no alteration in its contents was permitted, and, accordingly, evidence that had been discovered after the anacrisis was not producible at the trial.² In some cases, the trial before the dicasts was by law appointed to come on within a given time; in such as were not provided for by such regulations, we may suppose that it would principally depend upon the leisure of the magistrate. The parties, however, might defer the day (*κυρία*) by mutual consent.³ Upon the court being assembled, the magistrate called on the cause,⁴ and the plaintiff opened his case. At the commencement of the speech, the proper officer (*ὁ ἐφ' ἡδωρ*) filled the clepsydra with water. As long as the water flowed from this vessel, the orator was permitted to speak; if, however, evidence was to be read by the officer of the court, or a law recited, the water was stopped till the speaker recommenced. The quantity of water, or, in other words, the length of the speeches, was not by any means the same in all causes: in the speech against Macartatus, and elsewhere, one amphora only was deemed sufficient; eleven are mentioned in the impeachment of Æschines for misconduct in his embassy. In some few cases, as those of *κάκωσις*, according to Harpocration, no limit was prescribed. The speeches were sometimes interrupted by the cry *κατάβα*—"go down," in effect, "cease speaking"—from the dicasts, which placed the advocate in a serious dilemma; for if, after this, he still persisted in his address, he could hardly fail to offend those who bid him stop; if he obeyed the order, it might be found, after the votes had been taken, that it had emanated from a minority of the dicasts.⁵ After the speeches of the advocates, which were, in general, two on each side, and the incidental reading of the documentary and other evidence, the dicasts proceeded to give their judgment by ballot. (*Vid. CADISKOI*.)

When the principal point at issue was decided in favour of the plaintiff, there followed, in many cases, a farther discussion as to the amount of damages or penalty which the defendant should pay. (*Vid. ΑΤΩΝΕΣ ΑΤΙΜΗΤΟΙ ΚΑΙ ΤΙΜΗΤΟΙ*.) The method of voting upon this question seems to have varied, in that the dicasts used a small tablet instead of a ballot-ball, upon which those that approved of the

heavier penalty drew a long line, the others a short one.¹ Upon judgment being given in a private suit, the Athenian law left its execution very much in the hands of the successful party, who was empowered to seize the movables of his antagonist as a pledge for the payment of the money, or institute an action of ejectment (*ἐξούλης*) against the refractory debtor. The judgment of a court of dicasts was in general decisive (*δική αὐτοτελής*); but upon certain occasions, as, for instance, when a gross case of perjury or conspiracy could be proved by the unsuccessful party to have operated to his disadvantage, the cause, upon the conviction of such conspirators or witnesses, might be commenced *de novo*. (*Vid. APPELLATIO, GREEK*.) In addition to which, the party against whom judgment had passed by default had the power to revive the cause, upon proving that his non-appearance in court was inevitable (*τὴν ἐρήμην ἀντιλαχεῖν*);² this, however, was to be exercised within two months after the original judgment. If the parties were willing to refer the matter to an umpire (*διαιτητής*), it was in the power of the magistrate to transfer the proceedings as they stood to that officer; and in the same way, if the dietetes considered the matter in hand too high for him, he might refer it to the *εἰσαγωγεύς*, to be brought by him before an heliastic court. The whole of the proceedings before the dietetes were analogous to those before the dicasts, and bore equally the name of *δική*: but it seems that the phrase *ἀντιλαχεῖν τὴν μὴ οὖσαν* is peculiarly applied to the revival of a cause before the umpire in which judgment had passed by default. (*Vid. ΔΙΑΙΤΕΤΑΙ*.)

The following are the principal actions, both public and private, which we read of in the Greek writers, and which are briefly discussed under their several heads:

Δίκη or *Γραφή*—*Ἀδικίας* πρὸς τὸν δῆμον: *Ἀγεωργίον*: *Ἀγροφίον*: *Ἀγρόφον* μετάλλου: *Αἰκίας*: *Ἀλοχίον*: *Ἀμβλύσεως*: *Ἀμελίου*: *Ἀναγωγῆς*: *Ἀναμνηχίου*: *Ἀνδραποδισμοῦ*: *Ἀνδραποδίου*: *Ἀπατήσεως* τοῦ δήμου: *Ἀφορισμῶν*: *Ἀπαλείψεως*: *Ἀποπέμψεως*: *Ἀποστασίον*: *Ἀπορροστίον*: *Ἀργίας*: *Ἀργυρίου*: *Ἀσθεβείας*: *Ἀσπρατείας*: *Αὐτομολίας*: *Αὐτοτελής*: *Βεβαίωσεως*: *Βλαίου*: *Βλάβης*: *Βουλεύσεως*: *Κακηγορίας*: *Κακώσεως*: *Κακατεχνιών*: *Κάρπου*: *Καταλύσεως* τοῦ δήμου: *Κατασκοπῆς*: *Χρέους*: *Χωρίου*: *Κλοπῆς*: *Δεκαμοῦ*: *Δελτίας*: *Δώρου*: *Δωροδενίας*: *Ἑγγύης*: *Ἑνοικίου*: *Ἐπιτηρηραρχήματος*: *Ἐπιτροπῆς*: *Ἐξαγωγῆς*: *Ἐξαρφέσεως*: *Ἐξούλης*: *Ἀρπαγῆς*: *Εἰρημίου*: *Ἐταιρήσεως*: *Γερουσίας*: *Ἵποβολῆς*: *Ἵθρεως*: *Λειπομαρτυρίου*: *Λειπονωντίου*: *Λειποστρατίου*: *Λειποταξίου*: *Μισθοῦ*: *Μισθώσεως* οἴκου: *Μοιχείας*: *Νομισματός* διαφθορᾶς: *Οἰκίας*: *Παρακαταθήκης*: *Παρανοίας*: *Παρανόμων*: *Παραπειθείας*: *Παρειστροφῆς*: *Φαρμακῶν*: *Φόνου*: *Φωρίας* ἀφανοῦς καὶ μεθήμερίνης: *Φθορίας* τῶν ἐλευθέρων: *Πρααγωγίας*: *Προδοσίας*: *Προεισφορῆς*: *Πραικός*: *Ψευδεγγραφῆς*: *Ψευδοκλητείας*: *Ψευδομαρτυριῶν*: *Ῥητορικῆς*: *Σκυρίας*: *Σίτου*: *Συκοφαντίας*: *Συμβολαίου* or *Συνθηκῶν* παραβύσεως: *Τραυμάτων* ἐκ πρηνείας: *Τυραννίδος*.

ΔΙΪCROTA. (*Vid. BIREMIS*.)

**DICTAMNUS* (*δικτάνωσις*), a plant, the Dittany of Crete, or *Origanum Dictamnus*. Virgil gives a very striking description of it, and records the popular belief of its great efficacy in the cure of wounds.³ Pliny and those who came after him also attest its great virtues in this respect: the arrow or missile with which the wound had been inflicted dropped from it on applying the juice of the Dictamnus, and the stags, when wounded by the hunter, caused the weapon to fall out from the wound by browsing upon this plant! The moderns make no use of it,

1. (Demosth., c. Olym., 1174.)—2. (Demosth., c. Boet., i., 99.)—3. (Demosth., c. Phaen., 1042.)—4. (Platner, Process und Klagen, i., 182.)—5. (Aristoph., Vesp., 973.)

1. (Aristoph., Vesp., 167.)—2. (Platner, Process und Klagen, i., 396.)—3. (Æn., xii., 412, seq.)

experience having shown how little reliance was to be placed on these statements. The Dictamnus which grew on Mount Ida, in Crcte, was the most highly esteemed. It is to be regretted that Linnæus has given the name of Dictamnus to a kind of plant which has no relation whatever to the one mentioned by Virgil.

DICTATOR. The name and office of dictator are confessedly of Latin origin: thus we read of a dictator at Tusculum in early, at Lanuvium in very late, times.¹ Among the Albans, also, a dictator was sometimes elected, as Mettius Fuffetius on the death of their king Cluilius. Nor was this magistracy confined to single cities; for we learn from a fragment of Cato, that the Tusculan Egerius was dictator over the whole nation of the Latins.²

Among the Romans, a dictator was generally appointed in circumstances of extraordinary danger, whether from foreign enemies or domestic sedition. Instances occur very frequently in the early books of Livy, from whom we also learn that a dictator was sometimes created for the following purposes: 1. For fixing the "clavus annalis" on the temple of Jupiter, in times of pestilence or civil discord. (*Vid. CLAVUS ANNALIS.*) 2. For holding the comitia, or elections, in the absence of the consuls.³ 3. For appointing holidays (*feriarum constituendarum causa*) on the appearance of prodigies,⁴ and officiating at the ludi Romani if the prætor could not attend;⁵ also for holding trials (*quæstionibus exercendis*),⁶ and, on one occasion, for filling up vacancies in the senate.⁷ In this last case there were two dictators, one abroad and another at home; the latter, however, without a magister equitum.

According to the oldest authorities, the dictatorship was instituted at Rome ten years after the expulsion of the Tarquini, and the first dictator was said to have been T. Lartius, one of the consuls of the year.⁸ Another account states that the consuls of the year in which the first dictator was appointed were of the Tarquinian party, and therefore distrusted.

This tradition naturally suggests the inference that the dictator was on this first occasion appointed to direct and supersede the consuls (*moderator et magister consulis appositus*), not only with a view to foreign wars, but also for the purpose of summarily punishing any member of the state, whether belonging to the commonalty or the governing burghers, who should be detected in plotting for the restoration of the exiled king.⁹ The powers with which a dictator was invested will show how far his authority was adequate for such an object.

In the first place, he was formerly called *magister populi*, or master of the burghers;¹⁰ and, though created for six months only, his power within the city was as supreme and absolute as that of the consuls without.¹¹ In token of this, the fasces and securæ (the latter, instruments of capital punishment) were carried before him even in the city.¹² Again, no appeal against the dictator was at first allowed either to the commons or the burghers, although the latter had, even under the kings, enjoyed the privilege of appealing from to the great council of the patricians (*provocare ad populum*); a privilege, moreover, which the Valerian laws had confirmed and secured to them against any magistracy whatever.¹³ This right, however, was subsequently obtained by the members of the houses,¹⁴ and perhaps eventually by the plebeians; an instance of its being used is given by Livy,¹⁵ in the case of M. Fabius, who, when

his son was persecuted by the dictator L. Papirius, appealed on his behalf to the "populus," the patricians of the curies. Still, even in this case the populus had recourse to entreaties rather than authority.

Moreover, no one was eligible to the dictatorship unless he had previously been consul or prætor, for such was the old name of the consul.¹ Afterward, when the powers of the old prætors had been divided between the two consuls who went to their provinces abroad, and the prætorians who administered justice at home, prætorians as well as consulars were qualified for the office. The first plebeian dictator was C. Martius Rutilus, nominated (*dictus*), by the plebeian consul M. Popilius Lænas, B.C. 356.²

With respect to the electors and the mode of election, we are told³ that on the first institution of the office, the dictator was created by the populus or burghers (*M. Valerius qui primus magister a populo creatus est*), just as it had been the custom for the kings to be elected by the patricians. Dionysius⁴ tells us that the people merely ratified (*ἐπεψηφίσαντο*) the choice of the senate. But the common practice, even in very early times, was for the senate to select an individual, who was nominated in the dead of the night by one of the consuls, and then received the *imperium*, or sovereign authority, from the assembly of the curies.⁵ This ratification was in early times indispensable to the validity of the election, just as it had been necessary for the kings, even after their election by the curies, to apply to them for investiture with the *imperium* (*legem curiatam de imperio ferre*).⁶

The possession of the right of conferring the *imperium* may, as Niebuhr suggests, have led the patricians to dispense with voting on the preliminary nomination of the senate, although it is not impossible that the right of ratification has been confounded with the power of appointment. In later times, however, and after the passing of the Mænian law, the conferring of the *imperium* was a mere form. Thenceforward it was only necessary that the consul should consent to proclaim the person nominated by the senate.⁷

In the statement we have just made with respect to the nominations by the senate, we have been guided chiefly by the authority of Livy; but we must not omit to mention that, according to Dionysius, the senate only resolved on the appointment of a dictator, and left the choice to be made by one of the consuls. Some instances mentioned in Livy certainly confirm this opinion; but they are generally, though not always, cases in which a dictator was appointed for some single and unimportant purpose;⁸ nor is it likely that the disposal of kingly power would have been intrusted, as a matter of course, to the discretion of an individual. On one of these occasions we read that the consuls in office refused for some time to declare a dictator, though required by the senate to do so, till they were compelled by one of the tribunes.⁹ There were, in fact, religious scruples against the nomination being made by any other authority than the consuls;¹⁰ and to such an extent were they carried, that after the battle at the Trasimene lake, the only surviving consul being from home, the people elected a prodictator, and so met the emergency. We may observe that Livy states, with reference to this case, that the people could not create a dictator, having never up to that time exercised such a power (*quod*

1. (Cic., Pro Mil., 10.)—2. (Niebuhr, i., p. 589.)—3. (Livy, viii., 23; ix., 7.)—4. (Id., viii., 28.)—5. (Id., viii., 40; ix., 34.)—6. (Id., ix., 26.)—7. (Id., viii., 23.)—8. (Livy, ii., 18.)—9. 1. (Livy, ii., 18.)—2. (Livy, vii., 17.—Arnold, ii., p. 84.)—3. (Fest., Opt. Lex., 4. (v., 70.)—5. (Livy, ix., 38.)—6. (Cic., De Repub., ii., 13, 17.)—7. (Niebuhr, i., p. 509.)—8. (Livy, viii., 23 ix., 7.—Dionys., x., 23.)—9. (Livy, ix., 26.)—10. (Livy, iv., 31 xvi., c. 5.)

nunquam ante eam diem factum erat): we find, however, in a case subsequent to this (B.C. 212), that the people did *appoint* a dictator for holding the elections, though the consul of the year pretested against it, as an encroachment upon his privileges; but even then the consul *nominated*, though he did not *appoint*.¹

Dionysius² informs us that the authority of a dictator was supreme in everything (*πολέμων τε καὶ εἰρήνης καὶ παντὸς ἄλλου πράγματος ἀντοκράτωρ*), and that, till the time of Sulla, no dictator had ever abused his power. There were, however, some limitations, which we will mention.

1. The period of office was only six months,³ and at the end of that time a dictator might be brought to trial for any acts of tyranny committed by him while in power.⁴ Many, however, resigned their authority before the expiration of the six months, after completing the business for which they were appointed. 2. A dictator could not draw on the treasury beyond the credit granted him by the senate,⁵ nor go out of Italy,⁶ nor even ride on horseback without the permission of the people,⁷ a regulation apparently capricious, but perhaps intended to show whence his authority came. The usurped powers of the dictators Sulla and Julius Cæsar are, of course, not to be compared with the genuine dictatorship. After the death of the latter, the office was abolished forever by a law of Antony, the consul.⁸ The title, indeed, was offered to Augustus, but he resolutely refused it,⁹ in consequence of the odium attached to it from the conduct of Sulla when dictator; in fact, even during the later ages of the Republic, and for one hundred and twenty years previous to Sulla's dictatorship, the office itself had been in abeyance, though the consuls were frequently invested, in time of danger, with something like a dictatorial power by a *senatus consultum*, empowering them to take measures for securing the state against harm (*ut darent operam ne quid respublica detrimenti caperet*).

Together with the master of the burghers, or the dictator, there was always appointed (*dictatori additus*) a *magister equitum*, or master of the knights. In many passages of Livy, it is stated that the latter was chosen by the dictator. This, however, was not always the case; at any rate, we meet with instances where the appointment was made by the senate or the plebs.¹⁰ He was, of course, subject, like other citizens, to the dictator; but his authority is said to have been equally supreme, within his own jurisdiction, over the knights and *acensii*:¹¹ who the latter are it is difficult to determine.¹² Niebuhr¹³ says of the *magister equitum*, "The functions of this officer in the state are involved in obscurity; that he was not merely the commander of the horse, and the dictator's lieutenant in the field, is certain. I conjecture that he was chosen by the centuries of the plebeian knights, and that he was their protector: the dictator may have presided at the election, and have taken the votes of the twelve centuries on the person whom he proposed to them. This might afterward have fallen into disuse, and he would then name his colleague himself."

This conjecture, although plausible, is far from being supported by the authority of Livy, who speaks of both officers as being "creati," and of the *magister equitum* as being "additus dictatori," in such a way as to justify the inference that they were both appointed by the same authority, just as they were both selected from the same class of men, the *consulares* or *prætorii*.

1. (Livy, xxii., 8, 31.)—2. (v., 73.)—3. (Livy, ix., 34.)—4. (Livy, vii., 4.)—5. (Niebuhr, note 1249.)—6. (Livy, Epit., xix.)—7. (Livy, xiii., 14.)—8. (Cic., Phil., i., 1.)—9. (Suet., Octav., c. 32.)—10. (Livy, ii., 18; viii., 17; xvii., 3.)—11. (Varro, De Ling. Lat., v., 62.)—12. (Arnold, i., p. 144.)—13. (i., p. 596.)

On one occasion the people made a master of the horse, M. Minucius, equal in command with the dictator Fabius Maximus.¹

ΔICTYNN'IA (Δικτύνια), a festival with sacrifices, celebrated at Cydonia in Crete, in honour of Artemis, surnamed Δίκτυνα or Δικτύνια, from δίκτυον, a hunter's net.² Particulars respecting its celebration are not known. Artemis Δικτύνα was also worshipped at Sparta,³ and at Ambrysus in Phœcis.⁴

DIES (of the same root as *διός* and *deus*). The name dies was applied, like our word day, to the time during which, according to the notions of the ancients, the sun performed his course around the earth; and this time they called the civil day (*dies civilis*, in Greek *νυχθήμερον*, because it included both night and day⁶). The natural day (*dies naturalis*), or the time from the rising to the setting of the sun, was likewise designated by the name dies. The civil day began with the Greeks at the setting of the sun, and with the Romans at midnight; with the Babylonians at the rising of the sun, and with the Umbrians at midday.⁷ We have here only to consider the natural day, and, as its subdivisions were different at different times, and not always the same among the Greeks as among the Romans, we shall endeavour to give a brief account of the various parts into which it was divided by the Greeks at the different periods of their history, and then proceed to consider its divisions among the Romans, to which will be subjoined a short list of remarkable days.

At the time of the Homeric poems, the natural day was divided into three parts.⁸ The first, called *ῥῶς*, began with sunrise, and comprehended the whole space of time during which light seemed to be increasing, *i. e.*, till midday.⁹ Some ancient grammarians have supposed that in some instances Homer used the word *ῥῶς* for the whole day, but Nitzsch¹⁰ has shown the incoherence of this opinion. The second part was called *μέσσην ἡμῶν*, or midday, during which the sun was thought to stand still.¹¹ The third part bore the name of *δελήν* or *δελιῶν ἡμῶν*,¹² which derived its name from the increased warmth of the atmosphere. The last part of the *δελήν* was sometimes designated by the words *ποτὶ ἑσπεραν* or *βουλυτός*.¹³ Besides these three great divisions, no others seem to have been known at the time when the Homeric poems were composed. The chief information respecting the divisions of the day in the period after Homer, and more especially the divisions made by the Athenians, is to be derived from Pollux.¹⁴ The first and last of the divisions made at the time of Homer were afterward subdivided into two parts. The earlier part of the morning was termed *πρωὴ* or *πρῶτῃ τῆς ἡμέρας*; the latter *πληθούσης τῆς ἀγορᾶς*, or *περὶ πλήθουσας ἀγορᾶν*.¹⁵ The *μέσσην ἡμῶν* of Homer was afterward expressed by *μεσημβρία*, *μέσσην ἡμέρας*, or *μέσση ἡμέρα*, and comprehended, as before, the middle of the day, when the sun seemed neither to rise nor to decline. The two parts of the afternoon were called *δελήν πρωὴ* or *πρωτῇ*, and *δελήν ὀψιῃ* or *ὀψίᾳ*.¹⁶ This division continued to be observed down

(Herod., vi., 167; vii., 6.—Thucyd., iii., 74; vii., 26.—Compare Libanius, Epist., 1084.)

to the latest period of Grecian history, though another more accurate division, and more adapted to the purposes of common life, was introduced at an early period: for Anaximander, or, according to others, his disciple Anaximenes, is said to have made the Greeks acquainted with the use of the Babylonian chronometer or sundial (called *πόλος* or *ἀρολόγιον*, sometimes with the epithet *σκιόθρηκόν* or *ἡλιαμάνθρον*), by means of which the natural day was divided into twelve equal spaces of time.¹ These spaces were, of course, longer or shorter, according to the various seasons of the year. The name hours (*ῥαί*), however, did not come into general use till a very late period, and the difference between natural and equinoctial hours was first observed by the Alexandrine astronomers.

During the early ages of the history of Rome, when artificial means of dividing time were yet unknown, the natural phenomena of increasing light and darkness formed with the Romans, as with the Greeks, the standard of division, as we see from the vague expressions in Censorinus.² Pliny states³ that in the Twelve Tables only the rising and the setting of the sun were mentioned as the two parts into which the day was then divided; but from Censorinus⁴ and Gellius⁵ we learn that midday (*meridies*) was also mentioned. Varro⁶ likewise distinguished three parts of the day, viz., *mane*, *meridies*, and *suprema* scil. *tempestas*, after which no assembly could be held in the Forum. The lex Platoria prescribed that a herald should proclaim the supremacy in the comitium, that the people might know that their meeting was to be adjourned. But the division of the day most generally observed by the Romans was that into *tempus antemeridianum* and *pomeridianum*, the merides itself being only considered as a point at which the one ended and the other commenced. But, as it was of importance that this moment should be known, an especial officer (*vid.* ACCENSUS) was appointed, who proclaimed the time of midday, when from the curia he saw the sun standing between the rostra and the græcostasis. The division of the day into twelve equal spaces, which, here as in Greece, were shorter in winter than in summer, was adopted at the time when artificial means of measuring time were introduced among the Romans from Greece. This was about the year B.C. 291, when L. Papirius Cursor, after the war with Pyrrhus in southern Italy, brought to Rome an instrument called *solarium horologium*, or simply *solarium*.⁷ But as the solarium had been made for a different meridian, it showed the time at Rome very incorrectly. Scipio Nasica, therefore, erected in B.C. 159 a public clepsydra, which indicated the hours of the night as well as of the day. Even after the erection of this clepsydra, it was customary for one of the subordinate officers of the prætor to proclaim the third, sixth, and ninth hours; which shows that the day was, like the night, divided into four parts, each consisting of three hours. See Dissem's treatise, *De Partibus Noctis et Diei ex Divisionibus Veterum*, in his *Kleine Lateinische und Deutsche Schriften*, p. 130, 150. (Compare the article HOROLOGIUM.)

All the days of the year were, according to different points of view, divided by the Romans into different classes. For the purpose of the administration of justice, all days were divided into *dies fasti* and *dies nefasti*.

DIES FASTI were the days on which the prætor was allowed to administer justice in the public

courts; they derived their name from *furi* (*fari tua verba; do, dico, addico*). On some of the dies fasti comitia could be held, but not on all.² Dies might be fasti in three different ways: 1. *Dies fasti proprie et toti*, or simply *dies fasti*, were days on which the prætor used to hold his courts, and could do so at all hours. They were marked in the Roman calendar by the letter F, and their number in the course of the year was 38;³ 2. *Dies proprie sed non toti fasti*, or *dies intercesi*, days on which the prætor might hold his courts, but not at all hours, so that sometimes one half of such a day was *fastus*, while the other half was *nefastus*. Their number was 65 in the year, and they were marked in the calendar by the signs Fp. = *fastus primo*, Np = *nefastus primo*, En. = *endotercisus* = *intercesis*, Q. Rex C. F. = *quando Rex comitio fugit*, or *quando Rex comitiavit* fus, Q. St. Df. = *quando stercus defertur*; 3. *Dies non proprie sed casu fasti*, or days which were not fasti properly speaking, but became fasti accidentally; a dies comitialis, for instance, might become *fastus*, if either during its whole course, or during a part of it, no comitia were held, so that it accordingly became either a dies *fastus totus*, or *fastus ex parte*.⁴

DIES NEFASTI were days on which neither courts of justice nor comitia were allowed to be held, and which were dedicated to other purposes.⁵ According to the ancient legends, they were said to have been fixed by Numa Pompilius.⁶ From the remarks made above, it will be understood that one part of a day might be *fastus*, while another was *nefastus*.⁷ The *nundina*, which had originally been dies *fasti*, had been made *nefasti* at the time when the twelve-months year was introduced; but in B.C. 286 they were again made *fasti* by a law of Q. Hortensius.⁸ The term dies *nefasti*, which originally had nothing to do with religion, but simply indicated days on which no courts were to be held, was in subsequent times applied to religious days in general, as dies *nefasti* were mostly dedicated to the worship of the gods.⁹

In a religious point of view all days of the year were either *dies festi*, or *dies profesti*, or *dies intercesi*. According to the definition given by Macrobius, dies *festi* were dedicated to the gods, and spent with sacrifices, repasts, games, and other solemnities; dies *profesti* belonged to men for the administration of their private and public affairs. They were either *dies fasti*, or *comitiales*, or *comperendini*, or *stati*, or *præliales*. Dies *intercesi* were common between gods and men, that is, partly devoted to the worship of the gods, partly to the transaction of ordinary business.

We have lastly to add a few remarks on some of the subdivisions of the dies *profesti*, which are likewise defined by Macrobius. *Dies comitiales* were days on which comitia were held; their number was 134 in a year. *Dies comperendini* were days to which any action was allowed to be transferred (*quibus vadimonium licet dicere*¹⁰). *Dies stati* were days set apart for causes between Roman citizens and foreigners (*quæ iudicii causa cum peregrinis instituuntur*). *Dies præliales* were all days on which religion did not forbid to commence a war; a list of days and festivals on which it was contrary to religion to commence a war is given by Macrobius. See also Festus, s. v. Compare Manutius, *De Veterum Dicrum Ratione*, and the article CALENDAR (ROMAN).

DIGESTA. (Vid. PANDECTÆ.)

DIGITUS. (Vid. PES.)

DIPOLEIA (Διπόλεια), also called Διπόλεια ο. Διπόλεια, a very ancient festival, celebrated every year on the acropolis of Athens in honour of Zeus, surnamed Πολιεύς.¹ Suidas and the scholiast on Aristophanes² are mistaken in believing that the Diipolia were the same festival as the Diasia. It was held on the 14th of Scirophorion. The manner in which the sacrifice of an ox was offered on this occasion, and the origin of the rite, are described by Porphyrius,³ with whose account may be compared the fragmentary descriptions of Pausanias⁴ and Ælian.⁵ The Athenians placed barley mixed with wheat upon the altar of Zeus, and left it unguarded; the ox destined to be sacrificed was then allowed to go and take of the seeds. One of the priests, who bore the name of βουφόνος (whence the festival was sometimes called βουφόνια), at seeing the ox eating, snatched the axe, killed the ox, and ran away. The others, as if not knowing who had killed the animal, made inquiries, and at last also summoned the axe, which was in the end declared guilty of having committed the murder. This custom is said to have arisen from the following circumstance: In the reign of Erechtheus, at the celebration of the Dionysia, or, according to the scholiast on Aristophanes,⁶ at the Diipolia, an ox ate the cakes offered to the god, and one Baulon or Thaulon, or, according to others, the βουφόνος, killed the ox with an axe and fled from his country. The murderer having thus escaped, the axe was declared guilty, and the rite observed at the Diipolia was performed in commemoration of that event.⁷ This legend of the origin of the Diipolia manifestly leads us back to a time when it had not yet become customary to offer animal sacrifices to the gods, but merely the fruits of the earth. Porphyrius also informs us that three Athenian families had their especial (probably hereditary) functions to perform at this festival. Members of the one drove the ox to the altar, and were thence called κεντριάδαι: another family, descended from Baulon, and called the βουτέποι, knocked the victim down; and a third, designated by the name δαίρποι, killed it.⁸

DILIGENTIA. (Vid. DAIOT.)

DIMACHÆ (διμάχαι) were Macedonian horse-soldiers, who also fought on foot when occasion required. Their armour was heavier than that of the ordinary horse-soldiers, and lighter than that of the regular heavy-armed foot. A servant accompanied each soldier in order to take care of his horse when he alighted to fight on foot. This species of troops is said to have been first introduced by Alexander the Great.⁹

DIMINUTIO CAPITIS. (Vid. CAPUT.)

DIOBOLOS. (Vid. BOLOS.)

DIOCLEIA (Διόκλεια), a festival celebrated by the Megarians in honour of an ancient Athenian hero, Diocles, around whose grave young men assembled on the occasion, and amused themselves with gymnastic and other contests. We read that he who gave the sweetest kiss obtained the prize, consisting of a garland of flowers.¹⁰ The scholiast on Theocritus¹¹ relates the origin of this festival as follows: Diocles, an Athenian exile, fled to Megara, where he found a youth with whom he fell in love. In some battle, while protecting the object of his love with his shield, he was slain. The Megarians honoured the gallant lover with a tomb, raised him to the rank of a hero, and, in commemoration of his

faithful attachment, instituted the festival of the Diocleia. See Böckh *ad Pind.*, *Olymp.*, vii., 157, p. 176, and the scholiast *ad Aristoph.*, *Acharn.*, 730, where a Megarian swears by Diocles, from which we may infer that he was held in great honour by the Megarians.¹

DIOMOSIA (Διωμοσία). (Vid. ANTHOMOSIA.)

DIONYSIA (Διονύσια), festivals celebrated in various parts of Greece in honour of Dionysus. We have to consider under this head several festivals of the same deity, although some of them bore different names; for here, as in other cases, the name of the festival was sometimes derived from that of the god, sometimes from the place where it was celebrated, and sometimes from some particular circumstance connected with its celebration. We shall, however, direct our attention chiefly to the Attic festivals of Dionysus, as, on account of their intimate connexion with the origin and the development of dramatic literature, they are of greater importance to us than any other ancient festival.

The general character of the festivals of Dionysus was extravagant merriment and enthusiastic joy, which manifested themselves in various ways. The import of some of the apparently unmeaning and absurd practices in which the Greeks indulged during the celebration of the Dionysia, has been well explained by Müller:² "The intense desire felt by every worshipper of Dionysus to fight, to conquer, to suffer in common with him, made them regard the subordinate beings (Satyrs, Pans, and Nymphs, by whom the god himself was surrounded, and through whom life seemed to pass from him into vegetation, and branch off into a variety of beautiful or grotesque forms), who were ever present to the fancy of the Greeks, as a convenient step by which they could approach more nearly to the presence of their divinity. The customs so prevalent at the festivals of Dionysus, of taking the disguise of satyrs, doubtless originated in this feeling, and not in the mere desire of concealing excesses under the disguise of a mask, otherwise so serious and pathetic a spectacle as tragedy could never have originated in the choruses of these satyrs. The desire of escaping from self into something new and strange, of living in an imaginary world, breaks forth in a thousand instances in these festivals of Dionysus. It is seen in the colouring the body with plaster, soot, vermilion, and different sorts of green and red juices of plants, wearing goat and deer skins round the loins, covering the face with large leaves of different plants, and, lastly, in the wearing masks of wood, bark, and other materials, and of a complete costume belonging to the character." Drunkenness, and the boisterous music of flutes, cymbals, and drums, were likewise common to all Dionysiac festivals. In the processions called *θιασοί* (from *θιαίζω*), with which they were celebrated, women also took part, in the disguise of Bacchæ, Lenæ, Thyades, Naiades, Nymphs, &c., adorned with garlands of ivy, and bearing the thyrsus in their hands (hence the god was sometimes called *Θηλύμορφος*), so that the whole train represented a population inspired, and actuated by the powerful presence of the god. The choruses sung on the occasion were called dithyrambs, and were hymns addressed to the god in the freest metres and with the boldest imagery, in which his exploits and achievements were extolled. (Vid. CHORUS.) The phallus, the symbol of the fertility of nature, was also carried in these processions,³ and men disguised as women, called *ἰθυβάλλοι*,⁴ followed the

phallus. A woman called *λικοφόρος* carried the *λίκον*, a long basket containing the image of the god. Maidens of noble birth (*κανηφόροι*) used to carry figs in baskets, which were sometimes of gold, and to wear garlands of figs round their necks.¹ The indulgence in drinking was considered by the Greeks as a duty of gratitude which they owed to the giver of the vine; hence in some places it was thought a crime to remain sober at the Dionysia.²

The Attic festivals of Dionysus were four in number: the *Διονύσια κατ' ἀγρούς*, or the rural Dionysia, the *Λήναια*, the *Ἀνθεστήρια*, and the *Διονύσια ἐν ᾠσεϊ*. After Ruhken³ and Spalding⁴ had declared the Anthesteria and the Lenæa to be only two names for one and the same festival, it was generally taken for granted that there could be no doubt as to the real identity of the two, until in 1817, A. Böckh read a paper to the Berlin Academy,⁵ in which he established by incontrovertible arguments the difference between the Lenæa and Anthesteria. An abridgment of Böckh's essay, containing all that is necessary to form a clear idea of the whole question, is given in the Philological Museum.⁶ The season of the year sacred to Dionysus was during the months nearest to the shortest day,⁷ and the Attic festivals were accordingly celebrated in the Poseideon, Gamelion (the Lenæon of the Ionians), Anthesterion, and Elaphebolion.

The *Διονύσια κατ' ἀγρούς* or *μικρά*, the rural or lesser Dionysia, a vintage festival, were celebrated in the various demes of Attica in the month of Poseideon, and were under the superintendence of the several local magistrates, the demarchs. This was doubtless the most ancient of all, and was held with the highest degree of merriment and freedom; even slaves enjoyed full freedom during its celebration, and their boisterous shouts on the occasion were almost intolerable. It is here that we have to seek for the origin of comedy, in the jests and the scurrilous abuse which the peasants vented upon the by-standers from a wagon in which they rode about (*κῶμος ἐξ' ἀμαζόν*). Aristophanes⁸ calls the comic poets *τρυνωδοί*, lee-singers, and comedy, *τρυνωδία*, lee-song;⁹ from the custom of smearing the face with lees of wine, in which the merry country people indulged at the vintage. The *ascolia* and other amusements, which were afterward introduced into the city, seem also originally to have been peculiar to the rural Dionysia. The Dionysia in the Piræus, as well as those of the other demes of Attica, belonged to the lesser Dionysia, as is acknowledged both by Spalding and Böckh. Those in the Piræus were celebrated with as much splendour as those in the city; for we read of a procession, of the performance of comedies and tragedies, which at first may have been new as well as old pieces; but when the drama had attained a regular form, only old pieces were represented at the rural Dionysia. Their liberal and democratical character seems to have been the cause of the opposition which these festivals met with, when, in the time of Pisistratus, Thespis attempted to introduce the rural amusements of the Dionysia into the city of Athens.¹⁰ That in other places, also, the introduction of the worship of Dionysus met with great opposition, must be inferred from the legends of Orchomenos, Thebes, Argos, Ephesus, and other places. Something similar seems to be implied in the account of

the restoration of tragic choruses to Dionysus at Sicyon.¹

The second festival, the *Lenæa* (from *ληνός*, the wine-press, from which, also, the month of Gamelion was called by the Ionians Lenæon), was celebrated in the month of Gamelion; the place of its celebration was the ancient temple of Dionysus Limnæus (from *λίμνη*, as the district was originally a swamp, whence the god was also called *λίμναγνής*). This temple, the Lenæon, was situate south of the theatre of Dionysus, and close by it.² The Lenæa were celebrated with a procession and scenic contests in tragedy and comedy.³ The procession probably went to the Lenæon, where a goat (*πράγος*, hence the chorus and tragedy which arose out of it were called *πραγμακός χορός* and *τραγωδία*) was sacrificed, and a chorus standing around the altar sang the dithyrambic ode to the god. As the dithyramb was the element out of which, by the introduction of an actor, tragedy arose (*vid. Chorvs*), it is natural that, in the scenic contests of this festival, tragedy should have preceded comedy, as we see from the important documents in Demosthenes.⁴ The poet who wished his play to be brought out at the Lenæa applied to the second archon, who had the superintendence of this festival as well as the Anthesteria, and who gave him the chorus if the piece was thought to deserve it.

The third Dionysiac festival, the *Anthesteria*, was celebrated on the 12th of the month of Anthesterion;⁵ that is to say, the second day fell on the 12th, for it lasted three days, and the first fell on the 11th,⁶ and the third on the 13th.⁷ The second archon superintended the celebration of the Anthesteria, and distributed the prizes among the victors in the various games which were carried on during the season.⁸ The first day was called *πιθουρία*, the second, *χῶες*; and the third, *χύτροι*.⁹ The first day derived its name from the opening of the casks to taste the wine of the preceding year; the second from *χοῦς*, the cup, and seems to have been the day devoted to drinking. The *ascolia* seem to have been played on this day. (*Vid. ASCOLIA*.) We read in Suidas¹⁰ of another similar amusement peculiar to this day. The drinker placed himself upon a bag filled with air, trumpets were sounded, and he who emptied his cup quickest, or drank most, received as his prize a leather bag filled with wine and a garland, or, according to Elian,¹¹ a golden crown.¹² The *κῶμος ἐξ' ἀμαζόν* also took place on this day, and the jests and abuse which persons poured forth on this occasion were doubtless an imitation of the amusements customary at the rural Dionysia. Athenæus¹³ says that it was customary on the day of the *Chœres* to send on to sophists their salaries and presents, that they too might enjoy themselves with their friends. The third day had its name from *χύτρος*, a pot, as on this day persons offered pots with flowers, seeds, or cooked vegetables, as a sacrifice to Dionysus and Hermes Chthonius.¹⁴ With this sacrifice were connected the *ἀγῶνες χύτρων* mentioned by the scholiast on Aristophanes,¹⁵ in which the second archon distributed the prizes. Slaves were permitted to take part in the general rejoicings of the Anthesteria; but at the close of the day they were sent home with the words *θύραζε, Κᾶρες, οὐκ ἔτ' Ἀνθεστήρια*.¹⁶

It is uncertain whether dramas were performed at the Anthesteria; but Böckl supposes that comedies were represented, and that tragedies which were to be brought out at the great Dionysia were perhaps rehearsed at the Anthesteria. The mysteries connected with the celebration of the Anthesteria were held at night, in the ancient temple *ἐν Λίμναις*, which was opened only once a year, on the 12th of Anthesterion. They were likewise under the superintendence of the second archon and a certain number of *ἐπιμεληταί*. He appointed fourteen priestesses, called *γεραιαί* or *γεραραί*, the venerable, who conducted the ceremonies with the assistance of one other priestess.¹ The wife of the second archon (*βασιλίσσα*) offered a mysterious sacrifice for the welfare of the city; she was betrothed to the god in a secret solemnity, and also tendered the oath to the *gerææ*, which, according to Demosthenes,² ran thus: "I am pure and unspotted by anything that pollutes, and have never had intercourse with man. I will solemnize the Theognia and Iobakcheia at their proper time, according to the laws of my ancestors." The admission to the mysteries, from which men were excluded, took place after especial preparations, which seem to have consisted in purifications by air, water, or fire.³ The initiated persons wore skins of fawns, and sometimes those of panthers. Instead of ivy, which was worn in the public part of the Dionysia, the mystæ wore myrtle.⁴ The sacrifice offered to the god in these mysteries consisted of a sow, the usual sacrifice of Demeter, and in some places of a cow with calf. It is more than probable that the history of Dionysus was symbolically represented in these mysteries, as the history of Demeter was acted in those of Eleusis, which were in some respects connected with the former.⁵

The fourth Attic festival of Dionysus, *Διονύσια ἐν ἄστει*, *ἀστικά* or *μεγάλα*, was celebrated about the 12th of the month of Elaphebolion;⁶ but we do not know whether they lasted more than one day or not. The order in which the ceremonies took place was, according to the document in Demosthenes, as follows: The great public procession, the chorus of boys, the *κῶμος* (*vid.* CHORUS), comedy, and, lastly, tragedy. We possess in Athenæus's description of a great Bacchic procession, held at Alexandria in the reign of Ptolemæus Philadelphus, from which we may form some idea of the great Attic procession. It seems to have been customary to represent the god by a man in this procession. Plutarch,⁷ at least, relates that, on one occasion, a beautiful slave of Nicias represented Dionysus.⁸ A ridiculous imitation of a Bacchic procession is described in Aristophanes.⁹ Of the dramas which were performed at the great Dionysia, the tragedies, at least, were generally new pieces; repetitions do not, however, seem to have been excluded from any Dionysiac festival. The first archon had the superintendence, and gave the chorus to the dramatic poet who wished to bring out his piece at this festival. The prize awarded to the dramatist for the best play consisted of a crown, and his name was proclaimed in the theatre of Dionysus.¹¹ Strangers were prohibited from taking part in the choruses of boys. During this and some other of the great Attic festivals, prisoners were set free, and nobody was allowed to seize the goods of a debtor; but a war was not interrupted by its celebration.¹² As the great Dionysia were celebrated at the beginning of spring, when the navigation was reopened, Athens

was not only visited by numbers of country people, but also by strangers from other parts of Greece; and the various amusements and exhibitions on this occasion were not unlike those of a modern fair.¹ Respecting the scrupulous regularity, and the enormous sums spent by the Athenians on the celebration of these and other festivals, see Demosthenes.² As many circumstances connected with the celebration of the Dionysia cannot be made clear without entering into minute details, we must refer the reader to Böckl's essay.

The worship of Dionysus was almost universal among the Greeks in Asia as well as in Europe, and the character of his festivals was the same everywhere, only modified by the national differences of the various tribes of the Greeks. It is expressly stated that the Spartans did not indulge so much in drinking during the celebration of the Dionysia as other Greeks.³ The worship of Dionysus was in general, with the exception of Corinth, Sicyon, and the Doric colonies in southern Italy, less popular among the Doric states than in other parts of Greece.⁴ It was most enthusiastic in Bœotia, in the orgies on Mount Cithæron, as is well known from allusions and descriptions in several Roman poets. That the extravagant merriment, and the unrestrained conduct with which all festivals of this class were celebrated, did, in the course of time, lead to the greatest excesses, cannot be denied; but we must, at the same time, acknowledge that such excesses did not occur until a comparatively late period. At a very early period of Grecian history, Bacchic festivals were solemnized with human sacrifices, and traces of this custom are discernible even until very late. In Chios this custom was superseded by another, according to which the Bacchæ were obliged to eat the raw pieces of flesh of the victim which were distributed among them. This act was called *ὀμοφαγία*, and Dionysus derived from it the name of *ὀμιδῖος* and *ὀμηστής*. There was a report that even Themistocles, after the battle of Salamis, sacrificed three noble Persians to this divinity.⁵ But Plutarch's account of this very instance, if true, shows that at this time such savage rites were looked upon with horror.

The worship of Dionysus, whom the Romans called Bacchus, or, rather, the Bacchic mysteries and orgies (*Bacchanalia*), are said to have been introduced from southern Italy into Etruria, and from thence to Rome,⁶ where for a time they were carried on in secret, and, during the latter part of their existence, at night. The initiated, according to Livy, did not only indulge in feasting and drinking at their meetings, but, when their minds were heated with wine, they indulged in the coarsest excesses and the most unnatural vices. Young girls and youths were seduced, and all modesty was set aside; every kind of vice found here its full satisfaction. But the crimes did not remain confined to these meetings: their consequences were manifest in all directions; for false witnesses, forgeries, false wills, and denunciations proceeded from this focus of crime. Poison and assassination were carried on under the cover of this society; and the voices of those who had been fraudulently drawn into these orgies, and would cry out against the shameful practices, were drowned by the shouts of the Bacchantes, and the deafening sounds of drums and cymbals.

The time of initiation lasted ten days, during

which a person was obliged to abstain from all sexual intercourse; on the tenth he took a solemn meal, underwent a purification by water, and was led into the sanctuary (*Bacchanal*). At first only women were initiated, and the orgies were celebrated every year during three days. Matrons alternately performed the functions of priests. But Pacula Annia, a Campanian matron, pretending to act under the direct influence of Bacchus, changed the whole method of celebration: she admitted men to the initiation, and transferred the solemnization, which had hitherto taken place during the daytime, to the night. Instead of three days in the year, she ordered that the Bacchanalia should be held during five days in every month. It was from the time that these orgies were carried on after this new plan that, according to the statement of an eyewitness,¹ licentiousness and crimes of every description were committed. Men as well as women indulged in the most unnatural appetites, and those who attempted to stop or to oppose such odious proceedings fell as victims. It was, as Livy says, a principle of the society to hold every ordinance of God and nature in contempt. Men, as if seized by fits of madness, and under great convulsions, gave oracles: and the matrons, dressed as Bacchæ, with dishevelled hair and burning torches in their hands, ran down to the Tiber and plunged their torches into the water; the torches, however, containing sulphur and chalk, were not extinguished. Men who refused to take part in the crimes of these orgies were frequently thrown into dark caverns and despatched, while the perpetrators declared that they had been carried off by the gods. Among the number of the members of these mysteries were, at the time when they were suppressed, persons of all classes; and during the last two years, nobody had been initiated who was above the age of twenty years, as this age was thought most fit for seduction and sensual pleasure.

In the year B.C. 186, the consuls Spurius Postumius Albinus and Q. Marcius Philippus were informed of the existence of these meetings, and, after having ascertained the facts mentioned above, they made a report to the senate.² The senate, alarmed by this singular discovery, and although dreading lest members of their own families might be involved, invested the consuls with extraordinary power, to inquire into the nature of these nocturnal meetings, to exert all their energy to secure the priests and priestesses, to issue a proclamation throughout Rome and Italy, forbidding any one to be initiated in the Bacchic mysteries, or to meet for the purpose of celebrating them; but, above all things, to submit those individuals who had already been secured to a rigid trial. The consuls, after having given to the subordinate magistrates all the necessary instructions, held an assembly of the people, in which the facts just discovered were explained to the public, in order that the objects of the proceedings which were to take place might be known to every citizen. A reward was at the same time offered to any one who might be able to give farther information, or to name any one that belonged to the conspiracy, as it was called. Measures were also taken to prevent any one from leaving Italy. During the night following, a number of persons were apprehended; many of them put an end to their own lives. The whole number of the initiated was said to be 7000. The trial of all those who were apprehended lasted thirty days. Rome was almost deserted, for the innocent as well as the guilty had reason to fear. The punishment inflicted on those who were convicted varied according to the degree of their guilt; some were

thrown into prison, others were put to death. The women were surrendered to their parents or husbands, that they might receive their punishment in private. The consuls then were ordered by the senate to destroy all Bacchanalia throughout Rome and Italy, with the exception of such altars or statues of the god as had existed there from ancient times. In order to prevent a restoration of the Bacchic orgies, the celebrated decree of the senate (*Senatus auctoritas de Bacchanalibus*) was issued, commanding that no Bacchanalia should be held either in Rome or Italy; that if any one should think such ceremonies necessary, or if he could not neglect them without scruples or making atonements, he should apply to the prætor urbanus, who might then consult the senate. If the permission should be granted to him in an assembly of the senate, consisting of not less than one hundred members, he might solemnize the Bacchic sacra; but no more than five persons were to be present at the celebration; there should be no common fund, and no master of the sacra or priest.³ This decree is also mentioned by Cicero.⁴ A brazen table containing this important document was discovered near Bari, in southern Italy, in the year 1640, and is at present in the imperial Museum of Vienna. A copy of it is given in Drakenbore's edition of Livy.⁵

We have, in our account of the Roman Bacchanalia, closely followed the description given by Livy, which may, indeed, be somewhat exaggerated; but, considering the difference of character between the Greeks and Romans, it cannot be surprising that a festival like the Dionysia, when once introduced among the Romans, should have immediately degenerated into the grossest and coarsest excesses. Similar consequences were seen immediately after the time when the Romans were made acquainted with the elegance and the luxuries of Greek life; for, like barbarians, they knew not where to stop, and became brutal in their enjoyments. But whether the account of Livy be exaggerated or not, thus much is certain, that the Romans, ever since the time of the suppression of the Bacchanalia, considered these orgies as in the highest degree immoral and licentious, as we see from the manner in which they applied the words derived from Bacchus, *e. g.*, *bacchor*, *bacchans*, *bacchatio*, *bacchicus*, and others. But the most surprising circumstance in the account of Livy is, that the Bacchanalia should have been celebrated for several years in the boisterous manner described above, and by thousands of persons, without any of the magistrates appearing to have been aware of it.

While the Bacchanalia were thus suppressed, another more simple and innocent festival of Bacchus, the *Liberalia* (from *Liber* or *Liber Pater*, a name of Bacchus), continued to be celebrated at Rome every year on the 16th of March.⁶ A description of the ceremonies customary at this festival is given by Ovid,⁷ with which may be compared Varro.⁸ Priests and aged priestesses, adorned with garlands of ivy, carried through the city wine, honey, cakes, and sweetmeats, together with an altar with a handle (*ansata ara*), in the middle of which there was a small firepan (*foculus*), in which, from time to time, sacrifices were burned. On this day Roman youths who had attained their sixteenth year received the toga virilis.⁹ That the *Liberalia* were celebrated with various amusements and great merriment, might be inferred from the general character of Dionysiac festivals; but we may also see it from the name *Ludi Liberales*, which is sometimes used instead of *Liberalia*; and Nævius⁹ expressly says

1. (Livy, xxxix., 18.)—2. (De Leg., ii., 15.)—3. (tom. vii., p. 197, seqq.)—4. (Ovid, Fast., iii., 713.)—5. (l. c.)—6. (De Ling. Lat., v. 55, ed Bipont.)—7. (Cic. ad Att., i., 1.)—8. (ap Fes-)

that persons expressed themselves very freely at the Liberalia. St. Augustine¹ even speaks of a high degree of licentiousness carried on at this festival.

*DIOS ANTHOS (Διὸς ἄνθος), a plant. Sprengel conjectures that it was the *Agrostemma Flos Jovis*; but Stackhouse hesitates between the *Agrostemma* and the *Dianthus Caryophyllus*, or Carnation.²

DIOSCURIA (Διοσκουρία), festivals celebrated in various parts of Greece in honour of the Dioscuri. The Spartan Dioscuria mentioned by Pausanias³ and Spanheim,⁴ were celebrated with sacrifices, rejoicings, and drinking. At Cyrene the Dioscuri were likewise honoured with a great festival.⁵ The Athenian festival of the Dioscuri has been described under ANACEIA. Their worship was very generally adopted in Greece, especially in the Doric and Achaean states, as we conclude from the great number of temples dedicated to them; but scarcely anything is known respecting the manner in which their festivals were celebrated.

*DIOSPYRUS (Διόσπυρος), according to Stackhouse, the *Diospyrus Lotus*; but Schneider doubts whether the fruit of the latter agrees in character with the description of the Διόσπυρος as given by Theophrastus.⁶

DIOTRA was a vessel containing two ears (ῥα) or handles, used for holding wine. It appears to have been much the same as the amphora.⁷ (Vid. AMPHORA.)

*DIPHRYGES (διφρυγές), "evidently," according to Adams, "a metallic compound of copper. Sprengel says it consisted principally of burned copper, with a certain admixture of iron. Dr. Milligan calls it an oxide of copper. Mattholius gives it the name of *Marc de bronze*, i. e., Husk of bronze."⁸

*DIPSACUS (δίψακος), the *Dipsacus Fullonum*, Fuller's Thistle, or manured Teasel. Stephens calls it *Chardon de Bonnelier*. The leaves are concave, and so placed as to contain water.⁹

*DIPSAS (διψύς), the name of a venomous serpent, whose bite causes insatiable thirst, whence the name, from διψάω, "to thirst." Sprengel marks it as the *Coluber prester*, or black viper. According to Adams, it is sometimes found in England. A splendid description of the effects of its sting is given by Lucan. For farther information, the student is referred by Adams to Nicander, Dioscorides, Aëtius, and the other writers on toxicology, as also to Lucian's treatise on the Dipsades.¹⁰

DIPHThERA (διφθέρα) was a kind of cloak made of the skins of animals, and worn by herdsmen and country people in general. It is frequently mentioned by Greek writers.¹¹ Pollux¹² says that it had a covering for the head (ἐπικράνον), in which respect it would correspond to the Roman *cucullus*. (Vid. CUCULLUS.)¹³

DIPHROS (δίφρος). (Vid. CURRUS, p. 333.)

DIPLOIS (διπλοῖς). (Vid. PALLIUM.)

DIPLOMA was a writ or public document, which conferred upon a person any right or privilege. During the Republic it was granted by the consuls and senate; and under the Empire, by the emperor and the magistrates whom he authorized to do so.¹⁴ The diploma was sealed by the emperor;¹⁵ it consisted of two leaves, whence it derived its name.

These writs were especially given to public *couriers*, or to those who wished to procure the use of the public horses or carriages.¹ The tabellarii of the emperor would naturally always have a diploma; whence we read in an inscription² of a *diploma rius tabellarius*.

ΔΙΠΛΩΟΙ ΝΗΕΣ (διπλωοὶ νῆες). (Vid. ΑΜΦΙ ΠΥΡΜΝΟΙ ΝΗΕΣ.)

DIPTYCHA (δίπτυχα) were two writing tablets, which could be folded together. Herodotus³ speaks of a δέλτιον διπτυχον made of wood, and covered over with wax.⁴ The diptycha were made of different materials, commonly of wood, but sometimes of ivory.

Under the Empire, it was the custom of the consuls and other magistrates to distribute among their friends and the people, on the day on which they entered on their office, tablets, called respectively *diptycha consularia*, *praetoria*, *adilita*, &c., which were inscribed with their names, and contained their portraits. Several of these diptycha are given by Montfaucon.⁶

DIRECTA ACTIO. (Vid. ACTIO, p. 17.)

DIRIBITORES are said by most modern writers to have been the persons who gave to the citizens the *tabella* with which they voted in the comitia (vid. COMITIA, p. 297); but Wunder has most distinctly proved, in the preface to his *Codex Erfutensis*,⁷ that it was the office of the diribitores to divide the votes when taken out of the *cista*, so as to determine which had the majority. He remarks that the etymology of *diribere* would lead us to assign to it the meaning of "separation" or "division," as it is compounded of *dis* and *habere*, in the same manner as *dirimere* is of *dis* and *emere*; the *h* disappears as in *prabere* and *debere*, which come respectively from *prae* and *habere*, and *de* and *habere*. In several passages the word cannot have any other signification than that given by Wunder.⁸

When Cicero says,⁹ "*vos rogatores, vos diribitores, vos custodes tabellarum*," we may presume that he mentions these officers in the order in which they discharged their duties in the comitia. It was the office of the *rogatores* to collect the *tabellæ* which each century gave, as they used, before the ballot was introduced, to ask (*rogare*) each century for its votes, and report them to the magistrate who presided over the comitia. The *diribitores*, as has been already remarked, divided the votes when taken out of the *cista*, and handed them over to the *custodes*, who checked them off by points marked on a tablet.

Many writers have confounded the *cista* with the *sitella* or urna, into which the sortes or mere lots were cast; the true difference between these words is explained under SITELLA.

DISCUS (δίσκος), a circular plate of stone (λίθου δίσκος¹) or metal (*scintilla pondera disci*²), made for throwing to a distance as an exercise of strength and dexterity. This was, indeed, one of the principal gymnastic exercises of the ancients, being included in the Πύρραθλον. It was practised in the heroic age;³ the fable of Hyacinthus, who was killed by Apollo as they were playing together at this game,⁴ also proves its very high antiquity.

The discus was ten or twelve inches in diameter, so as to reach above the middle of the forearm when held in the right hand. The object was to throw it

Expl., Suppl., vol. iii., p. 220, &c.)—7. (p. cxxvi.—clviii.)—8. (Cic., Pro Planc., 20; ad Qu. Frat., iii., 4, § 1.—Varro, De Re Rust., iii., 2, § 1; iii., 5, § 18.)—9. (in Pis., 15.)—10. (Pind., Isth., i., 34.)—11. (Mart., xiv., 164.)—12. (Hom., Il., ii., 774.—Od., vi., 626; viii., 129, 186—188; xvii., 168.—Eurp., Iph. in Aul., 200.)—13. (Ovid, Met., x., 167—219.)

from a fixed spot to the greatest distance; and in doing this, each player had a friend to mark the point at which the discus, when thrown by him, struck the ground, as is done by Minerva on behalf of Ulysses when he contends with the Phæacians;¹ *fixa signatur terra sagitta*.² The distance to which it was commonly thrown became a measure of length, called *τὰ δίσκουρα*.³

The space on which the discobolus, or thrower of the discus, stood, was called *βαλβίς*, and was indicated by being a little higher than the ground surrounding it. As each man took his station, with his body entirely naked, on the *βαλβίς*, he placed his right foot forward, bending his knee, and resting principally on this foot. The discus being held, ready to be thrown, in his right hand, he stooped, turning his body towards it, and his left hand was naturally turned in the same direction.⁴ This attitude was represented by the sculptor Myron in one of his works, and is adduced by Quintilian⁵ to show how much greater skill is displayed by the artist, and how much more powerful an effect is produced on the spectator, when a person is represented in action, than when he is at rest or standing erect. We fortunately possess several copies, more or less entire, of this celebrated statue; and one of the best of them is in the British Museum (see the annexed woodcut). It represents the player just ready to swing round his outstretched arm, so as to describe with it a semicircle in the air, and thus, with his collected force, to project the discus at an angle of forty-five degrees, at the same time springing forward so as to give it the impetus of his whole body. Discum "*vasto contorquet turbine, et ipse prosequitur*."⁶

By metaphor, the term *discus* was applied to a mirror⁷ (*vid. SPECULUM*); to the orb of the sun as seen by us; and to a flat round plate used to hold meat, whence the English *dish*.

Sometimes a heavy mass of a spherical form (*σόλος*) was used instead of a discus, as when the Greeks at the funeral games contended for a lump of iron, which was to be given to him who could throw it farthest.⁸ The *σόλος* was perforated in the centre, so that a rope or thong might be passed through, and used in throwing it.⁹ In this form the discobolia is still practised by the mountaineers of the canton of Appenzel, in Switzerland. They meet twice a year to throw round stones of great weight and size. This they do by a sudden leap

and forcible swinging of the whole body. The same stone is taken by all, as in the case of the ancient discus and *σόλος*: he who sends it to the greatest distance receives a public prize. The stone is lifted as high as the right shoulder (see woodcut; *κατωμαδίον*) before being projected.²

DISPENSATOR. (*Vid. CALCULATOR.*)

DITHYRAMBUS. (*Vid. CHORUS*, p. 247.)

DIVERSORIUM. (*Vid. CAUPONA.*)

DIVINATIO is, according to Cicero,³ a presension and a knowledge of future things; or, according to Chrysippus,⁴ a power in man which foresees and explains those signs which the gods throw in his way, and the diviner must therefore know the disposition of the gods towards men, the import of their signs, and by what means these signs are to be obtained. According to this latter definition, the meaning of the Latin word *divinatio* is narrower than that of the Greek *μαντική*, inasmuch as the latter signifies any means by which the decrees of the gods can be discovered, the natural as well as the artificial; that is to say, the seers and the oracles, where the will of the gods is revealed by inspiration, as well as the *divinatio* in the sense of Chrysippus. In the one, man is the passive agent through which the deity reveals the future; while in the other, man discovers it by his own skill or experience, without any pretension to inspiration. As, however, the seer or vates was also frequently called *divinus*, we shall treat, under this head, of seers as well as of other kinds of *divinatio*. The subject of oracles is discussed in a separate article. (*Vid. ORACULUM.*)

The belief that the decrees of the divine will were occasionally revealed by the deity himself, or could be discovered by certain individuals, is one which the classical nations of antiquity had, in common with many other nations, before the attainment of a certain degree of intellectual cultivation. In early ages such a belief was natural, and perhaps founded on the feeling of a very close connexion between man, God, and nature. But in the course of time, when men became more acquainted with the laws of nature, this belief was abandoned, at least by the more enlightened minds, while the multitudes still continued to adhere to it; and the governments, seeing the advantages to be derived from it, not only countenanced, but encouraged and supported it.

The seers or *μάντιες*, who, under the direct influence of the gods, chiefly that of Apollo, announced the future, seem originally to have been connected with certain places where oracles were given; but in subsequent times they formed a distinct class of persons, independent of any locality; one of them is Calchas in the Homeric poems. Apollo, the god of prophecy, was generally the source from which the seers, as well as other diviners, derived their knowledge. In many families of seers the inspired knowledge of the future was considered to be hereditary, and to be transmitted from father to son. To these families belonged the Iamids,⁵ who from Olympia spread over a considerable part of Greece; the Branchidae, near Miletus; the Eumolpids, at Athens and Eleusis; the Clytiads,⁷ the Teliads,⁸ the Acarnanian seers, and others. Some of these families retained their celebrity till a very late period of Grecian history. The manteis made their revelations either when requested to do so on important emergencies, or they made them spontaneously whenever they thought it necessary; either

to prevent some calamity or to stimulate their countrymen to something beneficial. The civil government of Athens not only tolerated, but protected and honoured them; and Cicero¹ says, that the manteis were present in all the public assemblies of the Athenians.² Along with the seers we may also mention the Bacides and the Sibyllæ. Both existed from a very remote time, and were distinct from the manteis so far as they pretended to derive their knowledge of the future from sacred books (*χρησμοί*) which they consulted, and which were in some places, as at Athens and Rome, kept by the government or some especial officers, in the acropolis and in the most revered sanctuary. Bacis was, according to Pausanias,³ in Boeotia, a general name for a man inspired by nymphs. The scholiast on Aristophanes⁴ and Ælian⁵ mention three original Bacides, one of Eleon in Boeotia, a second of Athens, and a third of Caphys in Arcadia.⁶ From these three Bacides all others were said to be descended, and to have derived their name. Antichares,⁷ Musæus,⁸ Euclous of Cyprus,⁹ and Lycus, son of Pandion,¹⁰ probably belonged to the Bacides. The Sibyllæ were prophetic women, probably of Asiatic origin, whose peculiar custom seems to have been to wander with their sacred books from place to place.¹¹ Ælian¹² states that, according to some authors, there were four Sibyllæ, the Erythræan, the Samian, the Egyptian, and the Sardinian; but that others added six more, among whom there was one called the Cumæan, and another called the Jewish Sibylla. Compare Suidas,¹³ and Pausanias,¹⁴ who has devoted a whole chapter to the Sibyllæ, in which, however, he does not clearly distinguish between the Sibyllæ properly so called, and other women who travelled about and made the prophetic art their profession, and who seem to have been very numerous in all parts of the ancient world.¹⁵ The Sibylla whose books gained so great an importance at Rome was, according to Varro,¹⁶ the Erythræan: the books which she was said to have sold to one of the Tarquins were carefully concealed from the public, and only accessible to the duumvirs. The early existence of the Sibyllæ is not as certain as that of the Bacides; but in some legends of a late date they occur even in the period previous to the Trojan war, and it is not improbable that at an early period every town in Greece had its prophecies by some Bacis or Sibylla.¹⁷ They seem to have retained their celebrity down to the time of Antiochus and Demetrius.¹⁸

Besides these more respectable prophets and prophetesses, there were numbers of diviners of an inferior order (*χρησμολόγοι*), who made it their business to explain all sorts of signs, and to tell fortunes. They were, however, more particularly popular with the lower orders, who are everywhere most ready to believe what is most marvellous and least entitled to belief. This class of diviners, however, does not seem to have existed until a comparatively late period,¹⁹ and to have been looked upon, even by the Greeks themselves, as nuisances to the public.

These soothsayers lead us naturally to the mode of divination, of which such frequent use was made by the ancients in all the affairs of public and private life, and which chiefly consisted in the inter-

pretation of numberless signs and phenomena. No public undertaking of any consequence was ever entered upon by the Greeks and Romans without consulting the will of the gods, by observing the signs which they sent, especially those in the sacrifices offered for the purpose, and by which they were thought to indicate the success or the failure of the undertaking. For this kind of divination no divine inspiration was thought necessary, but merely experience and a certain knowledge acquired by routine; and although, in some cases, priests were appointed for the purpose of observing and explaining signs (*vid. AUGUR, HARUSPEX*), yet on any sudden emergency, especially in private affairs, any one who met with something extraordinary might act as his own interpreter. The principal signs by which the gods were thought to declare their will, were things connected with the offering of sacrifices, the flight and voice of birds, all kinds of natural phenomena, ordinary as well as extraordinary and dreams.

The interpretation of signs of the first class (*λεπομαντεία* or *λεποσκοπία*, *haruspicium* or *ars haruspicina*) was, according to Æschylus,²⁰ the invention of Prometheus. It seems to have been most cultivated by the Etruscans, among whom it was raised into a complete science, and from whom it passed to the Romans. Sacrifices were either offered for the special purpose of consulting the gods, or in the ordinary way; but in both cases the signs were observed, and when they were propitious, the sacrifice was said *καλλεπεῖν*. The principal points that were generally observed were, 1. The manner in which the victim approached to the altar, whether uttering a sound or not; the former was considered a favourable omen in the sacrifice at the Panionium.²¹ 2. The nature of the intestines with respect to their colour and smoothness;²² the liver and bile were of particular importance. (*Vid. CAVER EXORTUM*.) 3. The nature of the flame which consumed the sacrifice;²³ hence the words *πυρομαντεία*, *ἐμπύρα σήματα*, *φλογυπύ σήματα*. That the smoke rising from the altar, the libation, and various other things offered to the gods, were likewise considered as a means through which the will of the gods might be learned, is clear from the names *καπνομαντεία*, *λιβανομαντεία*, *κριθμαντεία*, and others. Especial care was also taken, during a sacrifice, that no inauspicious or frivolous words were uttered by any of the by-standers: hence the admonitions of the priests, *εὐφημεῖτε* and *εὐφημία*, or *στυγέτε*, *σιωπάτε*, *ῥηγεῖτε*, *ῥηγία*, and others; for improper expressions were not only thought to pollute and profane the sacred act, but to be unlucky omens (*δυσφημία*, *κληρόνες*, *ῥήματ*, *φωναί*, or *δυσφαί*).

The art of interpreting signs of the second class was called *οἰωνοστική*, *augurium* or *auspicium*. It was, like the former, common to Greeks and Romans, but was never developed into so complete a system by the former as by the latter; nor did it ever attain the same degree of importance in Greece as it did at Rome. (*Vid. AUSPICUM*.) The Greeks, when observing the flight of birds, turned their face towards the north, and then a bird appearing to the right (east), especially an eagle, a heron, or a falcon, was a favourable sign,²⁴ while birds appearing to the left (west) were considered as unlucky signs.²⁵ Sometimes the mere appearance of a bird was thought sufficient: thus the Athenians always considered the appearance of an owl as a lucky sign; hence the proverb, *γλαυὺς ἔπταται*, "the owl is out,"

i. e., we have good luck. Other animals appearing unexpectedly, especially to travellers on their road (*ἐνὸδία σύμβολα*), were also thought ominous; and at Athens it was considered a very unlucky omen when a weasel appeared during the assembly of the people.¹ Superstitions of this kind are still met with in several European countries. Various other means were used to ascertain the will of the gods, such as the *σίδηρομαντεία*, or divination by placing straws on red-hot iron; the *μολυβδομαντεία*, by observing the figures which melted lead formed; the *βοτανομαντεία*, or divination by writing one's own name on herbs and leaves, which were then exposed to the wind, &c.

Of greater importance than the appearance of animals, at least to the Greeks, were the phenomena in the heavens, particularly during any public transaction. They were not only observed and interpreted by private individuals in their own affairs, but by the public magistrates. The Spartan ephors, as we learn from Plutarch,² made regular observations in the heavens every ninth year during the night; and the family of the Pythiastæ, of Athens, made similar observations every year before the theoris set sail for Delos.³ Among the unlucky phenomena in the heavens (*δυσσημεία, signa or portenta*) were thunder and lightning,⁴ an eclipse of the sun or moon,⁵ earthquakes,⁶ rain of blood, stones, milk, &c.⁷ Any one of these signs was sufficient at Athens to break up the assembly of the people.⁸ In common life, things apparently of no importance, when occurring at a critical moment, were thought by the ancients to be signs sent by the gods, from which conclusions might be drawn respecting the future. Among these common occurrences we may mention sneezing,⁹ twinkling of the eyes,¹⁰ tinkling of the ears, and numberless other things which we cannot here enumerate. Some of them have retained their significance with the superstitious multitude down to the present day.

The art of interpreting dreams (*ὄνειροπολία*), which had probably been introduced into Europe from Asia, where it is still a universal practice, seems in the Homeric age to have been held in high esteem; for dreams were said to be sent by Zeus.¹¹ In subsequent times, that class of diviners who occupied themselves with the interpretation of dreams seems to have been very numerous and popular; but they never enjoyed any protection from the state, and were chiefly resorted to by private individuals. Some persons are said to have gained their livelihood by this profession.¹² Respecting the oracles which were obtained by passing a night and dreaming in a temple, see ORACULUM.

For farther information concerning the art of divination in general, see Cicero's work *De Divinatione*. The *μαντική* of the Greeks is treated of at some length by Wachsmuth.¹³

The word *divinatio* was used in a particular manner by the Romans as a law-term, which requires some explanation. If in any case two or more accusers came forward against one and the same individual, it was, as the phrase ran, *decided by divinatio* who should be the chief or real accuser, whom the others then joined as subscriptores, i. e., by putting their names to the charge brought against the

offender. This transaction, by which one of several accusers was selected to conduct the accusation, was called *divinatio*, as the question here was not about facts, but about something which was to be done, and which could not be found out but by witnesses or written documents; so that the judges had, as it were, to divine the course which they had to take.¹ Hence the oratio of Cicero, in which he tries to show that he, and not Q. Cæcilius Niger, ought to conduct the accusation against Verres, is called *Divinatio in Cæcilium*.²

DIVYSOR. (*Vid. AMBITUS*.)

DIVORTIUM, generally a separation, and, in a special sense, a dissolution of marriage. A Roman marriage was dissolved by the death of the wife or husband, and by *divortium* or separation in the lifetime of the husband and wife.

Divorce, or the absolute determination of the marriage relation, always existed in the Roman polity so far back as we know anything of it; and there might be divorce both in the case of a marriage with *conventio in manum*, and in the case of a marriage when there was no *conventio*, and, consequently, the relation of the wife to her own *famidia* still continued. The statement of Plutarch,³ that the husband alone had originally the power of effecting a divorce, may be true; but we cannot rely altogether on such an authority. As one essential part of a marriage was the consent and conjugal affection of the parties, it was considered that this affection was necessary to its continuance, and, accordingly, either party might declare his or her intention to dissolve the connexion. No judicial decree, and no interference of any public authority, was requisite to dissolve a marriage. *Filii familias*, of course, required the consent of those in whose power they were. The first instance of divorce at Rome is said to have occurred about B.C. 234, when Sp. Carvilius Ruga put away his wife⁴ on the ground of barrenness: it is added that his conduct was generally condemned. The real meaning of the story is explained by Savigny with his usual acuteness.⁵

Towards the latter part of the Republic, and under the Empire, divorces became very common. Pompey divorced his wife Mucia for alleged adultery, and his conduct was approved;⁶ and Cicero speaks of Paula Valeria⁷ as being ready to serve her husband, on his return from his province, with notice of divorce.⁸ Cicero himself divorced his wife Terentia, after living with her thirty years, and married a young woman. If a husband divorced his wife, the wife's *dos*, as a general rule, was restored (*vid. Dos*); and the same was the case when the divorce took place by mutual consent. As divorce became more common, attempts were made to check it indirectly, by affixing pecuniary penalties or pecuniary loss to the party whose conduct rendered the divorce necessary. This was part of the object of the *lex Papia Poppæa*, and of the rules as to the *retentio dotis* and *judicium morum*. There was the *retentio dotis propter liberos*, when the divorce was caused by the fault of the wife, or of her father, in whose power she was: three sixths of the *dos* was the limit of what could be so retained. On account of *matters morum graviorum*, such as adultery, a sixth part might be retained; in the case of *matters morum leviorum*, one eighth. The husband, when in fault, was punished by being required to return the *dos* earlier

than it was otherwise returnable. After the divorce, either party might marry again.

By the *lex Papia Poppæa*, a freedwoman who had married her patronus could not divorce herself; there appears to have been no other class of persons subjected to this incapacity.

Corresponding to the forms of marriage by *confarreatio* and *coemptio*, there were the forms of divorce by *diffarreatio* and *remancipatio*. According to Festus,¹ *diffarreatio* was a kind of religious ceremony, so called, "quia fiebat farreo libo adhibito," by which a marriage was dissolved; and Plutarch² has been supposed to allude to this ceremony in the case of a divorce between the *flamen dialis* and his wife. It is said that originally marriages contracted by *confarreatio* were indissoluble, and in a later age, this was the case with the marriage of the *flamen dialis*,³ who was married by *confarreatio*. In the case referred to by Plutarch, the emperor authorized the divorce. A marriage by *coemptio* was dissolved by *remancipatio*.⁴ In course of time less ceremony was used, but still some distinct notice or declaration of intention was necessary to constitute a divorce: the simple fact of either party contracting another marriage was not a legal divorce.⁵ The ceremony of breaking the *nuptiales tabulae*,⁶ or of taking the keys of the house from the woman and turning her out of doors, were probably considered to be acts of themselves significant enough, though it may be presumed that they were generally accompanied with declarations that could not be misunderstood. The general practice was apparently to deliver a written notice, and perhaps to assign a reason. In the case of Paula Valeria, mentioned by Cicero, no reason was assigned. By the *lex Julia de Adulteriis*, it was provided that there should be seven witnesses to a divorce, Roman citizens of full age (*púberes*), and a freedman of the party who made the divorce.

Under the Christian emperors divorce was punished in various ways, but still the power of divorce remained, as before, subject to the observance of certain forms. Theodosius and Valentinian III., and subsequently Justinian, made various laws, by which punishment was imposed, not only on the party who gave good cause for the divorce, or who without any good cause made a divorce, but also on both parties when they dissolved the marriage by agreement without good legal cause. The penalties in such cases varied with the circumstances; they were both pecuniary and personal.

The term *repudium*, it is said, properly applies to a marriage only contracted (*vid. Sponsalia*), and *divortium* to an actual marriage;⁷ but sometimes *divortium* and *repudium* appear to be used indifferently. The phrases to express a divorce are *nuncium remittere*, *divortium facere*; and the form of words might be as follow: "*Tuas res tibi habeto, tuas res tibi agito*."⁸ The phrase used to express the renunciation of a marriage contract were *renunciare repudium*, *repudium remittere*, *dicere*, and *repudiare*; and the form of words might be, "*Conditione tua non utor*."⁹

For the subject of Greek divorce, see ΑΠΟΑΕΙ-ΣΤΕΣ ΔΙΚΗ, and MARRIAGE, GREEK.

DOC'ANA (Δόκανα, τὰ: from *δοκός*, a beam) was an ancient symbolical representation of the Dioscuri (Castor and Polydeuces) at Sparta. It consisted of two upright beams, with others laid across them transversely.¹⁰ This rude symbol of fraternal unity evidently points to a very remote age, in which scarcely any attempts in sculpture can have

been made. At a later time, when works of art were introduced into all the spheres of ordinary life, this rude and ancient object of worship, like many others of its kind, was not superseded by a more appropriate symbol. The Dioscuri were worshipped as gods of war, and we know that their images accompanied the Spartan kings whenever they took the field against the enemy. But when, in the year 504 B.C., the two kings, during their invasion of Attica, failed in their undertaking on account of their secret enmity towards each other, it was decreed at Sparta that in future only one king should command the army, and, in consequence, should only be accompanied by one of the images of the Dioscuri.¹ It is not improbable that these images, accompanying the kings into the field, were the ancient *δόκανα*, which were now disjointed, so that one half of the symbol remained at Sparta, while the other was taken into the field by one of the kings. Suidas and the *Etymologicum Magnum*² state that *δόκανα* was the name of the graves of the Dioscuri at Sparta, and derived from the verb *δέχομαι*.³

DOCIMASIA (δοκιμασία). When any citizen of Athens was either appointed by lot or chosen by suffrage (*κληρωτός καὶ αἰρετός*) to hold a public office, he was obliged, before entering on its duties, to submit to a *δοκιμασία*, or scrutiny into his previous life and conduct, in which any person could object to him as unfit. This was the case with the archons, the senators, the strategi, and other magistrates. The examination, or anacrisis, for the archonship was conducted by the senators, or in the courts of the *heliæa*.⁴ The *δοκιμασία*, however, was not confined to persons appointed to public offices; for we read of the denouncement of a scrutiny (*ἐπαγγελία δοκιμασίας*) against orators who spoke in the assembly while leading profligate lives, or after having committed flagitious crimes. This denouncement might be made in public by any one *πρὸς δοκιμασίαν τοῦ βίου*, i. e., to compel the party complained of to appear before a court of justice, and give an account of his life and conduct. If found guilty, he was punished with *ἀτιμία*, and prohibited from the assemblies.⁵

We will now explain the phrase *ἄνδρα εἶναι δοκιμασθῆναι*. At the age of eighteen every Athenian became an *ephebus*, and after two years was enrolled among the men, so that he could be present and vote at the assemblies.⁶ In the case of wards who were heirs to property, this enrolment might take place before the expiration of the two years, on it's being established by a *δοκιμασία* that the youth was physically qualified to discharge any duties the state might impose upon him. If so, he was released from guardianship, and "became a man" (*ἄνθρωπος ἐγένετο ἢ ἐδοκιμάσθη*), being thereby empowered to enter upon his inheritance, and enjoy other privileges, just as if he were of the full age of twenty.⁷ We may add that the statements of the grammarians and orators are at variance on this point; but the explanation we have given seems the best way of reconciling them, and it agrees in substance with the supposition of Schömann, "that among the Athenians no one period was appointed for enrolment, provided that it was not done before the attainment of the 18th, nor after the completion of the 20th year."

DODRANS. (*Vid. As*, p. 110.)

DOGMATICI (δογματικοί), the oldest of the medical sects of antiquity, must not be confounded with

the philosophers mentioned by Diogenes Laërtius.¹ They derived their name from *δόγμα*, a philosophical tenet or opinion, because they professed to follow the opinions of Hippocrates, whence they were sometimes called *Hippocratici*. Thessalus, the son, and Polybus, the son-in-law of Hippocrates, were the founders of this sect, about B.C. 400, which enjoyed a great reputation, and held undisputed sway over the whole medical profession, till the establishment of the Alexandrian school of philosophy called *Empirici*. (*Vid.* *EMPIRICI*.) After the rise of this sect, for some centuries every physician ranged himself under one or other of the two parties. The different arguments brought forward on each side are stated with such clearness and elegance by Celsus,² that the passage relating to the *Dogmatici* is here given at full length, and the objections of the other party in the article *EMPIRICI*.

The *Dogmatici* held that it was necessary to be acquainted with the *hidden causes* of diseases, as well as the *more evident ones*; and to know how the *natural actions and different functions* of the human body take place, which necessarily supposes a knowledge of the *interior parts*. They gave the name of *hidden causes* to those which concern the elements or principles of which our bodies are composed, and the occasion of good or ill health. It is impossible, said they, for a person to know how to set about curing an illness unless he knows what it comes from; since there is no doubt that he must treat it in one way, if diseases in general proceed from the excess or deficiency of one of the four elements, as some philosophers have supposed; in another way, if all the malady lies in the humours of the body, as Herophilus thought; in another, if it is to be attributed to the respiration, according to the idea of Hippocrates (alluding, probably, to the work *Περὶ Πνεύματος*, *De Flatibus*, which is generally considered to be spurious); in another, if the blood excites inflammation by passing from the veins which are meant to contain it into the vessels that ought only to contain air, and if this inflammation produces the extraordinary movement of the blood that is remarked in fever, according to the opinion of Erasistratus; and in another, if it is by means of corpuscles which stop in the invisible passages and block up the way, as Asclepiades affirms to be the case. If this be granted, it must necessarily appear that, of all physicians, he will succeed the best in the cure of diseases who understands best their first origin and cause. The *Dogmatici* did not deny the necessity of experiments also; but they said that these experiments could not be made, and never had been made, but by reasoning. They added, that it is probable that the first men, or those who first applied themselves to medicine, did not recommend to their patients the first thing that came into their thoughts, but that they deliberated about it, and that experiment and use then let them know if they had reasoned justly or conjectured happily. It mattered little, said they, that people declared that the greater number of remedies had been the subject of experiment from the first, provided they confessed that these experiments were the results of the reasoning of those who tried the remedies. They went on to say, that we often see new sorts of diseases break out, for which neither experiment nor custom has yet found out any cure; and that, therefore, it is necessary to observe whence they came and how they first commenced, for otherwise no one can tell why, in such an emergency, he makes use of one remedy rather than another. Such according to the *Dogmatici*, are the reasons why a physician

ought to try and discover the *hidden causes* of diseases. As for the *evident causes*, which are such as can easily be discovered by anybody, and where one has only to know if the illness proceeds from heat or from cold, from having eaten too little or too much, and the like, they said it was necessary to inform one's self of all that, and make on it the suitable reflections; but they did not think that one ought to stop there without going any farther. They said again, with regard to the *natural actions*, that it was necessary to know wherefore and in what manner we receive the air into our lungs, and why we afterward expire it; why food is taken into the body, how it is there prepared, and then distributed through every part of it; why the arteries are subject to pulsation; what is the cause of sleep, wakefulness, &c.: and they maintained that a man could not cure the diseases relating to these several functions unless he were able to explain all these phenomena. To give an example taken from the process of digestion: The food, said these physicians, is either ground in the stomach, as Erasistratus thought; or it purifies, according to the notion of Plistonicius, a disciple of Praxagoras; or it is concocted by a peculiar heat, as was the opinion of Hippocrates; or else, if we are to believe Asclepiades, all these opinions are equally erroneous, and nothing is concocted, but the alimentary matter is distributed throughout the body in the same crude state in which it was taken into the mouth. However much they differ on this point, they all agree that the sort of nourishment proper for a sick person will vary according as one or other of these opinions be supposed to be the true one. For if the food is ground to pieces, we must choose that kind which is most easily ground; if it putrefies, we must give what putrefies most quickly; if it is concocted by heat, we must prefer such as is most apt to excite heat; but if it is not concocted, we need not select any of the above-mentioned kinds of food, but rather such as will remain as it is eaten, and change the least. And in the same way they argued that, when the breathing is affected, or there is too great sleepiness or wakefulness, if a physician understands thoroughly the nature of these phenomena, he will be able to cure the diseases connected with them. Lastly, they maintained that, as the principal pains and diseases proceed from the *internal parts*, it is impossible for a person to administer any remedy unless he is acquainted with these parts. They therefore contended that it was necessary to open dead bodies and examine the different viscera; but that it was much the best way to do as Herophilus and Erasistratus, who used to dissect alive the criminals condemned to death that were put into their hands, and who were thus enabled to behold during life those parts which nature had concealed, and to contemplate their situation, colour, figure, size, order, hardness or softness, roughness or smoothness, &c. They added, that it is not possible, when a person has any internal illness, to know what is the cause of it, unless one is exactly acquainted with the situation of all the viscera, nor can one heal any part without understanding its nature; that, when the intestines protrude through a wound, a person who does not know what is their colour when in a healthy state cannot distinguish the sound from the diseased parts, nor therefore apply proper remedies, while, on the contrary, he who is acquainted with the natural state of the diseased parts will undertake the cure with confidence and certainty; and that, it short, it is not to be called an act of cruelty, as some persons suppose it, to seek for the remedies of an immense number of *innocent* persons in the sufferings of a few *criminals*.

1. (*De Vit. Philos.*, *proem.*, 11.)—2. (*De Medic.*, *pref.* in lib. i.)

Such were their opinions, and the arguments by which they supported them. Additional information on the subject may be found in various parts of Galen's works.¹

DOLABRA, *dim.* DOLABELLA (σμίλη, *dim.* σμιλίον), a chisel, a celt.

For the purpose of planing and polishing wood, the ancients used either the adze, which was impelled in the direction exhibited in the woodcut at page 112 (*vid.* ASCIA), or the chisel, which was forced in the opposite direction, *i. e.*, from the body of the workman, as shown in the woodcut at page 62. On account of the use of these tools in ship-building, Juvenal² describes the merchant as trusting his life "ligno dolato." Statues also were made by the application of the chisel. "E robore dolatus,"³ "truncus dolamine effigiatus."⁴

The chisel used by stone-masons is represented at the bottom of the monument, which is the subject of the woodcut to the article CIRCINUS (p. 252). Ashlar, *i. e.*, stone adapted to be cut and smoothed by the chisel, was called "lapis dolabilis." A Greek epigram represents the inscription on a marble tomb as engraved by the strokes of the chisel (λατόποις σμίλῃς κεκολλημένον⁵), and such letters are called σμιληντὰ γράμματα.⁶

Dolabrae were also much employed in the operations of horticulture and agriculture. A small sharp chisel was used to cut out the dead wood from the trunk of the vine; an instrument of the same form, though, of course, much more blunt and rough, and yet called by the same name (*dolabella*), was employed to stir up the ground about its roots.⁷ This tool was likewise used to refresh the soil in rose-beds,⁸ and the same term "dolabra" is applied to the spud, or small spade, which the ploughman carried with him to destroy weeds. Hence the ancient glossaries translate *dolabra* "a tool for digging" (ὄρυς); and Columella⁹ says, with a view to this object, "Nec minus dolabra, quam vomere, bubulcus utatur."

It must have been in a form very similar that the *dolabra* was used by the Greek and Roman armies in making intrenchments and in destroying fortifications. When they made a breach in the wall of a city, the expression is "*Dolabris perfringere murum*."¹⁰ In what manner the instrument was applied we may infer from the statement of Livy,¹¹ that on a certain occasion soldiers were sent "with *dolabrae* to destroy a wall from its foundation," and that the execution of this task was easy, because the stones of which the wall was built were laid in clay or mud, and not in mortar. It is clear that the use of the chisels in this instance was to insert them between the stones, so as to remove the clay, and in doing this, to loosen and destroy the wall.¹²

Dolabrae abound in our public museums and in the cabinets of the curious, being known under the equivalent name of "celts" to antiquaries, who, however, generally use the word without understanding its true sense.¹³ "Celtes" is an old Latin word for a chisel, probably derived from *celo*, to engrave. Thus the phrase "*celte sculptantur in silice*" occurs in the Vulgate version of Job,¹⁴ and "*malleolo et celte literatus silex*" in an inscription found at Pola.¹⁵ These articles are for the most part of bronze, more rarely of hard stone. They are chiefly found, as we might expect from the ac-

count of their use given by Curtius, Livy, and Tacitus, in ancient earth-works and encampments, and in various instances a great number, even more than a hundred, have been discovered together. The sizes and forms which they present are as various as the uses to which they were applied. The annexed woodcut is designed to show a few of the most remarkable varieties. Fig. 1 is from a celt found, with several others, and with a number of Roman coins, at Karnbré in Cornwall.¹ Its length was six inches without the haft, which was no doubt of wood, and fixed directly into the socket at the top. It must have been a very effective implement for removing the stones in the wall of a city or fortification, after they had been first shattered and loosened in some degree by the battering-ram. The ear or loop which is seen in this and many other celts, would be useful to suspend them from the soldier's girdle, and may also have had a cord or chain attached to it to assist in drawing back the celt when ever it became too firmly wedged between the stones of the wall which it was intended to destroy.

Figs. 2 and 3 are from Sir W. Hamilton's collection in the British Museum. These chisels seem best adapted for the use of the carpenter. The celt (fig. 4) which was found in Furness, co. Lancaster,² instead of being shaped to receive, or to be inserted into a handle like the three preceding, is made thick, smooth, and round in the middle, so as to be conveniently manipulated without a handle. It is nine inches long, and weighs 2 lb. 5 oz. Its sharp edge is like that of a common hatchet, and may have been used for polishing timber.

On the other hand, figs. 5, 6, 7 exactly resemble the knife now used by leather-cutters, and therefore illustrate the account given by Julius Pollux, who reckons this same tool, the σμίλη, among the εργαλεία τοῦ σκηντοτόμου. This instrument was also used for cutting paper, and probably in the same manner (σμίλῃ χαρτοτόμος, sicula³).

The following woodcut shows a small bronze

celt fixed into a handle of stag's horn, and there-

1. (*Vid.* De Differ. Puls., iv., 3, p. 721, ed. Kühn.—De Meth. Med., iii., 1, 3, p. 159, 182, 184.—De Compos. Medicam. per Gen., ii., 1, p. 463.—Introd., cap. ii., p. 677.)—2. (xix, 57.)—3. (De Re Rust., ii., 2.)—10. (Curt., ix., 5.)—11. (xvi., 11.)—12. (Compare Liv., ix., 37.—Tacit., Hist., iii., 20.)—13. (See Jameson's Etym. Dict., s. v. Celt.)—14. (xix, 24.)—15. (Gruet., p. 329.)

1. (Borlase, Ant. of Cornwall, iii., 13.)—2. (Archæologia, v., p. 106.)—3. (Philox., Gloss.)

fore exemplifies one of the modes of attaching the metal to its haft. It was evidently adapted for very fine work, and is strongly contrasted with the above-figured celt from Cornwall. It was found in an ancient tomb in Wiltshire.¹ The two other figures in this woodcut represent the knife used in sacrifices, as it is often exhibited on cameos and bas-reliefs, being the "scena," "sacena," or "dolabra pontificalis" mentioned by Festus;² and the "securis dolabrata," or hatchet furnished with a chisel,³ as sculptured on a funeral monument.

DOLICHUS (δόλιχος). (Vid. STADIUM.)

DOLIUM, a cylindrical vessel, somewhat resembling our tubs or casks, into which new wine was put to let it ferment. It was at first made of earth. In the time of Pliny, wood does not appear to have been used for this purpose either in Greece or Rome. At a later period *dolia* were made of wood, held together with hoops. Palladius⁴ speaks of *dolia* containing two hundred *congi*: it is incredible that such large vessels were made of earth. The shape preferred for *dolia* was long, and of a small diameter. Immediately after they were made they were covered with pitch, and subjected to a farther preparation, after which they were filled with wine, but not quite to the brim, and placed in a chamber (*cella vinaria*), which was at least high enough above the earth to have windows. Here the *dolia* either stood on the ground or were let into it (*demersa, depressa, or defossa*). Wine which would not keep long was drunk from the *dolia*; that which improved by keeping was transferred from them to *amphora*. The *cupa* and *serie* were vessels like the *dolia*, and used for the same purpose.⁵

DE DOLO MALO ACTIO. (Vid. CULPA.)

DOLUS MALUS. (Vid. CULPA.)

DOMINIUM. Dominium signifies quitarian ownership, or property in a thing; and dominus, or dominus legitimus, is the owner. Possessor is often used by Roman writers as equivalent to owner; but this is not a correct use of the word. In like manner, "to have ownership" is sometimes expressed by "possidere," and the thing in which there is property is sometimes called "possessio."⁶

The complete notion of property or ownership comprehends the determination of the things which may be the objects of ownership; the power which a man may have over such subjects, both as to duration of time and extent of enjoyment; the modes in which ownership may be acquired and lost; the persons who are capable of acquiring, transferring, or losing ownership.

Res is the general name for anything. The chief division of res is into res divini juris and res humani juris. Res divini juris are those which are appropriated to religious purposes, namely, res sacre, sanctæ, religiosæ; and, so long as they have this character, they cannot be objects of property. Res humani juris are all other things that can be the objects of property, and they are either res publicæ or res privatæ. Res publicæ belong to the corporation of the state, and can only become private property by being deprived of this public character. (Vid. AGRARIÆ LEGES.) Res universitatis are the property of a corporate body, which are not the property of any individual of the corporation. The phrase res nullius is ambiguous; it sometimes means that the thing cannot be the property of any individual, which is affirmed of things divini juris; when applied to things humani juris, it sometimes means that they are not the property of an individual, but of a body; yet such things may become the

property of an individual; res hereditariæ are res nullius until there is a heres. Res communes are those which cannot be the objects of property, and therefore are res nullius, as the sea.

Res corporales are defined to be those "quæ tangi possunt;" incorporeales are those "quæ tangi non possunt, sed in jure consistunt," as HEREDITAS, USUSFRUCTUS, OBLIGATIONES; and they are consequently incapable of tradition or delivery.

Corporal things are divided into immobiles, or solum et res soli, and mobiles. The class of things "quæ pondere, numero, mensura constant," are such things as wine, oil, corn, silver, gold, which are of such a nature that any the same number, weight, or measure may be considered the same thing. (Vid. MUTUUM.) There is another class of res, consisting of those "quæ usu consumuntur, minuuntur," and those "quæ non," which may or may not be the same as things "quæ numero," &c.

A thing may either be a unity, singula res, or it may be several things of the same kind, singule res, or it may be a thing compounded of many various things, universitas, by which is understood a whole property, all that a person has, without respect to its component parts, and with all the rights and obligations attached to it.

The division of things into res mancipi and res nec mancipi was one of ancient origin; and it continued to a late period in the Empire to be an important distinction. Res mancipi are not farther known than by an enumeration of them, which is perhaps imperfect:¹ they are prædia in Italico solo, both rustic and urban; also jura rusticorum prædiorum or servitutis, as via, iter, aquæductus; also slaves, and four-footed animals, as oxen, horses, &c., quæ collo dorsove domantur. Other things were nec mancipi.

All the things have been enumerated which are the subject of dominium, and some which are not. Every dominus has a right to the possession of the thing of which he is dominus; but possession alone, which is a bare fact without any legal character, neither makes a man dominus, nor does the want of possession deprive him of dominium. Possession has the same relation to a legal right to a thing, as the physical power to operate upon it has to the legal power; and, accordingly, the doctrine of possession precedes that of ownership. Things cannot be the objects of possessio civilis which cannot be the objects of dominium.

The class of things called jura in re are not properly subjects of ownership (*dominium*), though a claim to them is prosecuted by an actio in rem: they are servitutis, emphyteusis, superficies, and pignus and hypotheca.

Dominium properly signifies the right of dealing with a corporeal thing as a person (*dominus*) pleases; this, of course, implies the right to exclude all others from meddling with it. The dominus has the right to possess, and is distinguished in that respect from the bare possessor, who has only the right of possession. The term dominium is sometimes (improperly) extended to jura in re; and sometimes he who takes as heres is called dominus hereditatis. Jura, or jura in re, are, however, detached parts of property, which are opposed to dominium, as the totality of all the rights of property. Even the usufructuarius is never considered as owner, and proprietas is the name for that which remains after the usufructus is deducted from the ownership. Ownership may be either absolute, that is, as complete as the law allows any ownership to be, or it may be limited. The distinction between bare ownership and ownership united with the beneficial interest, is explained in another place. (Vid.

1. (Sir R. C. Hoare's Anc. Wilts. South, p. 182, 203.)—2. (s. v. Scena.)—3. (Pallad. De Re Rust., i. 43.)—4. (x. 11.)—5. (Becker, Gallus, ii. 166, &c.)—6. (See Savigny's remarks on the subject, "Das Recht des Besitzes," p. 85.)

1. (Ulp., Frag., xix.)

BONA.) A person who has no ownership of a thing may have rights in or to a thing (*jura in re*), which, as far as they extend, limit the owner's power over his property. Ownership, being in its nature single, can only be conceived as belonging to one person; consequently, there cannot be several owners of one thing, but several persons may own undivided shares or parts of a thing.

In order to acquire ownership, a person must have a legal capacity to acquire; and ownership may be acquired by such a person, or by another for him. There must also be a thing which can be the object of such ownership, and there must be a legal mode of acquisition (*acquisitio civilis*). Ownership may be acquired in single things (*acquisitio rerum singularium*), or it may be acquired in a number of things of different kinds at once (*acquisitio per universitatem*), in which case a person acquires them not as individual things, but as parts of a whole. The latter kind of acquisition is either *successio inter vivos*, as in the case where a man adrogates another, and so becomes the owner of all the adrogated person's property;¹ or it is *successio mortis causa*, as in the case of a testamentary heres, or a heres ab intestato.

Acquisitiones per universitatem are properly discussed under other heads (*vid. ADOPTIO, HERES, UNIVERSITAS*). The following remarks apply to acquisitiones rerum singularium. Acquisitions were either *civiles* (*ex jure civili*), or *naturales* (*ex jure gentium*), that is, there was no formality prescribed for the mode of acquisition: in both cases dominium could be acquired. The *civiles acquisitiones* of single things were by *mancipatio*, in *jure cessio*, and *usucapio*: those *naturali jure* were by *traditio* or *delivery*. In the case of *res mancipi*, the only modes of acquiring dominium were *mancipatio*, in *jure cessio*, and *usucapio*; but *usucapio* applied also to things *nec mancipi*. The alienation of things *nec mancipi* was the peculiar effect of *traditio*, or bare delivery,² and if there was a *justa causa*, dominium was thus acquired; for *traditio*, in the case of a thing *mancipi*, merely made it *in bonis*, and the ownership continued unchanged. The notion that, in the case of *res nec mancipi*, bare *traditio* did not confer *quiritarian* ownership or dominium, is erroneous; for when the Roman law did not require peculiar forms, the transfer of ownership was effected in what may be called the natural way, that is, the simplest and most easy way in which the parties to the act could show their meaning and carry it into effect.

A man who was *dominus* of a thing, whether acquired *jure civili* or *naturali*, prosecuted his right to it in the same way, by the *rei vindicatio*. He could not, of course, prosecute such a right unless he was out of possession, and, in order to succeed, he must prove his ownership. If he had a thing in *bonis*, and was in possession, he acquired the ownership by *usucapio*: if he was out of possession, it seems not an improbable conjecture of Unterholzner,³ that he was aided in his action, after the time when the *legis actiones* fell into disuse and the formula was introduced (for as to a previous time it is difficult to form any conjecture), by the fiction of his having received the property *mancipatione*. There are examples of a similar fiction in the case of the *bonorum possessor* and the *bonorum emptor*.⁴ A man could only dispose of a legacy by his will *per vindicationem*⁵ when he had the dominium of it: otherwise he could only give it *per damnationem* or *sinendi modo*. A slave who was the property of his master (*dominus*) might attain the Ro-

man *civitas* by the act of *manumissio*: if he was only in *bonis* of the person who manumitted him, he became only a *Latinus* by the act of *manumissio*. The difference between *quiritarian* ownership and in *bonis* was destroyed by the legislation of Justinian, who declared in *bonis* to be complete ownership.

Some modern writers enumerate, in addition to the *civiles acquisitiones* here enumerated, *addictio*, *emptio sub corona*, *sectio bonorum*, *adjudicatio*, and *lex*, by which last they understand those circumstances under which some special enactment gives property to a person, and *caducum* (*vid. CADUCUM*) is mentioned as an instance.

A *bonæ fidei possessio* was not ownership (*dominium*), nor was it the same as in *bonis*. The two things are distinguished by Ulpian.¹ A *bonæ fidei* possessor had a capacity for acquiring by *usucapio* the ownership of the thing possessed. He had a kind of action, *actio publiciana in rem*, by which, if he lost the possession before he had acquired the ownership by *usucapio*, he could recover it against all but the owner, in which latter respect he differed from him who had a thing in *bonis*, for his claim was good against the person who had the bare ownership.

As to *fundi provinciales*, it was an old principle of Roman law that there could be no dominium in them, that is, no *quiritarian* ownership (*vid. AGRARIÆ LEGES*); nor were they said to be in *bonis*; but the occupier had *possessio* and *usufructus*. In fact, the terms *dominium* and in *bonis* were not applicable to provincial lands, nor were the fictions that were applicable to things in *bonis* applicable to provincial lands; but it is an ingenious conjecture of Unterholzner, that the formula *actionis* was adapted to the case of provincial lands by a fiction of their being *Italic* lands, combined with a fiction of their being acquired by *usucapio*. In the case of the *ager publicus* in Italy, the dominium was in the Roman people, and the terms *possessio* and *possessor* were appropriate to the enjoyment and the person by whom the land was enjoyed. Still the property in provincial land was like the property in *bonis* in Rome and Italy, and it consequently became dominium after the distinction between *quiritarian* and *bonitarian* ownership was destroyed.

Ownership was also acquired in the case of *occupatio*, *accessio*, &c. (*vid. ACCESSIO, ALLUVIO, CONFUSIO*.)

A man who had a legal capacity could acquire property either himself or by those who were "in potestate, manu, mancipiove." He could even acquire thus *per universitatem*, as in the case of an *hereditas*; and also he could thus acquire a legacy. If a slave was a man's in *bonis*, everything that the slave acquired belonged to the owner in *bonis*, and not to him who had the bare *quiritarian* ownership. If a man was the "bona fide possessor" of another person, whether that person happened to be a free-man supposed to be and possessed as a slave, or was the property of another, the possessor only acquired the ownership of that which the person so possessed acquired "ex re possidentis" and ex "operis suis." The same rule applied to a slave in which a man had only the *usufructus*; and the rule was consistent with the rule just laid down, for *usufructus* was not property. Sons who were in the power of a father, and slaves, of course, could not acquire property for themselves. (*vid. PECULUM*.)

Ownership was lost either with the consent of the owner or against it. With the consent when he transferred it to another, which was the general

1. (Gaius, iii., 21.)—2. (Ulp., Frag., xix., 8.)—3. (Rhein. Mus. für Jurisprud. Erster Jahrgang, p. 129.)—4. (Gaius, iv., 34, 35.)—5. (Ulp., Frag., xxiv., 7.)

mode of acquiring and losing property; without the consent when the thing perished, when it became the property of another by accession or usucapion, when it was judicially declared to be the property of another, or forfeited by being pledged. Ownership was not lost by death, for the heres was considered to be the same person as the defunct.

As certain persons had not a capacity to acquire, so some persons had not a liability to lose when others had. Thus the property of a pupillus who was in tutela legitima could not become the property of another by usucapion; a fundamental principle of law, which Cicero, with good reason, was surprised that his friend Atticus did not know.¹

Ownership might be lost by the maxima capitis diminutio; when it was the consequence of a conviction for a capital crime, the property was forfeited to the state. (Vid. SECTIO BONORUM.) The media capitis diminutio only affected an incapacity for quiritarian ownership: the person could still retain or acquire property by the jus gentium; still, if the media capitis diminutio was the consequence of conviction for a capital crime, it had the same consequences as the maxima.²

DOMINUS. (Vid. DOMINIUM.)

DOMITIA LEX. (Vid. PONTIFEX.)

DONUS. (Vid. HOUSE.)

DONARIA (ἀναθήματα or ἀνακείμενα) are names by which the ancients designated presents made to the gods, either by individuals or communities. Sometimes they are also called *donata* or δώρα. The belief that the gods were pleased with costly presents, was as natural to the ancients as the belief that they could be influenced in their conduct towards men by the offering of sacrifices; and, indeed, both sprang from the same feeling. Presents were mostly given as tokens of gratitude for some favour which a god had bestowed on man; but some are also mentioned which were intended to induce the deity to grant some especial favour. At Athens, every one of the six thesmothetæ, or, according to Plato,³ all the nine archons, on entering upon their office, had to take an oath, that if they violated any of the laws, they would dedicate in the temple of Delphi a gilt statue of the size of the man who dedicated it (ἀνδρὶ μῆντα χρυσὸν ἰσομέτηρον⁴). In this last case the anathema was a kind of punishment, in which the statue was regarded as a substitute for the person forfeited to the gods. Almost all presents of this kind were dedicated in temples, to which, in some places, an especial building was added, in which these treasures were preserved. Such buildings were called θησαυροὶ (treasuries); and in the most frequented temples of Greece, many states had their separate treasures.⁵ The act of dedication was called ἀναθεῖναι, *donare*, *dedicare*, or *sacrare*.

The custom of making donations to the gods is found among the ancients from the earliest times of which we have any record, down to the introduction of Christianity; and even after that period, it was, with some modifications, observed by the Christians during the Middle Ages. In the heroic ages of Grecian history the anathemata were of a simple description, and consisted of chaplets and garlands of flowers. A very common donation to the gods seems to have been that of locks of hair (κόμης ἀπαρχαί), which youths and maidens, especially young brides, cut off from their heads and

consecrated to some deity.¹ This custom in some places lasted till a very late period: the maidens of Delos dedicated their hair before their wedding to Hecate,² and those of Megara to Iphinoë. Pausanias³ saw the statue of Hygieia at Titane covered all over with locks of hair, which had been dedicated by women. Costly garments (πέπλοι) are likewise mentioned among the earliest presents made to the gods, especially to Athena and Hera.⁴ At Athens, the sacred πέπλος of Athena, in which the great adventures of ancient heroes were worked, was woven by maidens every fifth year, at the festival of the great Panathenæa. (Vid. ΑΡΡΗΦΗΘΗΡΙΑ.)⁵ A similar peplos was woven every five years at Olympia by sixteen women, and dedicated to Hera.⁶

At the time when the fine arts flourished in Greece, the anathemata were generally works of art of exquisite workmanship, such as high tripods bearing vases, craters, cups, candelabras, pictures, statues, and various other things. The materials of which they were made differed at different times; some were of bronze, others of silver or gold,⁷ and their number is to us almost inconceivable.⁸ The treasures of the temples of Delphi and Olympia, in particular, surpass all conception. Even Pausanias, at a period when numberless works of art must have perished in the various ravages and plunders to which Greece had been exposed, saw and described an astonishing number of anathemata. Many works of art are still extant, bearing evidence, by their inscriptions, that they were dedicated to the gods as tokens of gratitude. Every one knows of the magnificent presents which Cræsus made to the god of Delphi.⁹ It was an almost invariable custom, after the happy issue of a war, to dedicate the tenth part of the spoil (ἀκρόθινον, ἀκρόλειον, or πρωτόλειον) to the gods, generally in the form of some work of art.¹⁰ Sometimes magnificent specimens of armour, such as a fine sword, helmet, or shield, were set apart as anathemata for the gods.¹¹ The Athenians always dedicated to Athena the tenth part of the spoil and of confiscated goods; and to all the other gods collectively, the fiftieth part.¹² After a seafight, a ship, placed upon some eminence, was sometimes dedicated to Neptune.¹³ It is not improbable that trophies, which were always erected on the field of battle, as well as the statues of the victors in Olympia and other places, were originally intended as tokens of gratitude to the god who was supposed to be the cause of the success which the victorious party had gained. We also find that, on some occasions, the tenth part of the profit of some commercial undertaking was dedicated to a god in the shape of a work of art. Respecting the large and beautiful crater dedicated by the Samians to Hera, see the article CRATER.

Individuals who had escaped from some danger were no less anxious to show their gratitude to the gods by anathemata than communities. The instances which occur most frequently are those of persons who had recovered from an illness, especially by spending one or more nights in a temple of Asclepius (*incubatio*). The most celebrated temples of this divinity were those of Epidaurus, Cos, Tricca, and, at a later period, that of Rome.¹⁴ Cures

were also effected in the Grotto of Pluto and Proserpina, in the neighbourhood of Nysa.¹ In all cases in which a cure was effected, presents were made to the temple, and little tablets (*tabulae votivae*) were suspended on its walls, containing an account of the danger from which the patients had escaped, and of the manner in which they had been restored to health. Some tablets of this kind, with their inscriptions, are still extant.² From some relics of ancient art, we must infer, that in some cases, when a particular part of the body was attacked by disease, the person, after his recovery, dedicated an imitation of that part in gold or silver to the god to whom he owed his recovery. Persons who had escaped from shipwreck usually dedicated to Neptune the dress which they wore at the time of their danger;³ but if they had escaped naked, they dedicated some locks of their hair.⁴ Shipwrecked persons also suspended votive tablets in the Temple of Neptune, on which their accident was described or painted. Individuals who gave up the profession or occupation by which they had gained their livelihood, frequently dedicated in a temple the instruments which they had used, as a grateful acknowledgment of the favour of the gods. The soldier thus dedicated his arms, the fisherman his net, the shepherd his flute, the poet his lyre, cithara, or harp, &c.

It would be impossible to attempt to enumerate all the occasions on which individuals, as well as communities, showed their gratefulness towards the gods by anathemata. Descriptions of the most remarkable presents in the various temples of Greece may be read in the works of Herodotus, Strabo, Pausanias, Athenæus, and others.

The custom of making presents to the gods was common to Greeks and Romans, but among the latter the donaria were neither as numerous nor as magnificent as in Greece; and it was more frequent among the Romans to show their gratitude towards a god by building him a temple, by public prayers and thanksgivings (*supplicatio*), or by celebrating festive games in honour of him, than to adorn his sanctuary with beautiful and costly works of art. Hence the word donaria was used by the Romans to designate a temple or an altar, as well as statues and other things dedicated in a temple.⁵ The occasions on which the Romans made donaria to their gods are, on the whole, the same as those we have described among the Greeks, as will be seen from a comparison of the following passages: Liv., x., 36; xxix., 36; xxxii., 30; xl., 40, 37.—Plin., *Hist. Nat.*, vii., 48.—Suet., *Claud.*, 25.—Tacit., *Ann.*, iii., 71.—Plaut., *Amphitr.*, III., ii., 65; *Curcul.*, I., i., 61; II., ii., 10.—Aurel. Vict., *Cæs.*, 35.—Gellius, ii., 10.—Lucan, ix., 515.—Cic., *De Nat. Deor.*, iii., 37.—Tibull., ii., 5, 29.—Horat., *Epist.*, I., i., 4.—Stat., *Sylv.*, iv., 92.

DONATIO MORTIS CAUSA. There were three kinds of donatio mortis causa: 1. When a man, under no present apprehension of danger, but moved solely by a consideration of human mortality, makes a gift to another. 2. When a man, being in immediate danger, makes a gift to another in such a manner that the thing immediately becomes the property of the donee. 3. When a man, under the like circumstances, gives a thing in such a manner that it shall become the property of the donee in case the giver dies. Every person could receive such a gift who was capable of receiving a legacy.

It appears, then, that there were several forms

of gift called donatio mortis causa; but the third seems the only proper one, and that of which mention is chiefly made, for it was a rule of law that a donation of this kind was not perfected unless death followed, and it was revocable by the donor. A thing given absolutely could hardly be a donatio mortis causa, for this donatio had a condition attached to it, namely, the death of the donor and the survivorship of the donee.¹ The thing might be a thing capable of traditio or delivery, or it might be a promise of a sum of money to be paid after the death of the testator. It would appear as if the law about such donations was not free from difficulty. They were finally assimilated to legacies in all respects by Justinian, though this had been done in some particulars before his time. Still they differed in some respects from legacies, for such a donation could take effect though there was no heres; and a filius familias, who could not make a will, might, with his father's consent, make a donatio mortis causa.

The English law of donationes mortis causa is first stated by Bracton² in the very words of the Digest;³ and the present law is expounded by Lord Hardwicke;⁴ but what he there states to be the English law is not exactly the law as stated in Bracton. The rules of donationes mortis causa in English law are now pretty well fixed. Tradition or delivery is considered one essential of such a gift, and the death of the donor is another essential. The gift must not be an absolute gift, but a gift made in contemplation of, and to be perfected by the death of the donor.⁵

DONATIO PROPTER NUPTIAS signifies that which is given by a husband or by any other person to a woman on the occasion of her marriage, whether it be by way of security for her dos, or for her support during the marriage or widowhood. Justinian required this donatio whenever the wife brought a dos; and it was enacted that it should be equal in amount to the dos, and should be increased when the dos was increased. Such a gift was the property of the wife, but it was managed by the husband, and he was bound to apply it to its proper purposes; but he could not alienate it, even with the consent of the wife.⁶

DONATIONES INTER VIRUM ET UXOREM. During marriage, neither husband nor wife could, as a general rule, make a gift of anything to one another. This rule would, however, only apply where there was no conventio in manum; for in such a case the rule of law would be unnecessary, because a gift between husband and wife would be legally impossible. The reason for this rule was said to be the preservation of the marriage relation in its purity, as a contract subsisting by affection, and not maintained by purchase or by gift from one party to the other. The reason seems a singular one, but it is that which is given by the Roman writers. It has apparently a tacit reference to the power of divorce, and appears like an implied recommendation of it when the conjugal affection ceases. Donations of this kind were, however, valid when there were certain considerations, as mortis causa, divortii causa, servi manumittendi gratia. By certain imperial constitutions, a woman could make gifts to her husband in order to qualify him for certain honours. It must be remembered, that when there was no conventio in manum,⁷ a wife retained all her rights of property which she did not surrender on her marriage (*vid. Dos*), and she might, during the marriage, hold property quite distinct from her

1. (Compare Dig. 39, tit. 6, s. 1 and 35.)—2. (ii., c. 26.)—3. (36, tit. 6, s. 2, &c.)—4. (Ward v. Turner, 2 Vez., 431.)—5. (Dig. 39, tit. 6.—Cod. viii., tit. 57.)—6. (Cod. v., tit. 3.—Nov 97, c. 1; 117, c. 4, &c.)—7. (Gaius, ii., 95.)

husband. It was a consequence of this rule as to gifts between husband and wife, that every legal form by which the gift was affected to be transferred, as *manipatio*, *cessio*, and *traditio*, conveyed no ownership; stipulations were not binding, and acceptations were no release. A difficulty might remain as to *usucapio*, but the law provided for this also. If a woman received from a third person the property of her husband, and neither the third person, nor she, nor her husband knew that it was the husband's property, she might acquire the ownership by *usucapio*. If both the giver and the husband knew at the time of the gift that it was the husband's property, and the wife did not know, it might also become her property by *usucapio*; but not if she knew, for in that case the *bona fides* which was essential to the commencement of possession was wanting. If, before the ownership was acquired by *usucapio*, the husband and wife discovered that it was the husband's, though the husband did not choose to claim it, there was no *usucapio*; for this would have been a mere evasion of the law. If, before the ownership was acquired by *usucapio*, the wife alone discovered that it was the husband's property, this would not destroy her right to acquire the property by *usucapio*. This, at least, is Savigny's ingenious explanation of the passage in Digest 24, tit. 1, s. 44. The strictness of the law as to these donations was relaxed in the time of S. Severus, and they were made valid if the donor died first, and did not revoke his gift before death. There were also some exceptions as to the general rule, which it is not necessary to particularize here.¹

DONATI VUM. (*Vid. CONGIARIUM.*)

*DONAX (*δῶναξ*), the species of reed called *Arundo donax*. It derives its name from *δῶνα*, "to agitate" or "disturb," from its being easily agitated by the wind. Pliny, in speaking of it, says, "*calamus fruticosissimus, qui vocatur Donax*."² Virgil styles it "*fluvialis*."³ It was used for shepherds' pipes, writing-pens, angling-rods, &c. The modern Greeks call it *Κάλαμος*. Sibthorp found it everywhere in the marshy grounds.⁴

*DORCAS (*δορκάς*). By the earlier commentators on the classics, it was taken for a species of wild goat, but it is now generally acknowledged to be the Gazelle, or *Antelope Dorcas*. "In fact," observes Adams, "the Arabian medical authors, Avicenna and Haly Abbas, were aware that it meant the Gazelle; hence the term *δορκαδίζων* of Galen is rendered *gazellans* by their translators. The *δορκας* is the *tschi* of the Hebrew Scriptures. It is also called *ζόρος* and *πρόξ*."⁵

DORPEIA or DORPIA. (*Vid. APATURIA*, p. 66.)

DORPON. (*Vid. DREIPON.*)

DORSUARIUS or DOSSUARIUS (*νωτοφόρος*), a beast of burden.

In the mountainous parts of Italy, where it was impossible to use wheeled carriages, the produce of the country was borne on the backs of quadrupeds. In this manner the corn, wine, and oil of Apulia and Calabria were conveyed to the seacoast by asses, which are described by Varro⁶ as "*aselli dossuarii*." In these elevated regions, as we learn from the same author,⁷ the necessities of life were brought to the pastoral inhabitants either by mares or by any other animal, "*quod onus dorso ferre possit*,"

an expression designed to explain the etymology of the epithet "*dossuarius*."¹

Beasts of burden also accompanied the army,² and were used to carry a part of the baggage. In Eastern countries the camel has always been employed as a beast of burden.³

The "*jumenta dossuaria*" carried their load either by means of panniers (*καθήλια*) (*vid. CURET. LÆ*) or of the pack-saddle (*σάγμα*). From using the latter, they were called "*equi sagmarii*," "*muli sagmarii*," &c., whence came the German "*saumthier*," "*saum-ross*," &c., and the English "*sumpter-mule*" and "*sumpter-horse*."⁴

The following woodcut, representing a mule and a camel accompanied by two Scythian or Gothic conductors, is taken from the column which was erected at Constantinople to commemorate the victories of Theodosius I., and of which drawings were made by command of Mohammed II.

*DORYCNium (*δορύκνιον*), a plant, in determining which, botanical writers find some difficulty. The evidence preponderates in favour of the *Convolvulus Dorycnium*, or Shrubby Bindweed.⁵

DORY (*δόρυ*). (*Vid. HASTA.*)

DOS (GREEK). Euripides⁶ makes Medea complain that, independent of other misfortunes to which women were subject, they were obliged to buy their husbands by great sums of money (*χρημάτων υπερβολή*). On this the scholiast remarks, that the poet wrote as if Medea had been his contemporary, and not a character of the heroic ages, in which it was customary for the husband to purchase his wife from her relations by gifts called *ἔδνα* or *ἐδῶνα*. The same practice prevailed in the East during the patriarchal ages,⁷ and Tacitus⁸ says of the ancient Germans, "*Dotem non uxor marito, sed uxori maritus offert*."

The custom of the heroic times is illustrated by many passages in Homer. Thus we read of the *ὑπερβία* and *μυρία ἔδνα*, or many gifts by which wives were purchased.⁹ In another place¹⁰ we are told of a hundred oxen and a thousand sheep and goats having been given by a Thracian hero to his maternal grandfather, whose daughter he was about to marry. Moreover, the poetical epithet, *ἀλφειόβοιαι*,¹¹ applied to females, is supposed to have had its origin in the presents of this sort which were made to a woman's relatives on her marriage. These nuptial gifts, however, or equivalents for them, were returned to the husband in the event of the commission of adultery by his wife, and perhaps in other cases.¹²

We must not infer from the above facts that it was not usual in those times for relations to give a portion with a woman when she married. On the contrary, mention is made¹³ of the *μείλια*, or marriage gifts which men gave with their daughters (*ἐπέδωκαν*), and we are told by Æschines¹⁴ of one of the sons of Theseus having received a territory near Amphipolis as a *φερνή*, or dower with his wife.

1. (Compare Virg., *Georg.*, i. 273-275.)—2. (Xen., *Cyr.*, vi. 2 § 34.)—3. (Diod. Sic., ii. 54; *ibid.*, 45; xvii. 105.)—4. (Menage Dict. Etym., s. v. *Sommier*.—Adelung, *Glossar. Manuale*, t. vi. p. 22-24.)—5. (Nicand., *Alex.*, 376.—Dioscor., iii. 75.—Galen De Simplic., vi.—Schulze, *Toxicol. Vet.*—Schneider ad Nicand., l. c.—Adams, *Append.*, s. v.)—6. (Medea, 236.)—7. (Genes., xxxiv. 2.)—8. (German, c. 18.)—9. (Il., xvi. 178, 180.)—10. (Il., xi. 243.)—11. (Hecateo ad Il., xvii. 593.)—12. (Od., viii. 316.)—13. (Il., ix. 147.)—14. (περί Παιονισσῶν, 33.)

1. (Dig. 24, tit. 1.—Savigny, *Zeitschrift*, &c., i. p. 270.)—2. (H. N., xvi. 36.)—3. (Georg., ii. 414.)—4. (Billerbeck, *Flora Classica*, p. 26.)—5. (Aristot., H. A., ii. 2.—Ælian, N. A., vii. 47.—Adams, *Append.*, s. v.)—6. (De Re Rust., ii. 6.)—7. (c. 10.)

Moreover, both Andromache and Penelope are spoken of as *ἀλοχοι πολύδαρυι*,¹ or wives who brought to their husbands many gifts, which probably would have been returned to their relations in case of a capricious dismissal.²

The Doric term for a portion was *δωτήνη*, and Müller³ observes that we know for certainty that daughters in Sparta had originally no dowry, but were married with a gift of clothes only; afterward they were at least provided with money and other personal property:⁴ but in the time of Aristotile,⁵ so great were the dowers given (*διὰ τὸ προίκας δοῦναι μεγάλας*), and so large the number of *ἐπικληροί*, or female representatives of families (*οἰκοί*), that nearly two fifths of the whole territory of Sparta had come into the possession of females. The regulations of Solon were, according to Plutarch,⁶ somewhat similar in respect of dower to the old regulations at Sparta: for the Athenian legislator, as he tells us, did not allow a woman, unless she were an *ἐπικληρος*, to have any *φερνή* or dower, except a few clothes and articles of household furniture. It is plain, however, that such an interference with private rights could not be permanent; and, accordingly, we find that, in after times, the dowers of women formed, according to the account in Böckh,⁷ a considerable part of the movable property of the state: "even with poor people they varied in amount from ten to a hundred and twenty minas. The daughter of Hipponic received ten talents at her marriage, and ten others were promised her." This, however, was a very large portion, for Demosthenes⁸ informs us that even five talents were more than was usually given, and Lucian⁹ also speaks of the same sum as a large dowry. The daughters of Aristides received from the state, as a portion, only thirty minæ each.¹⁰ We may observe, too, that one of the chief distinctions between a wife and a *παλλακή* consisted in the former having a portion, whereas the latter had not; hence persons who married wives without portions appear to have given them or their guardians an *ὁμολογία προικός*,¹¹ or acknowledgment in writing, by which the receipt of a portion was admitted. (*Vid. CONCUBINA.*) Moreover, poor heiresses (*τῶν ἐπικληρῶν ἡσὰ θετικῶν τελευτῶν*) were either married or portioned by their next of kin (*vid. ARCHON.*), according to a law which fixed the amount of portion to be given at five minæ by a Pentacosimedimnus, three by a Horseman, and one and a half by a Zeugites.¹² In illustration of this law, and the amount of portion, the reader is referred to Terence, who says,¹³

*"Lex est ut orba, qui sint genere proximi
Iis nubant;"*

and again,

"Iidem ut cognata si sit, id quod lex jubet,

*Dotem dare, abduce hanc: minas quinque accipe."*¹⁴

We will now state some of the conditions and obligations attached to the receipt of a portion, or *προίξ*, in the time of the Athenian orators. The most important of these was the obligation under which the husband lay to give a security for it, either by way of settlement on the wife, or as a provision for repayment in case circumstances should arise to require it. With regard to this, we are told that, whenever relatives or guardians gave a woman a portion on her marriage, they took from the husband, by way of security, something equivalent to it, as a house or piece of land. The person who gave

this equivalent (*τὸ ἀποτίμημα*) was said *ἀποτίμειν*: the person who received it, *ἀποτιμάσθαι*.¹ The word *ἀποτίμημα* is also used generally for a security.² The necessity for this security will appear from the fact that the portion was not considered the property of the husband himself, but rather of his wife and children. Thus, if a husband died, and the wife left the family (*ἀπέλιπε τὸν οἶκον*), she might claim her portion, even though children had been born;³ and in the event of a wife dying without issue, her portion reverted to the relatives who had given her in marriage (*οἱ κύριοι*) and portioned her.⁴ The portion was also returned if a husband put away his wife, and in some cases, probably settled by law, when a woman left her husband.⁵

That, after the death of the wife, her portion belonged to her children, if she had left any, may be inferred from Demosthenes;⁶ if they were minors, the interest was set apart for their education and maintenance. When the husband died before the wife, and she remained in the family (*μενούσης ἐν τῷ οἴκῳ*), the law appears to have given her portion to her sons, if of age, subject, however, to an allowance for her maintenance.⁷

If the representatives of the deceased husband (*οἱ τὸν κληρὸν ἔχοντες*) wrongfully withheld her portion from his widow, her guardians could bring an action against them for it, as well as for alimony (*δίκη προικός καὶ σίτου*).⁸ Moreover, if a husband, after dismissing his wife, refused to return her portion, he might be sued for interest upon it as well as the principal: the former would, of course, be reckoned from the day of dismissal, and the rate was fixed by law at nine oboli for every mina, or about 18 per cent. The guardians were farther authorized by the same law to bring an action for alimony in the *Ὠλιδεῖον*.⁹ We may add that a *δίκη προικός* was one of the *ἐμμενοὶ δίκαι*, or snits that might be tried every month.¹⁰

DOS (ROMAN). Dos (*res uxoria*) is everything which, on the occasion of a woman's marriage, was transferred by her, or by another person, to the husband, or to the husband's father (if the husband was in his father's power), for the purpose of enabling the husband to sustain the charges of the marriage state (*onera matrimonii*). All the property of the wife which was not made dos, or was not a donatio propter nuptias, continued to be her own, and was comprised under the name of parapherna. The dos, upon its delivery, became the husband's property, and continued to be his so long as the marriage relation existed. All things that could be objects of property (*vid. DOMINIUM*), as well as a *jus in re*, and, in fact, anything by which the substance of the husband could be increased, might be the objects of dos. Any person who had a legal power to dispose of his property could give the dos; but the dos was divided into two kinds, dos profecticia and dos adventicia, a division which had reference to the demand of the dos after the purposes were satisfied for which it was given. That dos is profecticia which was given by the father or father's father of the bride; and it is profecticia, even if the daughter was emancipated, provided the father gave it as such (*ut parens*). All other dos is adventicia. The dos recepticia was a species of dos adventicia, and was that which was given by some other person than the father or father's father, on the consideration of marriage, but on the condition that it should be restored on the death of the wife. The giving

(Pollux, Onom., viii., 63, 101.)

of the dos depended on the will of the giver; but certain persons, such as a father and father's father, were bound to give a dos with a woman when she married, and in proportion to their means. The dos might be either given at the time of the marriage, or there might be an agreement to give. The technical words applicable to the dos were *dare, dicere, promittere*. Any person was competent *dare, promittere*. The word *dicere* was applied to the woman who was going to marry, who could promise all property as *dos*, but the promise was not binding unless certain legal forms were observed (*non deberi viro dotem, quam nullo auctore dixisset*¹). An example of a *promissio dotis* occurs in *Plautus*.² As the dos became the husband's property, he had a right to the sole management, and to the fruits of it; in fact, he exercised over it all the rights of ownership, with the exception hereafter mentioned. He could dispose of such parts of the dos as consisted of things movable; but the *Julia lex (de adulteriis)* prevented him from alienating such part of the dos as was land (*fundus dotialis, dotalia prædia*;³ *dotales agri*⁴) without his wife's consent, or pledging it with her consent.⁵ The legislation of Justinian prevented him from selling it also, even with the wife's consent, and it extended the law to provincial lands.

The husband's right to the dos ceased with the marriage. If the marriage was dissolved by the death of the wife, her father or father's father (as the case might be) was entitled to recover the dos *profecticia*, unless it had been agreed that in such case the dos should belong to the husband. The dos *adventicia* became the property of the wife's heirs, unless the person who gave it had stipulated that it should be returned to him (*dos recepticia*). The dos could be claimed immediately upon the dissolution of the marriage, except it consisted of things *quæ numero, &c.*, for which time was allowed.⁶

In the case of divorce, the woman, if she was sui juris, could bring an action for the restitution of the dos; if she was in the power of her father, he brought the action jointly with his daughter. (*Vid. DIVORTIUM*)

The dos could not be restored during the marriage, for this was contrary to a positive rule of law. (*Vid. DONATIO INTER VIRUM ET UXOREM*.) Yet, in the case of the husband's insolvency, the wife could demand back her dos during the marriage. In certain cases, also, the husband was permitted to restore the dos during the marriage, and such restoration was a good legal acquittance to him: these excepted cases were either cases of necessity, as the payment of the wife's debts, or the sustentation of near kinsfolks.⁷

What should be returned as dos depended on the fact of what was given as dos. If the things given were ready money, or things estimated by quantity, &c., the husband must return the like sum or the like quantity. If the things, whether movable or immovable, were valued when they were given to the husband (*dos aestimata*), this was a species of sale, and at the end of the marriage the husband must restore the things or their value. If the things were not valued, he must restore the specific things, and he must make good all loss or deterioration which had happened to them except by accident. But the husband was entitled to be reimbursed for all necessary expenses (*impensæ necessariae*); as, for instance, necessary repairs of houses incurred by him in respect of his wife's

property, and also for all outlays by which he had improved the property (*impensæ utiles*).

The husband's heirs, if he were dead, were bound to restore the dos. The wife's father, or the surviving wife, might demand it by an *actio ex stipulatu de dote reddenda*, which was an *actio stricti juris*, if there was any agreement on the subject; and by an *actio rei uxoriæ* or *dotis*, which was an *actio bonæ fidei*, when there was no agreement. A third person who had given the dos must always demand it *ex stipulatu*, when he had bargained for its restoration. Justinian enacted that the action should always be *ex stipulatu*, even when there was no contract, and should be an *actio bonæ fidei*.

The wife had no security for her dos, except in the case of the *fundus dotalis*, unless she had by contract a special security; but she had some privileges as compared with the husband's creditors. Justinian enacted that on the dissolution of the marriage the wife's ownership should revive, with all the legal remedies for recovering such parts of the dos as still existed; that all the husband's property should be considered legally pledged (*tacita hypotheca*) as a security for the dos; and that the wife, but she alone, should have a priority of claim on such property over all other creditors to whom the same might be pledged.

The dos was a matter of great importance in Roman law, both because it was an ingredient in almost every marriage, and was sometimes of a large amount. The frequency of divorces also gave rise to many legal questions as to dos. A woman whose dos was large (*dotata uxor*) had some influence over her husband, inasmuch as she had the power of divorcing herself, and thus of depriving him of the enjoyment of her property. The allusions to the dos are numerous in the Roman writers.

It is a disputed point whether there could be dos, properly so called, in the case of a marriage with *conventio in manum*. (*Vid. MARRIAGE*.)¹

DOULOS (δούλος). (*Vid. SERVUS*.)

*DRABE (δράβη), Pepperwort, or *Lepidium draba*.²

DRACHMA (δραχμή), the principal silver coin among the Greeks. The two chief standards in the currencies of the Greek states were the Attic and Æginetan. We shall, therefore, first speak of the Attic drachma, and afterward of the Æginetan.

The average weight of the Attic drachma from the time of Solon to that of Alexander was 66·5 grains. It contained about $\frac{1}{16}$ th of the weight alloy; and hence there remain 65·4 grains to be valued. Each of our shillings contains 80·7 grains of pure silver. The drachma is, therefore, worth $\frac{65.4}{80.7}$

of a shilling, or 9·72 pence, which may be called 9½d.³ After Alexander's time, there was a slight decrease in the weight of the drachma, till, in course of time, it only weighed 63 grains. The drachma contained six obols (ὀβολοί); and the Athenians had separate silver coins, from four drachmæ to a quarter of an obol. Among those now preserved, the tetradrachm is commonly found; but we possess no specimens of the tridrachm, and only a few of the didrachm. Specimens of the tetrobolus, triobolus, diobolus, three quarter obol, half obol, and quarter obol, are still found. The following table, taken from Hussey, gives the value in English money of the Athenian coins, from a quarter obol to a tetradrachm:

	Pence.	Farth.
¼ Obol		1 625
½ Obol		3 25
Obol	1	2 5

1. (Hase, Rhein. Mus., ii. 75.—Compare Ulp., Frag., vi. Dig. 23, tit. 3.—Cod. v., tit. 12.)—2. (Dioscor., iii., 186.)—3. (Hussey, Ancient Weights and Money, p 47, 48)

1. (Cic., Pro Cæcina, c. 95.—Compare Pro Flacc., c. 34, 35, and Ulp., Frag., xi. 20.)—2. (Trinumm., v., 2.)—3. (Cic., Ep. ad Att., xv., 20.)—4. (Hor., Ep. l. i., 21.)—5. (Gaius, ii., 63.—Inst., ii., 8.)—6. (Ulp., Frag., vi., s. 8; but compare Cod. v., tit. 13, s. 71.)—7. (Zeitschrift, &c., v., p. 311, essay by Hase.)

	Shill.	Pence.	Farth.
Diobolos		3	1
Triobolos		4	3.5
Tetrobolos		6	2
Drachma		9	3
Didrachm	1	7	2
Tetradrachm	3	3	

The mina contained 100 drachmæ, and was, consequently, equal to 4*l.* 1*s.* 3*d.*; and the talent 60 minæ, and was thus equal to 243*l.* 15*s.* 0*d.* Respecting the value of the different talents among the Greeks, *vid.* TALENT.

The tetradrachm in later times was called stater;¹ but it has been doubted whether it bore that name in the flourishing times of the Republic.² We know that stater, in writers of that age, usually signifies a gold coin, equal in value to twenty drachmæ (*vid.* STATER); but there appear strong reasons for believing that the tetradrachm, even in the age of Thucydides and Xenophon, was sometimes called by this name.³

The obolos, in later times, was of bronze;⁴ but in the best times of Athens we only read of silver obols. The χαλκοῦς was a copper coin, and the eighth part of an obol. (*vid.* ÆS, p. 30.)

The Attic standard was used at Corinth, Cyrene, and Acanthus, and in Acarnania, Amphilochia, Leucadia, Epirus, and Sicily; it was the standard of Philip's gold, and was introduced by Alexander for silver also. The Æginetan standard appears to have been used in Greece in very early times. According to most ancient writers, money was first coined at Ægina by order of Pheidon of Argos (*vid.* ARGENTUS); and the Æginetan standard was used in almost all the states of the Peloponnesus, with the exception of Corioth. It was also used in Bœotia, and in some other parts of northern Greece, though the Attic standard prevailed most in the maritime and commercial states.

ATHENIAN DRACHMA. BRITISH MUSEUM.
ACTUAL SIZE.

The average weight of the Æginetan drachma, calculated by Mr. Hussey⁵ from the coins of Ægina and Bœotia, was 96 grains. It contains about $\frac{1}{32}$ part of the weight alloy. Hence its value is 93

grains of pure silver, or, as before, $\frac{93}{80.7}$ of a shilling;

that is, 1*s.* 1*d.* 3.2 farthings. The largest coin of the Æginetan standard appears to have been the didrachm, and the values of the different coins of this standard are as follow:

	Shill.	Pence.	Farth.
$\frac{1}{2}$ Obol		1	0.583
Obol		2	1.166
Diobolos		4	2.33
Triobolos		6	2.5
Drachma	1	1	3
Didrachm	2	3	2

The proportion of the Æginetan drachma to the Attic, according to the value given above, is as 93 to 65.4, or as 4.18 to 3 nearly. According to Pollux, however, the proportion was 5 to 3; for he states⁶ that the Æginetan drachma was equal to 10

Attic obols, and that the Æginetan talent contained 10,000 Attic drachmæ. His authority, however, cannot be of any weight against the evidence of existing coins; for the comparative value of Æginetan and Attic money is a plain fact, which can be proved by experiments. But, as Mr. Hussey remarks,¹ Pollux, "when he speaks of the Attic drachmæ, does not mean the money of the full weight, which was coined in the time of Pericles or Xenophon, but such as passed for Attic in the Augustan and following ages, namely, the Roman denarius; and this, too, not of the earliest standard, at the rate of 60 or 61 grains, but as it was coined when the weight had been reduced to $\frac{1}{4}$ th of the Roman ounce, or about 53 grains." (*vid.* DENARIUS 1)

ÆGINETAN DRACHMA. BRITISH MUSEUM.
ACTUAL SIZE.

The Attic and Æginetan were, as already remarked, the chief standards of money in Greece; but there was a third standard used to some extent, namely, that of the early coinage of Macedon, which was also adopted by the Greek kings of Egypt. The average weight of the Macedonian drachma was 109.4 grains; and, assuming the same quantity of alloy as in the Æginetan drachmæ, it would be worth in our money 1*s.* 3*d.* 2.8 farthings, or very nearly 1*s.* 3*d.* It has been supposed, however, by some writers, that this drachma was in reality a didrachm; but the existence of large silver coins of four times this weight is an argument for believing it to be the drachma, as we do not find any notice of eight-drachmæ pieces.

As the Romans reckoned in sesterces, so the Greeks generally reckoned by drachmæ; and when a sum is mentioned in the Attic writers without any specification of the unit, drachmæ are usually meant.²

DRACO. I. (*vid.* SIGNA MILITARIA.)

*II., or δράκων χειρᾶσις, the Land Dragon. "All the classical authors," observes Adams, "speak of the Land Dragon as being a most formidable animal, and of immense bulk, some say 50, some 60, and some 80 cubits in length. St. Augustine calls him the largest animal upon the face of the earth. Two species are described; one with wings, and the other without wings." These accounts but ill agree with the following description of the *Draco volans*, L., by M. l'Abbé Bonnaterre: "Le plus grand des individus qu'on conserve au Cabinet du Roi a huit pouces deux lignes de longueur totale. Il est doux, foible, tranquille, c'est le moins à craindre de tous les reptiles. Pourra-t-on se persuader que c'est *Dragon* à plusieurs têtes, qui rennissoit l'agilité de l'aigle, la force de lion, qui vomissoit des flammes, et dont les anciens nous ont fait un peinture."³ Buffon also calls it the flying Lizard, a little harmless animal that only preys on insects. I cannot help thinking, however, that the extraordinary stories of antiquity regarding the Dragon must have had their origin in the exaggerated reports of travellers about the *Boa Constrictor*. I shall point out one circumstance which leads forcibly to this conclusion. Ælian gives an account of a Dragon of extraordinary size, namely, 70 cubits long, which Alexander the Great saw in India, and which was kept as an object of worship. The poet Nonnus,

1. (Phot., s. v. Στατήρ.—Hesych., s. v. Γλαῦκες Δαυριωτικαί.—Math., xxvii., 27.)—2. (Hussey, *Ibid.*, p. 49.)—3. (Thucyd., iii., 70, with Arnold's note.—Xen., *Hell.*, v., ii., § 22.)—4. (Lucian, *Contempl.*, II., vol. i., p. 504, ed. Reiz.)—5. (p. 59, 60.)—6. (*ix.*, 76, 86.)

1. (p. 32.)—2. (Böckh, *Pub. Econ.* of Athens, i., p. 25.)—3. (*Encyc. Method.*, lib. xxxiii., 61.)

also, repeatedly connects the Dragon with the Indian worship of Bacchus.¹ Now it is known that the Boa is worshipped even to this day in some parts of Hindustan. Still farther, if the reader will compare the descriptions of the Ethiopian dragons given by Elian² and Philo³ with the stories which Pliny⁴ and Diodorus Siculus⁵ tell of serpents, he will readily perceive that they are all referable to the great *Boa*. Another argument in favour of this opinion may be drawn from the famous group of the "Laocoon" in the Vatican. It must strike every person who has seen a model of it, that the immense serpents which are coiled around the human figures represent *Boas*. Now these serpents are called "dracones" by Pliny⁶ in describing the group, and by Virgil⁷ in his relation of the event which forms the subject of it. Lord Byron,⁸ by-the-way, is singularly unfortunate in calling the serpent of the Laocoon an "asp," since the asp was a comparatively small reptile, and is said by Nicander and other toxicologists to despatch its victim without pain. But the following passage in Jerome's life of Hilarius puts the identity of the Dragon and the *Boa* beyond dispute: "Siquidem *Draco*, miræ magnitudinis, quos gentili nomine *Boas* vocant, ab eo quod tam grandes sint ut boves glutire soleant, omnem late vastabat provinciam," &c. In confirmation of the theory which is here sought to be established, the reader is referred to the remarks of Griffith in his edition of Cuvier. It may be stated with regard to the etymology of the term *Boa*, that, according to some of the ancient writers, this serpent was so called from its habit of following the hinds, in order to fasten itself to the teats of cows and suck their milk ("*bovm lacte delectantur*"). The so-called boas of the Eastern continent belong properly to the genus *Python*.¹⁰

**DRACONTIUM* (δρακόντιον), a plant answering, according to Fuchsius, Dodonæus, Sprengel, and other botanical authorities, to the *Arum Dracunculus*, or Dragon herb. "It is the *τάρχαν* of Simeon Seth. The *δρακόντιον* *ἑτερον* is the *Arum Italicum*, Lam., according to Sprengel. Stackhouse makes the *δρακόντιον* of Theophrastus to be the *Arum maculatum*, or spotted Wake-robin."¹¹

**DREP'ANIS* (δρεπανίς), the name of a bird incidentally mentioned by Aristotle and Pliny. According to Gaza and Scaliger, it is the same with the Reed-sparrow; but this opinion is rejected by Hardouin. Schneider is inclined to rank it under the genus *Procellaria* of Linnæus, called in English the Petrel, or Sea-swallow.¹²

**DROMEDARIUS*, the Dromedary, or *Camelus Dromedarius*, L. This is the Arabian Camel (Κάμηλος Ἀραβίος, Aristot.; *Camelus Arabia*, Plin.), having only one hunch, the Bactrian having two. Strictly speaking, however, the Dromedary is only a breed of the one-hunch kind. The name is of Greek origin, and refers to the fleetness of the animal (δρόμος, "a race"). The one-hunch species extends from the foot of Caucasus over Persia and Turkey, Arabia, northern Africa, and India. (*Vid. CAMELUS*.) Those of Turkey are the strongest, and best suited for burden; those of Arabia and Bombay the lightest; and those of India, where there are breeds for both purposes constantly supplied by fresh importations from the northwest, are yet probably inferior in their class to those more in the vicinity of their original climate.¹³

**DRY'INUS* (δρύινος), a species of serpent, so called from its lodging in the hollows of oaks (δρῦς, "an oak"). According to Nicander,¹ it was also called *χέλυνδρος*, an appellation given it because its scales are rough like those of a tortoise (χέλυν, "a tortoise"). Sprengel supposes it to be the *Cohuber libertinus*. Gesner says it is called in English the Sea-snail.²

**DRYOCALAPTES* (δρυοκαλάπτης), the *Picus*, or Woodpecker. "About the three species described by Aristotle,"³ remarks Adams, "there is considerable doubt. The first two would appear to be the *Picus Martius*, L., or the black Woodpecker; and the *Picus viridis*, the green Woodpecker, or Popinjay. That the largest species is the *Picus major*, or Whitwall, has been conjectured, but cannot be affirmed with certainty. The *δρύος* of Aristophanes was most probably the *Picus viridis*."⁴

**DRYOPT'ERIS* (δρυοπτερίς), according to Sprengel, the *Polypodium dryopteris*, or Oak-fern. Dierbach, however, holds that the *Asplenium adiantum nigrum* is also comprehended under it.⁵

**DRYPIS* (δρύνις), according to Sprengel and Stackhouse, the *Drypis spinosa*. Schneider, however, has doubts.⁶

**DRYS* (δρῦς), the Oak. (*Vid. QUERCUS*.)

DUCCENARIJ, the name of various officers and magistrates, of whom the principal were as follows:

I. *DUCCENARIJ* was the name given to the Roman procurators, who received a salary of 200 sesteritia. Dion Cassius⁷ says that the procurators first received a salary in the time of Augustus, and that they derived their title from the amount of their salary. We thus read of centenarii, trecentarii, &c., as well as of duccenarii.⁸ Claudius granted to the procurators duccenarii the consular ornaments.⁹

II. *DUCCENARIJ* formed a class or decuria of judges, and were first established by Augustus.¹⁰ They were so called because their property, as valued in the census, only amounted to 200 sesteritia. They appear to have had causes of small importance.¹¹

III. *DUCCENARIJ* were in later times officers who commanded two centuries, and who held the same rank as the primi hastati in the ancient legion.¹²

DUCCENTE'SIMA was a tax of half per cent. upon all things sold at public auctions. The centesima, or tax of one per cent., was first established by Augustus,¹³ and was reduced to half per cent. by Tiberius.¹⁴ The tax was abolished altogether by Caligula as far as Italy was concerned,¹⁵ whence we find on some of the coins of this emperor the letters R. C C., that is, *Remissa Ducentesima*. On one of his coins, preserved in the British Museum, we find on the obverse, C. CÆSAR. DIVI. AVG. PRON. AVG., and S. C. in the centre with the cap of liberty; and on the reverse, PON. M. TR. P. III. P. P. COS. DES. III., and in the centre R. C C. These last three letters have been interpreted by some writers to mean *Rei Censita Conservator*; but there can be no doubt that the interpretation given above is the correct one.¹⁶

DUPLICARIJ were soldiers who received double pay or double allowance for their services.¹⁷ They are frequently mentioned in inscriptions,¹⁸ but more commonly under the name of duplarii.¹⁹ In one in-

DUPLICATIO. (Vid. Actio, p. 19.)

DUPOUNDIUS. (Vid. As, p. 111.)

DUUMVIRI, or the two men, the name of various magistrates and functionaries at Rome, and in the coloniae and municipia. In inscriptions we also meet with the form *duumvires*³ and *duovir*.⁴

I. DUUMVIRI JURI DICUNDO were the highest magistrates in the municipal towns. (Vid. COLONIA, p. 282.)

II. DUUMVIRI NAVALES were extraordinary magistrates, who were created, whenever occasion required, for the purpose of equipping and repairing the fleet. They appear to have been originally appointed by the consuls and dictators, but were first elected by the people B.C. 311.⁵

III. DUUMVIRI PERDUELLIONIS. (Vid. PERDUELLIO.)

IV. DUUMVIRI QUINQUENNALES were the censors in the municipal towns, and must not be confounded with the *duumviri juri dicundo*. (Vid. COLONIA, p. 283.)

V. DUUMVIRI SACRORUM originally had the charge of the Sibylline books. Their duties were afterwards discharged by the *decemviri sacris faciundis*. (Vid. DECENVIRI, p. 340.)

VI. DUUMVIRI were also appointed for the purpose of building or dedicating a temple.⁶

E.

*EBENUS (*ἔβεος*), Ebony. According to Virgil,⁷ India was the only country that produced it. Dioscorides,⁸ however, remarks, that it grows also in Ethiopia; and there is a passage in Herodotus⁹ in which Ebony is spoken of among the articles of tribute paid by the Ethiopians to the king of Persia. Either, therefore, the name of Ethiopia is to be taken in a very general sense for the country of sun-burned races, and may consequently include India, or else Virgil is in error. Notwithstanding the numerous botanists who have travelled into India, we have not been able, until recently, to determine to what tree the Ebony was to be assigned. It is now certain that it is one of the genus *Diospyrus*. A work on the *Materia Medica*, published at Madras,¹⁰ says that Ebony is the wood of a tree called in the Tamoul language *Aitcha nararum*, which grows abundantly in the Gaugam-Circars, in Berar, and even in the island of Ceylon, where the natives term it *Naugagaha*. According to the author of the work just mentioned, it is the *Diospyrus Ebenaster* of Kœnig. As regards the name which the Greeks and Romans have given this tree, and which it still bears in all the languages of Europe, it may be remarked, that it comes from the Hebrew homonym *hâbân*. Its Arabic name, *Abnous*, is nothing more than a corruption from *ἔβεος*.¹¹ "Modern botanists," says Adams, "have applied various names to the Ebony-tree, namely, *Ebenus Cretica*, L.; *Diospyrus Melanocylon*, Roxb.; *D. Ebenus* and *Ebenastrum*, Retz.; and *Ebenoxylon verum*, L. Theophrastus also notices an Ebony shrub, which Sprengel, in his edition of Dioscorides, holds to be the *Anthyllis Cretica*. It is the same as the *Vulneraria* of Tournefort (namely, Woundwort), and hence it is now called *Anthyllis Vulneraria*.¹²

*ECHENEIS (*ἔχενηίς*), a species of Fish. "It would appear that the *ἔχενηίς* of Aristotle and Pliny was different from that of Oppian and Ælian, and

that the former corresponds to the *Echeneis naucrates*, L., or Sucking-fish, and the latter to the *Petro-myzon Lampetra*, L., or Lamprey-eel. Artdi states that the *Galaras* (*γαλαρίας*) of Galen corresponds to the Lamprey, and Rondelet and Nonnius refer the *βδέλλα* of Strabo to the same. The ancient stories about its stopping vessels in their course would appear to be fabulous, and yet it is worthy of notice that they are still credited by the inhabitants of Dalmatia and the neighbouring countries."¹³

*ECHTUM (*ἐχτιον*), a plant, supposed to be a remedy against the bite of a viper (*ἐχίς*). "The *Echium vulgare*, or common Viper's Bugloss, has been generally acknowledged to be the *ἐχτιον* of Nicander and Dioscorides; but, according to Sprengel, this is a mistake, since the flowers of the *Echium vulgare* are blue, whereas Dioscorides describes those of the *ἐχτιον* as being purple. It is to be remarked, however, that the Greeks used the terms *πορφύρεος* and *πορφυροειδής* in a loose manner, applying it to other colours besides purple, and more especially to the dark blue colour of the sea, which would not be applicable to the colours of the Viper's Bugloss.² On the subject of the purple colours of the ancients, Salmasius remarks,³ "*Cæruleus color, quem Græci κυανοῖν vocant, nihil aliud est quam purpura delutior et pallidior.*"

*ECHYNUS (*ἐχίνος*), I., the *ἐχίνος χέρσσιος* is the Hedgehog, or *Erinaceus Europæus*. The modern Greek name is *χαντιόχορος*. The first part of this word is a corruption of *ἀκανθα* (*Acanthias vulgaris nostras*, Klein). The flesh of the Hedgehog is prescribed in Syria medicinally in some disorders. Russell says he saw the animal carrying grapes as well as mulberries on its prickles, a story which certainly needs confirmation.⁴

*II. A testaceous genus containing many species: in English, the Sea-urchin. Aristotle gives a very minute description of this genus. "The *ἐχίνος ἰδιόμορος* is no doubt," observes Adams, "the *Echinus esculentus*, L., called in English the edible Sea-urchin. The two species called *σπάταγος* and *βρίσσιος* cannot be satisfactorily determined. The difference of habitats in the Land and Sea urchin gave rise to the Greek proverb expressive of irreconcilable habits: *πρὶν κε δύο ἐχίνοι ἐς φίλιαν ἔλθοιεν*.¹⁵

III. (Vid. DIKE.)

*ECHIS and ECHIDNA (*ἐχίς*, *ἐχιδνα*). "Most of the ancient authors who treat of serpents represent these as the Male and Female Viper; but, from the descriptions of them given by Nicander, it would appear that they were distinct species. Sprengel accordingly refers the Asiatic *ἐχιδνα* to the *Coluber Ægyptius*, the European *ἐχιδνα* to the *Coluber Berus*, and the *ἐχίς* to the *Coluber Ammodytes*. The word *θῆριον* is often applied κατ' ἐξοχὴν to the Viper (*Coluber Berus*), and hence *θηριακή* is used to signify the Electuary of Vipers. The Viper is the *Ἐφε* of Scripture."¹⁶

ECCLESIA (*ἐκκλησία*). The *ἐκκλησίαι* of the Athenians were general assemblies of the citizens, in which they met to discuss and determine upon matters of public interest. These assemblies were either *ordinary*, and held four times in each prytany, or *extraordinary*, that is, specially convened upon any sudden emergency, and therefore called *σύγκλητοι*. On occasions of extreme importance when it was desirable for as many persons as possible to be present at the discussion of any question, the people were summoned by express from the country

(Adams, Append., s. v.)

to the city, and then the assembly was called a *κατακλησία*, the proper meaning of *κατακαλεῖν* being to call from the country into the city. The ordinary assemblies were called *νόμμοι* or *κυρίαί*, according to the scholiast on Aristophanes,¹ who moreover informs us that there were three such in every month. But, according to the best-informed grammarians, who followed Aristotle, the name *κυρία* was appropriated to the first only of the regular assemblies of each prytany. Such, at least, is the account given by Pollux² and Harpocration, the former of whom asserts that the third of the regular assemblies in each prytany was partly devoted to the reception of ambassadors from foreign states.

Aristophanes, however, in the Acharnians,³ represents ambassadors who had just returned from Persia and Thrace as giving an account of their embassy in a *κυρία ἐκκλησία*, which, according to Pollux, would be not the third, but the first of the regular assemblies. With a view of reconciling these discrepancies, Schömann⁴ supposes that Solon originally appointed one regular assembly, called *κυρία*, to be held on a certain day of every prytany, and that afterward additional assemblies were instituted, appropriated respectively to particular purposes, though the term *κυρία* was still reserved for the assembly formerly so called. If, however, the representation of Aristophanes is in agreement with the practice of his age, we must farther suppose, what is very probable, that the arrangements for business, as described by Pollux, were not always observed even in the time of the poet; and since, a few years after Aristotle's time, many changes took place in the constitution of Athens, it may have happened that the name *κυρία* was then given to all the regular assemblies, in which case the scholiast probably identified the customs and terms of a late age with those of an earlier period. Moreover, the number of prytanies in each year, originally ten, one for each tribe, was, on the increase in the number of the tribes at Athens, raised to twelve, so that the prytanies would then coincide with the months of the year: a fact which, taken in conjunction with other circumstances,⁵ seems to show, that the authorities who speak of three regular assemblies in each month had in view the times when a prytany and a month were the same thing. Some authors have endeavoured to determine the particular days on which the four regular assemblies of each prytany were held; but Schömann⁶ has proved almost to demonstration, that there were no invariably fixed days of assembly; and at any rate, even if there were, we have not sufficient data to determine them. Ulpian⁷ says, in allusion to the times when there were three assemblies in every month, that one was held on the eleventh, another about the twentieth, a third about the thirtieth, of each month; and it is, of course, not improbable that they were always held at nearly equal intervals.

The place in which the assemblies were anciently held was, we are told by Harpocration,⁸ the *ἀγορά*. Afterward they were transferred to the Pnyx, and at last to the great theatre of Dionysus, and other places. Thus Thucydides⁹ speaks of the people being summoned to the Pnyx, the usual place of assembly in his times; and Aristophanes,¹⁰ in describing "Demus," the representative of the Athenian people, just as "John Bull" is of the English, calls that character *Δῆμος Πυκνίτης*, or Demus of the (parish of) Pnyx: a joke by which that place is represented as the home of the Athenians. The situation of it was to the west of the Areiopagus, on

a slope connected with Mount Lycabettus, and partly, at least, within the walls of the city. It was semicircular in form, with a boundary wall part rock and part masonry, and an area of about 12,000 square yards. On the north the ground was filled up and paved with large stones, so as to get a level surface on the slope; from which fact some grammarians derive its name (*παρὰ τὴν τῶν λίθων πύκνότητα*). Towards this side, and close to the wall, was the *βῆμα*, a stone platform or hustings ten or eleven feet high, with an ascent of steps; it was cut out of the solid rock, whence it is sometimes called *ὁ λίθος*, as in Aristophanes¹ we read *ὅστις κρατεῖ νῦν τοῦ λίθου τὸν τῆ Πυκνί*. The position of the *βῆμα* was such as to command a view of the sea from behind (on which account the thirty tyrants are said to have altered it), and of the *Προπύλαια* and Parthenon in front, though the hill of the Areiopagus lay partly between it and the Acropolis. Hence Demosthenes,² when reminding the Athenians from this very *βῆμα* of the other splendid works of their ancestors, says emphatically *Προπύλαια ταῦτα*: and we may be sure that the Athenian orators would often rouse the national feelings of their hearers by pointing to the assemblage of magnificent edifices, "monuments of Athenian gratitude and glory," which they had in view from the Pnyx.³ That the general situation of the place was elevated is clear from the phrase *ἀναβαίνειν εἰς τὴν ἐκκλησίαν*, and the words *πᾶς ὁ δῆμος ὡς καθῆτα*, applied to a meeting of the people in the Pnyx.⁴ After the great theatre of Dionysus was built, the assemblies were frequently held in it, as it afforded space and convenience for a large multitude; and in some particular cases it was specially determined by law that the people should assemble there.⁵ Assemblies were also held in the Peiræus, and in the theatre at Munychia.⁶

We will now treat of the right of convening the people. This was generally vested in the prytanes or presidents of the council of Five Hundred (*vid. Boule*, p. 168); but in cases of sudden emergency, and especially during wars, the strategî also had the power of calling extraordinary meetings, for which, however, if we may judge by the form in which several decrees are drawn up, the consent of the senate appears to have been necessary.⁷ The four ordinary meetings of every prytany were, nevertheless, always convened by the prytanes, who not only gave a previous notice (*προγράφειν τὴν ἐκκλησίαν*) of the day of assembly, and published a program of the subjects to be discussed, but also, as it appears, sent a crier round to collect the citizens (*συναγείναι τὸν δῆμον*). At any rate, whenever the strategî wished to convene one of the extraordinary assemblies, notice was certainly given of it by a public proclamation; for, as Ulpian observes,⁸ these assemblies were called *σύνκλητοι*, because the people were summoned to them by officers sent round for that purpose (*ὅτι συνεκάλουν τινες περίωντες*). But, independent of the right which we have said the strategî possessed of convening an extraordinary meeting, it would seem, from the case of Pericles,⁹ that a strategus had the power of preventing any assembly being called. It is, however, important to observe, that such an exercise of power would perhaps not have been tolerated except during wars and commotions, or in the person of a

distinguished character like Pericles; and that under different circumstances, at any rate after the time of Solon, the assemblies were always called by the prytanes. All persons who did not obey the call were subject to a fine, and six magistrates, called lexiarchs, were appointed, whose duty it was to take care that the people attended the meetings, and to levy fines on those who refused to do so.¹ With a view to this, whenever an assembly was to be held, certain public slaves (*Σκῦθαι* or *τοξόται*) were sent round to sweep the *ἀγορά* and other places of public resort with a rope coloured with vermilion. The different persons whom these ropemen met were driven by them towards the *ἐκκλησία*, and those who refused to go were marked by the rope and fined.² Aristophanes³ alludes to this subject in the lines,

οἱ δ' ἐν ἀγορᾷ λαλοῦσι, κῶνον καὶ κάτω
τὸ σχοινίον φεύγουσι τὸ μεμλιγμένον.

Besides this, all the roads except those which led to the meeting were blocked up with hurdles (*γέβραι*), which were also used to fence in the place of assembly against the intrusion of persons who had no right to be present: their removal in the latter case seems to have served as a signal for the admission of strangers who might wish to appeal to the people.⁴

An additional inducement to attend, with the poorer classes, was the *μισθὸς ἐκκλησιαστικός*, or pay which they received for it. The originator of this practice seems to have been a person named Callistratus, who introduced it "long after the beginning of the influence of Pericles." The payment itself, originally an obolus, was afterward raised to three by a popular favourite called Agyrrhius of Collytus. The increase took place but a short time before the Ecclesiastæ of Aristophanes came out, or about B.C. 392. The poet thus alludes to it in that play:⁵

Β. Τριώβολον δὴτ' ἔλαβες · Χ. εἰ γὰρ ὤφελον.

A ticket (*σύμβολον*) appears to have been given to those who attended, on producing which at the close of the proceedings they received the money from one of the thesmothetæ.⁶ This payment, however, was not made to the richer classes, who attended the assemblies gratis, and are therefore called *οἰκόσιτοι ἐκκλησιασταί* by the poet Antiphanes in a fragment preserved by Athenæus.⁷ The same word *οἰκόσιτος* is applied generally to a person who receives no pay for his services.

With respect to the right of attending, we may observe, that it was enjoyed by all legitimate citizens who were of the proper age (generally supposed to be twenty, certainly not less than eighteen), and not labouring under any *ἀτιμία* or loss of civil rights. All were considered citizens whose parents were both such, or who had been presented with the freedom of the state, and enrolled in the register of some *demos* or parish.⁸ Adopted citizens, however (*ποιηταί*), were not qualified to hold the office of archon or any priesthood.⁹ Decrepit old men (*γέροντες* οἱ ὠφειμένοι, perhaps those above sixty) seem not to have been admitted, although it is not expressly so stated.¹⁰ Slaves, and foreigners also, were certainly excluded,¹¹ though occasions would of course occur when it would be necessary or desirable to admit them; and from Demosthenes¹² we may infer that it was not unusual to allow foreigners to enter towards the close of the proceedings, when the most important business of the day had been concluded; otherwise they stood outside.¹³

The *ἰσοτελεῖς*, or foreigners, who enjoyed nearly equal privileges with the citizens, are by some thought to have had the same rights as adopted citizens, with respect to voting in the assembly.¹ This, however, seems very doubtful; at any rate, the etymology of the word *ἰσοτελεῖς* does not justify such an opinion.

In the article *Βουλή* it is explained who the prytanes and the proedri were; and we may here remark, that it was the duty of the proedri of the same tribe, under the presidency of their chairman (*ὁ ἐπιστάτης*), to lay before the people the subjects to be discussed; to read, or cause to be read, the previous bill (*τὸ προβούλευμα*) of the senate; and to give permission (*γνώμας προτιθέναι*) to the speakers to address the people.

They most probably sat on the steps near the *βήμα*, to which they were, on some occasions, called by the people. In later times they were assisted in keeping order (*εὐκοσμία*) by the members of the presiding tribe, *ἡ προεδρεύουσα φυλή*² (*vid. Βουλή*); and the officers who acted under them, the "sergeants-at-arms," were the crier (*ὁ κήρυξ*) and the Scythian bowmen. Thus, in Aristophanes,³ the crier says to a speaker who was out of order, *κάθησο σίγα*, and in another passage the *τοξόται* are represented as dragging a drunken man out of the assembly.⁴ When the discussion upon any subject had terminated, the chairman of the proedri, if he thought proper, put the question to the vote: we read, in some instances, of his refusing to do so.⁵

Previous, however, to the commencement of any business, it was usual to make a lustration or purification of the place where the assembly was held. This was performed by an officiating priest, called the Peristiarh, a name given to him because he went before the lustral victims (*τὴ περίστια*) as they were carried round the boundary of the place. The term *περίστια* is derived from *περί* and *ἔστια*, and is, therefore, properly applied to sacrifices carried round the hearth by way of lustration: hence it means any lustral victims. Thus the crier says, *Πάριτ' ἐς τὸ πρόσθεν παρίθ' ὡς ἄν ἐνός ᾔτε τοῦ καθάρματος*. The favourite victims were sucking pigs (*χοιρίδια*), the blood of which was sprinkled about the seats, and their bodies afterward thrown into the sea.⁷ After the peristiarh the crier followed, burning incense in a censer. When these ceremonies were concluded, the crier proclaimed silence, and then offered up a prayer, in which the gods were implored to bless the proceedings of the meeting, and bring down destruction on all those who were hostilely disposed towards the state, or who traitorously plotted its overthrow, or received bribes for misleading and deceiving the people.⁸ On the conclusion of this prayer business began, and the first subject proposed was said to be brought forward *πρῶτον μετὰ τὰ ἱερά*.⁹

We must, however, understand that it was illegal to propose to the ecclesia any particular measure unless it had previously received the sanction of the senate, or been formally referred by that body to the people, under the title of a *προβούλευμα*.

The assembly, nevertheless, had the power of altering a previous decree of the senate as might seem fit. Farther information on this point will be found under *Βουλή*, to which we may add, according to Schömann,¹⁰ that the object of the law mentioned by the grammarians (*Ἀπροβούλευτον μηδὲν ψήφισμα εἰσέναι ἐν τῷ δήμῳ*) seems to have been, not to provide that no motion should be proposed in the as

assembly unless previously approved of by the senate, but rather that no subject should be presented for discussion to the people about which a bill of the senate had not been drawn up and read in assembly.

The privilege of addressing the assembly was not confined to any class or age among those who had the right to be present: all, without any distinction, were invited to do so by the proclamation (*Τὴν ἀγορὴν βούλεται*) which was made by the crier after the proedri had gone through the necessary preliminaries, and laid the subject of discussion before the meeting; for though, according to the institutions of Solon, those persons who were above fifty years of age ought to have been called upon to speak first,¹ this regulation had, in the days of Aristophanes, become quite obsolete.² The speakers are sometimes simply called *οἱ παρόντες*, and appear to have worn a crown of myrtle on their heads while addressing the assembly, to intimate, perhaps, that they were then representatives of the people, and, like the archons when crowned, inviolable.³ They were by an old law required to confine themselves to the subject before the meeting, and keep themselves to the discussion of one thing at a time, and forbidden to indulge in scurrilous or abusive language: the law, however, had, in the time of Aristophanes, become neglected and almost forgotten.⁴ The most influential and practised speakers of the assembly were generally distinguished by the name of *ῥήτορες*. (*Vid.* *ΡΗΤΟΡ.*)

After the speakers had concluded, any one was at liberty to propose a decree, whether drawn up beforehand or framed in the meeting (*Ἐν τῷ δήμῳ συγγράφεσθαι*), which, however, it was necessary to present to the proedri, that they might see, in conjunction with the *νομοφύλακες*, whether there was contained in it anything injurious to the state, or contrary to the existing laws.⁵ If not, it was read by the crier; though, even after the reading, the chairman could prevent its being put to the vote, unless his opposition was overborne by threats and clamours.⁶ Private individuals, also, could do the same, by engaging upon oath (*ὑπομοσία*) to bring against the author of any measure they might object to, an accusation called a *γραφὴ παρανόμων*. If, however, the chairman refused to submit any question to the decision of the people, he might be proceeded against by *ἐνδείξεις*;⁷ and if he allowed the people to vote upon a proposal which was contrary to existing constitutional laws, he was in some cases liable to *ἀτιμία*.⁸ If, on the contrary, no opposition of this sort was offered to a proposed decree, the votes of the people were taken, by the permission of the chairman, and with the consent of the rest of the proedri: whence the permission is said to have been given sometimes by the proedri and sometimes by the chairman, who is also simply called *ὁ πρόεδρος*, just as the proedri are sometimes styled *prytanes*.⁹ The decision of the people was given either by show of hands or by ballot, i. e., by casting pebbles into urns (*καδίσκοι*); the former was expressed by the word *χειροπονεῖν*, the latter by *ψηφίζεσθαι*, although the two terms are frequently confounded. The more usual method of voting was by show of hands, as being more expeditious and convenient (*χειρονομία*). The process was as follows: The crier first proclaimed that all those who were in favour of a proposed measure should hold up their hands (*ὅτω δοκεῖ. κ. τ. λ. ἁπάντω τὴν χεῖρα*): then he proclaimed that all those who were

opposed to it should do the same (*ὅτω μὴ δοκεῖ. κ. τ. λ.*): they did so; and the crier then formed as accurate an idea as possible of the numbers for and against (*ἡριθμεῖ τὰς χεῖρας*), and the chairman of the meeting pronounced the opinion of the majority.¹ In this way most matters of public interest were determined. Vote by ballot (*κρυβδότης*), on the other hand, was only used in a few special cases determined by law; as, for instance, when a proposition was made for allowing those who had suffered *ἀτιμία* to appeal to the people for restitution of their former rights, or for inflicting extraordinary punishments on atrocious offenders, and, generally, upon any matter which affected private persons.² In cases of this sort, it was settled by law that a decree should not be valid unless six thousand citizens at least voted in favour of it. This was by far the majority of those citizens who were in the habit of attending; for in time of war the number never amounted to five thousand, and in time of peace seldom to ten thousand.³

With respect to the actual mode of voting by ballot in the ecclesia, we have no certain information; but it was probably the same as in the courts of law, namely, by means of black and white pebbles, or shells put into urns (*καδίσκοι*); the white for adoption, the black for rejection of any given measure.⁴ (*Vid.* *ΚΑΔΙΣΚΟΙ.*)

The determination or decree of the people was called a *ψήφισμα*, which properly signifies a law proposed to an assembly, and approved of by the people. The form for drawing up the *ψηφίσματα* varied in different ages. (*Vid.* *ΒΟΥΛΕ* and *ΓΡΑΜΜΑΤΕΥΣ.*)

We now come to the dismissal of the assembly; the order for which, when business was over, was given by the *prytanes* (*ἔλυσαν τὴν ἐκκλησίαν*), through the proclamation of the crier to the people;⁵ and as it was not customary to continue meetings, which usually began early in the morning,⁶ till after sunset, if one day were not sufficient for the completion of any business, it was adjourned to the next. But an assembly was sometimes broken up if any one, whether a magistrate or private individual, declared that he saw an unfavourable omen, or perceived thunder and lightning. The sudden appearance of rain, also, or the shock of an earthquake, or any natural phenomenon of the kind called *διουσμιαί*, was a sufficient reason for the hasty adjournment of an assembly.⁷

We have already stated, in general terms, that all matters of public and national interest, whether foreign or domestic, were determined upon by the people in their assemblies, and we shall conclude this article by stating in detail what some of these matters were. On this point Julius Pollux⁸ informs us, that in the first assembly of every prytany, which was called *κυρία*, the *ἐπιχειρονομία* of the magistrates was held; i. e., an inquiry into their conduct, which, if it proved unfavourable, was followed by their deposition. In the same assembly, moreover, the *εἰσαγγελίαι*, or extraordinary informations, were laid before the people, as well as all matters relating to the watch and ward of the country of Attica; the regular officers also read over the lists of confiscated property, and the names of those who had entered upon inheritances. The second was devoted to the hearing of those who appeared before the people as suppliants for some favour, or for the privilege of addressing the assembly without incurring a penalty, to which they otherwise would

have been liable, or for indemnity previous to giving information about any crime in which they were accomplices. In all these cases it was necessary to obtain an *ἀδεία*, i. e., a special permission or immunity, whence Pollux says of the second assembly, Ἡ δευτέρα ἐκκλησία ἀνεῖται τοῖς βουλευμένοις ἀδείας (i. e., ἐπ' ἀδείᾳ) λέγειν περὶ τῶν ἰδίων καὶ τῶν δημοσίων.

In the third assembly, ambassadors from foreign states were received. In the fourth, religious and other public matters of the state were discussed.

From this statement, compared with what is said under *EISANGELIA*, it appears that in cases which required an extraordinary trial, the people sometimes acted in a judicial capacity, although they usually referred such matters to the court of the *Heliaea*. There were, however, other cases in which they exercised a judicial power: thus, for instance, the *proedri* could *ex officio* prosecute an individual before the people for misconduct in the *ecclesia*.¹ Again, on some occasions, information (*μῦνσις*) was simply laid before the people in assembly, without the informant making a regular impeachment; and although the final determination in cases of this sort was generally referred to a court of law, still there seems no reason to doubt that the people might have taken cognizance of them in assembly, and decided upon them as judges, just as they did in some instances of heinous and notorious crimes, even when no one came forward with an accusation. Moreover, in turbulent and excited times, if any one had incurred the displeasure of the people, they not unfrequently passed summary sentence upon him, without any regard to the regular and established forms of proceeding: as examples of which we may mention the cases of Demosthenes and Phocion. The proceedings called *προβολή* and *ἐπαγγελία* were also instituted before the people: farther information with respect to them is given under those heads.

The legislative powers of the people in assembly, so far as they were defined by the enactments of Solon, were very limited; in fact, strictly speaking, no laws could, without violating the spirit of the Athenian constitution, be either repealed or enacted, except by the court of the *Νομοθέται*: it might, however, doubtless happen, that *ψηφίσματα* passed by the assemblies had reference to general and permanent objects, and were therefore virtually *νόμοι* or laws;² moreover, if we may judge by the complaints of Demosthenes, it appears that in his days the institutions of Solon had in this respect fallen into disuse, and that new laws were made by the people collectively in assembly, without the intervention of the court of the *nomothetae*.³

The foreign policy of the state, and all matters connected with it, and the regulation and appropriation of the taxes and revenues, were, as we might expect, determined upon by the people in assembly. The domestic economy of the state was under the same superintendence: a fact which Pollux briefly expresses by informing us that the people decided in the fourth assembly *περὶ τῶν καὶ δημοσίων*, i. e., on all matters, whether spiritual or secular, in which the citizens collectively had an interest. Such, for example, says Schömann,⁴ "are the priesthood, the temples of the gods, and all other sacred things; the treasury, the public land, and public property in general; the magistracy, the courts, the laws and institutions of the state, and, in fine, the state itself:" in connexion with which we may observe, that the meetings for the election of magistrates were called *ἀρχαιρεσίαι*. Lastly, as

Schömann remarks, "the people likewise determined in assembly upon the propriety of conferring rewards and honours on such citizens or strangers, or even foreign states, as had in any manner significantly benefited the commonwealth." It is hardly necessary to add, that the signification of a religious assembly or church, which *ἐκκλησία* bore in later times, sprang from its earlier meaning of an assembly in general, whether of the constituency of a whole state, or of its subdivisions, such as tribes and cantons. (*Vid.* *TRIBUS* and *DEMUS*.)

ΕΚΚΛΗΤΟΣ ΠΟΛΙΣ. (*Vid.* *SYMBOLA*.)

ΕΚΚΛΕΤΟΙ (*ἐκκλητοί*) was the name of an assembly at Sparta, and seems to have been the same as the so-called *lesser assembly* (*ἡ μικρὰ καλούμενη ἐκκλησία*).¹ Its name seems to indicate a select assembly, but it is difficult to determine of what persons it was composed; but, since Xenophon² mentions the *ephors* along with and as distinct from it, we cannot, with Tittmann³ and Wachsmuth,⁴ consider it as having consisted of the Spartan magistrates, with the addition of some deputies elected from among the citizens. As, however, the *ἐκκλητοί* do not occur until the period when the franchise had been granted to a great number of freedmen and aliens, and when the number of ancient citizens had been considerably thinned, it does not seem improbable that the lesser assembly consisted exclusively of ancient citizens, either in or out of office; and this supposition seems very well to agree with the fact, that they appear to have always been jealously watchful in upholding the ancient constitution, and in preventing any innovation that might be made by the *ephors* or the new citizens.⁵

The whole subject of the *ἐκκλητοί* is involved in difficulty. Tittmann thinks that, though the name of this assembly is not mentioned, it existed long before the Persian war, and that in many cases in which the magistrates (*τέλη, ἄρχοντες, ἢ ἀρχαί*) are said to have made decrees, the magistrates are mentioned instead of the *ἐκκλητοί*, of whom they were the chief members. This last supposition is rejected by Müller,⁶ who observes that the magistrates were often said to have decreed a measure (especially in foreign affairs), though it had been discussed before the whole assembly and approved by it; for the magistrates were the representatives and the organs of the assembly, and acted in its name. Müller is also of opinion that *ἐκκλητοί* and *ἐκκλησία* are identical, and distinct from the lesser assembly, which he considers to have been a kind of select assembly. But his arguments on this point are not convincing. The *ἐκκλητοί* and the lesser assembly are mentioned about the same time in Grecian history, and previous to that time we hear of no assembly except the regular *ἐκκλησία* of all the Spartans.⁷

ΕΚΔΟΣΙΣ. (*Vid.* *NAUTICON*.)

ΕΚΛΕΚΤΙΚΟΙ (*ἐκλεκτικοί*), an ancient medical sect, which must not be confounded with the school of philosophers of the same name mentioned by Diogenes Laertius,⁸ though it is probable that they assumed this title in imitation of them. Their name is derived from their founder (like Potamo the philosopher) "having selected from each sect the opinions that seemed most probable" (*ἐκλεξαμένου τὰ ἀρεσάντα ἐξ ἐκάστης τῶν αἰρέσεων*).⁹ From a passage in the *Introductio* (in which Le Clerc¹⁰ conjectures that, instead of *ἐκλεκτοί*, we should read *ἐκλεκτικοί*) and which is falsely attributed to Galen,¹¹ it appears

that they were a branch of the Methodici (*vid. Μεθωδικοί*), and they seem to have agreed very nearly, if not to have been altogether identical, with the sect of the Episynthetici. (*vid. Επισυνθητικοί*.) They were founded either by Agathinus of Sparta or his pupil Archigenes.¹ Several of the opinions of both these physicians are to be found in various fragments of their lost works preserved by Galen, Oribasius, Aëtius, &c.; but we are nowhere (as far as the writer is aware) informed what were the particular doctrines that they adopted as their own from those of other sects. We can only suppose that they endeavoured to join the tenets of the Methodici to those of the Empirici and Dogmatici (*vid. Methodici, Empirici, Dogmatici*), and to reconcile the differences of those rival and opposite sects.

ΕC'LOGEIS. (*vid. ΕΙΣΦΟΡΑ*.)

ΕC'MARTYRIA (*ἐκμαρτυρία*) signifies the deposition of a witness, who, by reason of absence abroad, or illness, was unable to attend in court. His statement was taken down in writing, in the presence of persons expressly appointed to receive it, and afterward, upon their swearing to its identity, was read as evidence in the cause. They were said *μαρτυρεῖν τὴν ἐκμαρτυρίαν*: the absent witness, *ἐκμαρτυρεῖν*: the party who procured the evidence, *ἐκμαρτυρίαν ποιεῖσθαι*. It was considered as the testimony of the deponent himself, not that of the certifying witnesses, and therefore did not come within the description of hearsay evidence, which (except the declaration of a deceased person) was not admissible at Athens. The law was *ἀκούειν εἶναι μαρτυρεῖν τελευτῶτος, ἐκμαρτυρίαν δὲ ὑπερορίου καὶ ἀδυνάτου*. The deponent (like any other witness) was liable to an action for false testimony if the contents of the deposition were untrue, unless he could show that it was incorrectly taken down or forged, in which case the certifying witnesses would be liable. Therefore (Isæus tells us) it was usual to select persons of good character to receive such evidence, and to have as many of them as possible.² (*vid. ΜΑΡΤΥΡΙΑ*.)

EDICTUM. The *Jus Edicendi*, or power of making edicts, belonged to the higher magistratus populi Romani, but it was principally exercised by the two prætors, the prætor urbanus and the prætor peregrinus, whose jurisdiction was exercised in the provinces by the præses. The curule ædiles also made many edicts, and their jurisdiction was exercised (under the Empire at least) in the provincie populi Romani by the quæstors.³ There was no edict promulgated in the provincie Cæsaris. The tribunes, censors, and pontifices also promulgated edicts relating to the matters of their respective jurisdictions. The edicts are enumerated by Gaius among the sources of Roman law, and this part of the Roman law is sometimes called in the Pandect *Jus Honorarium*,⁴ apparently because the edictal power belonged to those magistrates only who had the honores, and not so much ad honorem prætorum.⁵ As the edicts of the prætors were the most important, the *jus honorarium* was sometimes called *jus prætorium*; but properly, the *jus honorarium* was the term under which was comprehended all the edictal law.

The Edictum may be described generally as a rule promulgated by a magistratus on entering on his office, which was done by writing it on an album and placing it in a conspicuous place, "*Unde de plano recte legi potest*." From this circumstance the Edict was considered to be a part of the *jus scriptum*. As the office of a magistratus was annual, the rules promulgated by a predecessor were not binding on a successor, but he might confirm or adopt the rules of his predecessor, and introduce them into his own Edict, and hence such adopted rules were called *edictum tralatitum*¹ or *vetus*, as opposed to *edictum novum*. A *repentinum edictum* was that rule which was made (*prout res iudici*) for the occasion.² A *perpetuum edictum* was that rule which was made by the magistratus on entering upon office, and which was intended to apply to all cases to which it was applicable during the year of his office: hence it was sometimes called, also, *annua lex*. Until it became the practice for magistratus to adopt the edicts of their predecessors, the edicts could not form a body of permanent binding rules; but when this practice became common, the edicts (*edictum tralatitum*) soon constituted a large body of law, which was practically of as much importance as any other part of the law. The several edicts, when thus established, were designated by the names of their promulgators, as the *Edictum Carbonianum*; or they were named with reference to the formula and the actio which they established, as *Aquiliana*, *Publiciana*, *Rutiliana*, &c.

The origin of the edictal power cannot be historically shown; but as the prætor was a magistrate established for the administration of justice, on account of the occupations of the consuls, and the consular power was the representative of the kingly power, it seems that the *jus edicendi* may have been a remnant of the kingly prerogative. However this may be, the edictal power was early exercised, and so far established that the *jus prætorium* was a recognised division of law in, and perhaps somewhat before, the time of Cicero,³ in whose age the study of the Edict formed a part of the regular study of the law.⁴ The edict of the ædiles about the buying and selling of slaves is mentioned by Cicero;⁵ the *Edictiones Ædilitiæ* are alluded to by Plautus;⁶ and an edict of the prætor Peregrinus is mentioned in the *Lex Gallie Cisalpinæ*, which probably belongs to the beginning of the eighth century of the city. The *Lex Cornelia*, B.C. 67, provided against abuses of the edictal power, by declaring that the prætors should decide in particular cases conformably to their perpetual edicts. The edicts made in the provinces are often mentioned by Cicero. They were founded on the *edictum urbanum*, though they likewise comprehended special rules, applicable only to the administration of justice in the provinces, and so far they were properly *edictum provinciale*. Thus Cicero⁷ says that he promulgated in his province two edicts; one *provinciale*, which, among other matters, contained everything that related to the publicani, and another, to which he gives no name, relating to matters of which he says, "*ex edicto et postulari et fieri solent*." As to all the rest he made no edict, but declared that he would frame all his decrees (*decreta*) upon the edicts urbana. It appears, then, that in the time of Cicero the edicts already formed a large body of law, which is confirmed by the fact that in his time an attempt had been already made to reduce it into order, and to comment on it. Servius Sulpicius, the great jurist

and orator, the friend and contemporary of Cicero, addressed to Brutus two very short books on the Edict, which was followed by the work of Ofilius;¹ though we do not know whether the work of Ofilius was an attempt to arrange and collect the various edicta, like the subsequent compilation of Julian, or a commentary like those of many subsequent jurists (Ofilius edictum prætoris primus diligenter composuit).

The object of the Edict, according to the Roman jurists, was the following: "Adjuvandi vel supplendi vel corrigendi juris civilis gratia propter utilitatem publicam:" the Edict is also described as "viva vox juris civilis." It was, in effect, an indirect method of legislating, sanctioned, not only by public opinion, but by the sovereign power, and it was the means by which numerous rules of law became established. It was found to be a more effectual, because an easier and more practical way of gradually enlarging and altering the existing law, and keeping the whole system in harmony, than the method of direct legislation; and it is undeniable that the most valuable part of the Roman law is derived from the edicts. If a prætor established any rule which was found to be inconvenient or injurious, it fell into disuse if not adopted by his successor. The publicity of the Edict must also have been a great security against any arbitrary changes, for a magistratus would hardly venture to promulgate a rule to which opinion had not by anticipation already given its sanction. Many of the rules promulgated by the Edict may probably have been merely in conformity to existing custom, more particularly in cases of contracts, and thus the edict would have the effect of converting custom into law. When Cicero,² however, says that the Edict depends in a great degree on custom, he probably only means that it was usual to incorporate into every new edict what any preceding magistratus had adopted from former edicts. Thus the edictum tralatitium obtained its validity by being continually recognised by every successive magistratus.

As to the matter of the Edict, it must be supposed that the defects of the existing law must generally have been acknowledged and felt before any magistratus ventured to supply them; and in doing this, he must have conformed to that so-called natural equity which is recognised by all mankind. Under the emperors, also, it may be presumed that the opinions of legal writers would act on public opinion, and on those who had the *jus edicendi*. Hence a large part of the edictal rules were founded on the so-called *jus gentium*, and the necessity of some modifications of the strict rules of the civil law, and of additional rules of law, would become the more apparent with the extension of the Roman power and their intercourse with other nations. But the method in which the prætor introduced new rules of law was altogether conformable to the spirit of Roman institutions. The process was slow and gradual; it was not effected by the destruction of that which existed, but by adapting it to circumstances. Accordingly, when a right existed or was recognised, the prætor would give an action if there was none; he would interfere by way of protecting possession, but he could not make possession into ownership, and, accordingly, that was effected by law (*vid. USUCAPIO*); he aided plaintiffs by fictions, as, for instance, in the *Publiciana actio*, where the fiction was that the possessor had obtained the ownership by *usucapio*, and so was *quasi ex jure Quiritium dominus*;³ and he also aided parties by exceptions, and in *integrum restitutio*.

The old forms of procedure were few in number,

and certainly they were often inconvenient and failed to do justice. Accordingly, the prætor extended the remedies by action, as already intimated in the case of the *Publiciana actio*. This change probably commenced after many of the *legis actiones* were abolished by the *Æbutia lex*, and the necessity of new forms of actions arose. These were introduced by the prætors, and it is hardly a matter of doubt that, in establishing the formulæ, they followed the analogy of the *legis actiones*. It is the conclusion of an ingenious writer,¹ "that the edict of the prætor urbanus was in the main part relating to actions arranged after the model of the old *legis actiones*, and that the system is apparent in the Code of Justinian, and still more in the Digest."

Under the emperors there were many commentaries on the Edict. Thus we find that Labeo wrote four books on the Edict, and a work of his in thirty books, *Ad Edictum Prætoris Peregrini*, is cited by Ulpian.² When the imperial rescripts became common, the practice of making annual edicts became less common, and after the time of Hadrian probably fell nearly into disuse; but this opinion, it should be observed, is opposed by several distinguished modern writers. However this may be, Salvius Julianus, a distinguished jurist, who lived in the time of Hadrian, and filled the office of prætor, composed a systematic treatise on the edict, which was called *Edictum Perpetuum*; and it seems that, from the date of this treatise, the name *Perpetuum* was more particularly applied to this edictum than to that which was originally called the *Edictum Perpetuum*. Julian appears to have collected and arranged the old edicts, and he probably omitted both what had fallen into disuse, and abridged many parts, thus giving to the whole a systematic character. The work of Julian must have had a great influence on the study of the law, and on subsequent juristical writings. Nothing is known of the details of this treatise. It does not seem probable that the edicts of the two Romans prætors, together with the *Edictum Provinciale*, and the edicts of the *curule ædiles*, were blended into one in this compilation. If the work of Julian comprehended all these edicts, they must have been kept distinct, as the subject matter of them was different. We know that the edicts of the *curule ædiles* were the subject of distinct treatises by Gaius, Ulpian, and Paulus, and the *Edictum Provinciale* would, from its nature, be of necessity kept separate from all the rest. But some writers are of opinion that the *Edictum Perpetuum* of Julianus made one body of law out of the edicta of the prætor urbanus and peregrinus; that there was also incorporated into it much of the *Edictum Provinciale*, and a large part of the *Edictum Ædilitium*, as an appendage at least. The Edict thus arranged and systematized was, it is farther supposed, promulgated in the provinces, and thus became, as far as its provisions extended, a body of law for the Empire. This view of the edictum of Julianus is confirmed by the fact of Italy being divided by Hadrian into the city of Rome with its appurtenant part, and four districts. The magistratus remained as before, but the jurisdiction of the prætor was limited to Rome and its territory; and magistrates, called *consulares*, and subsequently, in the time of Aurelius, *juridici*, were appointed to administer justice in the districts. As the edictal power of the prætor was thus limited, the necessity for a comprehensive Edict (such as the *Edictum Perpetuum*) is the more apparent.

There were numerous writings on the Edict besides those above enumerated. They were sometimes simply entitled *ad Edictum*, according to the

1. (Dig. 1, tit. 2, s. 2.) — 2. (De Invent., ii., 22.) — 3. (Gaius, iv., 26.)

1. (Rhein. Mus. für Juris., i., p. 51. — "Die Oeconomie des Edictes, von Heffter.") — 2. (Dig. 4, tit. 3, s. 9.)

itations in the Digest ; and there were also other juristical writings, not so entitled, which followed the order of the Edict, as, for instance, the epitome of Hermogenianus.¹ Ultimately the writings on the Edict, and those which followed the arrangement of the Edict, obtained more authority than the Edict itself, and became the basis of instruction.

Some few fragments of the older edicts are found here and there in the Roman writers, but it is chiefly from the writings of the jurists as excerpted in the Digest that we know anything of the Edict in its later form. It seems pretty clear that the order of Justinian's Digest, and more particularly that of his Code, to some extent followed that of the Edict. The writings on the Edict, as well as the Edict itself, were divided into tituli or rubricæ, and these into capita ; some special or detached rules were named clausulæ ; and some parts were simply named edictum, as Edictum Carbonianum, &c.

The Edicta or Edictales Leges of the emperors are mentioned under *Constitutio*.

The Digest, as already observed, contains numerous fragments of the Edicts. The most complete collection of the fragments of the Edicts is by Wieling, in his "Fragmenta Edicti Perpetui," Frank., 1733. The latest essay on the subject is by C. G. L. de Weyhe, "Libri Tres Edicti sive de origine fatisque Jurisprudentiæ Romanæ præsertim Edictorum Prætoris ac de forma Edicti Perpetui," Cell., 1821. The twenty-first book of the Digest² is on the *Ædilicium Edictum*. (Zimmern, *Geschichte des Röm. Privatrechts*.—Marezoll, *Lehrbuch*, &c.—Rein, *Das Römische Privatrecht*, &c., ein *Hilfsbuch zur Erklärung der alten Classiker*, &c., Leipzig, 1836, a useful work.—Savigny, *Geschichte des R. R.*, &c., vol. i., c. 1.)

EDICTUM THEODORICI. This is the first collection of law that was made after the downfall of the Roman power in Italy. It was promulgated by Theodoric, king of the Ostrogoths, at Rome, in the year A.D. 500. It consists of 154 chapters, in which we recognise parts taken from the Code and Novellæ of Theodosius, from the Codices Gregorianus and Hermogenianus, and the Sententiæ of Paulus. The Edict was doubtless drawn up by Roman writers, but the original sources are more disfigured and altered than in any other compilation. This collection of law was intended to apply both to the Goths and the Romans, so far as its provisions went ; but when it made no alteration in the Gothic law, that law was still to be in force. There is an edition of this Edictum by G. F. Rhon, Halæ, 1816, 4to.³

EEDNA. (*Vid.* DOS, GREEK.)

EICOSTE (*εἰκοστή*) was a tax or duty of one twentieth (five per cent.) upon all commodities exported or imported by sea in the states of the allies subject to Athens. This tax was first imposed B.C. 413, in place of the direct tribute which had up to this time been paid by the subject allies ; and the change was made with the hope of raising a greater revenue.⁴ This tax, like all others, was farmed, and the farmers of it were called *εἰκοστολόγοι*. It continued to be collected in B.C. 405, as Aristophanes mentions an *εἰκοστολόγος* in the *Frogs*.⁵

EICOSTOLOGOI. (*Vid.* EICOSTE.)

EIREN or **EIREN** (*εἰρην* or *ἱρην*) was the name given to the Spartan youth when he attained the age of twenty. At the age of eighteen he emerged from childhood, and was called *μελλεῖρην*.⁶ When he had attained his twentieth year, he began to ex-

ercise a direct influence over his juniors, and was intrusted with the command of troops in battle. The word appears to have originally signified a commander. Hæschylus explains ἱρᾶνες by ἄρχοντες, διώκοντες ; and *εἰρηνάγεις* by κρατεῖ. The ἱρᾶνες mentioned in Herodotus¹ were certainly not youths, but commanders.²

EIS'AGEIN. (*Vid.* EISAGOGEIS.)

EISAGO'GEIS (*εἰσαγγεῖς*) were not themselves distinct classes of magistrates, but the name was given to the ordinary magistrates when they were applied to to bring a cause (*εἰσαγγεῖν*) into a proper court. (*Vid.* ΔΙΑΙΤΕΤΑΙ, p. 354, and DICE, p. 358.) The cause itself was tried, as is explained under DICE, by dicasts chosen by lot ; but all the preliminary proceedings, such as receiving the accusation, drawing up the indictment, introducing the cause into court, &c., were conducted by the regular magistrate, who attended in his own department to all that was understood in Athenian law by the *ἡγεμονία τοῦ δικαστηρίου*. Thus we find the strategæ, the logistæ, the ἐπιστάται τῶν δημοσίων ἔργων, the ἐπιμεληταὶ τοῦ ἐμπορίου, &c., possessing this *ἡγεμονία* ; but it was not the chief business of any of the public magistrates except of the archons, and perhaps of the eleven. The chief part of the duties of the former, and especially of the thesmothetæ, consisted in receiving accusations and bringing causes to trial (*εἰσαγγεῖν*) in the proper courts. (*Vid.* ΑΚΘΕΩΝ, p. 84.)³

EISANGELIA (*εἰσαγγελία*) signifies, in its primary and most general sense, a denunciation of any kind,⁴ but much more usually, an information laid before the council or the assembly of the people, and the consequent impeachment and trial of state criminals at Athens under novel or extraordinary circumstances. Among these were the occasions upon which manifest crimes were alleged to have been committed, and yet of such a nature as the existing laws had failed to anticipate, or, at least, describe specifically (*ἄγραφά ἄδικήματα*), the result of which omission would have been, but for the enactment by which the accusations in question might be preferred (*νόμος εἰσαγγελτικός*), that a prosecutor would not have known to what magistrate to apply ; that a magistrate, if applied to, could not with safety have accepted the indictment or brought it into court ; and that, in short, there would have been a total failure of justice.⁵ The process in question was peculiarly adapted to supply these deficiencies : it pointed out, as the authority competent to determine the criminality of the alleged act, the assembly of the people, to which applications for this purpose might be made on the first business-day of each prytany (*κυρία ἐκκλησία*), or the council, which was at all times capable of undertaking such investigations ; and occasionally the accusation was submitted to the cognizance of both these bodies. After the offence had been declared penal, the forms of the trial and amount of the punishment were prescribed by the same authority ; and, as upon the conviction of the offenders a precedent would be established for the future, the whole of the proceedings, although extraordinary, and not originating in any specific law, may be considered as virtually establishing a penal statute, retrospective in its first application.⁷

The speech of Euryptolemus⁸ clearly shows that the crime charged against the ten generals who fought at Arginusæ was one of these unspecified offences. The decree of the senate against Antiphon and his colleagues,⁹ directing that they

should be tried, and, if found guilty, punished as traitors, seems to warrant the inference that their delinquency (viz., having undertaken an embassy to Sparta by order of the Four Hundred, a government declared illegal upon the reinstatement of the democracy) did not amount to treason in the usual sense of the term, but required a special declaration by the senate to render it cognizable as such by the Heliæa. Another instance of treason by implication, prosecuted as an extraordinary and unspecified crime, appears in the case of Leocrates, who is, in the speech already cited, accused of having absented himself from his country, and dropped the character of an Athenian citizen at a time when the state was in imminent danger. Offences, however, of this nature were by no means the only ones, nor, indeed, the most numerous class of those to which extraordinary denunciations were applicable. They might be adopted when the charge embraced a combination of crimes, as that of treason and impiety in the famous case of Alcibiades, for each of which a common indictment (*γραφῆ*) was admissible when the accused were persons of great influence in the state, when the imputed crime, though punishable by the ordinary laws, was peculiarly heinous, or when a more speedy trial than was permitted by the usual course of business was requisite to accomplish the ends of justice.¹ Circumstances such as these would, of course, be very often pretended by an informer, to excite the greater odium against the accused, and the adoption of the process in question must have been much more frequent than was absolutely necessary.

The first step taken by the informer was to reduce his denunciation to writing, and submit it immediately to the cognizance of the council, which had a discretionary power to accept or reject it.² Schömann maintains that a reference to this body was also necessary when it was intended to bring the matter before the assembly of the people, but that its agency was in such cases limited to permitting the impeachment to be announced for discussion, and directing the *proedri* to obtain a hearing for the informer. The *thesmothetæ* are also mentioned by Pollux³ as taking part in bringing the matter before the assembly, but upon what occasion they were so employed we can only conjecture.

In cases intended for the cognizance of the council only, after the reception of the denunciation, three courses with respect to it might be adopted by that body. If the alleged offence were punishable by a fine of no greater amount than five hundred drachmæ, the council itself formed a court competent for its trial; if it was of a graver character, they might pass a decree, such as that in the case of Antiphon already mentioned, directing the proper officers to introduce the cause to a Heliastic court, and prescribing the time and forms of the trial, and the penalty to be inflicted upon the conviction of the criminals; lastly, if the matter were highly important, and from doubts or other reasons they required the sanction of the assembly, they might submit the cause as it stood to the consideration of that body. In the first case, the trial was conducted before the council with all the forms of an ordinary court; and if, upon the assessment of penalties, the offence seemed to deserve a heavier punishment than fell within its competency, the trial was transferred to a Heliastic court, by the delivery of the sentence of the council (*κατάγνωσις*) to the *thesmothetæ* by the scribe of the *prytanes*, and upon these officers it then devolved to bring the criminals to justice.⁴ The accused were in the mean while put into prison for safe custody by the

authority of the council. When the offence was obviously beyond the reach of the senate's competency, the trial was dispensed with, and a decree immediately drawn up for submitting the cause to a superior court.

When a cause of this kind was so referred, the decree of the senate, or vote of the people, associated other public advocates, generally ten in number, with the informer, who received a drachma each from the public treasury (*συνήγοροι*). And besides these, permission was given to any other citizen to volunteer his services on the side of the prosecution. If the information were laid before the assembly, either by the accuser himself or the senate, the first proceedings in the cause had for their object to establish the penalty of the offence, or the apparent culpability of the accused; and this being decided by a vote of the people after a public discussion, the mode of conducting the trial and the penalty were next fixed. In the case of the ten generals, the assembly directed that the senate should propose the requisite arrangements. The plan of the senate, however, was not necessarily adopted, but might be combated by rival proposals of any private citizen. The assembly very often referred the matter to the Heliastic court, but occasionally undertook the trial itself; and when the prisoner was accused of treason, we are told¹ that he made his defence to the assembly in chains, and with a keeper upon either side; and, according to another authority,² that the time for such defence was limited. After this the tribes voted by ballot, two urns being assigned to each tribe for this purpose. The informer, in the event of the prisoner being acquitted, was subjected to no penalty if he obtained the votes of as many as a fifth of the judges; otherwise he was liable to a fine of a thousand drachmæ. For a more ample discussion of the trials in question, the reader is referred to Schömann.³

Besides the class of causes hitherto described, there were also two others which equally bore the name of *εισαγγελία*, though by no means of the same importance, nor, indeed, much resembling it in the conduct of the proceedings. The first of these consists of cases of alleged *κίκασις*, i. e., wrong done to aged or helpless parents, women, or orphans. Upon such occasions the informer laid his indictment before the archon if the aggrieved persons were of a free Attic family, or before the polemarch if they were resident aliens. The peculiarities of this kind of cause were, that any Athenian citizen might undertake the accusation; that the informer was not limited as to time in his address to the court, and incurred no penalty whatever upon failing to obtain a verdict. With respect to the accused, it is obvious that the cause must have been *τιμῆς*, or, in other words, that the court would have the power of fixing the amount of the penalty upon conviction. The third kind of *εισαγγελία* was available against one of the public arbitrators (*διαίτητες*), when any one complained of his having given an unjust verdict against him. The information was in this case laid before the senate; and that the magistrate who had so offended, or did not appear to defend himself, might be punished by disfranchisement, we know from the instance mentioned by Demosthenes.⁴ This passage, however, and an allusion to it in Harpocration, constitute the whole of our information upon the subject.⁵

EISITERIA (*Εισιτήρια*, scil. *ιερά*), sacrifices which were offered at Athens by the senate before the session began, in honour of *Θεοὶ Βουλευταὶ*, i. e.,

1. (Schömann, *De Com.*, p. 190.—Harpocrat.)—2. (*Lys.*, c. *Nicom.*, 185.)—3. (*vii.*, 87.)—4. (*Demosth.*, c. *Timocr.*, 720.)

1. (*Xen.*, l. c.)—2. (*Schol. ad Aristoph.*, *Eccles.*, 1081.)—3. (*De Comitiis*, c. iii.)—4. (*c. Meid.*, 542, 14.)—5. (*Hadtwaalcken über die Diätet.* p. 19—*Meier*, *Att. Proc.*, 270.)

Zeus and Athena.¹ The sacrifice was accompanied by libations, and a common meal for all the senators.²

Suidas³ calls the *εισθέρια* a festive day—the first of every year—on which all the Athenian magistrates entered upon their office, and on which the senate offered up sacrifices for the purpose of obtaining the good-will of the gods for the new magistrates. But this statement, as well as the farther remarks he adds, seem to have arisen from a gross misunderstanding of the passage of Demosthenes⁴ to which he refers. Schönmann⁵ adopts the account of Suidas, and rejects the other statement without giving any reason.

EISPHORA (*εισφορά*), literally a contribution or tribute, was an extraordinary tax on property, raised at Athens whenever the means of the state were not sufficient to carry on a war. The money thus raised was sometimes called *τὰ καταβλήματα*.⁶ We must carefully distinguish between this tax and the various liturgies which consisted in personal or direct services which citizens had to perform, whereas the *εισφορά* consisted in paying a certain contribution towards defraying the expenses of a war. Some ancient writers do not always clearly distinguish between the two, and Ulpian on Demosthenes⁷ entirely confounds them; and it is partly owing to these inaccuracies that this subject is involved in great difficulties. At the time when armies consisted only of Athenian citizens, who equipped themselves and served without pay, the military service was indeed nothing but a species of extraordinary liturgy; but when mercenaries were hired to perform the duties of the citizens, when wars became more expensive and frequent, the state was obliged to levy contributions on the citizens in order to be able to carry them on, and the citizens then paid money for services which previously they had performed in person.

It is not quite certain when this property-tax was introduced; for, although it is commonly inferred, from a passage in Thucydides,⁸ that it was first instituted in 428 B.C. in order to defray the expenses of the siege of Mytilene, yet we find *εισφορά* mentioned at an earlier period;⁹ and even the passage of Thucydides admits of an interpretation quite in accordance with this, for it is certainly not impossible that he merely meant to say that so large an amount as 200 talents had never before been raised as *εισφορά*. But, however this may be, after the year 428 B.C. this property-tax seems to have frequently been raised, for a few years afterward Aristophanes¹⁰ speaks of it as something of common occurrence. Such a contribution could never be raised without a decree of the people, who also assigned the amount required;¹¹ and the generals superintended its collection, and presided in the courts where disputes connected with, or arising from, the levying of the tax were settled.¹² Such disputes seem to have occurred rather frequently; personal enmity not seldom induced the officers to tax persons higher than was lawful, according to the amount of their property.¹³ The usual expressions for paying this property-tax are, *εισφέρειν χρηματα*, *εισφέρειν εἰς τὸν πόλεμον*, *εἰς τὴν σωτηρίαν τῆς πόλεως*, *εἰσφέρειν εἰσφέρειν*, and those who paid it were called *οἱ εἰσφέροντες*. On the occasion mentioned by Thucydides, the amount which was raised

was, as we have seen, 200 talents, which, if we suppose the taxable property to have been 20,000 talents, was a tax of one per cent.¹ At other times the rates were higher or lower, according to the wants of the Republic at the time: we have accounts of rates of a twelfth, a fiftieth, a hundredth, and a five hundredth part of the taxable property.

The census of Solon was during the first period the standard according to which the *εισφορά* was raised, until in 377 B.C., in the archonship of Nausinicus, a new census was instituted, in which the people, for the purpose of fixing the rates of the property-tax, were divided into a number of symmoriæ (*συμμορίαι*) or classes, similar to those which were afterward made for the trierarchy.² The nature of this new census, notwithstanding the minute investigation of Böckh,³ is still involved in great obscurity. Each of the ten phylæ, according to Ulpian, appointed 120 of its wealthier citizens, who were divided into two parts, according to their property, called symmoriæ, each consisting of sixty persons; and the members of the wealthier of the two symmoriæ were obliged, in case of urgent necessity, to advance to the less wealthy the sum required for the *εισφορά* (*προεἰσφορά*).⁴ When the wants of the state had been thus supplied, those who had advanced the money could at their ease, and in the usual way, exact their money back from those to whom they had advanced it. The whole number of persons included in the symmoriæ was 1200, who were considered as the representatives of the whole Republic; it would, however, as Böckh justly observes, be absurd to suppose, with Ulpian, that these 1200 alone paid the property-tax, and that all the rest were exempt from it. The whole census of 6000,⁵ or, more accurately, of 5750 talents,⁶ was surely not the property of 1200 citizens, but the taxable property of the whole Republic. Many others, therefore, though their property was smaller than that of the 1200, must have contributed to the *εισφορά*, and their property must be considered as included in the census of 5750 talents of taxable property.

The body of 1200 was, according to Ulpian, also divided into four classes, each consisting of 300. The first class, or the richest, were the leaders of the symmoriæ (*ἡγεμόνες συμμορίων*), and are often called the three hundred *κατ' ἐξοχὴν*. They probably conducted the proceedings of the symmoriæ, and they, or, which is more likely, the demarchs, had to value the taxable property. Other officers were appointed to make out the lists of the rates, and were called *ἐπιγραφεῖς*, *διαγραφεῖς*, or *ἐκλογεῖς*. When the wants of the state were pressing, the 300 leaders, perhaps in connexion with the 300 included in the second class—for Ulpian, in the first portion of his remark, states that the richer symmoria of every phyle had to perform this duty—advanced the money to the others on the above-mentioned terms,⁷ which, however, was never done unless it was decreed by the people.⁸ The rates of taxation for the four classes have been made out with great probability by Böckh,⁹ from whose work the following table is taken:

First Class, from twelve talents upward.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-30th part.
500 tal.	$\frac{1}{3}$	100 tal.	5 tal.
100 "	$\frac{1}{3}$	20 "	1 "
50 "	$\frac{1}{3}$	10 "	30 min.
15 "	$\frac{1}{3}$	3 "	9 "
12 "	$\frac{1}{3}$	2 tal. 24 min.	720 drach.

1. (Böckh, Staatsh., ii., p. 56.)—2. (Philoch., on Harpocrat. s. v. *Συμμορία*.—Demosth., c. Androt., p. 606.—Ulpian ad Demosth., Olynth., ii., p. 33, e.)—3. (Staatsh., book iv.)—4. (Demosth., c. Meul., p. 564, &c.)—5. (Demosth., De Symmor.)—6. (Polyb., ii., 62, A. 7.)—7. (Demosth., c. Phenipp., p. 146.)—8. (Demosth., c. Polycl., p. 1209.)—9. (Staatsh., ii., p. 55.)

1. (Antiph., De Chor., p. 789.—Böckh, Corp. Inscript., i., p. 671.)—2. (Demosth., De Fals. Leg., p. 400, 24.—Compare with c. Meid., p. 552, 2, where *εισθέρια* are said to be offered for the senate, *ὑπὲρ τῆς βουλῆς*.)—3. (s. v.)—4. (De Fals. Leg., p. 400.)—5. (De Comit., p. 291, transl.)—6. (Demosth., c. Timocr., p. 731.)—7. (Olynth., ii., p. 33, e.)—8. (Ili., 19.)—9. (Vid. Antiph., Tetral., i. b., c. 12.—Isæus, De Dicog., c. 37; and Tittmann, Griech. Staats., p. 41, note 31.—10. (Æquit., 922.)—11. (Demosth., c. Polycl., p. 1208.—Aristoph., Eccles., 818.)—12. (Wolf, Proleg. in Leptin., p. 94.—Demosth., c. Boeot., p. 1002.)—13. (Aristoph., l. c.—Demosth., c. Aphob., p. 615.)

Second Class, from six talents and upward, but under twelve.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
11 tal.	$\frac{1}{8}$	1 tal. 50 min.	550 drach.
10 "	$\frac{1}{8}$	1 " 40 "	500 "
8 "	$\frac{1}{8}$	1 " 20 "	400 "
7 "	$\frac{1}{8}$	1 " 10 "	350 "
6 "	$\frac{1}{8}$	1 " . . .	300 "

Third Class, from two talents upward, but under six.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
5 tal.	$\frac{1}{8}$	37½ min.	187½ drach.
4 "	$\frac{1}{8}$	30 "	150 "
3 "	$\frac{1}{8}$	22½ "	112½ "
2½ "	$\frac{1}{8}$	18½ "	93½ "
2 "	$\frac{1}{8}$	15 "	75 "

Fourth Class, from twenty-five minæ upward, but under two talents.

Property.	Taxable.	Taxable Capital.	Property-tax of 1-20th part.
1½ tal.	$\frac{1}{8}$	900 drach.	45 drach.
1 "	$\frac{1}{8}$	600 "	30 "
45 min.	$\frac{1}{8}$	450 "	22½ "
30 "	$\frac{1}{8}$	300 "	15 "
25 "	$\frac{1}{8}$	250 "	12½ "

Every one had to pay his tax in the phyle where his landed property lay, as appears from the oration of Demosthenes against Polyces; and if any one refused to pay, the state had a right to confiscate his estate, but not to punish the individual with atimia.¹ But if any one thought that his property was taxed higher than that of another man on whom juster claims could be made, he had the right to call upon this person to take the office in his stead, or to submit to a complete exchange of property. (*Vid.* ANTIDOSIS.) No Athenian, on the other hand, if belonging to the tax-paying classes, could be exempt from the *εισφορά*, not even the descendants of Harmodius and Aristogiton.² Orphans, though exempt from liturgies, were obliged to pay the property-tax, as we see in the instance of Demosthenes, who was one of the leaders of the symmoriae for ten years.³ Even trierarchs were not exempt from paying the *εισφορά* themselves, although they could not be compelled to pay the *προεισφορά*.⁴ It seems that aliens were likewise subject to it, for the only instance we have of any exception being made is one of aliens.⁵

For further information concerning the subject of the *εισφορά*, *vid.* the fourth book of Böckh's *Public Economy of Athens*.—Wolf, *Prolegomena in Lepitin*.—Wachsmuth, *Hellen. Alterth.*, ii., 1, p. 136.—Hermann, *Pol. Ant. of Greece*, § 162.

ΕΙΣΠΟΙΕΙΣΤΗΑΙ (*εισποιεῖσθαι*). (*Vid.* ADOP-TION, GREEK.)

ΕΛΑΘΗΣΙΥΜ. (*Vid.* ΒΑΤΗΣ, p. 148.)

*ΕΛΑΙΑ (*ἐλαία*), the Olive. The common *ἐλαία* of the Greek authors is the *Olea Europæa*, L. The *ἐλαία Αἰθιοπική*, called also *ἀγριελαία* and *κότνος*, is referred by Matthioli and Sprengel to several species of the *Elaiagnus*, namely, *E. spinosa*, *E. hortensis*, and *E. Orientalis*.⁶

*ΕΛΑΙΑΓ'ΝΟΣ or ΕΛΕΙΑΓ'ΝΟΣ (*ἐλαίαγνος* or *ἐλείαγνος*), a plant mentioned by Theophrastus,⁷ and which is thought, from the description which he gives of it, to have been the same with the Dutch Myrtle, or *Myrica*, Gale Sprengel, however, is in favour of the *Salix Babylonica*, or Weeping Willow.⁸

*ΕΛΑΙΟΜΕΛΙ (*ἐλαίου μελι*), according to Dr. Al-

ston, a sort of Manna. Pliny¹ says of it, "*Spontis nascitur in Syria maritimis, quod elaiomeli vocant, manat ex arboribus pingue, crassiusque melle, resina tenuius, sapore dulci.*" The same writer, in another part,² informs us that it acted as an aperient, and was particularly efficacious in producing evacuations of bile. Hard drinkers, who wished to contend for the palm at a carousal, commenced by drinking a cyathus of diluted elaiomeli. Fée inclines to make it a terebinthine, especially since Dioscorides speaks of its employment as a friction in nervous disorders. Pliny and Dioscorides make mention, also, of its soporific properties; but this seems inconsistent with its other qualities, and is regarded by Fée as erroneous.³

ΕΛΑΠΗΒΟΛΙΑ (*Ἐλαφήβωλία*), the greatest festival in the town of Hyampolis, in Phocis, which was celebrated in honour of Artemis, in commemoration, it is said, of a victory which its inhabitants had gained over the Thessalians, who had ravaged the country, and reduced the Phocians in the neighbourhood of the town nearly to the last extremity.⁴ The only particular which we know of its celebration is, that a peculiar kind of cake (*ἐλαφος*) was made on the occasion.⁵ These cakes were, as their name indicates, probably made in the shape of a stag or deer, and offered to the goddess. The festival of the elaphebolia was also celebrated in many other parts of Greece, but no particulars are known.⁶

ΕΛΑΠΗΒΟΛΙΟΝ (*Ἐλαφήβολιών*). (*Vid.* CAL-NDAR, GREEK.)

*ΕΛΑΠΗΒΟΣ'CUS (*ἐλαφόβσκος*), the Garden Parsnip, or *Pastinaca sativa*. The popular belief was, that the stags, by feeding on this, were enabled to resist serpents. Sibthorp found it in the islands of the Archipelago, on the margins of fields, and also in the Peloponnesus.⁷

*ΕΛ'APHUS (*ἐλαφος*), the Stag, or *Cervus Elaphus*. Buffon makes the *ἰππ'ελάφος* of Aristotle the *Cerv des Ardennes*. The *ἄκωνης* of Aristotle was the *Daguet*, or Young Stag.⁸

*ΕΛ'ATE (*ἐλάτη*). "The common *ἐλάτη* of the Greeks," observes Adams, "must have been either the *Pinus Orientalis*, Tournefort, or the *Pinus abies*. There is some difficulty in distinguishing the Male and Female species of Theophrastus.⁹ Stackhouse holds the former to be the *Pinus abies*, or common Fir-tree; and the latter, the *Pinus picea*, or Yellow-leaved Fir.¹⁰

*ΕΛΑΤ'INE (*ἐλατίνη*), either the *Linaria Elatine*, Desf., or *Linaria spuria*, Will. Its English name is Fluellin, and it is a species of Toad-flax.¹¹

*ΕΛΕΒ'ORUS. (*Vid.* HELLÉBORUS.)

ELECTRUM. (*Vid.* BRONZE, p. 177.)

*II. Amber. Most of the ancient authors erred in supposing Amber an exudation from the poplar. Theophrastus, however,¹² would appear to have known its true origin. "Amber," says he, "is a stone. It is dug out of the earth in Liguria, and has, as before mentioned, a power of attraction." Diodorus Siculus¹³ knew that Amber came from the country north of Gaul, and that the popular story of its consisting of the tears of those poplars into which Phaëthon's sisters were transformed was a mere fable. Lucian was aware that Amber was not an exudation from the poplar, and that there was none of it got at the mouth of the Po. The common error in relation to the quarter whence this substance was obtained, has been explained as fol-

lows: The Phœnician, and, after them, the Carthaginian, traders obtained their supply of Amber from the river *Rodanus*, which still retains its name, and which flows into the Vistula near Dantzic. Their fear of rivalry, however, in this lucrative branch of commerce, induced them to keep the source of their traffic involved in obscurity. The name, but not the position of the river, was mentioned, and hence the Greeks imagined that the stream in question was the Eridanus, from the similarity of name. "Amber," says Dr. Moore, "was well known to the ancients many centuries before the age of Pliny, and various ornamental articles were made of it, but in his time only for the use of women.¹ His own belief, not differing much from the one now received, is, that it consists of the resinous juice of certain trees, which had, in course of time, become mineralized in the earth. Hence was its Latin name '*succinum*' derived, '*quod arboris succum prisca nostri credere*.'"² Pliny says, the different colours it exhibited in its native state were sometimes produced by artificial means, since they could dye it of whatever tint they pleased; and, therefore, it was much used in counterfeiting translucent gems, and especially the amethyst. Demostratus³ called Amber *lyncurion*, supposing it produced from the urine of the lynx; from that of males when of a deeper and more fiery tint, but when feebler and paler, of the other sex. Other writers spoke of *lyncurion* as a substance distinct from Amber, but having the origin indicated by its name."⁴

*ELEDONE (*ἐλεδώνη*), a species of molluscous animal, briefly noticed by Aristotle⁵ and Athenæus. "Coray," remarks Adams, "proposes to read *χελιδόνας* instead of it; but I agree with Schweighæuser, that there is no necessity for any emendation. Schneider inclines to refer it to the *Moschatus octopus*, Lam."⁶

*ELEIOCHRY'SUS (*ἐλείουχρυσος*) or ELICHRY'SUS (*ἐλίχρυσος*), according to some botanical authorities, the *Gnaphalium stachas*, L., or Shrubby Everlasting. Its Greek name was derived from its golden-coloured flowers. Dioscorides states that it was called by some *χρυσάνθεμος*, by others *ἀμάραντος*, the latter name referring to its perennial character, from which circumstance it was used to adorn the statues of the gods. Adams, however, is in favour of the *Caltha palustris*, or Marsh Marygold.⁷

*ELEIOS (*ἐλεῖος*), an animal mentioned by Aristotle,⁸ and supposed to have been identical with the *Glis* of the Romans, which was the *Glis esculentus*, or Rellmouse of the later naturalists. Linnæus calls it the *Myoxus Glis*.⁹

*ELEIOSELI'NON (*ἐλειοσέλινον*), most probably the *Apium graveolens*, wild Celery, or Smallage.¹⁰

*ELEIS'PHAKOS (*ἐλεῖσφακος*), the *Salvia officinalis*, or common Sage. The Latin name was derived from the salutary properties ascribed to the plant (*salvia*, a salute, i. e., *sanitate*). Sibthorp found it in uncultivated places, as described by Dioscorides.¹¹

*ELEPHAS (*ἐλέφας*), the Elephant, or *Elephas maximus*, L. "One description of the Elephant given by Aristotle is admitted by Cuvier to be remarkably accurate. The animal and the disease Elephas, or Elephantiasis, are both minutely described by Aretæus. It cannot admit of a doubt that the ancients were acquainted with the Indian

Elephant (*Elephas Indicus*), as well as the African (*Loxodonta Africanus*)."

ELEVEN, THE (*οἱ ἐνδεκα*), were magistrates at Athens of considerable importance. They are always called by this name in the classical writers; but in the time of Demetrius Phalereus, their name is said to have been changed into that of *νομοφύλακες*,² who were, however, during the Democracy, distinct functionaries. (*Vid.* *ΝΟΜΟΦΥΛΑΚΕΣ*.) The grammarians also give other names to the Eleven, as *δεμοφύλακες*, *θεμοφύλακες*, &c.³

The time at which the office of the Eleven was instituted is disputed. Ulrich considers the office to have been of an aristocratical character, and concludes, from a passage in Heraclides Ponticus,⁴ that it was established by Aristides. Meier, on the other hand, maintains that the office existed not only before the time of Cleisthenes, but probably before the legislation of Solon; but it seems impossible to come to any satisfactory conclusion on the subject. They were annually chosen by lot, one from each of the ten tribes, and a secretary (*γραμματεὺς*), who must properly be regarded as their servant (*ὑπρέτης*), though he formed one of their number.⁵

The principal duty of the Eleven was the care and management of the public prison (*δεσμωτήριον*) (*vid.* *CARCER*), which was entirely under their jurisdiction. The prison, however, was seldom used by the Athenians as a mere place of confinement, serving generally for punishments and executions. When a person was condemned to death, he was immediately given into the custody of the Eleven, who were then bound to carry the sentence into execution according to the laws.⁶ The most common mode of execution was by hemlock juice (*κώνειον*), which was drunk after sunset.⁷ The Eleven had under them jailers, executioners, and torturers, who were called by various names (*οἱ παραστάται*,⁸ *οἱ τῶν ἐνδεκα ὑπρέτης*,⁹ *οἱ δημόκοινοι*,¹⁰ *οἱ δημόσιοι δήμιος*, &c.). When torture was inflicted in cases affecting the state, it was either done in the immediate presence of the Eleven,¹¹ or by their servant (*ὁ δῆμιος*). (*Vid.* *BASANOS*.)

The Eleven usually only had to carry into execution the sentence passed in the courts of law and the public assemblies; but in some cases they possessed an *ἡγεμονία δικαστηρίου*. This was the case in those summary proceedings called *ἀπαγωγή*, *ἐφέγησις*, and *ἐνδείξις*, in which the penalty was fixed by law, and might be inflicted by the court on the confession or conviction of the accused without appealing to any of the jury courts. (*Vid.* *ΑΡΑΓΟΓΕ*.) They also had an *ἡγεμονία δικαστηρίου* in the case of *κακούργοι*, because the summary proceedings mentioned above were chiefly adopted in the case of such persons: hence Antiphon¹² calls them *ἐπιμεληταὶ τῶν κακούργων*. The word *κακούργοι* properly means any kind of malefactors, but is only applied in Athenian law to thieves (*κλέπται*), housebreakers (*ταχυρῆχοι*),¹³ man-stealers (*ἀνδραποδίσται*), and other criminals of a similar kind.¹⁴

The Eleven are also said to have possessed *ἡγεμονία δικαστηρίου* in the case of confiscated property,¹⁵ which statement is confirmed by an inscription published by Böckh.¹⁶

ELEUSINIA (*Ἐλευσινία*), a festival and mysteries, originally celebrated only at Eleusis in Attica, in honour of Demeter and Persephone.¹ All the ancients who have occasion to mention the Eleusinian mysteries, or the mysteries, as they were sometimes called, agree that they were the holiest and most venerable of all that were celebrated in Greece.² Various traditions were current among the Greeks respecting the author of these mysteries; for, while some considered Eumolpus or Musæus to be their founder, others stated that they had been introduced from Egypt by Erechtheus, who at a time of scarcity provided his country with corn from Egypt, and imported from the same quarter the sacred rites and mysteries of Eleusis. A third tradition attributed the institution to Demeter herself, who, when wandering about in search of her daughter Persephone, was believed to have come to Attica, in the reign of Erechtheus, to have supplied its inhabitants with corn, and to have instituted the *τελεταί* and mysteries at Eleusis.³ This last opinion seems to have been the most common among the ancients, and in subsequent times a stone, called *ἀγέλαστος πέτρα* (*triste saxum*), was shown near the well Callichoros at Eleusis, on which the goddess, overwhelmed with grief and fatigue, was believed to have rested on her arrival in Attica.⁴ Around the well Callichoros the Eleusinian women were said to have first performed their chorus, and to have sung hymns to the goddess.⁵ All the accounts and allusions in ancient writers seem to warrant the conclusion that the legends concerning the introduction of the Eleusinia are descriptions of a period when the inhabitants of Attica were becoming acquainted with the benefits of agriculture, and of a regularly constituted form of society.⁶

In the reign of Erechtheus a war is said to have broken out between the Athenians and Eleusinians,⁷ and when the latter were defeated, they acknowledged the supremacy of Athens in everything except the *τελεταί*, which they wished to conduct and regulate for themselves.⁸ Thus the superintendence remained with the descendants of Eumolpus (*vid. ΕΥΜΟΛΠΙΔΕ*), the daughters of the Eleusinian king Celeus, and a third class of priests, the Keryces, who seem likewise to have been connected with the family of Eumolpus, though they themselves traced their origin to Hermes and Aglauros.

At the time when the local governments of the several townships of Attica were concentrated at Athens, the capital became also the centre of religion, and several deities who had hitherto only enjoyed a local worship were now raised to the rank of national gods. This seems also to have been the case with the Eleusinian goddess; for in the reign of Theseus we find mention of a temple at Athens, called Eleusinion,⁹ probably the new and national sanctuary of Demeter. Her priests and priestesses now became naturally attached to the national temple of the capital, though her original place of worship at Eleusis, with which so many sacred associations were connected, still retained its importance and its special share in the celebration of the national solemnities; and though, as we shall see hereafter, the great Eleusinian festival was commenced at Athens, yet a numerous procession always went, on a certain day, to Eleusis:

it was here that the most solemn part of the sacred rites was performed.

We must distinguish between the greater Eleusinia which were celebrated at Athens and Eleusis, and the lesser which were held at Agræ on the Ilissus.¹ From the tradition respecting the institution of the lesser Eleusinia, it seems to be clear that the initiation into the Eleusinian mysteries was originally confined to Atticans only; for it is said that Heracles, before descending into the lower world, wished to be initiated; but as the law did not admit strangers, the lesser Eleusinia were instituted in order to evade the law, and not to disapprove the great benefactor of Attica.² Other legends concerning the initiation of Heracles do not mention the lesser Eleusinia, but merely state that he was adopted into the family of one Pylins in order to become lawfully entitled to the initiation. But both traditions in reality express the same thing, if we suppose that the initiation of Heracles was only the first stage in the real initiation; for the lesser Eleusinia were in reality only a preparation (*προκάθαρσις* or *προάγνυσις*) for the real mysteries.³ After the time when the lesser Eleusinia are said to have been instituted, we no longer hear of the exclusion of any one from the mysteries except barbarians; and Herodotus⁴ expressly states, that any Greek who wished it might be initiated. The lesser Eleusinia were held every year in the month of Anthesterion,⁵ and, according to some accounts, in honour of Persephone alone. Those who were initiated in them bore the name of *μυσταί* (*μύσται*), and had to wait at least another year before they could be admitted to the great mysteries. The principal rites of this first stage of initiation consisted in the sacrifice of a sow, which the *μυσταί* seem to have first washed in the Cantharus,⁷ and in the purification by a priest, who bore the name of Hydranos.⁸ The *μυσταί* had also to take an oath of secrecy, which was administered to them by the *μυσταγός*, also called *ιεροφάντης* or *προφήτης*: they received some kind of preparatory instruction, which enabled them afterward to understand the mysteries which were revealed to them in the great Eleusinia; they were not admitted into the sanctuary of Demeter, but remained during the solemnities in the vestibule.⁹

The great mysteries were celebrated every year in the month of Boedromion, during nine days, from the 15th to the 23d,¹⁰ both at Athens and Eleusis. The initiated were called *ἐπίσπραι* or *ἐπύροι*.¹¹ On the first day, those who had been initiated in the lesser Eleusinia assembled at Athens, whence its name was *ἀγνυμός*;¹² but strangers who wished to witness the celebration of these national solemnities likewise visited Athens in great numbers at this season, and we find it expressly stated that Athens was crowded with visitors on the occasion.¹³ On the second day the *μυσταί* went in solemn procession to the seacoast, where they underwent a purification. Hence the day was called *Ἀλαθε μύσται*, probably the conventional phrase by which the *μυσταί* were invited to assemble for the purpose.¹⁴ Suidas¹⁵ mentions two *ριυεῖται*, called *ῥεῖται*, as the place to which the *μυσταί* went in order to be purified. Of the third day scarcely anything is known with certainty; we only learn from

Clemens of Alexandria¹ that it was a day of fasting, and that in the evening a frugal meal was taken, which consisted of cakes made of sesame and honey. Whether sacrifices were offered on this day, as Meursius supposes, is uncertain; but that which he assigns to it consisted of two kinds of sea-fish (*τρίγλη* and *μανίνι*²), and of cakes of barley grown in the Rharian plain.³ It may be, however, that this sacrifice belonged to the fourth day, on which, also, the *καλῶτος κῆθοδος* seems to have taken place. This was a procession with a basket containing pomegranates and poppy-seeds; it was carried on a wagon drawn by oxen, and women followed with small mystic cases in their hands.⁴ On the fifth day, which appears to have been called the torch-day (*ἡ τῶν λαμπάδων ἡμέρα*), the mystæ, led by the *οἰδοῦχος*, went in the evening with torches to the Temple of Demeter at Eleusis, where they seem to have remained during the following night. This rite was probably a symbolical representation of Demeter wandering about in search of Persephone. The sixth day, called Iacchos,⁵ was the most solemn of all. The statue of Iacchos, son of Demeter, adorned with a garland of myrtle, and bearing a torch in his hand, was carried along the sacred road⁶ amid joyous shouts (*ιαχιζεν*) and songs, from the Ceramice to Eleusis.⁷ This solemn procession was accompanied by great numbers of followers and spectators, and the story related by Herodotus⁸ is founded on the supposition that 30,000 persons walking along the sacred road on this occasion was nothing uncommon. During the night from the sixth to the seventh day, the mystæ remained at Eleusis, and were initiated into the last mysteries (*ἐποπτεία*). Those who were neither *ἐπὶσπαι* nor *μύσται* were sent away by a herald. The mystæ now repeated the oath of secrecy which had been administered to them at the lesser Eleusinia, underwent a new purification, and then they were led by the mystagogus, in the darkness of night, into the lighted interior of the sanctuary (*φωταγωγία*), and were allowed to see (*αὐτοψία*) what none except the *εποπταὶ* ever beheld. The awful and horrible manner in which the initiation is described by later, especially Christian writers, seems partly to proceed from their ignorance of its real character, partly from their horror and aversion to these pagan rites. The more ancient writers always abstained from entering upon any description of the subject. Each individual, after his initiation, is said to have been dismissed by the words *κύριε, ὁμᾶς*,⁹ in order to make room for other mystæ.

On the seventh day the initiated returned to Athens, amid various kinds of raillery and jests, especially at the bridge over the Cephissus, where they sat down to rest, and poured forth their ridicule on those who passed by. Hence the words *γεφύριζεν* and *γεφύριμος*.¹⁰ These *σκώμματα* seem, like the procession with torches to Eleusis, to have been dramatised and symbolical representations of the jests by which, according to the ancient legend, Iambe or Bauho had dispelled the grief of the goddess and made her smile. We may here observe, that probably the whole history of Demeter and Persephone was in some way or other symbolically represented at the Eleusinia. Hence Clemens of Alexandria¹¹ calls the Eleusinian mysteries a "mystical drama."¹² The eighth day, called *Ἐντιδρία*,

was a kind of additional day for those who by some accident had come too late, or had been prevented from being initiated on the sixth day. It was said to have been added to the original number of days, when Asclepius, coming over from Epidaurus to be initiated, arrived too late, and the Athenians, not to disappoint the god, added an eighth day.¹ The ninth and last day bore the name of *πλημυχοί*,² from a peculiar kind of vessel called *πλημυχόη*, which is described as a small kind of *κόρυμβος*. Two of these vessels were on this day filled with water or wine, and the contents of the one thrown to the east, and those of the other to the west, while those who performed this rite uttered some mystical words.

Besides the various rites and ceremonies described above, several others are mentioned, but it is not known to which day they belonged. Among them we shall mention only the Eleusinian games and contests, which Meursius assigns to the seventh day. They are mentioned by Gellius,³ and are said to have been the most ancient in Greece. The prize of the victors consisted in ears of barley.⁴ It was considered as one of the greatest profanations of the Eleusinia if, during their celebration, an *ἄνιμος* came as a suppliant to the temple (the Eleusinion), and placed his olive-branch (*ἱκετηρία*) in it;⁵ and whoever did so might be put to death without any trial, or had to pay a fine of one thousand drachmæ. It may also be remarked, that at other festivals, no less than at the Eleusinia, no man, while celebrating the festival, could be seized or arrested for any offence.⁶ Lycurgus made a law that any woman using a carriage in the procession to Eleusis should be fined one thousand drachmæ.⁷ The custom against which this law was directed seems to have been very common before.⁸

The Eleusinian mysteries long survived the independence of Greece. Attempts to suppress them were made by the Emperor Valentinian, but he met with strong opposition, and they seem to have continued down to the time of the elder Theodosius. Respecting the secret doctrines which were revealed in them to the initiated, nothing certain is known. The general belief of the ancients was that they opened to man a comforting prospect of a future state.⁹ But this feature does not seem to have been originally connected with these mysteries, and was probably added to them at the period which followed the opening of a regular intercourse between Greece and Egypt, when some of the speculative doctrines of the latter country and the East may have been introduced into the mysteries, and hallowed by the names of the venerable bards of the mythical age. This supposition would also account, in some measure, for the legend of their introduction from Egypt. In modern times many attempts have been made to discover the nature of the mysteries revealed to the initiated, but the results have been as various and as fanciful as might be expected. The most sober and probable view is that, according to which, "they were the remains of a worship which preceded the rise of the Hellenic mythology and its attendant rites, grounded on a view of nature less fanciful, more earnest, and better fitted to awaken both philosophical thought and religious feeling."¹⁰ Respecting the Attic Eleusinia, see Meursius, *Eleusinia*, Lugd. Bat., 1619.—St. Croix, *Recherches, Hist. et Critiq. sur les Mystères du Paganisme* (a second edition was published in 1817 by Sylvestre de Sacy, in 2 vols. Paris).—Ou-

Eleusinia were also celebrated in other parts of Greece. At Ephesus they had been introduced from Athens.¹ In Laconia they were, as far as we know, only celebrated by the inhabitants of the ancient town of Helos, who, on certain days, carried a wooden statue of Persephone to the Eleusinion, in the heights of Taygetus.² Crete had likewise its Eleusinia.³

ELEUTHERIA (Ἐλευθέρια, the feast of liberty), a festival which the Greeks, after the battle of Plataeæ (479 B.C.), instituted in honour of Zeus Eleutherios (the deliverer). It was intended not merely to be a token of their gratitude to the god to whom they believed themselves to be indebted for their victory over the barbarians, but also as a bond of union among themselves; for in an assembly of all the Greeks, Aristides carried a decree that delegates (πρόβουλοι καὶ θεωροί) from all the Greek states should assemble every year at Plataeæ for the celebration of the Eleutheria. The town itself was at the same time declared sacred and inviolable, as long as its citizens offered the annual sacrifices which were then instituted on behalf of Greece. Every fifth year these solemnities were celebrated with contests (ἀγὼν τῶν Ἐλευθερίων), in which the victors were rewarded with chaplets (ἀγῶν γυμνικὸς στεφανίτης⁴). The annual solemnity at Plataeæ, which continued to be observed down to the time of Plutarch,⁵ was this: On the sixteenth of the month of Maimacterion, a procession, led by a trumpeter, who blew the signal for battle, marched at daybreak through the middle of the town. It was followed by wagons loaded with myrtle boughs and chaplets, by a black bull, and by free youths, who carried the vessels containing the libations for the dead. No slave was permitted to minister on this occasion. At the end of this procession followed the archon of Plataeæ, who was not allowed at any other time during his office to touch a weapon, or to wear any other but white garments, now wearing a purple tunic, and with a sword in his hand, and also bearing an urn, kept for this solemnity in the public archive (γραμμαφυλάκιον). When the procession came to the place where the Greeks who had fallen at Plataeæ were buried, the archon first washed and anointed the tombstones, and then led the bull to a pyre and sacrificed it, praying to Zeus and Hermes Chthonios, and inviting the brave men who had fallen in the defence of their country to take part in the banquet prepared for them. This account of Plutarch⁶ agrees with that of Thucydides.⁷ The latter, however, expressly states that dresses formed a part of the offerings, which were probably consumed on the pyre with the victim. This part of the ceremony seems to have no longer existed in the days of Plutarch, who does not mention it; and if so, the Plataeans had probably been compelled by poverty to drop it.⁸

Eleutheria was also the name of a festival celebrated in Samos, in honour of Eros.⁹

ELLIMENION (ἐλλυμένιον) was a harbour duty at the Peiræus, which, according to a fragment of Eupolis,¹⁰ had to be paid by a passenger before he embarked. This tax appears to have been the same as the fiftieth, or two per cent., which was levied on all exports and imports; since Pollux¹¹ speaks of the ἐλλυμενιστᾶι, or collectors of the harbour duty, as

the same persons as the πεντηκοστολόγοι, or collectors of the πεντηκοστή. (Vid. PENTECOSTE.)

ELLO'TIA or HELLO'TIA (Ἐλλώτια or Ἐλλώτια), a festival celebrated at Corinth in honour of Athena.¹

A festival of the same name was celebrated in Crete, in honour of Europa. The word ἑλλωτίς, from which the festival derived its name, was, according to Seleucus,² a myrtle garland twenty yards in circumference, which was carried about in the procession at the festival of the Ellotia.³

ELLYCHNIUM (ἐλλύχμιον: Attic, θρυαλλίς), a wick. Wicks were made of various substances: 1. Principally of tow, i. e., the coarser fibres of flax (στύρα⁴); 2. of the pith of the rush, θρύον, whence the Attic term θρυαλλίς;⁵ 3. of the narrow woolly leaves of the mullein (φλοιός, λυχνίτις⁶), the use of which was analogous to the practice of the Spaniards, who now make wicks of the slender radical leaves of a similar plant, Phlomis Lychnitis, Linn.;⁷ 4. of ASBESTOS.

The lamps which were lighted at the solemn festival celebrated every year at Sais in Egypt, were small open vessels (ἐμβύφια), filled with salt and oil. Into this the wick was immersed, and the flame burned all night upon the surface.⁸ There can be no doubt that wicks were originally and very commonly used in this manner. It was a great improvement when the vessel containing the oil was covered, by which it was converted into a proper lamp. It was then necessary to make one or more round holes in the lamp, according to the number of the wicks burned in it; and, as these holes were called, from an obvious analogy, μυκτήρες or μύζαι, literally, nostrils or nozzles,⁹ the lamp was called δῖμυξος, τρίμυξος, or πολύμυξος, in reference to the same distinction¹⁰ (Polyμυξος lucerna¹¹). In an epigram of Callimachus, a woman dedicated to Serapis a lamp with twenty nozzles (εἰκοσι μύζας πλουσίην λύχνον).

As we learn from Aristophanes, thrifty persons used to chide those who wasted the oil either by using a wick which was thicker than necessary,¹² or by pushing the wick forward so as to increase the flame.¹³ Moreover, in the latter of these passages, the boy advances the wick by pushing it with his finger, as he might do when the oil was contained in an open vessel. In a proper lamp it was drawn out by an instrument contrived for the purpose, "Et producit acu supas humore carentes."¹⁴ The bronze lamps found in ancient sepulchres, besides exhibiting all the varieties depending on the number of holes or nozzles, have sometimes attached to them by a chain the needle which served to trim the wick.

The fungus-shaped excrescences which form on the top of the wick (μυκήρες, fungi) were thought to indicate rain.¹⁵

*ELMINS or HELMINS (ἐλμινς or ἐλμινς). Standing alone, this term is applied to intestinal worms in general. The ἐλμινς πλάτεια is the *Tænia lata*. Theophrastus¹⁶ says it is congenital in some countries, as Egypt. The medical authors describe the *Dracunculus*, or Guinea Worm, which the Greeks call δρακόντιον, and the translators of the Arabians *Veru medinensis*.¹⁷ Thus far Adams. "The word *Elmins*," observes Griffith, "which is

frequently employed by Hippocrates in many of his works, and, among others, in his General Treatise on Diseases, was applied by him to those animals which are at present known under the denomination of *intestinal worms*, of which he was acquainted with but a small number of species. Aristotle has employed it in the same manner, as well as Ælian, every time that he speaks of the substances which are used to rid dogs of the worms to which they are subject. The Latin authors, and Pliny among the rest, have restricted the word *lumbricus* to the intestinal worms, and have rendered the three Greek denominations (σκώληξ, εὐλαί, and ἔλμινς) by a single one, that of *vermes*, from which it has happened that the moderns have been led into the same confusion by the word *worms*, which, as well as the French word *vers*, is evidently derived from the Latin.¹

*ELOPS (ἔλαψ), a species of harmless Serpent mentioned by Nicander. Belon says it is called *Laphiate* in Lemnos.²

*ELYMUS (ἐλυμός), a species of Grain. The *Ελυμός* of Hippocrates is, according to Dierbach, the *Panicum Italicum*; while that of Dioscorides is, according to Sprengel, the *Panicum Milhaceum*. Panic is a plant of the millet kind.³

EMANCIPATIO was an act by which the patria potestas was dissolved in the lifetime of the parent, and it was so called because it was in the form of a sale (*mancipatio*). By the laws of the Twelve Tables it was necessary that a son should be sold three times in order to be released from the paternal power, or to be *sui juris*. In the case of daughters and grandchildren, one sale was sufficient. The father transferred the son by the form of a sale to another person, who manumitted him, upon which he returned into the power of the father. This was repeated, and with the like result. After a third sale, the paternal power was extinguished, but the son was resold to the parent, who then manumitted him, and so acquired the rights of a patron over his emancipated son, which would otherwise have belonged to the purchaser who gave him his final manumission.

The following clear and satisfactory view of emancipatio is given by a German writer: "The patria potestas could not be dissolved immediately by manumission, because the patria potestas must be viewed as an imperium, and not as a right of property, like the power of a master over his slave. Now it was a fundamental principle that the patria potestas was extinguished by exercising once or thrice (as the case might be) the right which the pater familias possessed of selling, or, rather, pledging his child. Conformably to this fundamental principle, the release of a child from the patria potestas was clothed with the form of a *mancipatio*, effected once or three times. The patria potestas was indeed thus dissolved, though the child was not yet free, but came into the condition of a *nexus*. Consequently, a manumissio was necessarily connected with the *mancipatio*, in order that the proper object of the emancipatio might be attained. This manumissio must take place once or thrice, according to circumstances. In the case when the manumissio was not followed by a return into the patria potestas, the manumissio was attended with important consequences to the manumissor, which consequences ought to apply to the emancipating party. Accordingly, it was necessary to provide that the decisive manumission should be made by the emancipating party; and for that reason, a *remancipatio*,

which preceded the final manumissio, was a part of the form of emancipatio."⁴

The legal effect of emancipation was to dissolve all the rights of agnatio. The person emancipated became, or was capable of becoming, a *pater familias*; and all the previously existing relations of agnatio between the parent's familia and the emancipated child ceased at once. But a relation analogous to that of patron and freedman was formed between the person who gave the final emancipation and the child, so that if the child died without children or legal heirs, or if he required a tutor or curator, the rights which would have belonged to the father if he had not emancipated the child, were secured to him as a kind of paternal right, in case he had taken the precaution to secure to himself the final manumission of the child. Accordingly, the father would always stipulate for a *remancipatio* from the purchase: this stipulation was the *pactum fiduciæ*.

The emancipated child could not take any part of his parent's property as heres, in case the parent died intestate. This rigour of the civil law (*iuris iniquitates*)⁵ was modified by the prætor's edict, which placed emancipated children, and those who were in the parent's power at the time of his death, on the same footing as to succeeding to the intestate parent's property.

The Emperor Anastasius introduced the practice of effecting emancipation by an imperial rescript.⁶ Justinian enacted that emancipation should be effected before a magistrate; and by an edict (*ex edicto prætoris*), the parent had still the same rights to the property (*bona*) of the emancipated person that a patron had to the *bona* of his freedman. But he still allowed, what was probably the old law, a father to emancipate a grandson without emancipating the son, and to emancipate the son without emancipating the grandson, or to emancipate them all. Justinian, also,⁷ did not allow a parent to emancipate a child against his will, though it seems that this might be done by the old law, and that the parent might so destroy all the son's rights of agnatio.

The Emperor Anastasius allowed an emancipated child (under certain restrictions) to succeed to the property of an intestate brother or sister, which the prætor had not allowed; and Justinian put an emancipated child in all respects on the same footing as one not emancipated, with respect to such succession.

An emancipatio effected a *capitis diminutio*, in consequence of the servile character (*servilis causa*) into which the child was brought by such act.⁸

EMANSOR. (Vid. DESERTOR.)

EMBAS (ἐμβαός), a shoe worn by men,⁹ which is frequently mentioned by Aristophanes⁷ and other Greek writers. This appears to have been the most common kind of shoe worn at Athens (ἐντελής ὑπόδημα⁸). Pollux⁹ says that it was invented by the Thracians, and that it was like the low cothurnus. The ἐμβαός was also worn by the Bœotians,¹⁰ and probably in other parts of Greece.¹¹

EMBATEIA (ἐμβατεία). In Attic law this word (like the corresponding English one, *entry*) was used to denote a formal taking possession of real property. Thus, when a son entered upon the land left him by his father, he was said ἐμβατεῖν, or βαδίζειν.

1. (Unterholzner, Zeitschrift, ii., 139: "Von den Formen der Manumissio per Vindictam und der Emancipatio.")—2. (Gaius, iii., 25.)—3. (Cod. viii., tit. 49, § 6.)—4. (Nov., 89, c. 11.)—5. εν εἰς τὰ πατῶα, and thereupon he became *seised*, or possessed of his inheritance. If any one disturbed him in the enjoyment of this property, with an intention to dispute the title, he might maintain an action of ejectment, *ἐξούλης δίκη*. Before entry he could not maintain such action. *Ἐξούλη* is from *ἐξίλλειν*, an old word, signifying to eject. The supposed ejectment, for which the action was brought, was a mere formality. The defendant, after the plaintiff's entry, came and turned him off, *ἐξήγεν ἐκ τῆς γῆς*. This proceeding (called *ἐξαγωγή*) took place quietly, and in the presence of witnesses; the defendant then became a wrong-doer, and the plaintiff was in a condition to try the right.

All this was a relic of ancient times, when, before writs and pleadings, and other regular processes were invented, parties adopted a ruder method, and took the law into their own hands. There was then an actual ouster, accompanied often with violence and breach of the peace, for which the person in the wrong was not only responsible to the party injured, but was also punishable as a public offender. Afterward, in the course of civilization, violent remedies became useless, and were discontinued; yet the ceremony of ejecting was still kept up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words "*ex jure te manum consertum voco*," to go with him to the land in dispute, and (in the presence of the prætor and others) turn him out by force. Afterward this was changed into the symbolical act of breaking a clod of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased. We may observe, also, that the English action of ejectment in this respect resembles the Athenian, that, although an entry by the plaintiff, and an ouster of him by the defendant are supposed to have taken place, and are considered necessary to support the action, yet both entry and ouster are mere fictions of law.

These proceedings by entry, ouster, &c., took place also at Athens in case of resistance to an execution; when the defendant, refusing to give up the land or the chattel adjudged, or to pay the damages awarded to the plaintiff by the appointed time, and thus being *ὑπέρημερος*, i. e., the time having expired by which he was bound to satisfy the judgment, the plaintiff proceeded to satisfy himself by seizure of the defendant's lands. This he certainly might do, if there were no goods to levy upon; though whether it was lawful in all cases does not appear. The Athenian laws had made no provision for putting the party who succeeded in possession of his rights; he was, therefore, obliged to levy execution himself, without the aid of a ministerial officer, or any other person. If, in doing so, he encountered opposition, he had no other remedy than the *ἐξούλης δίκη*, which (if the subject-matter was land) must have been grounded upon his own previous entry. The action could be brought against any one who impeded him in his endeavour to get possession, as well as against the party to the former suit. The cause of Demosthenes against Oretor was this: Demosthenes having recovered a judgment against Aphobus, proceeded to take his lands in execution. Oretor claimed them as mortgagee, and turned him out (*ἐξήγεν*), whereupon Demosthenes, contending that the mortgage was collusive and fraudulent, brought the *ἐξούλης δίκη*, which is called *δίκη πρὸς Ὀνήτορα*, because the proceeding is *in rem*, and collateral to another object, rather than a direct controversy between the parties in the cause. The consequence to the defendant, if he failed in the action of ejectment, was, that (be-

sides his liability to the plaintiff) he was, as a public offender, condemned to pay to the treasury a sum equal to the damages, or to the value of the property recovered in the first action. While this remained unpaid (and we may presume it could not be paid without also satisfying the party), he became, as a state debtor, subject to the disabilities of *ἀτιμία*.¹

EMBLEMATA (*ἐμβλήματα, ἐμποιήματα*), an inlaid ornament. The art of inlaying (*ἡ τέχνη ἐμποιιστική*)² was employed in producing beautiful works of two descriptions, viz.: 1st, Those which resembled our marquetry, ooule, and Florentine mosaics, and, 2dly, those in which crusts (*crustæ*), exquisitely wrought in bas-relief, and of precious materials, were fastened upon the surface of vessels or other pieces of furniture.

To productions of the former class we may refer all attempts to adorn the walls and floors of houses with the figures of flowers and animals, or with any other devices expressed upon a common ground by the insertion of variously-coloured woods or marbles, all of which were polished so as to be brought to a plain surface. To such mosaics Lucilius alludes³ when he compares the well-connected words of a skilful orator to the small pieces (*tesserae*) which compose the "*emblemata vermiculatum*" of an ornamental pavement. In the time of Pliny, these decorations for the walls of apartments had become very fashionable.⁴ Seneca makes mention of silver inlaid with gold among the luxuries of his day.⁵ (*Vid. CHRYSODETA.*)

To the latter class of productions belonged the cups and plates which Verres obtained by violence from the Sicilians, and from which he removed the emblems for the purpose of having them set in gold instead of silver.⁶ These must have been riveted with nails, or in some other way. They were reckoned exceedingly valuable as works of first-rate artists, and some of them were, moreover, esteemed sacred, being the figures of the penates and household gods of the proprietors. Athenæus, in describing two Corinthian vases,⁷ distinguishes between the emblems in bas-relief (*πρόστυπα*) which adorned the body and neck of each vessel, and the figures in high relief (*περιφανῇ τεταραγμένα ζῶα*) which were placed upon its brim. An artist, whose business it was to make works ornamented with emblems, was called "*crustarius*."⁸

EMERITI was the name given to those Roman soldiers who had served out their time, and had exemption (*vacatio*) from military service. The usual time of service was twenty years for the legionary soldiers, and sixteen for the prætorians.⁹ At the end of their period of service they received a bounty or reward, either in lands or money, or in both. Dion Cassius¹⁰ states that it was arranged by Augustus that a prætorian should receive 5000 drachmæ (20,000 sesterces), and a legionary 3000 (12,000 sesterces). Caligula reduced the bounty of the latter to 6000 sesterces.¹¹ We find this bounty called *justa militiæ commoda*,¹² *commoda missionum*,¹³ and also *emeritum*.¹⁴

EMERITUM. (*Vid. EMERITI.*)

EMISSARIUM, an artificial channel formed to carry off any stagnant body of water (*unde aqua emittitur*), like the sluices in modern use.¹⁵

Some works of this kind are among the most remarkable efforts of Roman ingenuity. Remains still exist to show that the lakes Trasimene, Albano,

1. (Meier, Att. Proc., p. 372, 460, 748.)—2. (Athenæus, xi., 76, p. 488.)—3. (ap. Cic., De Orat., iii., 43.)—4. (H. N., xxxv., 1.)—5. (Epist., 5.)—6. (Cic., II. Ver., iv., 17, 22-24.)—7. (Dig. 49, tit. 16, s. 3, § 8, 12; s. 5, § 7.—Vid. Lipsius, Excursus ad Tacit., Ann., i., 17.)—15. (Plin., H. N., xxxiii., 21.—Cic. ad Fam., xvi., 18.)

Nemi, and Fucino were all drained by means of *emissaria*, the last of which is still nearly perfect, and open to inspection, having been partially cleared by the present King of Naples. Julius Cæsar is said to have first conceived the idea of this stupendous undertaking,¹ which was carried into effect by the Emperor Claudius.²

The following account of the works, from observations on the spot, will give some idea of their extent and difficulties. The circumference of the lake, including the bays and promontories, is about thirty miles in extent. The length of the emissary, which lies nearly in a direct line from the lake to the River Liris (Garigliano), is something more than three miles. The number of workmen employed was 30,000, and the time occupied in the work eleven years.³ For more than a mile the tunnel is carried under a mountain, of which the highest part is 1000 feet above the level of the lake, and through a stratum of rocky formation (carnelian) so hard that every inch required to be worked by the chisel. The remaining portion runs through a softer soil, not much below the level of the earth, and is vaulted in brick. Perpendicular openings (*putei*) are sunk at various distances into the tunnel, through which the excavations were partly discharged; and a number of lateral shafts (*cuniculi*), some of which separate themselves into two branches, one above the other, are likewise directed into it, the lowest at an elevation of five feet from the bottom. Through these the materials excavated were also carried out. Their object was to enable the prodigious multitude of 30,000 men to carry on their operations at the same time without incommoding one another. The immediate mouth of the tunnel is some distance from the present margin of the lake, which space is occupied by two ample reservoirs, intended to break the rush of water before it entered the emissary, connected by a narrow passage, in which were placed the sluices (*epistomium*). The mouth of the tunnel itself consists of a splendid archway of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resembling in construction the works of the Claudian aqueduct. That through which the waters dis-

charged themselves into the Liris was more simple, and is represented in the preceding woodcut. The river lies in a ravine between the arch and foreground, at a depth of 60 feet below, and, consequently, cannot be seen in the cut. The small aperture above the embouchure is one of the cuniculi above mentioned.

It appears that the actual drainage was relinquished soon after the death of Claudius, either from the perversity of Nero, as the words of Pliny¹ seem to imply, or by neglect; for it was reopened by Hadrian.²

ΕΜΗΗΝΟΙ ΔΙΚΑΙ (ἐμμηνοὶ δίκαι) were suits which were not allowed to be pending above a month. This regulation was not introduced till after the date of Xenophon's treatise on the revenue, in which it was proposed that a more rapid progress should be allowed to commercial suits,³ and it appears to have been first established in the time of Philip.⁴ It was confined to those subjects which required a speedy decision; and of these the most important were disputes respecting commerce (ἐμπορικαὶ δίκαι⁵), which were heard during the six winter months from Boëdromion to Munychion, so that the merchants might quickly obtain their rights and sail away;⁶ by which we are not to understand, as some have done, that a suit could be protracted through this whole time, but it was necessary that it should be decided within a month.⁷

All causes relating to mines (μεταλλικαὶ δίκαι) were also ἐμμηνοὶ δίκαι;⁸ the object, as Böckh remarks,⁹ being, no doubt, that the mine proprietor might not be detained too long from his business. The same was the case with causes relating to *ἐργονοί*¹⁰ (vid. ERANOI); and Pollux¹¹ includes in the list suits respecting dowry, which are omitted by Harpocration and Suidas.

*ΕΜΠΕΤΡΟΝ (ἐμπετρον), a plant, about which botanical writers are still undecided. Stephens and Hardouin call it *Perce-pierre*; but if by it they mean the *Alchemilla arvensis* of Hooker, which is often called *Perce-pierre*, or Parsley-breakstone, its characters, according to Adams, are by no means suitable to the ἐμπετρον of Dioscorides. The conjecture of Cæsalpinus, which Sprengel adopts, namely, that it was a species of *Salsola*, is, according to the same writer, much more probable. Fée, however, declares against this opinion without giving any one in its place. Pliny says of it, "*Empetros, quam nostri calcifragam vocant*," &c., identifying it with the *Calcifraga*.¹²

ΕΜΦΡΟΥΡΟΙ (ἐμφρούροι), from φρουρά, was the name given to the Spartan citizens during the period in which they were liable to military service.¹³ This period lasted to the fortieth year from manhood (ἀπὸ ἡβῆς), that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities.¹⁴

ΕΜΦΥΤΕΥΣΙΣ (ἐμφύτευσις, literally, an "in-planting") is a perpetual right in a piece of land that is the property of another: the right consists in the legal power to cultivate it, and treat it as our own, on condition of cultivating it properly, and paying a fixed sum (*canon, pensio, redditus*) to the owner (*dominus*) at fixed times. The right is founded on contract between the owner and the lessee

1. (Suet., Jul., 44.)—2. (Tacit., Ann., xii., 57.)—3. (Suet., Claud., 20.—Compare Plin., H. N., xxxvi., 24, § 11.)

(Pollux, Onom., viii., 101.—Harpocrat. and Suid., i. c.)—11. (I. c.)—12. (Dioscor., iv., 178.—Plin., H. N., xxvii., 9.—Adams, Append., a. v.)—13. (Xen., Rep. Lac., v., 7.)—14. (Isocr., Busr., p. 225, where μὲν ἡμῶς, according to Müller Dor., iii., 12, § 1, is evidently put for ἐμφρούροις.)

emphyteuta, and the land is called **ager vectigalis** or **emphyteuticarius**. It was long doubted whether this was a contract of buying and selling, or of letting and hiring, till the Emperor Zeno gave it a definite character, and the distinctive name of **contractus emphyteuticarius**.

The **Ager Vectigalis** is first distinctly mentioned about the time of Hadrian, and the term is applied to lands which were leased by the Roman state, by towns, by ecclesiastical corporations, and by the vestal virgins. In the Digest mention only is made of lands of towns so let, with a distinction of them into **agri vectigales** and **non vectigales**, according as the lease was perpetual or not; but in either case the lessee had a real action (*utilis in rem actio*) for the protection of his rights, even against the owner.

The term **Emphyteusis** first occurs in the Digest. The **Prædia Emphyteutica** are also frequently mentioned in the Theodosian and Justinian Codes, but they are distinguished from the **agri vectigales**. Justinian, however, put the **emphyteusis** and the **ager vectigalis** on the same footing; and in the case of an **emphyteusis** (whether the lessor was a community or an individual), the law was declared to be the same as in the case of leases of town property. This **emphyteusis** was not ownership: it was a *jus in re* only, and the lessee is constantly distinguished from the owner (*dominus*). Yet the occupier of the **ager vectigalis** and the **emphyteuta** had a *juristical possessio*; a kind of inconsistency, which is explained by Savigny, by showing that the **ager vectigalis** was formed on the analogy of the **ager publicus**, and though there were many differences between them, there was nothing inconsistent in the notion of possession, as applied to the public land, being transferred to the **ager vectigalis** as a modified form of the **ager publicus**.

Though the **emphyteuta** had not the ownership of the land, he had an almost unlimited right to the enjoyment of it, unless there were special agreements limiting his right. He could sell his interest in the land after giving notice to the owner, who had the power of choosing whether he would buy the land at the price which the purchaser was willing to give. But the lessee could not sell his interest to a person who was unable to maintain the property in good condition. The lessee was bound to pay all the public charges and burdens which might fall on the land, to improve the property, or, at least, not to deteriorate it, and to pay the rent regularly. In case of the lessee's interest being transferred to another, a fiftieth part of the price, or of the value of the property, when the nature of the transfer did not require a price to be fixed, was payable to the owner on the admission of the **emphyteuta**, and which, as a general rule, was payable by him. The *heredes* of the **emphyteuta** were not liable to such payment.

The origin of the **Emphyteusis**, as already stated, was by contract with the owner and by tradition; or the owner might make an **emphyteusis** by his last will. It might also, perhaps, in certain cases, be founded on prescription.

The right of the **emphyteuta** might cease in several ways: by surrender to the *dominus*, or by dying without heirs, in which case the **emphyteusis** reverted to the owner. He might also lose his right by injuring the property, by non-payment of his rent or the public burdens to which the land was liable, by alienation without notice to the *dominus*, &c. In such cases the *dominus* could take legal measures for recovering the possession.¹

EMPIRICI (*Ἐμπειρικοί*), an ancient medical sect,

so called from the word *ἐμπειρία* because they professed to derive their knowledge from *experience* only, and in this particular set themselves in opposition to the *Dogmatici*. (*Vid. DOGMATICI*.) Serapion of Alexandria, and Philinus of Cos, are regarded as the founders of this school, in the third century B.C. The arguments by which the *Dogmatici* supported their opinions, as summed up by Celsus,¹ are given under that head; those of the *Empirici* are thus stated by the same author: "On the other hand, those who, from experience, styled themselves *Empirici*, admit, indeed, the evident causes as necessary, but affirm the inquiry after the occult causes and natural actions to be fruitless, because Nature is incomprehensible. And that these things cannot be comprehended, appears from the controversies among those who have treated concerning them, there being no agreement found here, either among the philosophers or physicians themselves; for why should one believe Hippocrates rather than Herophilus? or why him rather than Asclepiades? That if a man inclines to determine his judgment by reasons assigned, the reasons of each of them seem not improbable; if by cures, all of them have restored the diseased to health; and, therefore, we should not deny credit either to the arguments or to the authority of any of them. That even the philosophers must be allowed to be the greatest physicians, if reasoning could make them so; whereas it appears that they have abundance of words, and very little skill in the art of healing. They say, also, that the methods of practice differ according to the nature of places; thus one method is necessary at Rome, another in Egypt, and another in Gaul. That if the causes of distempers were the same in all places, the same remedies ought to be used everywhere. That often, too, the causes are evident, as, for instance, in a lippitude (or ophthalmia) or a wound; and, nevertheless, the method of cure does not appear from them: that if the evident cause does not suggest this knowledge, much less can the other, which is itself obscure. Seeing, then, this last is uncertain and incomprehensible, it is much better to seek relief from things certain and tried; that is, from such remedies as experience in the method of curing has taught us, as is done in all other arts; for that neither a husbandman nor a pilot is qualified for his business by reasoning, but by practice. And that these disquisitions have no connexion with medicine, may be inferred from this plain fact, that physicians, whose opinions in these matters have been directly opposite to one another, have, notwithstanding, equally restored their patients to health; that their success was to be ascribed to their having derived their methods of cure, not from the occult causes or the natural actions, about which they were divided, but from experiments, according as they had succeeded in the course of their practice. That medicine, even in its infancy, was not deduced from these inquiries, but from experiments: for of the sick who had no physicians, some, from a keen appetite, had immediately taken food in the first days of their illness, while others, feeling a nausea, had abstained from it, and that the disorder of those who had abstained was more alleviated; also some, in the paroxysm of a fever, had taken food, others a little before it came on, and others after its remission; and that it succeeded best with those who had done it after the removal of the fever: in the same manner, some used a full diet in the beginning of a disease, others were abstemious; and that those grew worse who had eaten plentifully. These and the like instances daily occurring, that diligent men observed attentively what

¹ [Dig. 6, tit. 3. — Cod. 4, tit. 66. — Mühlenbruch, *Doctrina Pandectarum*. — Savigny, *Das Recht des Besitzes*, p. 99, &c., p. 160 — Mackeldey, *Lehrbuch*, &c.]

method generally answered best, and afterward began to prescribe the same to the sick. That this was the rise of the art of medicine, which, by the frequent recovery of some and the death of others, distinguishes what is pernicious from what is salutary; and that, when the remedies were found, men began to discourse about the reasons of them. That medicine was not invented in consequence of their reasoning, but that theory was sought for after the discovery of medicine. They ask, too, whether reason prescribes the same as experience, or something different: if the same, they infer it to be needless; if different, mischievous. That at first, however, there was a necessity for examining remedies with the greatest accuracy, but now they are sufficiently ascertained; and that we neither meet with any new kind of disease, nor want any new method of cure. That if some unknown distemper should occur, the physician would not therefore be obliged to have recourse to the occult things, but he would presently see to what distemper it is most nearly allied, and make trial of remedies like to those which have often been successful in a similar malady, and by the resemblance between them would find some proper cure. For they do not affirm that judgment is not necessary to a physician, and that an irrational animal is capable of practising this art, but that those conjectures which relate to the occult things are of no use, because it is no matter what causes, but what removes a distemper; nor is it of any importance in what manner the distribution is performed, but what is easiest distributed: whether concoction fails from this cause or that, or whether it be properly a concoction, or only a distribution; nor are we to inquire how we breathe, but what relieves a difficult and slow breathing; nor what is the cause of motion in the arteries, but what each kind of motion indicates. That these things are known by experience; that in all disputes of this kind a good deal may be said on both sides, and, therefore, genius and eloquence obtain the victory in the dispute; but diseases are cured, not by eloquence, but by remedies; so that if a person without any eloquence be well acquainted with those remedies that have been discovered by practice, he will be a much greater physician than one who has cultivated his talent in speaking without experience. That these things, however, which have been mentioned are only idle; but what remains is also cruel, to cut open the abdomen and præcordia of living men, and make that art, which presides over the health of mankind, the instrument, not only of inflicting death, but of doing it in the most horrid manner; especially if it be considered that some of those things which are sought after with so much barbarity cannot be known at all, and others may be known without any cruelty; for that the colour, smoothness, softness, hardness, and such like, are not the same in a wounded body as they were in a sound one; and, farther, because these qualities, even in bodies that have suffered no external violence, are often changed by fear, grief, hunger, indigestion, fatigue, and a thousand other inconsiderable disorders, which makes it much more probable that the internal parts, which are far more tender, and never exposed to the light itself, are changed by the severest wounds and mangling. And that nothing can be more ridiculous than to imagine anything to be the same in a dying man, nay, one already dead, as it is in a living person; for that the abdomen, indeed, may be opened while a man breathes, but as soon as the knife has reached the præcordia, and the transverse septum is cut, which, by a kind of membrane, divides the upper from the lower parts (and by the Greeks is called the diaphragm—*διάφραγμα*), the man immediately expires, and thus the præ-

cordia and all the viscera never come to the view of the butchering physician till the man is dead; and they must necessarily appear as those of a dead person, and not as they were while he lived; and thus the physician gains only the opportunity of murdering a man cruelly, and not of observing what are the appearances of the viscera in a living person. If, however, there can be anything which can be observed in a person that yet breathes, chance often throws it in the way of such as practise the healing art; for that sometimes a gladiator on the stage, a soldier in the field, or a traveller beset by robbers, is so wounded that some internal part, different in different people, may be exposed to view; and thus a prudent physician finds their situation, position, order, figure, and the other particulars he wants to know, not by perpetrating murder, but by attempting to give health; and learns by compassion that which others had discovered by horrid cruelty. That for these reasons it is not necessary to lacerate even dead bodies; which, though not cruel, yet may be shocking to the sight, since most things are different in dead bodies; and even the dressing of wounds shows all that can be discovered in the living.¹

Such were the arguments by which they supported their opinions in favour of experience, of which they reckoned three sorts, viz.: *Observation* (*τήρησις*) or *Autopsy* (*αὐτοψία*), *History* (*ἱστορία*), and *Analogy*, or *the substitution of a similar thing (ἡ τοῦ ὁμοίου μετέβασις)*, which they called "the Tripod of Medicine" (*τὴν τρίποδα τῆς ἱατρικῆς*).² They gave the name of *Observation* or *Autopsy* to that which had been noticed by each individual for himself while watching what took place in the course of an illness, and was the result of his own remarks on the signs and causes of the disease, and also on the result of different modes of treatment. What they called *History* was a collection of observations made by others, and afterward put in writing. *Analogy*, or *the substitution of one thing for another*, was what they had recourse to when they had to treat a new malady, and could not profit either by their own experience or that of others. In these and similar cases they selected their plan of treatment, by comparing the unknown disease with that which most resembled it. Their opinions may be found at greater length in Le Clerc's or Sprengel's History of Medicine. The latter remarks that "their principles exhibit the most evident proofs of their great sagacity and sound judgment, and that they were more animated by the true genius of medicine than the greater part of their predecessors, who had given themselves up to vague theories." However, their rejection of Anatomy, Physiology, and Pathology as useless studies, would, of course (at least in the opinion of modern physicians), prevent their ever attaining any higher rank than that of clever experimentalists, though it must not be denied that materia medica is indebted to them for the discovery of the properties of many valuable drugs.

Besides Philinus, the names of the following physicians of this sect have been preserved: Serapion, who is said by Celsus³ to have been their founder, Apollonius,⁴ Glancias,⁵ Heraclides of Tarantum,⁶ Bacchius of Tanagra, Zeuxis,⁷ Menodotus of Nicomedia,⁸ Theodas or Theudas of Laodicea,⁹ Sextus,¹⁰ Dionysius,¹¹ Crito,¹² Herodotus of Tarsus, Saturninus,¹³ Callicles, Diodorus, Lycus,¹⁴ Æschri-
on,¹⁵ Philippus, Marcellus, and Plinius Valerianus.

1. (Futvoyo's translation.)—2. (Galen, De Subfigur. Empir. cap. 13, p. 68.)—3. (De Medic., in Prefat.)—4. (Ibid.)—5. (Ibid.)—6. (Ibid.)—7. (Galen, Comment. in Aphor. Hippocr., tom. xviii., p. 187, ed. Kühn.)—8. (Diog. Laert., ix., 12, sect. 7, § 116.)—9. (Ibid.)—10. (Ibid.)—11. (Galen, De Medicam., sec. locos, v., 7.)—12. (Id., De Subfigur. Empir.)—13. (Diog. Laert., l. c.)—14. (Galen, De Meth. Med. ii., 7, p. 142.)—15. Id., De Simplic. Medicam. Facult., xi., 24, p. 356.)

With respect to Bacchius, however, it should be mentioned, that Kühn¹ considers the passage in Galen, which seems to class him among the Empirici, to be corrupt. None of these have left any works behind them except Sextus, Marcellus, and Plinius Valerianus, a few of whose writings are still extant. The sect existed a long time, as Marcellus lived in the fourth century A.D.; it appears also to have maintained its reputation as long as its members remained true to their original principles; and it was only when they began to substitute ignorant and indiscriminate experiments for rational and philosophical observation that the word *Empiric* sank into a term of reproach. A parallel has been drawn between the worst part of the system of the ancient Empirici and the modern Homœopaths by Franc. Ferd. Briskin, in an inaugural dissertation entitled "Philinus et Hahnemannus, seu Veteris Sectæ Empiricæ cum Hodiernâ Sectâ Homœopæthica Comparatio," 8vo, Berol, 1834, p. 36.

*EMPIIS (ἐμπίς), a species of insect, often confounded with the κώνωψ, or Gnat. Schneider thinks the term is more properly applicable to certain species of *Tipula*. "The *Tipula culiciformis*," observes Adams, "is very like the gnat; it would, then, appear to correspond to the ἐμπίς of the Greeks."²

EMPORICAI DICAI (ἐμπορικαὶ δίκαι). (Vid. EMPORIUM.)

EMPORIUM (τὸ ἐμπόριον), a place for wholesale trade in commodities carried by sea. The name is sometimes applied to a seaport town, but it properly signifies only a particular place in such a town. Thus Amphitryon says that he had looked for a person,

"Apud emporium, atque in macello, in palaestra atque in foro,
In medicinis, in tonstrinis, apud omnis ædis sacras."³

The word is derived from ἐμπορος, which signifies in Homer a person who sails as a passenger in a ship belonging to another person;⁴ but in later writers it signifies the merchant or wholesale dealer, and differs from κάπηλος, the retail dealer, in that it is applied to the merchant who carries on commerce with foreign countries, while the κάπηλος purchases his goods from the ἐμπορος, and retails them in the market-place (ἢ οὐ καπήλους καλούμεν τοὺς πρὸς ὄνρη τε καὶ πρᾶσιν διακονούντας, ἰδρυνέοντες ἢ ἀγορᾷ, τοὺς δὲ πλανήτας ἐπὶ τὰς πόλεις ἐμποροῦντας⁵).

At Athens, it is said⁶ that there were two kinds of emporia, one for foreigners and the other for natives (ξενικὸν and ἀστικὸν), but this appears doubtful.⁷ The emporium at Athens was under the inspection of certain officers, who were elected annually (ἐπιμελητὰι τοῦ ἐμπορίου). (Vid. EPI-MELTÆ.)

EMTI ET VENDITI ACTIO. The seller has an actio venditi, and the buyer has an actio emti, upon the contract of sale and purchase. Both of them are actiones directæ, and their object is to obtain the fulfilment of the obligations resulting from the contract.

EMTIO ET VENDITIO. The contract of buying and selling consists in the buyer agreeing to give a certain sum of money to the seller, and the seller agreeing to give to the buyer some certain thing for his money. After the agreement is made, the buyer is bound to pay his money, even if the thing which is the object of purchase should be ac-

cidentally destroyed before it is delivered; and the seller must deliver the thing with all its intermediate increase. The seller must also warrant a good title to the purchase (vid. EVICTIO), and he must also warrant that the thing has no concealed defects, and that it has all the good qualities which he (the seller) attributes to it. It was with a view to check frauds in sales, and especially in the sales of slaves, that the seller was obliged, by the edict of the curule ædiles (vid. EDICTUM), to inform the buyer of the defects of any slave offered for sale: "Qui mancipia vendunt, certiores faciant emptores quod morbi vitique," &c.¹ In reference to this part of the law, in addition to the usual action arising from the contract, the buyer had against the seller, according to the circumstances, an actio ex stipulatu, redhibitoria, and quanti minoris. Horace, in his Satires,² and in the beginning of the second epistle of the second book, alludes to the precautions to be taken by the buyer and seller of a slave

ENCAUSTICA. (Vid. PICTURA.)

ENCLEMA (ἐγκλημα). (Vid. DICE, p. 358.)

ENCTEMA (ἐγκτημα). (Vid. ENCTESIS.)

ENCTESIS (ἐγκτησις) was the right of possessing landed property and houses (ἐγκτησις γῆς καὶ οἰκίας) in a foreign country, which was frequently granted by one Greek state to another, or to separate individuals of another state.³ 'Εγκτήματα were such possessions in a foreign country, and are opposed by Demosthenes⁴ to κτήματα, possessions in one's own country.⁵ The term ἐγκτήματα was also applied to the landed property or houses which an Athenian possessed in a different δῆμος from that to which he belonged by birth, and, with respect to such property, he was called ἐγκεκτήμενος: whence we find Demosthenes⁶ speaking of οἱ δηριῶται καὶ οἱ ἐγκεκτήμενοι. For the right of holding property in a δῆμος to which he did not belong, he had to pay such δῆμος a tax, which is mentioned in inscriptions under the name of ἐγκτητικόν.⁷

ENCTE-TIKON (ἐγκτητικόν). (Vid. ENCTESIS.)

ENDEIXIS (ἐνδείξις) properly denotes a prosecution instituted against such persons as were alleged to have exercised rights or held offices while labouring under a peculiar disqualification. Among these are to be reckoned state debtors, who, during their liability, sat in court as dicasts, or took any other part in public life; exiles, who had returned clandestinely to Athens; those that visited holy places after a conviction for impiety (ἀσέβεια); and all such as, having incurred a partial disfranchisement (ἀτιμία κατὰ πρόσταξιν), presumed to exercise their forbidden functions as before their condemnation. Besides these, however, the same form of action was available against the chairman of the proedri (ἐπιστάτης), who wrongly refused to take the votes of the people in the assembly;⁸ against malefactors, especially murderers (which Schömann thinks was probably the course pursued when the time for an apogee had been suffered to elapse), traitors, ambassadors accused of malversation,⁹ and persons who furnished supplies to the enemy during war.¹⁰ The first step taken by the prosecutor was to lay his information in writing, also called ἐνδείξις, before the proper magistrate, who might be the archon or king archon, or one of the thesmothetæ, according to the subject-matter of the information; but in the case of a malefactor (κακοῦργος) being the accused person, the Eleven were the officers applied to. (Vid. ELEVEN, THE.) It then became the duty of the magistrate to arrest or hold

to bail the person criminated, and take the usual steps for bringing him to trial. There is great obscurity as to the result of condemnation in a prosecution of this kind. Heraldus¹ ridicules the idea that it was invariably a capital punishment. The accuser, if unsuccessful, was responsible for bringing a malicious charge (*ψευδοὺς ἐνδείξασαι ὑπεύθυνος*²).

ENDROMIS (*ἐνδρόμις*), a thick, coarse blanket, manufactured in Gaul, and called "endromis" because those who had been exercising in the stadium (*ἐν δρόμῳ*) threw it over them to obviate the effects of sudden exposure when they were heated. Notwithstanding its coarse and shaggy appearance, it was worn on other occasions as a protection from the cold by rich and fashionable persons at Rome.³ Ladies also put on an endromis of a finer description (*endromidas Tyrias*⁴) when they partook, as they sometimes did, of the exercises of the palestra. Moreover, boots (*vid. COTHURNUS*) were called *ἐνδρομίδες* on account of the use of them in running.⁵

ENDYMA (*ἐνδυμα*). (*Vid. AMICTUS*.)

ENECHYRA (*ἐνέχυρα*). In private suits at Athens, whether tried by a court of law or before an arbitrator, whenever judgment was given against a defendant, a certain period was at the same time fixed (*ἡ προθεσμία*), before the expiration of which it was incumbent upon him to comply with the verdict. In default of doing so he became *ὑπερήμερος*, or over the day, as it was called, and the plaintiff was privileged to seize upon (*ἀρᾶσθαι*) his goods and chattels as a security or compensation for non-compliance.⁶ The property thus taken was called *ἐνέχυρα*, and slaves were generally seized before anything else.⁷ This "taking in execution" was usually left to the party who gained the suit, and who, if he met with resistance in making a seizure, had his remedy in a *δίκη ἐξούλης*; if with personal violence, in a *δίκη αἰκίας*.⁸ On one occasion, indeed, we read of a public officer (*ὑπὲρρέτης παρὰ τῆς ἀρχῆς*) being taken to assist in, or, perhaps, to be a witness of a seizure; but this was in a case where public interests were concerned, and consequent upon a decision of the *βουλή*.⁹ The same oration gives an amusing account of what Englishmen would consider a case of "assault and trespass," committed by some plaintiffs in a defendant's house, though the amount of damages which had been given (*ἡ καταδίκη*) was, according to agreement, lying at the bank (*ἐπὶ τῇ τραπέζῃ*), and there awaiting their receipt.

It seems probable, though we are not aware of its being expressly so stated, that goods thus seized were publicly sold, and that the party from whom they were taken could sue his opponent, perhaps by a *δίκη βλάβης*, for any surplus which might remain after all legal demands were satisfied. No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenæa, &c. They were, in fact, *dies non* in Athenian law.¹⁰

ENGYE (*ἐγγύη*), bail or sureties, were in very frequent requisition, both in the private and public affairs of the Athenians. Private agreements, as, for instance, to abide by the decision of arbitrators,¹¹ or that the evidence resulting from the application of torture to a slave should be conclusive,¹² were corroborated by the parties reciprocally giving each

other sureties; and the same took place generally in all money-lending or mercantile transactions, and was invariably necessary when persons undertook to farm tolls, taxes, or other public property.

In judicial matters, bail or sureties were provided upon two occasions: first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial; and, secondly, when security was demanded for the satisfaction of the award of the court. In the first case, bail was very generally required when the accused was other than an Athenian citizen, whether the action were public or private; but if of that privileged class, upon no other occasion except when proceeded against by way of *Apagoge*, *Endeixis*, *Ephegesis*, or *Eisangelia*. Upon the last-mentioned form being adopted in a case of high treason, bail was not accepted. The technical word for requiring bail of an accused person is *κατεγγυάνειν*, that for becoming surety in such case, *ἐξεγγυᾶσθαι*. Surety of the other kind was demanded at the beginning of a suit upon two occasions only: first, when a citizen asserted the freedom of a person detained in slavery by another; and, secondly, when a litigant, who had suffered judgment to go by default before the arbitrator (*διαιτητής*), had recommenced his action within the given time (*μὴ οὖσα δίκη*). After the judgment, security of this kind was required in all mercantile and some other private causes; and state debtors, who had been sentenced to remain in prison till they had acquitted themselves of their liabilities, were, by a law of Timocrates,¹ allowed to go at large if they could provide three sureties that the money should be paid within a limited period. If the principal in a contract made default, the surety was bound to make it good, or, if he refused to do so, might be attacked by an *ἐγγυῆς δίκη*, if such action were brought within a twelvemonth after the obligation was undertaken.² If, however, a person accused in a public action by one of the forms above mentioned failed to appear to take his trial, his bail became liable to any punishment that such person had incurred by contempt of court; and, consistently with this, it appears, from a passage in Xenophon,³ that the law allowed the bail to secure the person of the accused by private confinement.⁴

ΕΓΓΥΗΣ ΔΙΚΗ. (*Vid. ENGYE*.)

*ENHYDRUS (*ἐνυδρος*), in all probability the Otter, or *Lutra vulgaris*. "Schneider makes the *ἐνυδρις* of Aristotle to be the same. Schneider and Gesner agree that the *Λάτρας* of the same Greek writer must have been the same as the *ἐνυδρος*, although he wishes to distinguish them from one another."⁵ That the *Mustela Lutra* is the *ἐνυδρις* appears evident from the Mosaic of Præneste, according to Sibthorp. One of the Roimic names of the Otter, *βίδρα*, is very similar to the Polish *Wydra*.⁶

ΕΝΟΙΚΙΟΥ ΔΙΚΗ (*ἐνοικίου δίκη*). An action brought (like our *trespass for mesne profits* after a successful action of ejectment) to recover the rents withheld from the owner during the period of his being kept out of possession. If the property recovered were not a house, but land (in the more confined sense of the word), the action for rents and profits was called *καρπού δίκη*. It seems from the language of the grammarians, that these actions could be brought to try the title to the estate, as well as for the above-mentioned purpose. Perhaps both the tenement and the intermediate profits might be recovered by one suit, but the proceeding would be more hazardous, because a failure in one

Panten., 978, 11.)

1. (Demosth., c. Timocr., 712-716.)—2. (Demosth., c. Apatur., 901, 10.)—3. (Ilel., i., 7, § 39.)—4. (Meier, Att. Process., 515.)—5. (Aristot., H. A., viii., 7.—Adams, Append., s. v.)—6. (Walpole's Memoirs, vol. i., p. 267.)

part of the demand would involve the loss of the whole cause. Thus the title of a party to the land itself might have expired, as, for instance, where he held under a lease for a term; yet he would be entitled to recover certain by-gone profits from one who had dispossessed him. Therefore it is not improbable that the *δικαι εν* and *καρ* might, in practice, be confined to those cases where the rents and profits only were the subject of claim. We are told that if the defendant, after a judgment in one of these actions, still refused to give satisfaction, an *οσίας δίκη* might be commenced against him, of which the effect was, that the plaintiff obtained a right to indemnify himself out of the whole property of the defendant. Schömann observes that this was a circuitous proceeding, when the plaintiff might take immediate steps to execution by means of entry and ejectment. His conjecture, however, that the *οσίας δίκη* was in ancient times an important advantage, when real property could not in the first instance be taken in execution, is probably not far from the truth, and is supported by analogy to the laws of other nations, which, being (in the infancy of civilization) framed by the landowners only, bear marks of a watchful jealousy of any encroachment upon their rights. He remarks, also, that the giving to the party the choice between a milder and a more stringent remedy, accords with the general tenour and spirit of the Athenian laws. We may add that our own law furnishes an illustration of this, viz., where a plaintiff has obtained a judgment, he has the option of proceeding at once to execution, or bringing an action on the judgment; though with us the latter measure is considered the more vexatious, as it increases the costs, and is rendered less necessary by the facility with which executions can be levied. At Athens the *εξούλης δίκη*, as it was the ultimate and most efficacious remedy, drew with it also more penal consequences, as explained under ΕΝΒΕΤΕΙΑ.¹

ENOMOTIA. (Vid. ARMY, GREEK, p. 98, 100.)

ENSIS. (Vid. GLADIUS.)

ENTASIS (ἐντασις). The most ancient columns now existing are remarkable for the extreme diminution of the shaft between its lower and upper extremity, the sides of which, like those of an obelisk, converge immediately and regularly from the base to the neck between two even lines; a mode of construction which is wanting in grace and apparent solidity. To correct this, a swelling line, called *entasis*,² was given to the shaft, which seems

to have been the first step towards combining grace and grandeur in the Doric column.

The original form is represented by the figure on the left in the preceding woodcut, which is taken from the great temple at Posidonia (Pæstum), which is one of the most ancient temples now remaining; that on the right shows the *entasis*, and is from a building of rather later construction in the same city. Two other examples of the same style are still to be seen in Italy, one belonging to an ancient temple at Alba Fucinensis,³ and the other at Rome, on the sepulchre of C. Publicius.⁴

*ENTOMA (ἐντομα), INSECTA, INSECTS

"Aristotle and Pliny used the terms *ἐντομα* and *insecta* respectively in the same sense in which the latter is applied by Baron Cuvier and the naturalists of the present day, and did not include the *Crustacea* in this class of animals, as was done by Linnaeus with singular want of judgment. The metamorphosis of insects is correctly described by Theophrastus, *ἐκ κάμπης γὰρ χρυσάλλης, εἰς ἐκ ταύτης ἡ ψύχη*. By *κάμπη* is evidently meant here the *Larva* or *Eruca*, L., and by *χρυσάλλης*, the *Chrysalis* or *Pupa*, L.: the *ψύχη* is the *Imago*, L."⁵

EPANGELIA (ἐπαγγελία). If a citizen of Athens had incurred *ἀτιμία*, the privilege of taking part or speaking in the public assembly was forfeited. (Vid. ATIMIA.) But as it sometimes might happen that a person, though not formally declared *ἀτιμος*, had committed such crimes as would, on accusation, draw upon him this punishment, it was, of course, desirable that such individuals, like real *ἀτιμοι*, should be excluded from the exercise of the rights of citizens. Whenever, therefore, such a person ventured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself, and demand of him to establish his right to speak by a trial or examination of his conduct (*δοκιμασία τοῦ βίου*), and this demand, denunciation, or threat, was called *ἐπαγγελία*, or *ἐπαγγελία δοκιμασίας*. The impeached individual was then compelled to desist from speaking, and to submit to a scrutiny into his conduct,⁶ and if he was convicted, a formal declaration of *ἀτιμία* followed.

Some writers have confounded the *ἐπαγγελία* with *δοκιμασία*, and considered the two words as synonyms; but from the statements made above, it is evident that the *δοκιμασία* is the actual trial, while the *ἐπαγγελία* is only the threat to subject a man to the *δοκιμασία*: hence the expression *ἐπαγγέλλειν δοκιμασίαν*.⁶ Other writers, such as Harpocration and Suidas, do not sufficiently distinguish between *ἐπαγγελία* and *ἐνδοξίς*: the latter is an accusation against persons who, though they had been declared *ἀτιμοι*, nevertheless venture to assume the rights of citizens in the public assembly, whereas *ἐπαγγελία* applied only to those who had not yet been convicted of the crime laid to their charge, but were only threatened with an accusation for the first time.⁷ Wachsmuth⁸ seems to be inclined to consider the *ρητορική γραφή* to be connected or identical with the *ἐπαγγελία*; but the former, according to the definitions of Photius and Suidas, was in reality quite a different thing, inasmuch as it was intended to prevent orators from saying or doing unlawful things in the assembly where they had a right to come forward; whereas the *ἐπαγγελία* was a denunciation, or a promise to prove that the orator had no right at all to speak in the assembly.

EPARITOI (ἐπάριτοι), a select corps of Arca-

dian troops, who appear to have been held in high estimation by their countrymen.¹

EPAULIA. (*Vid.* MARRIAGE, GREEK.)

EPYUNAKTAI (*ἐπυνυκταί*) were a class of citizens at Sparta, who are said to have been the offspring of slaves and the widows of Spartan citizens. Theopompus tells us² that in the Messenian war, in consequence of the great losses which they sustained, the Spartans married the widows of those who were slain to Helots, and that these Helots were admitted to the citizenship under the name of *ἐπυνυκταί*. Diodorus³ also calls the partisans of Phalarthus *ἐπυνυκταί*. (*Vid.* PARTHENIAI.)⁴

EPHEBETUM. (*Vid.* GYMNASIUM.)

EPHEBUS (*ἑφήβος*) was the name of Athenian youths after they had attained the age of 18.⁵ The state of *ἐφηβεία* lasted for two years, till the young men had attained the age of 20, when they became men, and were admitted to share all the rights and duties of a citizen, for which the law did not prescribe a more advanced age. That the young men, when they became *ἐφήβοι*, did not receive all the privileges of full citizens, is admitted on all hands; but from the assertion of Pollux and Harpocration, who state that their names were not entered in the lexiarchic registers until they had completed their 20th year, that is to say, until they had gone through the period of *ἐφηβεία*, it would seem that they were not looked upon as citizens as long as they were *ἐφήβοι*, and that, consequently, they enjoyed none of the privileges of full citizens. But we have sufficient ground for believing that the names of young men, at the time they became *ἐφήβοι*, were entered as citizens in the lexiarchic registers, for Lycurgus⁶ uses the expressions *ἐφήβον γίνεσθαι* and *εἰς τὸ ληξιαρχικὸν γραμματεῖον ἐγγράφεσθαι* as synonymous. The statement of Harpocration and Photius is therefore probably nothing but a false inference from the fact, that young men, before the completion of their 20th year, were not allowed to take an active part in the public assembly; or it may be that it arose out of the law which, as Schömann⁷ interprets it, prescribed that no Athenian should be enrolled in the lexiarchic registers before the attainment of the 18th, or after the completion of the 20th year. (*Vid.* DOXIMASIA.) From the oration of Demosthenes against Aphobus,⁸ we see that some of the privileges of citizens were conferred upon young men on becoming *ἐφήβοι*: Demosthenes himself, at the age of 18, entered upon his patrimony, and brought an action against his guardians; one Mantitheus⁹ relates that he married at the age of 18; and these facts are stated in such a manner that we must infer that their occurrence had nothing extraordinary, but were in accordance with the usual custom.

Before a youth was enrolled among the ephēbi, he had to undergo a *δοκιμασία*, the object of which was partly to ascertain whether he was the son of Athenian citizens, or adopted by a citizen, and partly whether his body was sufficiently developed and strong to undergo the duties which now devolved upon him.¹⁰ Schömann¹¹ believes that this *δοκιμασία* only applied to orphans, but Aristophanes and Plato mention it in such a general way, that there seems to be no ground for such a supposition. After the

δοκιμασία, the young men received in the assembly a shield and a lance;¹ but those whose fathers had fallen in the defence of their country received a complete suit of armour in the theatre.² It seems to have been on this occasion that the *ἐφήβοι* took an oath in the Temple of Artemis Aglauros,³ by which they pledged themselves never to disgrace their arms or to desert their comrades; to fight to the last in the defence of their country, its altars and hearths; to leave their country, not in a worse, but in a better state than they found it. to obey the magistrates and the laws; to resist all attempts to subvert the institutions of Attica, and finally to respect the religion of their forefathers. This solemnity took place towards the close of the year (*ἐν ἀρχαιρέσειαις*), and the festive season bore the name of *ἐφέβια*.⁴ The external distinction of the *ἐφήβοι* consisted in the *χλαμύς* and the *πέτασος*.⁵

During the two years of the *ἐφηβεία*, which may be considered as a kind of apprenticeship in arms, and in which the young men prepared themselves for the higher duties of full citizens, they were generally sent into the country, under the name of *περίπολοι*, to keep watch in the towns and fortresses, on the coast and frontier, and to perform other duties which might be necessary for the protection of Attica.⁶

EPHEGESIS (*ἐφήγησις*) denotes the method of proceeding against such criminals as were liable to be summarily arrested by a private citizen (*vid.* ΑΡΑΓΟΘΗΣ) when the prosecutor was unwilling to expose himself to personal risk in apprehending the offender.⁷ Under these circumstances, he made an application to the proper magistrate, as, for instance, to one of the Eleven, if it were a case of burglary or robbery attended with murder,⁸ and conducted him and his officers to the spot where the capture was to be effected. With respect to the forms and other incidents of the ensuing trial, we have no information; in all probability they differed but little, if at all, from those of an *apagoge*.⁹

*EPHEMERON (*ἐφήμερον*), I. a plant, the same with the *Colchicum autumnale*, or Meadow Saffron. Such, at least, is the *ἐφήμερον* of Theophrastus¹⁰ and Nicander.¹¹ "Dioscorides¹² also gives it as one of the synonymes of his *κολυχικόν*. But in the following chapter he describes the properties of another *ἐφήμερον*, which it is more difficult to determine. Sprengel inclines to the *Convallaria verticillata*.¹³

*II. The *Ephemera*, L., or May-fly. "The name of *Ephemera* has been given to the insects so called, in consequence of the short duration of their lives, when they have acquired their final form. There are some of them which never see the sun; they are born after he is set, and die before he reappears on the horizon."¹⁴

EPHESIA (*Ἐφέσια*), a great panegyris of the Ionians at Ephesus, the ancient capital of the Ionians in Asia. It was held every year, and had, like all panegyris, a twofold character, that of a bond of political union among the Greeks of the Ionian race, and that of a common worship of the Ephesian Artemis.¹⁵ The Ephesia continued to be held in the time of Thucydides and Strabo, and the former compares it¹⁶ to the ancient panegyris of Delos (*vid.* DELIA), where a great number of the Ionians as-

sembled with their wives¹ and children. Respecting the particulars of its celebration, we only know that it was accompanied with much mirth and feasting, and that mystical sacrifices were offered to the Ephesian goddess.² That games and contests formed, likewise, a chief part of the solemnities, is clear from Hesychius,³ who calls the Ephesia an *ἀγὼν ἐπιφανής*.⁴

From the manner in which Thucydides and Strabo speak of the Ephesia, it seems that it was only a panegyris of some Ionians, perhaps of those who lived in Ephesus itself and its vicinity. Thucydides seems to indicate this by comparing it with the Delian panegyris, which likewise consisted only of the Ionians of the islands near Delos; and Strabo, who calls the great national panegyris of all the Ionians in the Panionium the *κοινὴ πανήγυρις τῶν Ἴωνων*, applies to the Ephesia simply the name *πανήγυρις*. It may, however, have existed ever since the time when Ephesus was the head of the Ionian colonies in Asia.

EPHESIS. (*Vid.* APPELLATIO, GREEK.)

EPHESTRIIS (*ἐφεστρίς*) was a name applied to any outer garment, and is used as equivalent to the *ὑμῶν* and *chlamys*.⁵

EPHETAE (*Ἐφῆται*). The judges so called at Athens were fifty-one in number, selected from noble families (*ἀριστιοδὴν αἰρεθέντες*), and more than fifty years of age. They formed a tribunal of great antiquity, so much so, indeed, that Pollux⁶ ascribed their institution to Draco; moreover, if we can depend upon the authority of Plutarch,⁷ one of Solon's laws (*ἀξονες*) speaks of the courts of the Ephetae and Areiopagus as coexistent before the time of that legislator. Again, as we are told by Pollux,⁸ the Ephetae formerly sat in one or other of five courts, according to the nature of the causes they had to try. In historical times, however, they sat in four only, called, respectively, the court by the Palladium (*τὸ ἐπὶ Παλλάδιῳ*), by the Delphinium (*τὸ ἐπὶ Δελφινίῳ*), by the Prytaneum (*τὸ ἐπὶ Πρυτανείῳ*), and the court at Phreatto or Zea (*τὸ ἐν Φρεαττοῖς*). At the first of these courts they tried cases of unintentional, at the second of intentional, but justifiable homicide, such as slaying another in self-defence, taking the life of an adulterer, killing a tyrant or a nightly robber.⁹ At the Prytaneum, by a strange custom, somewhat analogous to the imposition of a deodand, they passed sentence upon the instrument of murder when the perpetrator of the act was not known. In the court at Phreatto, on the seashore at the Peiraus, they tried such persons as were charged with wilful murder during a temporary exile for unintentional homicide. In cases of this sort, a defendant pleaded his cause on board ship (*τῆς γῆς μὴ ἀπτόμενος*), the judges sitting close by him on shore.¹⁰ Now we know that the jurisdiction in cases of wilful murder was, by Solon's laws, intrusted to the court of the Areiopagus, which is mentioned by Demosthenes¹¹ in connexion with the four courts in which the Ephetae sat. Moreover, Draco, in his *Θεσμῶν*, spoke of the *Εφεταὶ only*, though the jurisdiction of the Areiopagus in cases of murder is admitted to have been of great antiquity. Hence Müller¹² conjectures that the court of the Areiopagus was anciently included in the five courts of the Ephetae, and infers, moreover, the early existence of a senate at Athens, resembling the Gerousia at Sparta, and invested with the jurisdic-

tion in cases of homicide.¹ The name of *Ἐφῆται* given to the members of this council was, as he conceives, rather derived from their granting a license to avenge blood (*οἱ ἐφιάδι τῷ ἀνδροφόνῳ τὴν ἀνδρὸς λήτῃν*) than from their being appealed to, or from the transfer to them of a jurisdiction which, before the time of Draco, had belonged to the kings.² If this hypothesis be true, it becomes a question, Why and when was this separation of the courts made? On this subject Müller adds, that when an act of homicide was not punished by death or perpetual banishment, the perpetrator had to receive expiation. (*Vid.* BANISHMENT, GREEK.) Now the atonement for blood, and the purification of a shedder of blood, came under the sacred law of Athens, the knowledge of which was confined to the old nobility, even after they had lost their political power. (*Vid.* ΕΞΕΓΕΤΑΙ.) Consequently, the administration of the rites of expiation could not be taken away from them, and none but an aristocratical court like that of the Ephetae would be competent to grant permission of expiation for homicide, and to preside over the ceremonies connected with it. Accordingly, that court retained the right of decision in actions for manslaughter, in which a temporary flight was followed by expiation, and also in cases of justifiable homicide, whether from the similarity of the latter (as regards the guilt of the perpetrator) to acts of accidental homicide, or as requiring a like expiation.³ For acts of wilful murder, on the other hand, the punishment was either death or *ἀειφυγία*, and, therefore, no expiation (*κάθαρσις*) was connected with the administration of justice in such cases, so that there could be no objection against their being tried by the court of the Areiopagus, though its members did not of necessity belong to the old aristocracy.

Such, briefly, are the reasons which Müller alleges in support of this hypothesis; and if they are valid there can be little doubt that the separation alluded to was effected when the Athenian nobility lost their supremacy in the state, and a timocracy or aristocracy of wealth was substituted for an aristocracy of birth. This, as is well known, happened in the time of Solon.

Lastly, we may remark, that the comparatively unimportant and antiquated duties of the Ephetae sufficiently explain the statement in Pollux,⁴ that their court gradually lost all respect, and became at last an object of ridicule.

EPHIPPPIUM (*ἄστράβη, ἐρίππιον, ἐρίππειον*), a Saddle. Although the Greeks occasionally rode without any saddle (*ἐπὶ ψιλοῦ ἵππου*), yet they commonly used one, and from them the name, together with the thing, was borrowed by the Romans.⁵ It has, indeed, been asserted, that the use of saddles was unknown until the fourth century of our era. But Ginzrot, in his valuable work on the history of carriages,⁶ has shown, both from the general practice of the Egyptians and other Oriental nations, from the pictures preserved on the walls of houses at Herculaneum, and from the expressions employed by J. Cæsar and other authors, that the term "ehippium" denoted not a mere horsecloth, a skin, or a flexible covering of any kind, but a saddle-tree, or frame of wood, which, after being filled with a stuffing of wool or cloth, was covered with softer materials, and fastened by means of a girth (*cingulum, zona*) upon the back of the animal. The ancient saddles appear, indeed, to have been thus far different from ours, that the cover stretched upon the hard frame was probably of stuffed or padded

1. (Strabo, l. c.)—2. (s. v.)—3. (Compare Paus., vii., 2, § 4.—Müller, *Dor.*, ii., 9, § 8.—Böckh, *Corp. Inscript.*, ii., n. 2909.)—4. (Xen., *Symp.*, iv., 38.—Lucian, *Dial. 1. (Thirlwall, *Hist. of Greece*, ii., p. 41.)—2. (Pollux, l. c.)—3. (Plato, *Leg.*, ix., p. 874 and 875.)—4. (l. c.)—5. (Xen., *De Re Equit.*, vii., 5.)—6. (Varro, *De Re Rust.*, ii., 7.—Cæsar, *B. G.*, iv., 2.—Hor., *Epist.*, i., 14, 43.—Gellius, v., 5.)—7. (vol. ii., c. 26.)

cloth rather than leather, and that the saddle was, as it were, a cushion fitted to the horse's back. Pendent cloths (*στρώματα*, *strata*) were always attached to it, so as to cover the sides of the animal; but it was not provided with stirrups. As a substitute for the use of stirrups, the horses, more particularly in Spain, were taught to kneel at the word of command, when their riders wished to mount them. (*Vid.* the annexed figure from an antique lamp found at Herculaneum, and compare Strabo, III., i., p. 436, ed. Sieb.; and Silius Italicus, x., 465.)

The cloths, which were either spread over the saddle or hung from it on each side, were often dyed with different colours ("Jam purpura vestial armos,"¹ *ephippia fucata*), and were sometimes rendered still more ornamental by the addition of fringes.

The term "Ephippium" was in later times in part supplanted by the word "sella," and the more specific expression "sella equestris."

EPHORI (Ἐφοροι). Magistrates called Ἐφοροι or overseers were common to many Dorian constitutions in times of remote antiquity. Cyrene and the mother state of Thera may be mentioned as examples: the latter colonized from Laconia in early ages, and where, as we are told, the ephors were ἑπωνύμοι, i. e., gave their name to their year of office.² The ephorality at Sparta is classed by Herodotus³ among the institutions of Lycurgus. Since, however, the ephori are not mentioned in the oracle which contains a general outline of the constitution ascribed to him,⁴ we may infer that no new powers were given to them by that legislator, or in the age of which he may be considered the representative. Another account refers the institution of the Spartan ephorality to Theopompus (B.C. 770-720), who is said to have founded this office with a view of limiting the authority of the kings, and to have justified the innovation by remarking that "he handed down the royal power to his descendants more durable, because he had diminished it."⁵ The inconsistency of these accounts is still farther complicated by a speech of Cleomenes the Third, who⁷ is represented to have stated that the ephors were

originally appointed by the kings, to act for them in a judicial capacity (*πρὸς τὸ κρίνειν*) during their absence from Sparta in the first Messenian war, and that it was only by gradual usurpations that these new magistrates had made themselves paramount even over the kings themselves. Now, according to some authorities,¹ Polydorus, the colleague of Theopompus, and one of the kings under whom the first Messenian war (B.C. 743-723) was completed, appropriated a part of the conquered Messenian territory to the augmentation of the number of portions of land possessed by the Spartans—an augmentation which implies an increase in the number of Spartan citizens. But the ephors, as we shall see hereafter, were the representatives of the whole nation; and, therefore, if in the reign of Theopompus the franchise at Sparta was extended to a new class of citizens, who, nevertheless, were not placed on an equality with the old ones (*ὑποκείμετοι*), the ephors would thenceforward stand in a new position with respect to the kings, and the councillors (*οἱ γέροντες*) who were elected from the higher class. Moreover, it is not improbable that, during the absence of the kings, the ephors usurped, or had conferred upon them, powers which did not originally belong to them; so that, from both these causes, their authority may have been so far altered as to lead to the opinion that the creation of the office, and not merely an extension of its powers, took place during the reign of Theopompus. Again, as Mr. Thirlwall observes, "if the extension of the ephorality was connected with the admission of an inferior class of citizens to the franchise, the comparison which Cicero² draws between the ephorality and the Roman tribunate would be more applicable than he himself suspected, and would throw a light on the seeming contradiction of the ephors being all-powerful, though the class which they more especially represented enjoyed only a limited franchise."³ But, after all, the various accounts which we have been considering merely show how different were the opinions, and how little historical the statements, about the origin of the ephorality.⁴

We shall therefore proceed to investigate the functions and authorities of the ephors in historical times, after first observing that their office, considered as a counterpoise to the kings and council, and in that respect peculiar to Sparta alone of the Dorian states, would have been altogether inconsistent with the constitution of Iycurgus, and that their gradual usurpations and encroachments were facilitated by the vague and indefinite nature of their duties. Their number, five, appears to have been always the same, and was probably connected with the five divisions of the town of Sparta, namely, the four *κῶμαι*, Limnæ, Mesoa, Pitana, Cynosura, and the Πόλις, or city properly so called, around which the *κῶμαι* lay.⁵ They were elected from and by the people (*ἐξ ἀπάντων*), without any qualification of age or property, and without undergoing any scrutiny (*οἱ τυχόντες*); so that, as Aristotle remarks,⁶ the *δημος* enjoyed through them a participation in the highest magistracy of the state. The precise mode of their election is not known, but Aristotle⁷ speaks of it as being very puerile; and Plato⁸ describes their office as *ἐγγὺς τῆς κληρωτῆς δυνάμεως*, words which may apply to a want of a directing and discriminating principle in the electors, without of necessity implying an election by lot. They entered upon office at the autumnal solstice, and the first in rank of the five gave his name

to the year, which was called after him in all civil transactions.¹ Their meetings were held in the public building called *ἄρχεῖον*, which in some respects resembled the Prytaneum at Athens, as being the place where foreigners and ambassadors were entertained, and where, moreover, the ephors took their meals together.²

The ephors also possessed judicial authority, on which subject Aristotle³ remarks that they decided in civil suits (*δίκαι τῶν συμβολαίων*), and generally in actions of great importance (*κρίσεων μεγάλων κύριαι*): whereas the council presided over capital crimes (*δίκαι φονικαί*). In this arrangement we see an exemplification of a practice common to many of the ancient Greek states, according to which a criminal jurisdiction was given to courts of aristocratic composition, while civil actions were decided by popular tribunals. (Compare ΕΦΙΕΤΑΕ and ΑΡΕΙΟΠΑΓΟΥΣ.) But with this civil jurisdiction was united a censorial authority, such as was possessed by the ephors at Cyrene: for example, the ephors punished a man for having brought money into the state,⁴ and others for indolence.⁵ We are told, also, that they inspected the clothing and the bedding of the young men.⁶ Moreover, something like a superintendence over the laws and their execution is implied in the language of the edict, which they published on entering upon their office, ordering the citizens "to shave the upper lip (*μύστακα*), i. e., to be submissive, and to obey the laws." Now the symbolical and archaic character of this expression seems to prove that the ephors exercised such a general superintendence from very early times, and there can be no doubt "that, in the hands of able men, it would alone prove an instrument of unlimited power."⁷

Their jurisdiction and power were still farther increased by the privilege of instituting scrutinies (*ἐθθυραί*) into the conduct of all the magistrates, on which Aristotle⁸ observes that it was a very great gift to the ephoralty (*τοῦτο δὲ τῇ ἐφορείᾳ μέγα λίαν τὸ δῶρον*). Nor were they obliged to wait till a magistrate had completed his term of office, since, even before its termination, they might exercise the privilege of deposition.⁹ Even the kings themselves could be brought before their tribunal (as Cleomenes was for bribery, *δωροδοκία*¹⁰), though they were not obliged to answer a summons to appear there till it had been repeated three times.¹¹ In extreme cases, the ephors were also competent to lay an accusation against the kings as well as the other magistrates, and bring them to a capital trial before the great court of justice.¹² If they sat as judges themselves, they were only able, according to Müller, to impose a fine, and compel immediate payment; but they were not in any case, great as was their judicial authority, bound by a written code of laws.¹³

In later times the power of the ephors was greatly increased; and this increase appears to have been principally owing to the fact that they put themselves in connexion with the assembly of the people, convened its meetings, laid measures before it, and were constituted its agents and representatives.¹⁴ When this connexion arose is matter of conjecture; some refer the origin of it to Asteropeus, one of the first ephors to whom the extension of the powers of the ephoralty is ascribed, and who is said to have lived many years after the time of Theopompus, probably about B.C. 560. That it was

not known in early times appears from the circumstance that the two ordinances of the oracle at Delphi, which regulated the assembly of the people, made no mention of the functions of the ephors.¹ It is clear, however, that the power which such a connexion gave, would, more than anything else, enable them to encroach on the royal authority, and make themselves virtually supreme in the state. Accordingly, we find that they transacted business with foreign ambassadors;² dismissed them from the state;³ decided upon the government of dependant cities;⁴ subscribed in the presence of other persons to treaties of peace;⁵ and in time of war sent out troops when they thought necessary.⁶ In all these capacities the ephors acted as the representatives of the nation and the agents of the public assembly, being, in fact, the executive of the state. Their authority in this respect is farther illustrated by the fact that, after a declaration of war, "they intrusted the army to the king or some other general, who received from them instructions how to act, sent back to them for fresh instructions, were restrained by them through the attendance of extraordinary plenipotentiaries, were recalled by means of the scytale, summoned before a judicial tribunal, and their first duty after return was to visit the office of the ephors."⁷ Another striking proof of this representative character is given by Xenophon,⁸ who informs us that the ephors, acting on behalf of the state (*ὑπὲρ τῆς πόλεως*), received from the kings every month an oath, by which the latter bound themselves to rule according to law; and that, in return for this, the state engaged, through the ephors, to maintain unshaken the authority of the kings if they adhered to their oath.

It has been said that the ephors encroached upon the royal authority; in course of time the kings became completely under their control. For example, they fined Agesilaus⁹ on the vague charge of trying to make himself popular, and interfered even with the domestic arrangements of other kings; moreover, as we are told by Thucydides,¹⁰ they could even imprison the kings, as they did Pausanias. We know, also, that in the field the kings were followed by two ephors, who belonged to the council of war; the three who remained at home received the booty in charge, and paid it into the treasury, which was under the superintendence of the whole College of Five. But the ephors had still another prerogative, based on a religious foundation, which enabled them to effect a temporary deposition of the kings. Once in eight years (*ὅλ' ἔστιν ἑνεία*), as we are told, they chose a calm and cloudless night to observe the heavens, and if there was any appearance of a falling meteor, it was believed to be a sign that the gods were displeased with the kings, who were accordingly suspended from their functions until an oracle allowed of their restoration.¹¹ The outward symbols of supreme authority also were assumed by the ephors, and they alone kept their seats while the kings passed; whereas it was not considered below the dignity of the kings to rise in honour of the ephors.¹²

The position which, as we have shown, the ephors occupied at Sparta, will explain and justify the statement of Müller, "that the ephoralty was the moving element, the principle of change in the Spartan constitution, and, in the end, the cause of its dissolution." In confirmation of this opinion we may cite the authority of Aristotle, who observes, that from the excessive and absolute power (*ισορῦπανος*) of

1 (Müller, Dor., iii., 7, § 7.)—2. (Pausan., iii., 11, 2.)—3. (Polit., i., 1.)—4. (Polit., ii., 6.)—5. (Plut., Lysan., 19.)—6. (Schol. in Thucyd., i., 84.)—7. (Athenæus, xii., 550.)—8. (Thirlwall, Hist. of Greece, i., 355.)—9. (Polit., ii., 6, 17.)—10. (Xen., De Rep. Lac., viii., 4.)—11. (Herod., vi., 82.)—12. (Plut., Cleom., 10.)—13. (Xen., i., c.—Herod., vi., 85.)—14. (Aristot., Polit., ii., 6, 16.)—15. (Müller, Dorians, ii., 125, transl.)

1. (Thirlwall, i., 356.)—2. (Herod., ix., 8.)—3. (Xen., Hell., ii., 13, 19.)—4. (Xen., Hell., iii., 4, 2.)—5. (Thucyd., v., 19, 24.)—6. (Herod., ix., 7, 10.)—7. (Müller, Dor., ii., 127, transl.)—8. (De Repub. Lac., xv.)—9. (Plutarch, Ages., 2, 5.)—10. (i., 131.)—11. (Plut., Agis, 11.)—12. (Xen., Repub. Lac., xv.)

the ephors, the kings were obliged to court them (*δημαγωγεῖν*), and eventually the government became a democracy instead of an aristocracy. Their relaxed and dissolute mode of life too (*ἀνεμμένη δόξα*), he adds, was contrary to the spirit of the constitution; and we may remark that it was one of the ephors, Epitadeius, who first carried through the law permitting a free inheritance of property in contravention of the regulation of Lycurgus, by which an equal share in the common territory was secured to all the citizens.

The change, indeed, to which Aristotle alludes, might have been described as a transition from an aristocracy to an oligarchy; for we find that in later times, the ephors, instead of being demagogues, invariably supported oligarchical principles and privileges. The case of Cinadon, B.C. 399, is an instance of this; and the fact is apparently so inconsistent with their being representatives of the whole community, and as much so of the lower (*ὑπομεινέες*) as of the higher (*δυνατοί*) class of citizens, that Wachsmuth¹ supposes the *δημος*,² from and by whom the ephors were chosen, to mean the whole body of privileged or patrician citizens only, the most eminent (*καλοὶ καγαθοὶ*) of whom were elected to serve as *γέροντες*. This supposition is not itself improbable, and would go far to explain a great difficulty; but any analysis of the arguments that may be urged for and against it is precluded by our limits.³ We shall, therefore, only add, that the ephors became at last thoroughly identified with all opposition to the extension of popular privileges.

For this and other reasons, when Agis and Cleomenes undertook to restore the old constitution, it was necessary for them to overthrow the ephorality, and, accordingly, Cleomenes murdered the ephors for the time being, and abolished the office (B.C. 225); it was, however, restored under the Romans.

EPIBATÆ (*ἐπιβάται*) were soldiers or marines appointed to defend the vessels in the Athenian navy, and were entirely distinct from the rowers, and also from the land soldiers, such as hoplites, peltasts, and cavalry.⁴ It appears that the ordinary number of epibatæ on board a trireme was ten. Dr Arnold⁵ remarks, that by comparing Thucyd., iii., 95, with c. 91, 94, we find three hundred epibatæ as the complement of thirty ships; and also, by comparing ii., 92, with c. 102, we find four hundred as the complement of forty ships; and the same proportion results from a comparison of iv., 76, with c. 101. In Thucydides, vi., 42, we find seven hundred epibatæ for a fleet of one hundred ships, sixty of which were equipped in the ordinary way, and forty had troops on board. In consequence of the number of heavily-armed men *ἐκ τοῦ καταλόγου* on the expedition, the Athenians appear to have reduced the number of regular epibatæ from ten to seven. The number of forty epibatæ to a ship, mentioned by Herodotus,⁶ Dr. Arnold justly remarks,⁷ "belongs to the earlier state of Greek naval tactics, when victory depended more on the number and prowess of the soldiers on board than on the manoeuvres of the seamen,"⁸ and it was in this very point that the Athenians improved the system, by decreasing the number of *ἐπιβάται*, and relying on the more skilful management of their vessels."

The epibatæ were usually taken from the Thetes, or fourth class of Athenian citizens;⁹ but on one occasion, in a season of extraordinary danger, the citizens of the higher classes (*ἐκ καταλόγου*) were compelled to serve as epibatæ.¹⁰

The term is sometimes, also, applied by the Roman writers to the marines,¹ but they are more usually called *classarii milites*. The latter term, however, is also applied to the rowers or sailors as well as the marines (*classiariorum remigio vchi*).²

EPIBLE'MA. (*Vid. AMICTUS*.)

EPIB'OLE (*ἐπιβολή*), a fine imposed by a magistrate, or other official person or body, for a misdemeanour. The various magistrates at Athens had (each in his own department) a summary penal jurisdiction; i. e., for certain offences they might inflict a pecuniary mulct or fine, not exceeding a fixed amount; if the offender deserved farther punishment, it was their duty to bring him before a judicial tribunal. Thus, in case of an injury done to orphans or heiresses, the archon might fine the parties, or (if the injury were of a serious nature) bring them before the court of Heliaea.³ Upon any one who made a disturbance, or otherwise misbehaved himself in the public assembly, the *proedri* might impose a fine of fifty drachms, or else bring him for condign punishment before the senate of 500, or the next assembly.⁴ The senate of 500 were competent to fine to the extent of 500 drachms.⁵

The magistrate who imposed the fine (*ἐπιβολὴν ἐπέβαλε*) had not the charge of levying it, but was obliged to make a return thereof to the treasury officers (*ἐπιγράφειν*, or *ἐγγράφειν τοῖς πράκτορσιν*, or *ἐγγράφειν τῷ δημοσίῳ*), whereupon, like all other penalties and amercements, it became (as we should say) a debt of record, to be demanded or recovered by the collectors.⁶ If it were made payable to the fund of a temple, it was collected by the functionaries who had the charge of that fund (*ταμίαι*). There might (it seems) be an appeal from the sentence of the magistrate to a jury or superior court.⁷

As under the old Roman law no magistrate could impose a fine of more than two oxen and thirty sheep, so, by the laws of Solon, fines were of very small amount at Athens. How greatly they increased afterward (as money became more plentiful, and laws more numerous), and how important a branch they formed of the public revenue, may be seen from the examples collected by Böckh.⁸

These *ἐπιβολαὶ* are to be distinguished from the penalties awarded by a jury or court of law (*τιμώματα*) upon a formal prosecution. There the magistrate or other person who instituted the proceeding (for any one might prosecute, *κατηγορεῖν*), was said *τίμημα ἐπιγράφασθαι*, as the court or jury were said *τιμῶν*, "to assess the penalty," which always determined upon them, except where the penalty was one fixed by law (*ἐκ τῶν νόμων ἐπιτεταμένη ζημία*), in which case it could not be altered.⁹

EPICHEIROTONIA. (*Vid. CHEIROTONIA*, ECCLÉSIA, p. 386.)

EPICLERUS (*ἐπικληρος*, heiress), the name given to the daughter of an Athenian citizen who had no son to inherit his estate. It was deemed an object of importance at Athens to preserve the family name and property of every citizen. This was effected, where a man had no child, by adoption (*εἰσποιήσεις*); if he had a daughter, the inheritance was transmitted through her to a grandson, who would take the name of the maternal ancestor. If the father died intestate, the heiress had not the choice of a husband, but was bound to marry her nearest relative, not in the ascending line. Upon

Eurg., and Mnes., 1132.—*Vid.* also Demosth., c. Meid., 572.)—6. (*Æsch.*, c. Timarch., l. c.—Demosth., c. Nicost., 1251.)—7. (Meier, *Att. Proc.*, p. 24, 34, 365.—Schömann, *Ant. Jur. Pub. Græc.*, p. 242, 293.)—8. (*Pub. Econ. of Athens*, ii., p. 109, &c.)—9. (*Æsch.*, *Περὶ Πράγματος*, 14, Bekker.—Demosth., c. Theocr., 1328.—Harpocrat. s. v. *Ἀρμπος δυνάμιν*.)

such person making his claim before the archon, whose duty it was *ἐπιμελεῖσθαι τῶν ἐπικλήρων καὶ τῶν οἰκῶν τῶν ἐξηρημονούντων*,¹ public notice was given of the claim; and if no one appeared to dispute it, the archon adjudged the heiress to him (*ἐπέδικασεν αὐτῷ τὴν ἐπικλήρον*). If another claimant appeared (*ἀμφισβητεῖν αὐτῷ τῆς ἐπικ.*), a court was held for the decision of the right (*διαδικασία τῆς ἐπικ.*), which was determined according to the Athenian law of consanguinity (*γένους κατ' ἀγγιστεῖαν*). Even where a woman was already married, her husband was obliged to give her up to a man with a better title; and men often put away their former wives in order to marry heiresses.²

A man without male issue might bequeath his property; but if he had a daughter, the devisee was obliged to marry her.³ If the daughter was poor, and the nearest relative did not choose to marry her, he was bound to give her a portion corresponding to his own fortune.⁴

The husband of an heiress took her property until she had a son of full age (*ἐπὶ διετέε ἡβήσαντα*), who was usually adopted into his maternal grandfather's family, and took possession of the estate. He then became his mother's legal protector (*κύριος*), and was bound to find her maintenance (*σίτον*). If there were more sons, they shared the property equally.⁵

When there was but one daughter, she was called *ἐπικλῆρος ἐπὶ παντὶ τῷ οἴκῳ*. If there were more, they inherited equally, like our co-parceners, and were severally married to relatives, the nearest having the first choice.⁶ Illegitimate sons did not share with the daughter, the law being *νόθῳ μὴ εἶναι ἀγγιστεῖαν μὴθ' ἱερῶν μὴθ' οἰκῶν*.⁷

The heiress was under the special protection of the archon; and if she was injured by her husband or relatives, or by strangers ejecting her from her estate, the law gave a criminal prosecution against the offender, called *κακίστως εἰσαγγελία*.⁸

EPICLINTRON. (*Vid. LECTUS.*)

EPIDAURIA. (*Vid. ELEUSINIA*, p. 396.)

EPIDEMIURGI. (*Vid. DEMIURGI.*)

EPIDICASIA (*ἐπιδικασία, κλήρον*) was the proceeding by which a legatee or heir, other than the natural descendant and acknowledged successor, obtained legal possession of the estate of a deceased person. Under these circumstances, the claimant was said *λαγχάνειν* or *ἐπιδικάζεσθαι τοῦ κλήρου*, and the property itself termed *ἐπιδίκων* until it was formally awarded to its rightful owner. Notice of a claim of this kind might be given to the archon eponymus during any month in the year except Scirrophorion, and that magistrate was bound, upon receiving it, to direct that it should be inscribed upon a tablet, and exposed to public inspection, as if it were an indictment or declaration (*γραφὴ* or *λῆξις*) in an ordinary lawsuit.⁹ After this it was recited by the herald in the first ensuing regular assembly of the people (*κυρία ἐκκλησία*), and a proclamation to the same effect was again made before the archon, who formally assigned the property to the claimant. If, however, any other parties made their appearance, a diadicasia ensued between them and the original suitor. (*Vid. DIADICASIA.*) An analogous proceeding took place when the surviving issue of the deceased consisted of one or more daughters only (*ἐπικλῆροι, ἐπικληρίτιδες, πατροῦχοι, ἐγγλῆροι, or ἐπίπα-*

μάτιδες), in which case the person in whose favour the will of the deceased had been made, the nearest male relative (*ἀγχιστεὺς*), or if several daughters had been left with their portions to different persons, the legatees or relatives were required to prefer their claim to the archon. The proclamation by the herald followed, in the same manner as when an estate was the subject of the petition; *ἀρκ* the paracatoble, or the tenth part of the estate or portion, was deposited as a forfeit, in case they failed to establish their claim, by the other parties that undertook a diadicasia.¹ (*Vid. EPICLERUS.*)

EPID'OSEIS (*ἐπιδόσεις*) were voluntary contributions, either in money, arms, or ships, which were made by the Athenian citizens in order to meet the extraordinary demands of the state. When the expenses of the state were greater than its revenue, it was usual for the prytanes to summon an assembly of the people, and, after explaining the necessities of the state, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose, and mentioned what they would give; while those who were unwilling to give anything remained silent, or retired privately from the assembly.² The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till the amount was paid.³

These *ἐπιδόσεις*, or voluntary contributions, were frequently very large. Sometimes the more wealthy citizens voluntarily undertook a triarchy, or the expenses of equipping a trireme.⁴ We read that Pasion furnished 1000 shields, together with five triremes, which he equipped at his own expense.⁵ Chrysippus presented a talent to the state when Alexander moved against Thebes;⁶ Aristophanes, the son of Nicophemus, gave 30,000 drachmæ for an expedition against Cyprus;⁷ Charidemus and Diotimus, two commanders, made a free gift of 900 shields;⁸ and similar instances of liberality are mentioned by Böckh,⁹ from whom the preceding examples have been taken.¹⁰

EPIGAMIA. (*Vid. MARRIAGE, GREEK.*)

EPIGRAPHEIS. (*Vid. EISPHORA*, p. 392.)

EPIMELETAÆ (*ἐπιμεληταί*), the name of various magistrates and functionaries at Athens.

1. *Ἐπιμελητὴς τῆς κοινῆς προσόδου*, more usually called *ταμίης*, the treasurer or manager of the public revenue. (*Vid. TAMIAS.*)

2. *Ἐπιμεληταὶ τῶν μορίων Ἑλαίων* were persons chosen from among the areopagites to take care of the sacred olive-trees.¹¹

3. *Ἐπιμεληταὶ τοῦ Ἐμπορίου* were the overseers of the emporium. (*Vid. EMPORIUM.*) They were ten in number, and were elected yearly by lot.¹² They had the entire management of the emporium, and had jurisdiction in all breaches of the commercial laws.¹³ According to Aristotle,¹⁴ it was part of their duty to compel the merchants to bring into the city two thirds of the corn which had been brought by sea into the Attic emporium; by which we learn that only one third could be carried away to other countries from the port of the Peiræus.¹⁵

4. *Ἐπιμεληταὶ τῶν Μυστηρίων* were, in connexion with the king archon, the managers of the Eleusin-

ian mysteries. They were elected by open vote, and were four in number, of whom two were chosen from the general body of citizens, one from the Eumolpidae, and one from the Ceryces.¹

5. Ἐπιμεληταὶ τῶν νεωρίων, the inspectors of the dockyards, formed a regular ἀρχή, and were not an extraordinary commission, as appears from Demosthenes,² Æschines,³ and the inscriptions published by Böckh,⁴ in which they are sometimes called οἱ ἄρχοντες ἐν τοῖς νεωρίοις, and their office designated an ἀρχή.⁵ We learn from the same inscriptions that their office was yearly, and that they were ten in number. It also appears that they were elected by lot from those persons who possessed a knowledge of shipping.

The principal duty of the inspectors of the dockyards was to take care of the ships, and all the rigging, tools, &c. (σκενή), belonging to them. They also had to see that the ships were seaworthy; and for this purpose they availed themselves of the services of a δοκιμαστής, who was well skilled in such matters.⁶ They had at one time the charge of various kinds of military σκενή, which did not necessarily belong to ships, such as engines of war,⁷ which were afterward, however, intrusted to the generals by a decree of the senate and people.⁸ They had to make out a list of all those persons who owed anything to the docks,⁹ and also to get in what was due.¹⁰ We also find that they sold the rigging, &c., of the ships, and purchased new, under the direction of the senate, but not on their own responsibility.¹¹ They had ἡγεμονίαν δικαστηρίων in conjunction with the ἐπιστολεῖς in all matters connected with their own department.¹² To assist them in discharging their duties, they had a secretary (γραμματεὺς)¹³ and a public servant (δημόσιος ἐν τοῖς νεωρίοις¹⁴). For a farther account of these inspectors, see Böckh, *Urkunden*, &c., p. 48-64.

6. Ἐπιμεληταὶ τῶν φυλῶν, the inspectors of the φυλαὶ or tribes. (*Vid.* TRIBUS.)

*EPI-MELIS (ἐπιμηλής), a species of Medlar. Sprengel sets it down for the *Mespilus Germanicus*, L.¹⁵

*EPI-OLUS (ἐπίολος), an insect described by Aristotle, and the same, most probably, as Adams thinks, with the *πυρράστης* of Ælian. Schneider supposes it to be the *Acarus telarius*, L., or Red Spider.¹⁶

*EPI-PACTIS (ἐπιπακτίς), according to Sprengel, the *Herniaria glabra*. Nothing satisfactory, however, is determined, with regard to this herb, by Matthioli, Bauhin, and other botanical writers.¹⁷

EPI-RHE'DIUM. (*Vid.* RHEDA.)

ΕΠΙΣΚΗΨΙΣ ΦΕΥΔΟΜΑΡΤΥΡΙΩΝ. (*Vid.* ΦΕΥΔΟΜΑΡΤΥΡΙΩΝ ΔΙΚΗ.)

EPI-S-COPOI (ἐπίσκοποι) were inspectors, who were sometimes sent by the Athenians to subject states. Harpocration compares them to the Lacedæmonian harmosts, and says that they were also called φύλακες. It appears that these ἐπίσκοποι received a salary at the cost of the cities over which they presided.¹⁸

EPI-STATES (ἐπιστάτης), which means a person placed over anything, was the name of two distinct

classes of functionaries in the Athenian state, namely, of the chairman of the senate and assembly of the people, respecting whose duties, see the articles BOULE, p. 168, and ECCLESIA, p. 386, and also of the directors of the public works (Ἐπιστάται τῶν δημοσίων ἔργων). These directors had different names, as τεichoποιοί, the repairers of the walls; τρηφοποιοί, the builders of the trenches; ταφροποιοί, the repairers of the trenches, &c.; all of whom were elected by the tribes, one from each: but the most distinguished of these were the τεichoποιοί.¹ Over other public buildings a manager of public works had the superintendence; and it was in this capacity that Pericles, and subsequently Lycurgus, undertook so many works of architecture. In the inscriptions relating to the building of the Temple of Athena Polias, we find ἐπιστάται mentioned.² Similar authorities were appointed for the care of the roads, and of the supply of water (ὀδοποιοί,³ ἐπιστάται τῶν ὑδάτων⁴).

The directors received the money which was necessary for these works from the public treasury (ἐκ τῆς διοικήσεως⁵).

EPI-STOLA. (*Vid.* CONSTITUTIO.)

EPI-STOLEUS (ἐπιστολεύς) was the officer second in rank in the Spartan fleet, and succeeded to the command if anything happened to the ναυάρχος or admiral.⁶ Thus, when the Chians and the other allies of Sparta on the Asiatic coast sent to Sparta to request that Lysander might be again appointed to the command of the navy, he was sent with the title of ἐπιστολεύς, because the laws of Sparta did not permit the same person to hold the office of ναυάρχος twice.⁷

EPI-STYLIUM, the architrave or lower member of an entablature (coroniz) which lies immediately over the column.⁸ When an intercolumniation was of the kind called aræostyle, that is, when the columns were more than three diameters apart, the epistylum was necessarily made of wood instead of stone,⁹ a construction exemplified by the restoration in the annexed woodcut¹⁰ of the Doric portico which surrounds three sides of the Forum at Pompeii. The holes seen at the back of the frieze received the beams which supported an upper gallery.

EPISYNTHETICI (ἐπισυνθετικοί), an ancient medical sect, so called because they *heaped up* in a manner (ἐπισυντίθημι), and adopted for their own the opinions of different, and even opposite, schools. They appear to have been a branch of the Method

(Pompeii, vol. i., p. 143.)

ici (*vid.* ΜΕΘΟΔΙΟΙ¹), and to have been founded by Agathinus of Sparta, the pupil of Athenæus, towards the end of the first century of the Christian era.² Galen informs us³ that the sect was also sometimes called *ἐκλεκτική*, and sometimes *ἐκτική*. (*vid.* ΗΕΚΤΙΚ.) The only other ancient physician (as far as the writer is aware) who is mentioned as having belonged to this sect, is Leonides of Alexandria,⁴ who is supposed by Sprengel⁵ to have lived in the third century, as he himself quotes Galen,⁶ while Galen never mentions him. Little is known of the opinions of either of these physicians, and nothing sufficiently characteristic to enable us to determine what were the peculiar tenets of their sect, which are, however, supposed to have nearly agreed with those of the Eclectici. (*vid.* ΕΚΛΕΚΤΙΚΙ.)

EPITHALAMUM. (*vid.* MARRIAGE.)

*EPITHYMON (*ἐπιθυμον*), a weed which is parasitic on thyme, furze, heath, and other plants. Allston, Dierbach, and Sprengel follow Bauhin in referring it to the *Cuscuta Epithymus*, or Lesser Dodder of Thyme.⁷

EPITYMIA (*ἐπιτυμία*). (*vid.* ΑΤΥΜΙΑ; CIVITAS, GREEK, p. 259.)

ΕΠΙΤΥΡΗΡΑΡΧΗΜΑΤΟΣ ΔΙΚΗ. (*vid.* ΛΕΙΤΟΥΡΓΙΑ.)

ΕΠΙΤΡΟΠΗΣ ΓΡΑΦΗ. (*vid.* ΕΠΙΤΡΟΦΟΣ.)

EPITROPOS (*ἐπίτροπος*), which signifies, literally, a person to whom anything is given in charge,⁸ occurs, however, much more frequently in the sense of a guardian of orphan children. Of such guardians there were at Athens three kinds: first, those appointed in the will of the deceased father; secondly, the next of kin, whom the law designated as tutores legitimi in default of such appointment, and who required the authorization of the archon to enable them to act; and, lastly, such persons as the archon selected, if there were no next of kin living to undertake the office. The duties of the guardian comprehended the education, maintenance, and protection of the ward, the assertion of his rights, and the safe custody and profitable disposition of his inheritance during his minority, besides making a proper provision for the widow if she remained in the house of her late husband. In accordance with these, the guardian was bound to appear in court in all actions in behalf of or against his ward, and give in an account of the taxable capital (*τίμημα*) when an *εἰσφορά* (the only impost to which orphans were liable) was levied, and make the proportionate payment in the minor's name. With reference to the disposition of the property, two courses were open to the guardian to pursue, if the deceased had left no will, or no specific directions as to its management, viz., to keep it in his own hands, and employ it as he best could for the benefit of the minor (*δοικεῖν*), or let it out to farm to the highest bidder (*μισθοῦν τὸν ὀκλόν*). In the former case, it seems probable⁹ that a constant control of the guardian's proceedings might be exercised by the archon; and a special law ordained that all money belonging to a minor should be vested in mortgages, and upon no account be lent out upon the more lucrative but hazardous security of bottomry.¹⁰

To ensure the performance of these duties, the law permitted any free citizen to institute a public action, as, for instance, an *apagoge* or *eisangelia*, against a guardian who maltreated his ward (*κακώσεως ὀφθαλμοῦ*), or a *γραφὴ ἐπίτροπῆς*, for neglect or

injury of his person or property; and the punishment, upon conviction, depended entirely upon the greater or less severity of the dicasts.¹ If the guardian preferred that the estate should be farmed, the regular method of accomplishing this was by making an application to the archon, who thereupon let the inheritance to the highest bidder, and took care that the farmer should hypothecate a sufficient piece of ground or other real property to guaranty the fulfilment of the contract (*ἀποτίμημα*). In some cases the guardian might be compelled to adopt this course or be punished, if the lease were irregularly or fraudulently made, by a phasis, which, upon this occasion, might be instituted by any free citizen. The guardianship expired when the ward had attained his eighteenth year, and, if the estate had been leased out, the farmer paid in the marketplace the capital he had received to trade with, and the interest that had accrued;² if, however, the inheritance had been managed by the guardian, it was from him that the heir received his property and the account of his disbursements during the minority. In case the accounts were unsatisfactory, the heir might institute an action *ἐπίτροπῆς* against his late guardian; this, however, was a mere private lawsuit, in which the damages and *epobelia* only could be lost by the defendant, to the latter of which the plaintiff was equally liable upon failing to obtain the votes of a fifth of the dicasts. This action was barred by the lapse of five years from the termination of the guardianship; and if the defendant in it died before that time, an action *βλαβῆς* would lie against his representatives to recover what was claimed from his estate.³

EPOBELIA (*ἐποβελία*), as its etymology implies, at the rate of one obolus for a drachma, or one in six, was payable on the assessment (*τίμημα*) of several private causes, and sometimes in a case of phasis, by the litigant that failed to obtain the votes of one fifth of the dicasts.⁴ It is not, however, quite certain that such was invariably the case when the defeated suitor was the defendant in the cause;⁵ though in two great classes, namely, cross-suits (*ἀντιγραφαί*), and those in which a preliminary question as to the admissibility of the original cause of action was raised (*παραγραφαί*), it may be confidently asserted. As the object of the regulation was to inflict a penalty upon litigiousness, and reimburse the person that was causelessly attacked for his trouble and anxiety, the fine was paid to the successful suitor in private causes, and those cases of phasis in which a private citizen was the party immediately aggrieved. In public accusations, in general, a fine of a thousand drachmæ, payable to the public treasury, or a complete or partial disfranchisement, supplied the place of the *epobelia* as a punishment for frivolous prosecutions.

EPOMIS (*ἐπομῖς*). (*vid.* ΤΥΝΙΚΑ.)

EPONYMOS (*Ἐπώνυμος*, having or *giving a name) was the surname of the first of the nine archons at Athens, because his name, like that of the consuls at Rome, was used in public records to mark the year. (*vid.* ΑΡΧΩΝ.) The expression *ἐπώνυμοι τῶν ἡλικιῶν*, whose number is stated by Suidas, the Etymologicum Magn., and other grammarians, to have been forty, likewise applies to the chief archon of Athens. Every Athenian had to serve in the army from his 19th to his 60th year, i. e., during the archonship of forty archons. Now, as an army generally consisted of men from the age of 18 to that of 60, the forty archons under whom they had been enlisted were called *ἐπώνυμοι τῶν*

ἡλικίων, in order to distinguish them from the ἐπώνυμοι τῶν βελῶν.¹ At Sparta the first of the five ephors gave his name to the year, and was therefore called ἑφορος ἐπώνυμος.²

It was a very prevalent tendency among the ancients in general to refer the origin of their institutions to some ancient or fabulous hero (ἀρχηγέτης³), from whom, in most cases, the institution was also believed to have derived its name, so that the hero became its ἀρχηγέτης ἐπώνυμος. In later times new institutions were often named after ancient heroes, on account of some fabulous or legendary connexion which was thought to exist between them and the new institutions, and the heroes thus became, as it were, their patrons or tutelary deities. A striking instance of this custom are the names of the ten Attic tribes instituted by Cleisthenes, all of which were named after some national hero.⁴ These ten heroes, who were at Athens generally called the ἐπώνυμοι, or ἐπώνυμοι τῶν φυλῶν, were honoured with statues, which stood in the Ceramicus, near the Tholos.⁵ If an Athenian citizen wished to make proposals for a new law, he exhibited them for public inspection in front of these statues of the ἐπώνυμοι, whence the expression ἐκθεῖναι πρόσθεν τῶν ἐπώνυμων, or πρὸς τοὺς ἐπώνυμους.⁶

*EPOPS (ἑσopus), a species of Bird. "It can hardly admit of a doubt," remarks Adams, "that this was the *Upupa Epops*, L., called in English the Hoopoe. It is well described in the *Aves* of Aristophanes.⁷ Tereus was fabled to have been metamorphosed into this bird. The description given by Ovid⁸ in relating this metamorphosis is very striking:

"Cui stant in vertice cristæ;
Prominet immodicum pro longa cuspidē rostrum:
Nomen Epops volucris."⁹

EPOPTAI. (Vid. ELEUSINIA.)

EPOTIDES. (Vid. NAVIS.)

EPULONES, who were originally three in number (*Triumviri Epulones*), were first created in B.C. 198, to attend to the Epulum Jovis,¹⁰ and the banquets given in honour of the other gods, which duty had originally belonged to the pontifices.¹¹ Their number was afterward increased to seven,¹² and they were called Septemviri Epulones or Septemviri Epulonum; under which names they are frequently mentioned in inscriptions.¹³ Julius Cæsar added three more,¹⁴ but after his time the number appears again to have been limited to seven. The following woodcut, taken from a denarius of the Cælian gens, of which a drawing is given by Spanheim,¹⁵ represents on the reverse an Epulo preparing a couch for Jupiter, according to custom, in the Epulum Jovis. On it is inscribed L. CALDUS VII. Vir Epul.

(Dion Cass., lvi., 51.)—14. (De Præst. et Usu Numism., vol. ii., p. 85.)

The Epulones formed a collegium, and were one of the four great religious corporations at Rome; the other three were those of the Pontifices, Augures, and Quindecimviri.¹

EPULUM JOVIS. (Vid. EPULONES.)

EQUIRIA were horse-races, which are said to have been instituted by Romulus in honour of Mars, and were celebrated in the Campus Martius.² There were two festivals of this name, of which one was celebrated A.D. III. Cal. Mart., and the other prid. Id. Mart.³ If the Campus Martius was overflowed by the Tiber, the races took place on a part of the Mons Cælius, which was called from that circumstance the Martialis Campus.⁴

EQUITES. The institution of the Equites is attributed to Romulus. Livy⁵ says that Romulus formed three centuries of equites, the *Ramnes*, *Titienses*, and *Luceres*. He does not mention the number of which these centuries consisted; but there can be little doubt that the 300 celeres, whom Romulus kept about his person in peace and war,⁶ were the same as the three centuries of equites. Dionysius,⁷ who does not speak of the institution of the equites, says that the celeres formed a body-guard of 300, divided into three centuries; and Pliny⁸ and Festus⁹ state expressly that the Roman equites were originally called celeres. (Vid. CELERES.)

To the 300 equites of Romulus, ten Alban turmae were added by Tullus Hostilius.¹⁰ As the turma in the legion consisted of 30 men, there is no reason for supposing a different number in these turmae; and the equites would therefore, in the time of Tullus Hostilius, amount to 600. Tarquinius Priscus, according to Livy,¹¹ wished to establish some new centuries of horse-men, and to call them by his own name, but gave up his intention in consequence of the opposition of the augur Attus Navius, and only doubled the number of the centuries. The three centuries which he added were called the *Ramnes*, *Titienses*, and *Luceres Posteriores*. The number ought, therefore, now to be 1200 in all, which number is given in many editions of Livy,¹² but is not found in any MS. The number in the MSS. is different, but the Florentine and the Wormian have 1800, which has been adopted by Gronovius, and appears the most probable. Livy has apparently forgotten to mention that the 300 equites of Romulus were doubled on the union with the Sabines; which Plutarch¹³ alludes to when he says that the Roman legion contained 300 horse-men, and, after the union with the Sabines, 600.

The complete organization of the equites Livy¹⁴ attributes to Servius Tullius. He says that this king formed (*scripsit*) 12 centuries of equites from the leading men of the state (*ex primoribus civitatis*); and that he also made six centuries out of the three established by Romulus. Thus there were now 18 centuries. As each of the 12 new centuries probably contained the same number as the six old centuries, if the latter contained 1800 men, the former would have contained 3600, and the whole number would have been 5400.

The account, however, which Cicero¹⁵ gives is quite different. He attributes the complete organization of the equites to Tarquinius Priscus. He agrees with Livy in saying that Tarquinius Priscus increased the number of the *Ramnes*, *Titienses*, and *Luceres*, by adding new centuries under the name of *Ramnes*, *Titienses*, and *Luceres secundæ* (not,

1. (Dion Cass., liii., 1; lvi., 12.—Plin., Ep., x., 3.—Vid. Walter, Geschichte des Röm. Rechts, p. 183.)—2. (Festus, s. v.—Varro, Ling. Lat., vi., 13.—Müller.)—3. (Ovid, Fast., ii., 859; iii., 519.)—4. (Festus, s. v. Mart. Campus.)—5. (i., 13.)—6. (Liv., i., 15.)—7. (ii., 13.)—8. (H. N., xxxiii., 9.)—9. (s. v.)—10. (Liv., i., 30.)—11. (i., 36.)—12. (i. c.)—13. (Rom., 13 20.)—14. (i., 43.)—15. (De Rep., ii., 26.)

however, *posteriores*, as Livy states; compare Festus, s. v. *Sex Vestæ*; but he differs from him in stating that this king also doubled their number after the conquest of the Æqui. Scipio, who is represented by Cicero as giving this account, also says that the arrangement of the equites which was made by Tarquinius Priscus continued unchanged to his day (B.C. 129). The account which Cicero gave of the equites in the constitution of Servius Tullius is unfortunately lost, and the only words which remain are *duodeviginti censu maximo*; but it is difficult to conceive in what way he represented the division of the 18 centuries in the Servian constitution, after he had expressly said that the organization of the body by Tarquinius Priscus had continued unchanged to the time of Scipio.

Cicero also differs from Livy respecting the number of the equites. Scipio states, according to the reading adopted in all editions of the "De Republica," that Tarquinius Priscus increased the original number of the equites to 1200, and that he subsequently doubled this number after the conquest of the Æqui, which account would make the whole number 2400. The MS., however, has ∞ ACCC, which is interpreted to mean *mille ac ducentos*; but, instead of this, Zumpt¹ proposes to read ∞ DCCC, 1800, justly remarking that such a use of *ac* never occurs in Cicero. This reading would make the number 3600, which Zumpt believes to have been the regular number of the equites in the flourishing times of the Republic. It appears, however, impossible to determine their exact number, though there are strong reasons for believing that it was fixed, whether we suppose it to have been 5400, 3600, or 2400.

Both authors, however, agree in stating that each of the equites received a horse from the state (*equus publicus*), or money to purchase one, as well as a sum of money for its annual support; and that the expense of its support was defrayed by the orphans and unmarried females; since, says Niebuhr,² "in a military state it could not be esteemed unjust that the women and the children were to contribute largely for those who fought in behalf of them and of the Commonwealth." According to Gaius,³ the purchase-money for a knight's horse was called *as equestre*, and its annual provision *as hordearium*. (Vid. *Æs HORDEARIUM*.) The former amount, according to Livy,⁴ to 10,000 asses, and the latter to 2000; but these sums are so large as to be almost incredible, especially when we take into account that 126 years afterward a sheep was only reckoned at 10, and an ox at 100 asses in the tables of penalties.⁵ The correctness of these numbers has accordingly been questioned by some modern writers, while others have attempted to account for the largeness of the sum. Niebuhr⁶ remarks that the sum was doubtless intended not only for the purchase of the horse, but also for its equipment, which would be incomplete without a groom or slave, who had to be bought and then to be mounted. Böckh⁷ supposes that the sums of money in the Servian census are not given in asses of a pound weight, but in the reduced asses of the first Punic war, when they were struck of the same weight as the sextans, that is, two ounces, or one sixth of the original weight. (Vid. *As*, p. 110.) Zumpt considers that 1000 asses of the old weight were given for the purchase of the horse, and 200 for its annual provision; and that the original sum has been retained in a passage of Varro (*equum publicum mille assariorum*⁸).

All the equites, of whom we have been speaking, received a horse from the state, and were included in the 18 equestrian centuries of the Servian constitution; but, in course of time, we read of another class of equites in Roman history, who did not receive a horse from the state, and were not included in the 18 centuries. This latter class is first mentioned by Livy¹ in his account of the siege of Veii, B.C. 403. He says that during the siege, when the Romans had at one time suffered great disasters, all those citizens who had an equestrian fortune, and no horse allotted to them (*quibus census equester erat, equi publici non erant*), volunteered to serve with their own horses; and he adds, that from this time equites first began to serve with their own horses (*tum primum equis merere equites coeperunt*). The state paid them (*census numerus aris est assignatus*) as a kind of compensation for serving with their own horses. The foot soldiers had received pay a few years before;² and two years afterward, B.C. 401, the pay of the equites was made threefold that of the infantry.³

From the year B.C. 403, there were therefore two classes of Roman knights: one who received horses from the state, and are therefore frequently called *equites equo publico*,⁴ and sometimes *Flexumines* or *Trossuli*, the latter of which, according to Götting, is an Etruscan word;⁵ and another class, who served, when they were required, with their own horses, but were not classed among the 18 centuries. As they served on horseback, they were called *equites*; and, when spoken of in opposition to cavalry, which did not consist of Roman citizens, they were also called *equites Romani*; but they had no legal claim to the name of equites, since in ancient times this title was strictly confined to those who received horses from the state, as Pliny⁶ expressly says, "*Equitum nomen subsistebat in turmis eorum publicorum*."

But here two questions arise. Why did the equites, who belonged to the 18 centuries, receive a horse from the state, and the others not? and how was a person admitted into each class respectively? These questions have occasioned much controversy among modern writers, but the following account is perhaps the most satisfactory:

In the constitution of Servius Tullius, all the Roman citizens were arranged in different classes according to the amount of their property, and it may therefore fairly be presumed that a place in the centuries of equites was determined by the same qualification. Dionysius⁷ expressly says that the equites were chosen by Servius out of the richest and most illustrious families; and Cicero,⁸ that they were of the highest census (*censu maximo*). Livy⁹ also states that the twelve centuries formed by Servius Tullius consisted of the leading men of the state. None of these writers, however, mention the property which was necessary to entitle a person to a place among the equites; but it was probably of the same amount as in the latter times of the Republic, that is, four times that of the first class. Every one, therefore, who possessed the requisite property, and whose character was unblemished (for the latter qualification appears to have been always necessary in the ancient times of the Republic), was admitted among the equites of the Servian constitution; and it may be presumed that the twelve new centuries were created in order to include all those persons in the state who possessed the necessary qualifications. Niebuhr,¹⁰ however, supposes that the qualification

1. ("Ueber die Römischen Ritter und den Ritterstand in Rom," Berlin, 1840.)—2. (Hist. of Rome, i., p. 461.)—3. (iv., 27.)—4. (i., 43.)—5. (Aul. Gell., xi., 1.)—6. (i., p. 433.)—7. (Metrol. Untersuch., c. 29.)—8. (De Ling. Lat., viii., 71, ed. Müller.)

1. (v., 7.)—2. (Liv., iv., 59.)—3. (Liv., v., 12.—Vid. Niebuhr, ii., p. 439.)—4. (Cic., Phil., vi., 5.)—5. (Plin., H. N., xxxiii., 9.)—6. Festus, s. v.—Götting, Gesch. der Röm. Staatsv., p. 372.)—7. (H. N., xxxiii.)—8. (iv., 18.)—9. (De Rep., ii., 22.)—10. (i., 43.)—10. (Hist. of Rome, i., 427, &c.)

of property was only necessary for admission into the twelve new centuries, and that the statement of Dionysius, quoted above, ought to be confined to these centuries, and not applied to the whole eightcen. He maintains that the twelve centuries consisted exclusively of plebeians; and that the six old centuries, which were incorporated by Servius into his comitia, under the title of the *sex suffragia*, comprised all the patricians, independent of the amount of property which they possessed. This account, however, does not seem to rest on sufficient evidence; and we have, on the contrary, an express instance of a patrician, L. Tarquinius, B.C. 458, who was compelled, on account of his poverty, to serve on foot.¹ That the six old centuries consisted entirely of patricians is most probable, since the plebeians would certainly not have been admitted among the equites at all till the Servian constitution; and as by this constitution new centuries were created, it is not likely that any plebeians would have been placed among the ancient six. But we have no reason for supposing that these six centuries contained the whole body of patricians, or that the twelve consisted entirely of plebeians. We may suppose that those patricians who belonged to the six were allowed by the Servian constitution to continue in them, if they possessed the requisite property; and that all other persons in the state, whether patricians or plebeians, who possessed the requisite property, were admitted into the twelve new centuries. That the latter were not confined to plebeians may be inferred from Livy, who says that they consisted of the leading men in the state (*primores civitatis*), not in the commonalty.

As vacancies occurred in the eighteen centuries, the descendants of those who were originally enrolled succeeded to their places, whether plebeians or patricians, provided they had not dissipated their property; for Niebuhr goes too far when he asserts that all vacancies were filled according to birth, independent of any property qualification. But in course of time, as population and wealth increased, the number of persons who possessed an equestrian fortune also increased greatly; and as the number of equites in the 18 centuries was limited, those persons whose ancestors had not been enrolled in the centuries could not receive horses from the state, and were therefore allowed the privilege of serving with their own horses among the cavalry, instead of the infantry, as they would otherwise have been obliged to have done. Thus arose the two distinct classes of equites, which have been already mentioned.

The inspection of the equites who received horses from the state belonged to the censors, who had the power of depriving an eque of his horse, and reducing him to the condition of an ærarian,² and also of giving the vacant horse to the most distinguished of the equites who had previously served at their own expense. For these purposes they made, during their censorship, a public inspection in the Forum of all the knights who possessed public horses (*equitatum recognoscunt*;³ *equitum centurias recognoscunt*⁴). The tribes were taken in order, and each knight was summoned by name. Every one, as his name was called, walked past the censors, leading his horse. This ceremony is represented on the reverse of some of the censorial coins which have been published by Spanheim,⁵ and which are copied in the annexed woodcuts. The first is a denarius of the Licinian gens, and is supposed by Spanheim to have been struck during the censor-

ship of P. Licinius Crassus, who was censor with Julius Cæsar.¹

The next is the reverse of one of the coins of the Emperor Claudius, in which the emperor is represented sitting, while a knight stands before him leading his horse. The word censor is written underneath, which title we know, from Dion Cassius,² was assumed by some of the emperors.

If the censors had no fault to find either with the character of the knight or the equipments of his horse, they ordered him to pass on (*traduc equum*³); but if, on the contrary, they considered him unworthy of his rank, they struck him out of the list of knights, and deprived him of his horse,⁴ or ordered him to sell it,⁵ with the intention, no doubt, that the person thus degraded should refund the money which had been advanced to him for its purchase.⁶ At the same review, those equites who had served the regular time, and wished to be discharged, were accustomed to give an account to the censors of the campaigns in which they had served, and were then dismissed with honour or disgrace, as they might have deserved.⁷

This review of the equites by the censors must not be confounded with the *Equitum Transvectio*, which was a solemn procession of the body every year on the Ides of Quintilis (July). The procession started from the Temple of Mars outside the city, and passed through the city, over the Forum, and by the Temple of the Dioscuri. On this occasion the equites were always crowned with olive chaplets, and wore their state dress, the *trabea*, with all the honourable distinctions which they had gained in battle.⁸ According to Livy,⁹ this annual procession was first established by the censors Q. Fabius and P. Decius, B.C. 304; but, according to Dionysius,¹⁰ it was instituted after the defeat of the Latins near the Lake Regillus, of which an account was brought to Rome by the Dioscuri.

It may be asked, how long did the knight retain his public horse, and a vote in the equestrian century to which he belonged? On this subject we have no positive information; but, as those equites who served with their own horses were only obliged to serve for ten years (*stipendia, στραπεῖαι*), under the age of 46,¹¹ we may presume that the same rule extended to those who served with the public horses, provided they wished to give up the service. For it is certain that in the ancient times of the Republic a knight might retain his horse as long as he pleased, even after he had entered the senate,

1 (Liv., iii., 27).—2 (Liv., xxiv., 43).—3 (Liv., xxxiv., 44).—4 (Val. Max., ii., 9, § 6).—5 (De Præst. et Usu Numism., vol. ii., p. 101, ed. Verburg).—6 (Fast. Capitol.—Cic., Pro Arch., 6.—Plin., II. N., xiii., 5.—7 (Liv., 18.—3. (Val. Max., iv., 1, § 10).—4. (Liv., xxxiv., 44).—5. (Liv., xxiv., 37.—Val. Max., ii., 9, § 6).—6. (Niebuhr, Hist. (f. Rome, i., p. 433).—7. (Plut., Pomp., c. 22).—8. (Dionys., vi., 13).—9. (ix., 46).—10 (l. c.).—11 (Polyb., vi., 19, § 2.)

provided he continued able to discharge the duties of a knight. Thus the two censors M. Livius Salinator and C. Claudius Nero, in B.C. 204, were also equites;¹ and L. Scipio Asiaticus, who was deprived of his horse by the censors in B.C. 185,² had himself been censor in B.C. 191. This is also proved by a fragment in the fourth book³ of Cicero's "*De Republica*," in which he says, *equitatus, in quo suffragia sunt etiam senatus*; by which he evidently means that most of the senators were enabled to vote at the Comitia Centuriata in consequence of their belonging to the equestrian centuries. But during the later times of the Republic, the knights were obliged to give up their horses on entering the senate, and, consequently, ceased to belong to the equestrian centuries. This regulation is alluded to in the fragment of Cicero already referred to, in which Scipio says that many persons were anxious that a plebiscitum should be passed, ordaining that the public horses should be restored to the state, which decret. was, in all probability, passed afterward; since, as Niebuhr observes,⁴ "when Cicero makes Scipio speak of any measure as intended, we are to suppose that it had actually taken place, but, according to the information possessed by Cicero, was later than the date he assigns to Scipio's discourse." That the greater number of the equites equo publico, after the exclusion of senators from the equestrian centuries, were young men, is proved by a passage in the work of Q. Cicero, *De Petitione Consulatus*.⁵

The equestrian centuries, of which we have hitherto been treating, were only regarded as a division of the army; they did not form a distinct class or order in the constitution. The community, in a political point of view, was only divided into patricians and plebeians; and the equestrian centuries were composed of both. But in the year B.C. 123, a new class, called the *Ordo Equestris*, was formed in the state by the lex Sempronia, which was introduced by C. Gracchus. By this law all the judices had to be chosen from those citizens who possessed an equestrian fortune.⁶ We know very little respecting the provisions of this law; but it appears from the lex Servilia repetundarum, passed 18 years afterward, that every person who was to be chosen judex was required to be above 30 and under 60 years of age, to have either an equus publicus, or to be qualified by his fortune to possess one, and *not* to be a senator. The number of judices who were required yearly was chosen from this class by the prætor urbanus.⁷

As the name of equites had been originally extended from those who possessed the public horses to those who served with their own horses, it now came to be applied to all those persons who were qualified by their fortunes to act as judices, in which sense the word is usually used by Cicero. Pliny,⁸ indeed, says that those persons who possessed the equestrian fortune, but did not serve as equites, were only called *judices*, and that the name of *equites* was always confined to the possessors of the equi publici. This may have been the correct use of the term; but custom had long since given the name of equites to the judices chosen in accordance with the lex Sempronia.

After the reform of Sulla, which entirely deprived the equestrian order of the right of being chosen as judices, and the passing of the lex Aurelia (B.C. 70), which ordained that the judices should be chosen from the senators, equites, and tribuni ærarii, the influence of the order, says Pliny, was still main-

tained by the publicani,¹ or farmers of the public taxes. We find that the publicani were almost always called equites, not because any particular rank was necessary in order to obtain from the state the farming of the taxes, but because the state was not accustomed to let them to any one who did not possess a considerable fortune. Thus the publicani are frequently spoken of by Cicero as identical with the equestrian order.² (*Vid. PUBLICANI*.) The consulship of Cicero, and the active part which the knights then took in suppressing the conspiracy of Catiline, tended still farther to increase the power and influence of the equestrian order; and "from that time," says Pliny,³ "it became a third body (*corpus*) in the state, and to the title of *Senatus Populusque Romanus* there began to be added *Et Equestris Ordo*."⁴

In B.C. 67, a distinction was conferred upon them which tended to separate them still farther from the plebs. By the lex Roscia Othonis, passed in that year, the first fourteen seats in the theatre behind the orchestra were given to the equites,⁵ which, according to Cicero⁶ and Velleius Paterculus,⁶ was only a restoration of an ancient privilege, which is alluded to by Livy⁷ when he says that special seats were set apart in the Circus Maximus for the senators and equites. They also possessed the right of wearing the *clavus angustus* (*vid. CLAVUS*, p. 265), and subsequently obtained the privilege of wearing a gold ring, which was originally confined to the equites equo publico.

The number of equites increased greatly under the early emperors, and all persons were admitted into the order, provided they possessed the requisite property, without any inquiry into their character, or into the free birth of their father and grandfather, which had always been required by the censors under the Republic. Property became now the only qualification; and the order, in consequence, gradually began to lose all the consideration which it had acquired during the later times of the Republic. Thus Horace says, with no small degree of contempt,

"*Si quadringentis sex septem milia desunt,
Plebs eris.*"⁸

Augustus formed a select class of equites, consisting of those equites who possessed the property of a senator, and the old requirement of free birth up to the grandfather. He permitted this class to wear the *latus clavus*,⁹ and also allowed the tribunes of the plebs to be chosen from them as well as the senators, and gave them the option, at the termination of their office, to remain in the senate or return to the equestrian order.¹⁰ This class of knights was distinguished by the special title *illustres* (sometimes *insignes* and *splendidi*) *equites Romani*.¹¹

The formation of this distinct class tended to lower the others still more in public estimation. In the ninth year of the reign of Tiberius an attempt was made to improve the order by requiring the old qualifications of free birth up to the grandfather, and by strictly forbidding any one to wear the gold ring unless he possessed this qualification. This regulation, however, was of little avail, as the emperors frequently admitted freedmen into the equestrian order.¹² When private persons were no longer appointed judices, the necessity for a distinct class in the community, like the equestrian order, ceased entirely; and the gold ring came at length to be worn by all free citizens. Even slaves, after their

manumission, were allowed to wear it by special permission from the emperor, which appears to have been usually granted, provided the patronus consented.¹

Having thus traced the history of the equestrian order to its final extinction as a distinct class in the community, we must now return to the equites equo publico, who formed the 18 equestrian centuries. This class still existed during the latter years of the Republic, but had entirely ceased to serve as horse-soldiers in the army. The cavalry of the Roman legions no longer consisted, as in the time of Polybius, of Roman equites, but their place was supplied by the cavalry of the allied states. It is evident that Cæsar, in his Gallic wars, possessed no Roman cavalry.² When he went to an interview with Ariovistus, and was obliged to take cavalry with him, we are told that he did not dare to trust his safety to the Gallic cavalry, and therefore mounted his legionary soldiers upon their horses.³ The Roman equites are, however, frequently mentioned in the Gallic and civil wars, but never as common soldiers; they were officers attached to the staff of the general, or commanded the cavalry of the allies, or sometimes the legions.⁴

After the year B.C. 50, there were no censors in the state, and it would therefore follow that for some years no review of the body took place, and that the vacancies were not filled up. When Augustus, however, took upon himself, in B.C. 29, the *prefectura morum*, he frequently reviewed the troops of equites, and restored, according to Suetonius,⁵ the long-neglected custom of the solemn procession (*transvectio*); by which we are probably to understand that Augustus connected the review of the knights (*recognitio*) with the annual procession (*transvectio*) of the 15th of July. From this time these equites formed an honourable corps, from which all the higher officers in the army⁶ and the chief magistrates in the state were chosen. Admission into this body was equivalent to an introduction into public life, and was therefore esteemed a great privilege; whence we find it recorded in inscriptions that such a person was *equo publico honoratus, exornatus*, &c., by the emperor.⁷ If a young man was not admitted into this body, he was excluded from all civil offices of any importance, except in municipal towns; and also from all rank in the army, with the exception of centurion.

All those equites who were not employed in actual service were obliged to reside at Rome,⁸ where they were allowed to fill the lower magistracies, which entitled a person to admission into the senate. They were divided into six *turmæ*, each of which was commanded by an officer, who is frequently mentioned in inscriptions as *Sevir equitum Rom.*, *turmæ* I., II., &c., or, commonly, *Sevir turmæ*,

or *Sevir turmarum equitum Romanorum*. From the time that the equites bestowed the title of *principes juventutis* upon Caius and Lucius Cæsar, the grandsons of Augustus,¹ it became the custom to confer this title, as well as that of *Sevir*, upon the probable successor to the throne, when he first entered into public life and was presented with an *equis publicus*.²

The practice of filling all the higher offices in the state from these equites appears to have continued as long as Rome was the centre of the government and the residence of the emperor. They are mentioned in the time of Severus³ and of Caracalla,⁴ and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the *Prefectus Vigilum*; but they still retained, in the time of Valentinianus and Valens, A.D. 364, the second rank in the city, and were not subject to corporeal punishment.⁵

The preceding account of the equites has been principally taken from the essay of Zumpt already referred to; to which, and to the valuable work of Marquardt, *Historia Equitum Romanorum libri iv.*, Berlin, 1840, the reader is referred for a fuller explanation of those points which have been necessarily treated with brevity in this article. Respecting the *Magister Equitum*, *vid.* *Dictator*, p. 361.

EQUULEUS or ECULEUS was an instrument of torture, which is supposed to have been so called because it was in the form of a horse. We have no description of its form given by any of the ancient writers, but it appears not to have differed greatly from the *crux*.⁶ It appears to have been commonly used at Rome in taking the evidence of slaves.⁷

*EQUUS (ἵππος), the Horse. The native country of this animal is unknown. The Horse was highly esteemed among the Egyptians, who appear to have had an excellent breed, and, besides those required for the army and private use, many were sold to foreign traders who visited the country.⁸ Among the Greeks, the public games, where racing formed so conspicuous a part, always induced great attention to be paid to this noble animal. The Greek horse appears to have been quite small in size, if any idea can be formed of its proportions from the bas-reliefs of the frieze of the Parthenon, forming part of the Elgin marbles. Flaxman speaks in terms of high eulogium of the manner in which these steeds are represented by the artist. "The beholder," he remarks, "is charmed with the deer-like lightness and elegance of their make; and, although the relief is not above an inch from the background, and they are so much smaller than nature, we can scarcely suffer reason to persuade us that they are not alive." Horses were sold in Attica for comparatively high prices, not only on account of their utility, and the difficulty of keeping them, but from the disposition of the Athenians to extravagance and display: while the knights kept expensive horses for military service and processions at the festivals, and while men of ambition and high rank trained them for the games and races, there arose, particularly among the young men, an excessive passion for horses, of which Aristophanes gives an example in the *Clouds*, and which is recorded by several ancient writers, so that many persons were impoverished by keeping them. The price of a common horse was three

minas; but a good saddle-horse, or a horse for running in chariot-races, according to Aristophanes, cost twelve minas. Sometimes, however, fashion, or fancy for horses, raised their price beyond all limits. Thus thirteen talents were given for Bucephalus.¹ The Romans, if nature had not furnished the horses with a proud and lofty action, used to tie rollers of wood and weights to their pastern joints, to compel them to lift their feet, a practice particularly required to go safely, skilfully, and with ease to the rider, in the amble. This was the favourite pace with the Romans. The Greeks tried their horses by a bell, and other loud and sudden noises. Such horses as were worn out, and unfit to serve with the troops, were turned out, and, as a mark of dismission, were branded in the jaw with the figure of a circle or a wheel. Virgil says that the fleetest steeds among the Greeks came from Epirus; the studs of Corinth, however, were also remarkable for their excellence, and the breed was traced back by the register-books to Pegasus. It was customary to mark horses of this breed with a *koppa* on the shoulder, whence the term *κοππαρις* (sc. *ἵππος*).²

ERANOI (*ἐρανοί*) were clubs or societies established for charitable or convivial purposes, or for both. They were very common at Athens, and suited the temper of the people, who were both social and generous. The term *ἐρανος*, in the sense of a convivial party, is of ancient date.³ It resembled our picnics, or the German *pikeniks*, and was also called *δείπνον ἀπὸ συννόσου* or *ἀπὸ συμβόλων*: where every guest brought his own dish, or (to save trouble) one was deputed to cater for the rest, and was afterward repaid by contributions. (*Vid. Δείπνον*.) The clubs that were formed at Athens used to dine together at stated periods, as once a month; and every member was bound to pay his subscription, which (as well as the society itself) was called *ἐρανος*, and the members *ἐρανοῖται*. If any member failed to pay, the sum was made up by the president, *ἐρανάρχης*, also called *πληρωτὴς ἐράνου*, who afterward recovered it, if he could, from the defaulter. *Πληρὸν ἐρανόν* often means simply to pay the subscription, as *λείπειν* or *ἐκλείπειν*, to make default.⁴

There were also associations under this name for the purpose of mutual relief, resembling in some degree our friendly or benefit societies; but with this essential difference, that the relief which they afforded was not (as it is with us) based upon any calculation of natural contingencies, but was given *pro re nata*, to such poor members as stood in need of it. The Athenian societies do not appear to have kept up a common fund by regular subscriptions, though it is probable that the sum which each member was expected to advance, in case of need, was pretty well understood. If a man was reduced to poverty, or in distress for money from any cause, he applied to the members of his club for assistance; this was called *συλλέγειν ἐρανόν*: those who advanced it were said *ἐρανίζειν αὐτόν*: the relief was considered as a loan, repayable by the borrower when in better circumstances. Isæus⁵ reckons among the assets of a person, *ἐξ ἐράνων ὁλόκληρα εἰσπαραγμένα*, from which we may infer that each contributor was entitled to recover the sum he had lent. For the recovery of such loans, and for the decision of other disputes, there were *ἐρανικαὶ δίκαι*, in which a summary and equitable kind of justice was administered. Plato⁶ disapproved of lawsuits in such matters, and would not allow them in his Republic.

Salmasius contends that, wherever the term *ἐρα-*

νος is applied to an established society, it means only a convivial club, and that there were no regular associations for the purposes of charity; but others have held a different opinion.¹ It is not probable that many permanent societies were formed with the sole view of feasting. We know that at Athens, as well as in the other Grecian Republics, there were clubs for various purposes, political as well as social; the members of which would naturally meet, and dine together at certain periods. Such were the religious companies (*θιασοί*), the commercial (*ἐμπορικαί*), and some others.² Unions of this kind were called by the general name of *ἐταῖριαί*, and were often converted to mischievous ends, such as bribery, overawing the public assembly, or influencing courts of justice.³ In the days of the Roman Empire, friendly societies, under the name of *ἐρανοί*, were frequent among the Greek cities, but were looked on with suspicion by the emperors as leading to political combinations.⁴ The *gilds*, or fraternities for mutual aid, among the ancient Saxons, resembled the *ἐρανοί* of the Greeks.⁵ Compare also the *ἀγάται*, or love-feasts of the early Christians.

The word *ἐρανος* is often used metaphorically, to signify any contributions or friendly advance of money.

*EREBINTHUS (*ἐρέβινθος*), a sort of small pea or vetch, Chickpea. "Of the three species or varieties of the *ἐρέβινθος* noticed by Dioscorides, the only one that can be satisfactorily determined," observes Adams, "is the *κρίος*, which is undoubtedly the *Cicer arictanum*."⁶

*ERETRIA TERRA (*Ἐρετριάς γῆ*), Eretrian Earth, an impure argil, of a snow-white colour, obtained near the city of Eretria, in Eubœa.⁷

ERGASTULUM was a private prison attached to most Roman farms, called *carcer rusticus* by Juvenal,⁸ where the slaves were made to work in chains. It appears to have been usually underground, and, according to Columella,⁹ ought to be lighted by narrow windows, which should be too high from the ground to be touched by the hand. The slaves confined in an ergastulum were also employed to cultivate the fields in chains.¹⁰ Slaves who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon, or were barbarous in their habits, were regularly kept. A trustworthy slave had the care of the ergastulum, and was, therefore, called *ergastularius*.¹¹ According to Plutarch,¹² these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarous slaves who were employed to cultivate the conquered lands. In the time of Hadrian and Antoninus, many enactments were made to ameliorate the condition of slaves; and, among other salutary measures, Hadrian abolished the ergastula, which must have been liable to great abuse in the hands of tyrannical masters.¹³ For farther information on the subject, *vid. Brissosinus, Antiq. Select.*, ii. 9.—Lipsius, *Elect.*, ii. 15.—Opera, vol. i., p. 317, &c.—Göttling, *Gesch. der Röm. Staatsv.*, p. 135.

*ERICA (*ἐρίκη* or *ἐρείκη*), the Tree-heath, or *Erica arborea*, mentioned by Theophrastus and Dioscorides.¹⁴

ERICIUS was a military engine, full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy.¹

*ERINEUS (ἐρινεύς), the Wild Fig-tree, or *Ficus Carica*, L. (Vid. *Ficus*.)²

*ERINUS (ἐρινός), according to Sprengel, the *Campanula Erinus*. Matthioli and Bauhin, however, are quite undecided about it.³

*ΕΡΙΟΦΟΡΟΝ ΑΕΝΑΡΟΝ, the Cotton-tree, or *Gossypium arboreum*. Virgil is supposed to allude to it in the following line: "Quid nemora Æthiopum, nulli canentia lana?"⁴

*ERODIUS, the Heron. (Vid. *ARDEA*.)

EROTIA or EROTIDIA (Ἐρώτια or Ἐρωτίδια) was the most solemn of all the festivals celebrated in the Boeotian town of Thespie. It took place every fifth year, and in honour of Eros, the principal divinity of the Thespians. Respecting the particulars nothing is known, except that it was solemnized with contests in music and gymnastics.⁵ The worship of Eros seems to have been established at Thespiæ from the earliest times; and the ancient symbolic representation of the god, a rude stone (ἀργὸς λίθος), continued to be looked upon with particular reverence, even when sculpture had attained the highest degree of perfection among the Greeks.⁶

*ERUCA, I. a species of Palmer or Canker-worm, very injurious to trees, the leaves and blossoms of which it eats completely off. This scourge of vegetation is produced, according to Pliny, during a humid season, and one only moderately warm.⁷

*II. The herb Rocket, or *Brassica Eruca*, the same with the εἰζάκων of the Greeks. The seed were used by the ancients as a condiment in food, and were employed in place of mustard in Iberia. They were also used as an aphrodisiac. Dioscorides⁸ and Pliny⁹ make mention of two kinds, the *sativum* and *agreste*, the latter being the wild kind. Sibthorp found this plant at Athens, and also among the vineyards in the islands of the Archipelago.—The Greek name εἰζάκων comes from εἶν, and ζωμός, "broth," indicating its being employed in seasoning broth; the Latin appellation is explained by Pliny, with reference to the pungent properties of Rocket, "quod vellicanda linguam quasi erodat."

*ERVUM, the Tare, or *Ervum Ervilia*, the same with the Greek ὀροβός. The ancient writers speak of two kinds, the *sativum* and *sylvestre*. Dioscorides¹⁰ subdivides the former into the red and the white, from the colour of the flowers. Aristotle, Columella,¹¹ and Pliny¹² make mention of it as used to fatten cattle. The modern Greeks still call it ῥόβι, applying this name to both the cultivated and the wild kind.¹³

*ERYNGIUM (ἑρύγγιον), the herb Eryngo, otherwise called Sea-holm or Sea-holly. "Eryngo," says Woodville, "is supposed to be the ἑρύγγιον of Dioscorides."¹⁴ Sprengel, however, makes the ἑρύγγιον of Theophrastus¹⁵ to be the *Eryngium maritimum*, but Stackhouse prefers the *Eryngium campopetre*. Sprengel, in his R. H. H., refers the ἑρύγγιον of Dioscorides to the *Eryngium planum*, but in his edition of Dioscorides he admits his uncertainty about the species.¹⁶

*ERYTHRODANUM (ἐρυθρόδανον). "It can admit of no doubt," observes Adams, "that the ἐρυθρόδανον of Dioscorides and Galen¹⁷ is the *Rubia*

tinctorum or dyer's Madder. Sprengel is disposed to question whether the ἐρυθρόδανον of Theophrastus¹⁸ be the same, and hesitates whether to make it the *Rubia lucida*, *Galium cruciatum*, Sm., or the *Asperula odorata*. Stackhouse, however, holds it also to be the *Rubia tinctorum*."¹⁹

*ERYTHROPUS (ἐρυθρόπους), a bird mentioned in the *Aves* of Aristophanes.²⁰ It was most probably, according to Adams, either the Redshank (*Scolopax calidris*) or the Bilecock (*Rallus aquaticus*).²¹

*ERYTHRONIUM (ἐρυθρόνιον), a plant, about which it is difficult to form any certain opinion. It is most probably, however, what is called Dog-tooth, or *Erythronium Dens Canis*.²²

ERYCTERES (ἐρυκτέρες) was the name given to the Spartan slaves who followed their masters to the wars, and who appear to have been, in course of time, manumitted. The name is supposed by Müller to have been given to them in allusion to their duty of drawing (ἐρύκειν) the wounded from the ranks.²³

*ESCHARUS (ἐσχαρος), the name of a fish briefly noticed by Athenæus, and called also κόρις. Rondelet supposes it a species or variety of Sole, namely, *Pleuronectes solea*.²⁴

ESOPTRON (ἐσοπτρον) (Vid. *SPECULUM*.)

ESSEDA RII. (Vid. *ESSEDA*.)

E'SSEDA or ESSEUDUM from the Celtic *Ess*, a carriage²⁵), the name of a chariot used, especially in war, by the Britons, the Gauls, and Belgæ,²⁶ and also by the Germans.²⁷

According to the account given by Cæsar,²⁸ and agreeably to the remarks of Diodorus Siculus,²⁹ the method of using the essedum in the ancient British army was very similar to the practice of the Greeks in the heroic ages, as described by Homer, and in the article CARRUS, p. 332, 323. The principal difference seems to have been that the essedum was stronger and more ponderous than the δίφρος; that it was open before instead of behind; and that, in consequence of these circumstances and the width of the pole, the owner was able, whenever he pleased, to run along the pole (*de temone Britanno cecidit*), and even to raise himself upon the yoke, and then to retreat with the greatest speed into the body of the car, which he drove with extraordinary swiftness and skill. It appears, also, that these cars were purposely made as noisy as possible, probably by the creaking and clanging of the wheels (*streptitu rotarum*).³⁰ *Esseda multisonora*;³¹ and that this was done in order to strike dismay into the enemy. The formidable British warriors who drove these chariots, the "car-borne" of Ossian, were called in Latin *essedarii*.³² There were about 4000 of them in the army of Cassibelaunus.³³ Having been captured, they were sometimes exhibited in the gladiatorial shows at Rome, and seem to have been great favourites with the people.³⁴ They must have held the highest rank in the armies of their own country; and Tacitus³⁵ observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans.³⁶ Cicero³⁷ mentions the use of it on one occasion by the tribune of the people as a piece of extravagance; but in the time of Seneca it seems to have been much

1. (Cæs., Bell. Civ., iii., 67.—Sallust., ap. Non., xviii., 16.—Lipsius, Poliorcet., v., 4.)—2. (Hom., II., vi., 433.—Theophrast., H. P., ii., 2.)—3. (Dioscor., iv., 29.)—4. (Theophrast., H. P., iv., 7.—Virg., Georg., ii., 120.—Adams, Append., s. v.)—5. (Plut., Erot., ix., 1.—Paus., ix., 31, § 3.—Athen., xiii., p. 561.)—6. more common; for he¹ reckons the sound of the "essedæ transcurrentes" among those noises which did not distract him. As used by the Romans, the essedum may have differed from the cisium in this, that the cisium was drawn by one horse (see woodcut, p. 257), the essedum always by a pair. The æssedum must have been similar to the COVINUS, except that the latter had a cover.

*EULAI (εὐλαί), Worms. This term is used by the Greek writers on Natural History in much the same sense, and with the same latitude, as the Latin term *Vermes* is applied by Cuvier and our late naturalists. "The names of worms, σκώληξ, εὐλαί, ἔλμυς, in Greek, and *Vermes* in Latin, were employed by the ancients," observes Griffith, "to designate certain animals which to a certain degree they suited, with much more reference, however, to their elongated form of body than to the softness of their composition. But, as we have just seen, the Greeks had three words for these beings, each of which had its peculiar signification. From what Aristotle tells us of his σκώληξ (a word, the root of which is undoubtedly σκολιός, 'tortuous'), it is evident that it applied to all the animals which exhibited the form of the common worm, or rather, perhaps, whose movements were tortuous, whatever might be the nature of the change which they were subsequently to undergo. It would seem, however, that it was more especially applied to the first degree of development in insects, to the state in which they appear on issuing from the egg of the parent. Aristotle certainly extends its application no farther than to insects. Such, however, is not the case with Ælian. In two places of his work on the nature of animals, where this expression occurs, he evidently intends the *lumbri*, or intestinal worms; in a third, it is probable that he alludes to the caterpillar of the cabbage-butterfly; and in a fourth, he thus designates, after Ctesias, some fabulous animal, although he states it to belong to the genus of those which are nourished and engendered in wood. The term εὐλαί appears to have been also employed to designate the form under which some insects exist for a greater or less period of time, since we find it applied to animals which inhabit putrid flesh, and also wounds and ulcers. Its extension, therefore, was not very great. Ælian likewise employs it to designate what, in all probability, was a larva, when he tells us that in India the peasants remove the land-tortoises from their shell with a mattock, in the same manner as they remove the worms from plants which are infested by them. Finally, the word ἔλμυς, which is frequently used by Hippocrates in many of his works, and, among others, in his General Treatise on Diseases, was applied by him to those animals which are at present known under the denomination of *intestinal worms*, of which he was acquainted with but a small number of species. Aristotle has employed it in the same manner, as well as Ælian, every time that he speaks of the substances which are used to rid dogs of the worms to which they are subject. The Latin authors, and Pliny among the rest, appear to have restricted the word *lumbri* to the intestinal worms, and to have rendered the three Greek denominations by a single one, that of *Vermes*, from which it has happened that the moderns have been led to the same confusion by the word *worms*, which, as well as the French word *vers*, is evidently derived from the Latin. All the other animals, which they comprehended under the name of *Exanguia*, meaning by that term that they had not red blood, were divided into the three classes of *Insecta*, *Mollusca*, and *Zoophyta*. The term *Vermes* did not then possess that undue extension

which it obtained among the naturalists of the last century, with whom it at last comprehended all animals with the exception of the Vertebrata, the Insecta, and the Crustacea."¹

EUMOLP'IDAI (Εὐμολπίδαι), the most distinguished and venerable among the priestly families in Attica. They were devoted to the service of Demeter at Athens and Eleusis, and were said to be the descendants of the Thracian bard Eumolpus, who, according to some legends, had introduced the Eleusinian mysteries into Attica.² The high-priest of the Eleusinian goddess (ιεροφάντης or μυσταγωγός), who conducted the celebration of her mysteries and the initiation of the mystæ, was always a member of the family of the Eumolpidæ, as Eumolpus himself was believed to have been the first hierophant.³ In his external appearance the hierophant was distinguished by a peculiar cut of his hair, a kind of diadem (στρόφιον), and a long purple robe.⁴ In his voice he seems always to have affected a solemn tone suited to the sacred character of his office, which he held for life, and which obliged him to remain unmarried.⁵ The hierophant was attended by four ἐκμεληταί, one of whom likewise belonged to the family of the Eumolpidæ.⁶ Other members of their family do not seem to have had any particular functions at the Eleusinia, though they undoubtedly took part in the great procession to Eleusis. The Eumolpidæ had on certain occasions to offer up prayers for the welfare of the state, and in case of neglect they might be taken to account and punished; for they were, like all other priests and magistrates, responsible for their conduct, and for the sacred treasures intrusted to their care.⁷ (Compare ΕΥΡΥΝΗΣ.)

The Eumolpidæ had also judicial power in cases where religion was violated (περὶ ἀσεβείας⁸). This power probably belonged to this family from the earliest times, and Solon as well as Pericles do not seem to have made any alteration in this respect. Whether the religious court acted independent of the archon king, or under his guidance, is uncertain. The law, according to which they pronounced their sentence, and of which they had the exclusive possession, was not written, but handed down by tradition; and the Eumolpidæ alone had the right to interpret it, whence they are sometimes called ἐξηγηταί. (Vid. EXEGETAI.) In cases for which the law had made no provisions, they acted according to their own discretion.⁹ Respecting the mode of proceeding in these religious courts, nothing is known.¹⁰ In some cases, when a person was convicted of gross violation of the public institutions of his country, the people, besides sending the offender into exile, added a clause in their verdict that a curse should be pronounced upon him by the Eumolpidæ.¹¹ But the Eumolpidæ could pronounce such a curse only at the command of the people, and might afterward be compelled by the people to revoke it, and purify the person whom they had cursed before.¹²

*EUPATO'RIMUM (εὐπατόριον¹³), a plant, the same with the Agrimony, or *Agrimonia Eupatorium*. Another name is Liverwort, from its being used in complaints of the liver, and hence we find it called in Oribasius ἡπατόριον. The name of *Eupatorium*

1. (Griffith's Cuvier, vol. xiii., p. 38, seqq.)—2. (Diod. Sic., i. 29.—Apollod., Biblioth., iii., 15, § 4.—Demosth., c. Neær., 1384, &c.)—3. (Hesych., s. v. was given it, according to some of the ancient writers, from that of Mithradates Eupator, who discovered the medicinal properties of this plant.¹ It is more probable, however, that it was so called from the city of Eupatoria, near the river Amisus, in Pontus, where it grew abundantly. Pliny says, that its seed, taken in wine, formed an excellent remedy for dysentery. The islanders of Zante call it *φονόχορτον*, and the Turks *Cojân otî*. Sibthorp found it in the Peloponnesus, and also around Byzantium, and along the road between Smyrna and Brusa.²

EUPATRIDÆ (Εὐπατρίδαι, descended from noble ancestors) is the name by which, in early times, the nobility of Attica was designated. Who the Eupatridæ originally were has been the subject of much dispute; but the opinion now almost universally adopted is, that they were the noble Ionic or Hellenic families who, at the time of the Ionian migration, settled in Attica, and there exercised the power and influence of an aristocracy of warriors and conquerors, possessing the best parts of the land, and commanding the services of a numerous class of dependants.³ The chiefs who are mentioned as kings of the several Attic towns, before the organization of the country ascribed to Theseus, belonged to the highest or ruling class of the Eupatridæ; and when Theseus made Athens the seat of government for the whole country, it must have been chiefly these nobles of the highest rank that left their former residences and migrated to Athens, where, after Theseus had given up his royal prerogatives and divided them among the nobles, they occupied a station similar to that which they had previously held in their several districts of Attica. Other Eupatridæ, however, who either were not of the highest rank, or were less desirous to exercise any direct influence upon the government, remained in their former places of residence.⁴ In the division of the inhabitants of Attica into three classes, which is ascribed to Theseus, the Eupatridæ were the first class,⁵ and thus formed a compact order of nobles, united by their interests, rights, and privileges. The first, or, at least, the most ambitious among them, undoubtedly resided at Athens, where they enjoyed nearly the same privileges as they had before the union in the separate townships of Attica. They were in the exclusive possession of all the civil and religious offices in the state, ordered the affairs of religion, and interpreted the laws, human and divine.⁶ The king was thus only the first among his equals, only distinguished from them by the duration of his office,⁷ and the four kings of the phylæ (φυλοβασιλεῖς), who were chosen from the Eupatridæ, were more his colleagues than his counsellors.⁸ The kingly power was in a state of great weakness; and while the overbearing influence of the nobles, on the one hand, naturally tended gradually to abolish it altogether, and to establish a purely aristocratical government in its stead,⁹ it produced, on the other hand, effects which threatened its own existence, and at last led to the entire overthrow of the hereditary aristocracy as an order: for the commonalty, which had likewise gained in strength by the union of all the Attic townships, soon began to feel the oppression of the aristocracy, which in Attica produced nearly the same effects as that of the patricians at Rome. The legislation of Draco seems to have arisen out of the growing discontent of the commonalty with the oppressive rule of the nobles;¹⁰

but his attempts to remedy the evil were more calculated to intimidate the people than to satisfy them, and could, consequently, not have any lasting results. The disturbances which, some years after, arose from the attempt of Cylon, one of the Eupatridæ, who tried to overthrow the aristocratical government and establish himself as tyrant, at length led to the legislation of Solon, by which the political power and influence of the Eupatridæ as an order was broken, and property instead of birth was made the standard of political rights.¹ But as Solon, like all ancient legislators, abstained from abolishing any of the religious institutions, those families of the Eupatridæ in which certain priestly offices and functions were hereditary, retained these distinctions down to a very late period of Grecian history.²

*EUPHORBÆUM (εὐφόρβιον), a plant belonging to the genus *Euphorbia*, or *Spurge*. It grows wild in Africa, and is said to have been discovered by King Juba,³ who gave it the name of Euphorbia in honour of his physician Euphorbus, brother to Antonius Musa, the medical attendant of Augustus.⁴ This prince also wrote a treatise on the virtues of the plant, which was in existence in Pliny's days.⁵ The Euphorbium was discovered by him near Mount Atlas. Its stem, according to Pliny,⁶ was straight like a thyrus, and its leaves resembled those of the acanthus. Its odour was so powerful, that they who collected the juice were compelled to stand at a distance. An incision was made into the stem by means of a pole tipped with iron, and the juice which exuded was caught in a goatskin. This juice became, on exposure to the air, a gum-resin resembling frankincense. Pliny speaks of it as a remedy against the bite of serpents. The name of this resin was also Euphorbium. "It is stated in the Edinburgh Dispensatory," remarks Adams, "that the Euphorbium is got from the species called *Euphorbia antiquorum*; but Sprengel prefers the *Euphorbia maritima*." Sibthorp informs us that the Greek fishermen, at the present day, use the *Euphorbia Characias* (called by them *φλόμος*) to poison the fish, but that, when caught by these means, they become putrid a short time after they are taken.⁸

EURIPUS. (Vid. AMPHITHEATRUM, p. 53.)

EUTHYDICÆA (εὐθύδικια). (Vid. DICE, p. 359.)

EUTHYNE (εὐθύνη). All public officers at Athens, especially generals, ambassadors,⁹ the archons and their assessors, the *dicætae*, priests and priestesses,¹⁰ the secretaries of the state,¹¹ the superintendents of public buildings, the trierarchs, and even the senate of the Five Hundred and the members of the Areiopagus, were accountable for their conduct, and the manner in which they acquitted themselves of their official duties. The judges in the popular courts seem to have been the only authorities who were not responsible,¹² for they were themselves the representatives of the people, and would, therefore, in theory, have been responsible to themselves. This account, which officers had to give after the time of their office was over, was called *εὐθύνη*, and the officers subject to it, *εὐθύνοιοι*. Every public officer had to render his account within thirty days after the expiration of his office,¹³ and as long as this duty was not fulfilled, the whole property of the ex-officer was in bondage to the

state:¹ he was not allowed to travel beyond the frontiers of Attica, to consecrate any part of his property as a donarium to the gods, to make his will, or to pass from one family into another by adoption; no public honours or rewards, and no new office could be given to him.² If within the stated period an officer did not send in his account, an action called *ἀλογιον* or *ἀλογίας δίκη* was brought against him.³ At the time when an officer submitted to the *εὐθύνη*, any citizen had the right to come forward and impeach him. Those who, after having refused to submit to the *εὐθύνη*, also disobeyed the summons to defend themselves before a court of justice, thereby forfeited their rights as citizens.⁴

It will appear from the list of officers subject to the euthyne, that it was not confined to those whose office was connected with the administration of the public money, or any part of it; but in many cases it was only an inquiry into the manner in which a person had behaved himself in the discharge of his official duties. In the former case the scrutiny was conducted with great strictness, as the state had various means to check and control the proceedings of its officers; in the latter, the euthyne may in many instances have been no more than a personal attendance of the ex-officer before the representatives of the people, to see whether any charge was brought against him. When no accuser appeared, the officer was honourably dismissed (*ἐπισημαίνεσθαι*).⁵ After an officer had gone through the euthyne, he became *ἀνέκθνος*.⁶

The officers before whom the accounts were given were in some places called *εὐθνοὶ* or *λογισταί*, in others *ἐξετασταί* or *συνήγοροι*.⁷ At Athens we meet with the first two of these names, and both are mostly mentioned together; but how far their functions differed is very uncertain. Some grammarians⁸ state that *λογισταί* was the name of the same officers who were formerly called *εὐθνοὶ*. But from the manner in which the Greek orators speak of them, it can scarcely be doubted that their functions were distinct. From the authorities referred to by Böckh,⁹ it seems, moreover, clear that the office of the *λογισταί*, though closely connected with that of the *εὐθνοὶ*, was of greater extent than that of the latter, who appear rather to have been the assessors of the former than a totally distinct class of officers, as will be seen hereafter. All accounts of those officers who had anything to do with the public money were, after the expiration of their office, first sent in to the *λογισταί*, who examined them; and if any difficulty or incorrectness was discovered, or if charges were brought against an ex-officer within the period of 30 days, the farther inquiry devolved upon the *εὐθνοὶ*, before whom the officer was obliged to appear and plead his cause.¹⁰ If the *εὐθνοὶ* found that the accounts were unsatisfactory, that the officer had embezzled part of the public money, that he had accepted bribes, or that charges brought against him were well founded, they referred the case to a court of justice, for which the *λογισταί* appointed the judges by lot, and in this court their herald proclaimed the question who would come forward as accuser.¹¹ The place where the court was held was the same as that to which ex-officers sent their accounts to be exam-

ined by the *λογισταί*, and was called *λογιστήριον*. It can scarcely be doubted that the *εὐθνοὶ* took an active part in the trials of the *λογιστήριον*: but whether they acted only as the assessors of the *λογισταί*, or whether they, as Pollux states, exacted the embezzled sums and fines instead of the praetores, is uncertain. The number of the *εὐθνοὶ*, as well as that of the *λογισταί*, was ten, one being taken from every tribe.¹² The *λογισταί* were appointed by the senate, and chosen by lot; whether the *εὐθνοὶ* were likewise chosen by lot is uncertain, for Photius uses an expression derived from *κληρὸς* (lot), while Pollux¹³ states that the *εὐθνοὶ* (*προσβαίρονται*, scil. *τοῖς λογισταῖς*), were like the assessors of the archons; the latter account, however, seems to be more consistent and more probable. Every *εὐθνος* had two assessors (*παρέδροι*).¹⁴

The first traces of this truly democratic institution are generally found in the establishment of the archonship (*ἀρχὴ ὑπεύθυνος*) instead of the kingly power, by the Attic nobles.¹⁵ It was from this state of dependance of the first magistrates upon the order of the nobles that, in the course of time, the regular euthyne arose. Similar institutions were established in several other republics of Greece.¹⁶

EUTHYNOI (*Εὐθνοὶ*). (*Vid.* ΕΥΘΥΝΕ)

EVICTIO. If the purchaser of a thing was by legal means deprived of it (*evicted*), the seller was bound to make good the loss (*evictionem praestare*). If the seller knew that he was selling what was not his own, this was a case of *dolus*, and he was bound, in case of eviction, to make good to the purchaser all loss and damage that he sustained. If there was no *dolus* on the part of the seller, he was simply bound to make good to the purchaser the value of the thing at the time of eviction. It was necessary for the purchaser to neglect no proper means of defence, when an attempt was made to evict him; and it was his duty to give the seller notice of the adverse claim (*litem denunciare*), and to pray his aid in defence of the action. The stipulation *duplex* was usual among the Romans; and, in such case, if the purchaser was evicted from the whole thing, he might, by virtue of his agreement, demand from the seller double its value.¹⁷

EVOCATI were soldiers in the Roman army who had served out their time and obtained their discharge (*missio*), but had voluntarily enlisted again at the invitation of the consul or other commander.¹⁸ There appears always to have been a considerable number of *evocati* in every army of importance; and when the general was a favourite among the soldiers, the number of veterans who joined his standard would of course be increased. The *evocati* were doubtless released, like the *vexillarii*, from the common military duties of fortifying the camp, making roads, &c., and held a higher rank in the army than the common legionary soldiers. They are sometimes spoken of in conjunction with the *equites Romani*,¹⁹ and sometimes classed with the *centurions*.²¹ They appear to have been frequently promoted to the rank of *centurions*. Thus Pompey induced a great many of the veterans who had served under him in former years, to join his standard at the breaking out of the civil war, by the promise of rewards and the command of centuries (*ordinum*).²² All the *evocati* could not, however, have held the rank of *centurions*, as we read of two

thousand on one occasion,¹ and of their belonging to certain cohorts in the army. Cicero speaks of a *Præfectus Evocatorum*.²

The name of Evocati was also given to a select body of young men of the equestrian order, who were appointed by Domitian to guard his bedchamber.³ This body is supposed by some writers to have existed under the succeeding emperors, and to have been the same as those called *Evocati Augusti*.⁴

ΕΞΑΓΩΓΗΣ ΔΙΚΗ (*ἐξαγωγῆς δίκη*), a suit of a public nature, which might be instituted against one who, assuming to act as the protector (*κύριος*) of an Athenian woman, married her to a foreigner in a foreign land. This was contrary to law, intermarriage with aliens being (as a general rule) prohibited. In the speech of Demosthenes against Timocrates,⁵ the latter is charged with having sold his sister to a Corcyrean, on pretence of giving her in marriage.⁶

ΕΞΑΙΡΕΣΕΩΣ ΔΙΚΗ (*ἐξαίρεσεως δίκη*). This was an action brought to recover damages for the attempt to deprive the plaintiff of his slave; not where the defendant claimed a property in the slave, but where he asserted him to be a freeman. As the condition of slavery at Athens incapacitated a man to take any legal step in his own person, if a reputed slave wished to recover his rights as a freeman, he could only do it by the assistance of one who was himself a freeman. He then put himself under the protection of such a person, who was said *ἐξαιρεῖσθαι* or *ἀφαιρεῖσθαι* αὐτὸν εἰς ἐλευθερίαν, *in libertatem vindicare*. If the master sought to reclaim him, he proceeded to take manual possession, *ἀγειν* αὐτὸν εἰς δουλείαν. A runaway slave might at any time be seized by his master, either in the open street or elsewhere, except in a sanctuary. If the friend or person who harboured the slave meant to contest the master's right, the proper course was to go with him before the magistrate, and give security for the value of the slave and costs, in case a court of law should decide against him. The magistrate who took cognizance of the cause was the archon, where a man claimed to be a citizen; the polemarch, where he claimed to be an alien freeman. It was the duty of the archon or polemarch to set the man at liberty *pendente lite*. In the suit that followed, the plaintiff had to prove his title to the ownership of the slave, and, if successful, obtained such compensation as the jury chose to award; this being a *τιμὴ τὸς ἀγών*, and half of the *τίμημα* being given to the state.⁷ A verdict for the plaintiff drew with it, as a necessary consequence, the adjudication of the ownership, and he would be entitled to take possession of his slave immediately: if, however, the slave had escaped in the mean time, and evidence of such fact were produced, the jury would probably take that into consideration in estimating the damages.

If the friend, in resisting the capture of the slave, had used actual violence, he was subject to a *δίκη βιαιών*. And if the *soi-disant* master had failed in the *ἐξ. δίκη*, the injured party might maintain an action against him for the attempted seizure.⁸

In a speech of Isocrates,⁹ the defendant, a banker, from whom it is sought to recover a deposit, is charged with having asserted the freedom of his own slave, in order to prevent his being examined by torture respecting the sum of money deposited

in his hands. This is remarkable on two accounts: first (as Meier observes), because it seems to prove that one not the owner of the slave could bring the *ἐξ. δίκη*, if he had an interest in the matter; secondly, because it was optional with a man to give up his slave to the torture or not, the refusal being only matter of observation to the jury; and, therefore, it appears strange that any one should have recourse to a measure, the result of which (if successful) would be to deprive him of his property.

EXAUCTORATIO. (*Vid. MISSIO*.)

EXAUGURATIO is the act of changing a sacred thing into a profane one, or of taking away from it the sacred character which it had received by inauguration, consecratio, or dedicatio. That such an act was performed by the augurs, and never without consulting the pleasure of the gods by augurium, is implied in the name itself.¹ Temples, chapels, and other consecrated places, as well as priests, were considered as belonging to the gods. No consecrated place whatever could be employed for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, without being previously exaugurated; and priests could not give up their sacred functions, or (in case they were obliged to live in celibacy) enter into matrimony, without first undergoing the process of exauguratio.²

EXCEPTIO. (*Vid. ACTIO*, p. 16.)

EXCUBIÆ. (*Vid. CASTRA*, p. 220.)

EXCUBITORES, which properly means watchmen or sentinels of any kind,³ was the name more particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor.⁴ Their commanding officer was called *tribunus excubitorum*.⁵ When the emperor went to an entertainment at the house of another person, the excubitores appear to have accompanied him, and to have kept guard at his own palace.⁶

EXEDRÆ. (*Vid. GYMNASIUM, HOUSE*)

EXEGETAI (*ἐξηγηταί*, interpreters; on this and other meanings of the word, *vid. Ruhnken, ad Timæi Glossar.*, p. 109, &c.) is the name of the Eumolpidae, by which they were designated as the interpreters of the laws relating to religion and of the sacred rites.⁷ (*Vid. EUMOLPIDAI*.) They were thus, at Athens, the only class of persons who in some measure resembled the Roman jurists; but the laws, of which the *ἐξηγηταί* were the interpreters, were not written, but handed down by tradition. Plutarch⁸ applies the term to the whole order of the Eupatridæ, though, properly speaking, it belonged only to certain members of their order, *i. e.*, the Eumolpidae. The *Etymologicum Magn.*⁹ in accordance with the etymological meaning of the word, states that it was applied to any interpreter of laws, whether sacred or profane; but we know that at Athens the name was principally applied to three members of the family of the Eumolpidae,¹⁰ whose province it was to interpret the religious and ceremonial laws, the signs in the heavens, and the oracles; whence Cicero¹¹ calls them *religionum interpretes*.¹² They had also to perform the public and private expiatory sacrifices, and were never appointed without the sanction of the Delphic oracle, whence they were called *Πυθόχρηστοι*.¹³

The name *ἐξηγητής* was also applied to those persons who served as guides (*cicerone*) to the visitors

EXENGYASTHAI (ἐξεγγασθαι) (*Vid.* ENGYE.)

EXERCITORIA ACTIO was an action granted by the edict against the exercitor navis. By the term navis was understood any vessel, whether used for the navigation of rivers, lakes, or the sea. The exercitor navis is the person to whom all the ship's gains and earnings (*obventiones et redditus*) belong, whether he is the owner, or has hired the ship from the owner for a time definite or indefinite. The magister navis is he who has the care and management of the ship, and was appointed (*præpositus*) by the exercitor. The exercitor was bound generally by the contracts of the magister, who was his agent, but with this limitation, that the contract of the magister must be with reference to furthering the object for which he was appointed; as, for instance, if he purchased things useful for the navigation of the ship, or entered into a contract or incurred expense for the ship's repairs, the exercitor was bound by such contract: the terms of the master's appointment (*præpositio*) accordingly determine the rights of third parties against the exercitor. If the magister, being appointed to manage the ship, and to use it for a particular purpose, used it for a different purpose, his employer was not bound by the contract. If there were several magistri, with undivided powers, a contract with one was the same as a contract with all. If there were several exercitores, who appointed a magister either out of their own number or not, they were severally answerable for the contracts of the magister. The contracting party might have his action either against the exercitor or the magister, so long as the magister continued to be such.

A party might have an action *ex delicto* against an exercitor in respect of the act either of the magister or the sailors, but not on the contract of the sailors. If the magister substituted a person in his place, though he was forbidden to do so, the exercitor would still be bound by any proper contract of such person.

The term *Nauta* properly applies to all persons who are engaged in navigating a ship; but in the Prætor's Edict² the term *Nauta* means Exercitor (*qui navem exercet*).

(Dig. 14, tit. 1.—Peckius, in *Titt. Dig. et Cod. ad Rem Nauticam pertinentes* Comment.—Abbott on *Shipping*, Index, *Exercitor Navis*.)

EXERCITUS. (*Vid.* ARMY.)

EXETASTAI (Ἐξετασταί) were commissioners sent out by the Athenian people to ascertain whether there were as many mercenaries as the generals reported. It appears to have been no uncommon plan for the commanders, who received pay for troops, to report a greater number than they possessed, in order to receive the pay themselves; in which case they were said "to draw pay for empty places in the mercenary force" (*μισθοφορεῖν ἐν τῷ ξενικῷ κεναῖς χώραις*).³ The commissioners, however, who were sent to make inquiries into the matter, often allowed themselves to be bribed.⁴ This name was also probably given to commissioners who were appointed to investigate other matters.

EXHERES. (*Vid.* HERES.)

EXHIBENDUM, ACTIO AD. This action was introduced mainly with respect to vindicationes, or actions about property. "Exhibere" is defined to be "*facere in publico potestatem, ut ei qui agat ex-*

periundi sit copia." This was a personal action, and he had the right of action who intended to bring an actio in rem. The actio ad exhibendum was against a person who was in possession of the thing in question, or had fraudulently parted with the possession of it; and the object was the production of the thing for the purpose of its being examined by the plaintiff. The thing, which was, of course, a movable thing, was to be produced at the place where it was at the commencement of the legal proceedings respecting it; but it was to be taken to the place where the action was tried at the cost and expense of the plaintiff.

The action was extended to other cases: for instance, to cases when a man claimed the privilege of taking his property off another person's land, that other person not being legally bound to restore the thing, though bound by this action to allow the owner to take it; and to some cases where a man had in his possession something in which his own and the plaintiff's property were united, as a jewel set in the defendant's gold, in which case there might be an actio ad exhibendum for the purpose of separating the things.

If the thing was not produced when it ought to have been, the plaintiff might have damages for loss caused by such non-production. This action would lie to produce a slave in order that he might be put to the torture to discover his confederates.

The ground of the right to the production of a thing was either property in the thing or some interest; and it was the business of the iudex to declare whether there was sufficient reason (*iusta et probabilis causa*) for production. The word "interest" was obviously a word of doubtful import. Accordingly, it was a question if a man could bring this action for the production of his adversary's accounts, though it was a general rule of law that all persons might have this action who had an interest in the thing to be produced (*quorum interest*); but the opinion as given in the Digest¹ is not favourable to the production on the mere ground of its being for the plaintiff's advantage. A man might have this actio though he had no vindictio; as, for instance, if he had a legacy given to him of such a slave as Titius might choose, he had a right to the production of the testator's slaves in order that Titius might make the choice; when the choice was made, then the plaintiff might claim the slave as his property, though he had no power to make the choice. If a man wished to assert the freedom of a slave (*in libertatem vindicare*), he might have this action.

This action was, as it appears, generally in aid of another action, and for the purpose of obtaining evidence; in which respect it bears some resemblance to a Bill of Discovery in Equity.

(Mühlenbruch, *Doctrina Pandectarum*.—Dig. 10, tit. 4.)

EXITERIA (ἐξίτηρια) or EPEXODIA (ἐπεξόδια) are the names of the sacrifices which were offered by generals before they set out on their expeditions.² The principal object of these sacrifices always was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter. According to Hesychius, ἐξίτηρια was also the name of the day on which the annual magistrates laid down their offices.

EXODIA (Ἐξόδια, from ἐξ and ὁδός) were old-fashioned and laughable interludes in verses, inserted in other plays, but chiefly in the Atellanæ.³ It is difficult to ascertain the real character of the exodia; but, from the words of Livy, we must infer

1. (Paus., i., 41, § 2.)—2. (Dig. 4, tit. 9, s. 1.)—3. (Æschin., c. Ctes., p. 556.)—4. (Æschin., c. Timarch., p. 131.—De Fals. Leg., p. 339.—Bækh, *Publ. Econ. of Athens*, i., p. 389.)

1. (Dig. 10, tit. 4, s. 19.)—2. (Xen., *Anab.*, vi 5, § 2;—3 (Livy, vii., 2.)

that, although distinct from the Atellanæ, they were closely connected with them, and never performed alone. Hence Juvenal calls them *exodium Atellanæ*¹ and Suetonius² *exodium Atellanicum*. They were, like the Atellanæ themselves, played by young and well-born Romans, and not by the *histriones*. Since the time of Jos. Scaliger and Casanbon, the *exodia* have almost generally been considered as short comedies or farces which were performed after the Atellanæ; and this opinion is founded upon the vague and incorrect statement of the scholiast on Juvenal.³ But the words of Livy, *exodia conserta fabellis*, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Atellanæ, which would suggest a false idea of the Atellanæ themselves. But as several Atellanæ were performed on the same day, it is probable that the *exodia* were played between them. This supposition is also supported by the etymology of the word itself, which signifies something *ἐξ ὁδοῦ*, extra viam, or something not belonging to the main subject, and thus is synonymous with *ἐπεισόδιον*. The play, as well as the name of *exodium*, seems to have been introduced among the Romans from Italian Greece; but after its introduction it appears to have become very popular among the Romans, and continued to be played down to a very late period.⁴

EXO-MIS (*ἐξωμῖς*) was a dress which had only a sleeve for the left arm, leaving the right, with the shoulder and a part of the breast, free, and was, for this reason, called *exomis*. It is also frequently called *χιτὼν ἑτερομίσχalos*.⁵ The *exomis*, however, was not only a chiton (*vid. TUNICA*), but also an *ιμάτιον* or *περίβλημα*. (*Vid. PALLIUM*.) According to Hesychius⁶ and Ælius Dionysius,⁷ it served at the same time both the purposes of a chiton and an himation; but Pollux⁸ speaks of two different kinds of *exomis*, one of which was a *περίβλημα*, and the other a *χιτὼν ἑτερομίσχalos*. His account is confirmed by existing works of art. Thus we find in the Mus. Pio-Clement.,⁹ Hephæstos wearing an *exomis*, which is an himation thrown round the body in the way in which this garment was always worn, and which clothes the body like an *exomis* when it is girded round the waist. The following figure of Charon, on the contrary, taken from Stackelberg,

Die Gräber der Hellenen, pl. 47, represents the proper *χιτὼν ἑτερομίσχalos*.

The *exomis* was usually worn by slaves and working people,¹ whence we find Hephæstos, the working deity, frequently represented with this garment in works of art.² The chorus of old men in the *Ly-sistrata* of Aristophanes³ wear the *exomis*, which is in accordance with the statement of Pollux,⁴ who says that it was the dress of old men in comic plays.

According to Anlus Gellius,⁵ the *exomis* was the same as the common tunic without sleeves (*citra humerum desinentes*); but his statement is opposed to the accounts of all the Greek grammarians, and is, without doubt, erroneous.⁶

EXOMOSIA (*ἐξωμοσία*). Any Athenian citizen, when called upon to appear as a witness in a court of justice (*κλητεύειν* or *ἐκκλητεύειν*), was obliged by law to obey the summons, unless he could establish by oath that he was unacquainted with the case in question.⁷ This oath was called *ἐξωμοσία*, and the act of taking it was expressed by *ἐξομνῆσθαι*.⁸ Those who refused to obey the summons without being able to take the *ἐξωμοσία*, incurred a fine of one thousand drachmæ; and if a person, after promising to give his evidence, did, nevertheless, not appear when called upon, an action called *λειπομαρτυρίον*, or *βλάβης δίκη*, might be brought against him by the parties who thought themselves injured by his having withheld his evidence.¹⁰

When the people, in their assembly, appointed a man to a magistracy or any other public office, he was at liberty, before the *δοκιμασία* took place, to decline the office, if he could take an oath that the state of his health or other circumstances rendered it impossible for him to fulfil the duties connected with it (*ἐξομνῆσθαι τὴν ἀρχήν*, or *τὴν χειροτονίαν*): and this oath was likewise called *ἐξωμοσία*, or sometimes *ἀπομοσία*.¹¹

EXOSTRA (*ἐξόστρα*, from *ἐξάθω*) was one of the many kinds of machines used in the theatres of the ancients. Cicero,¹² in speaking of a man who formerly concealed his vices, expresses this sentiment by *post siparium heluabatur*; and then stating that he now shamelessly indulged in his vicious practices in public, says, *jam in exostra heluatur*. From an attentive consideration of this passage, it is evident that the *exostra* was a machine by means of which things which had been concealed behind the *siparium* were pushed or rolled forward from behind it, and thus became visible to the spectators. This machine was therefore very much like the *ἐκκύκλημα*, with this distinction, that the latter was moved on wheels, while the *exostra* was pushed forward upon rollers.¹³ But both seem to have been used for the same purpose, namely, to exhibit to the eyes of the spectators the results or consequences of such things—*c. g.*, murder or suicide—as could not consistently take place in the *proscenium*, and were therefore described as having occurred behind the *siparium* or in the scene.

The name *exostra* was also applied to a peculiar kind of bridge, which was thrown from a tower of the besiegers upon the walls of the besieged town, and across which the assailants marched to attack those of the besieged who were stationed on the ramparts to defend the town.¹⁴

ΕΞΟΥΛΗΣ ΔΙΚΗ (*ἐξούλης δίκη*). The process so called in Athenian law seems to have been originally used as a remedy against those who wrongfully "kept others out" (*ἐξείλκεν, ἐξείργεν*) of real property which belonged to them.¹ The etymology of the word indicates this, and the speeches of Demosthenes against Onetor furnish an example of it. (*Vid. ΕΜΒΑΤΕΙΑ*.)

The *δίκη ἐξούλης*, however, does not generally appear in this simple shape, but rather as an "*actio rei judicatae*," or an action consequent upon the non-fulfilment of a judgment in a previous suit; the nature of which, of course, modified the subsequent proceedings. We will consider, first, the case when the main action had reference to real property. If a plaintiff was successful in an action of this sort, and the defendant did not give up possession by the time appointed, two processes seem to have been open to the former. Thus he might, if he chose, proceed at once to take possession (*ἐμβατεύειν*), and if resisted, then bring his action for ejectment;² or he might adopt a less summary process, which, so far as we can understand the grammarians, was as follows: If the property in question, and which the defendant refused, after judgment given, to surrender, was a house, the plaintiff brought an action for the rent (*δίκη ἐνοικίου*): if a landed estate (*χωρίον*), for the produce (*δίκη καρποῦ*). If the defendant still kept possession, the next step was a *δίκη οὐσίας*, or an action for the proceeds of all his property by way of indemnification; and after that followed the *δίκη ἐξούλης*.³ The statement we have given from Hudtwalcker⁴ rests mainly on its inherent probability and the authority of Suidas.⁵ Some grammarians, however, do not represent the *δίκη καρποῦ* and the *δίκη οὐσίας* as consequent upon a previous action, but as the first steps taken before a *δίκη ἐξούλης* was commenced. For a probable explanation of this, *vid. ΕΝΟΙΚΙΟΥ ΔΙΚΗ*. The question now arises, What was done if the defendant refused to give up possession, even after being cast in the *δίκη ἐξούλης*? We are almost bound to suppose, though we have no express authority for it, that a plaintiff would, under such circumstances, receive aid from the public authorities to assist him in ejecting the defendant; but, independent of this, it appears from Andocides⁶ that a defendant incurred the penalty of *ἀτιμία* if defeated in a *δίκη ἐξούλης*.

We will now explain the proceedings when the main action had no reference to real property: as, for example, the *δίκη κακηγορίας*, in which Meidias allowed judgment to go by default (*ἐρήμην ὥφε*), and neglected or refused to pay the damages given against him, so as to become *ὑπερήμερος*. Demosthenes,⁷ the plaintiff in the case, says that he might have seized upon Meidias's property by way of pledge, but that he did not do so, preferring to bring a *δίκη ἐξούλης* at once. It is, of course, implied in this statement, that if he had attempted to make a seizure, and been resisted, the same process would have been equally open to him. In fact, Ulpian⁸ informs us that a *δίκη ἐξούλης* was the consequence of such a resistance being made. Moreover, in cases of this sort, it was peculiarly a penal action; for the defendant, if cast, was required to pay to the public treasury a fine of the same amount as the damages (*ἡ καταδίκη*) due to the plaintiff.⁹ The penalty of *ἀτιμία* also was inflicted till both the fine and damages were paid. Lastly, Pollux¹⁰ informs us, *εἰ δὲ μὲν ὡς ἐωνήμενος ἀμφισβητεῖ κτήματος, ὁ δὲ ὡς ὑποθήκη ἔχων, ἐξούλης ἡ δίκη*, words which to

Hudtwalcker seem obscure, but simply mean that if one person claimed a property as purchaser, and another as mortgagee, or as having a lien upon it, the dispute was settled by an *ἐξούλης δίκη*. In such a case, it would, of course, be merely a civil action to try a right.

EXPEDITUS is opposed to "*impeditus*," and signifies unencumbered with armour or with baggage (*impedimenta*). Hence the light-armed soldiers in the Roman army (p. 104) were often called the *Expediti*;¹ and the *cpithet* was also applied to any portion of the army, when the necessity for haste, or the desire to conduct it with the greatest facility from place to place, made it desirable to leave behind every weight that could be spared.²

EXPLORATORES. (*Vid. SPECULATORES*.)

EXSEQUIE. (*Vid. FUNUS*.)

EXSILIUM. (*Vid. BANISHMENT, ROMAN*.)

EXSUL. (*Vid. BANISHMENT, ROMAN*.)

EXTISPEX. (*Vid. HARUSPEX*.)

EXTRAORDINARIII (interpreted by Polybius and Suidas by the Greek word *Ἐπιλέκτοι*, *selected*) were the soldiers who were placed about the person of the consul in the Roman army. They consisted of about a third part of the cavalry and a fifth part of the infantry of the allies, and were chosen by the prefects.⁴ Hence, for a legion of 4200 foot and 300 horse, since the number of the infantry of the allies was equal to that of the Roman soldiers, and their cavalry twice as many, the number of extraordinarii would be 840 foot and 200 horse, forming two cohorts, which are mentioned by Livy;⁵ or, in an army of two legions, four cohorts.⁶

From the extraordinarii a body of chosen men was taken to form a body-guard for the consul. These were called *ablecti* (*ὑπολέκτοι*). Their number is uncertain. Lipsius conjectures that they consisted of 40 out of the 200 cavalry, and 168 out of the 840 infantry of the extraordinarii, making the whole number of the ablecti in a consular army 80 horse and 336 foot.⁷

F.

*FABA (*κυμαός*), the Bean. Dioscorides⁸ makes mention of two kinds, the Grecian and Egyptian (*Ἑλληνικός* and *Αἰγύπτιος*). The *κυμαός Ἑλληνικός* is generally held to be the *Vicia Faba*, but there is considerable difficulty, according to Adams, in determining exactly the variety of it most applicable to the descriptions of the ancient bean. The most probable opinion appears to be that of Dickson, who thinks that the *Faba minor* of Miller, namely, the Horse-bean, answers best to the descriptions of Theophrastus.⁹ The *κυμαός Αἰγύπτιος* is the *Ne lumbium speciosum*. Its edible root was termed *κολοκασία*, and its fruit *κιβώριον*. The ancients made a kind of bread out of beans, called *ἄρτος κυάμνος*, or *panis ex faba*. "Galen remarks that beans were much used by gladiators for giving them flesh, but adds that it was not firm or compact. Dr. Cullen notices the nutritious qualities of these things, but omits to mention that the flesh which they form is deficient in firmness. Actuarii states that they are nutritious, but dissuades from using them freely, on account of their flatulence. According to Celsus, both beans and lentils are stronger food than pease. Seth agrees with Galen, that the flesh formed from them is flabby and soft. Galen directs to fry beans, or boil them with onions, whereby they will be rendered less flatulent."¹⁰ The bean is said to have come origi-

nally from Persia.¹ The Romans held it in high estimation, and Pliny assigns it the first rank among leguminous plants. Pythagoras, as is well known, proscribed beans, a prohibition which would seem to have been rather dietetic than physical or moral. The abstaining from beans was also enjoined on the Egyptians. Herodotus says that beans were never sown in any part of Egypt, and that, if some happened to grow there, the Egyptians would not eat them, either crude or dressed. As for the priests, adds he, they abhor the very sight of that pulse, accounting it impure and abominable.² The Pythagorean prohibition, therefore, would seem to have been of Egyptian origin.

FABRI are workmen who make anything out of hard materials, as *fabri tignarii*, carpenters, *fabri ararii*, smiths, &c. The different trades were divided by Numa³ into nine collegia, which correspond to our companies or guilds. In the constitution of Servius Tullius, the *fabri tignarii* (τέκτονες⁴) and the *fabri ararii* or *ferrarii* (χαλκοῦνται) were formed into two centuries, which were called the *centuriæ fabrūm*, and not *fabrorum*.⁵ They did not belong to any of the five classes into which Servius divided the people; but the *fabri tign.* probably voted with the first class, and the *fabri ar.* with the second. Livy⁶ and Dionysius⁷ name both the centuries together: the former says that they voted with the first class; the latter, that they voted with the second. Cicero⁸ names only one century of fabri, which he says voted with the first class; but as he adds the word *tignariorum*, he must have recognised the existence of the second century, which we suppose to have voted with the second class.⁹

The fabri in the army were under the command of an officer called *præfectus fabrūm*.¹⁰ It has been upposd by some modern writers that there was a *præfectus fabrūm* attached to each legion; and this may have been the case. No genuine inscriptions, however, contain the title of *præfectus fabrūm* with the name of a legion added to it. There were also civil magistrates at Rome, and in the municipal towns, called *præfecti fabrūm*; but we know nothing respecting them beyond their name. Thus we find in Gruter, PRÆF. FABR. ROMÆ,¹¹ PRÆFECTUS FABR. CÆR.¹² The subject of the *præfecti fabrūm* is discussed with great accuracy in a letter of Hagenbuchius, published by Orelli.¹³

FABULA PALLIATA. (Vid. COMEDIA, p. 300.)
FABULA PRÆTEXTATA. (Vid. COMEDIA, p. 300.)

FABULA TOGATA. (Vid. COMEDIA, p. 300.)
FACTIO NES AURIGARUM. (Vid. CIRCUS, p. 256.)

*FAGUS, the Beech-tree. The name is supposed to be derived from the Greek φαῖνα, "to eat," as indicating that its fruit served for the nourishment of the early race of men. The *fagus* of Pliny is the same with that of Virgil, both writers meaning the beech; but the φῆγος of Theophrastus is a species of oak. (Vid. ÆSCULUS.) La Cerda falls into the mistake of confounding the *fagus* and φῆγος.¹⁴

FALARICA. (Vid. HASTA.)

FALCIDIA LEX. (Vid. LEOATUM.)

FALSUM. The crime of falsum was the subject of a Judicium Publicum, and it was the object of a *lex Cornelia* (passed by Sulla), which Cicero also

calls *testamentaria* and *numaria*,¹ with reference to the crimes which it was the object of the law to punish. The provisions of this *lex* are stated by Paulus,² who also entitles it *lex Cornelia testamentaria*, to apply to any person "*qui testamentum quodve aliud instrumentum falsum sciens dolo malo scripserit, reitaverit, subiecit, suppresserit, amoverit, resignaverit, deleverit*," &c. The punishment was deportatio in insulam (at least when Paulus wrote) for the "honestiores," and the mines or crucifixion for the "humiliores." In place of deportatio, the law probably contained the punishment of the interdictio aquæ et ignis. According to Paulus, the law applied to any instrument as well as a will, and to the adulteration of gold and silver coin, or refusing to accept in payment genuine coin stamped with the head of the princeps. But it appears from Ulpian (*sub titulo de pena legis Cornelia testamentaria*) that these were subsequent additions made to the *lex Cornelia*³ by various *senatus consulta*. By a *senatus consultum*, in the consulship of Statilius and Taurus, the penalties of the law were extended to the case of other than testamentary instruments. It is conjectured that, for the consulship of Statilius and Taurus, as it stands in the text of Ulpian, we should read Statilius Taurus, and that the consulship of Statilius Taurus and L. S. Libo (A.D. 15) is meant. A subsequent *senatus consultum*, in the fourteenth year of Tiberius, extended the penalties of the law to those who for money undertook the defence of a (criminal?) cause, or to procure testimony; and by a *senatus consultum*, passed between the dates of those just mentioned, conspiracies for the ruin of innocent persons were comprised within the provisions of the law. Another *senatus consultum*, passed A.D. 26, extended the law to those who received money for selling, or giving, or not giving testimony. There were probably other legislative provisions for the purpose of checking fraud. In the time of Nero, it was enacted against fraudulent persons (*falsarii*) that tabulæ or written contracts should be pierced with holes, and a triple thread passed through the holes, in addition to the signature.⁴ In the time of Nero, it was also provided that the first two parts (*cera*) of a will should have only the testator's signature, and the remaining one that of the witnesses: it was also provided that no man who wrote the will should give himself a legacy in it. The provisions as to adulterating money and refusing to take legal coin in payment were also made by *senatus consulta* or imperial constitutions. Allusion is made to the latter law by Arrian.⁵ It appears, from numerous passages in the Roman writers, that the crime of falsum in all its forms was very common, and especially in the case of wills, against which legislative enactments are a feeble security.⁶

* FALX, *dim.* FALCULA (ἄρπη, δρέπανον, *poet.* δρεπάνη, *dim.* δρεπάνιον), a sickle; a scythe; a pruning-knife or pruning-hook; a bill; a falchion; a halbert.

As CULTER denoted a knife with one straight edge, "falx" signified any similar instrument, the single edge of which was curved (ἀρπῆνος εὐκαμπές; γαμψὴς δρεπάνος; ⁸ curva falces; ⁹ curvamine falcis ahenæ; ¹⁰ adunca falce¹¹). By additional epithets the various uses of the falx were indicated, and its corresponding varieties in form and size. Thus the sickle, because it was used by reapers, was called *falx messoria*; the scythe, which was employed in mowing hay, was called *falx fœnaria*;

the pruning-knife and the bill, on account of their use in dressing vines, as well as in hedging and in cutting off the shoots and branches of trees, were distinguished by the appellation of *falx putatoria*, *vinitoria*, *arboraria*, or *sylvatica*,¹ or by the diminutive *falcula*.²

A rare coin published by Pellerin³ shows the head of one of the Lagidæ, kings of Egypt, wearing the DIADEMA, and on the reverse a man cutting down corn with a sickle. (See woodcut.)

The lower figure in the same woodcut is taken from the MSS. of Columella, and illustrates his description of the various parts of the *falx vinitoria*.⁴ (*Vid. CULTUR.*) The curvature in the forepart of the blade is expressed by Virgil in the phrase *procurva falx*.⁵ In this form the bill must have been used by hunters to cut their way through thickets.⁶ After the removal of a branch by the pruning-hook, it was often smoothed, as in modern gardening, by the chisel.⁷ (*Vid. DOLABRA.*) The edge of the falx was often toothed or serrated (*ἄρπην καρχαρόδοντα*; ⁸ *denticulata*).⁹ The indispensable process of sharpening these instruments (*ἄρπην χαρασσέμεναι*,¹⁰ *ἄρπην εὐκαμπὴ νεοηγία*¹¹) was effected by whetstones, which the Romans obtained from Crete and other distant places, with the addition of oil or water, which the mower (*fœniscæ*) carried in a horn upon his thigh.¹²

Numerous as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geloni were noted for its use.¹³ It was the weapon with which Jupiter wounded Typhon;¹⁴ with which Hercules slew the Lernaean Hydra;¹⁵ and with which Mercury cut off the head of Argus (*falcato ense*;¹⁶ *harpen Cyllenida*).¹⁷ Perseus, having received the same weapon from Mercury, or, according to other authorities, from Vulcan, used it to decapitate Medusa and to slay the sea-monster.¹⁸ From the passages now referred to, we may conclude that the falchion was a weapon of the most remote antiquity; that it was girt like a dagger upon the waist; that it was held in the hand by a short hilt; and that, as it was, in fact, a dagger or sharp-pointed blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature (*curvo tenus abdidit vamo*). In the annexed woodcut, four examples are selected from works of ancient art to illustrate its

form. One of the four cameos here copied represents Perseus with the falchion in his right hand, and the head of Medusa in his left. The two smaller figures are heads of Saturn, with the falx in its original form; and the fourth cameo, representing the same divinity at full length, was probably engraved in Italy at a later period than the others, but early enough to prove that the scythe was in use among the Romans, while it illustrates the adaptation of the symbols of Saturn (*Κρόνος*; *senex falcifer*) for the purpose of personifying Time (*Χρόνος*), who, in the language of an ancient epigram,¹⁹ destroys all things (*μὴ δρεπάνῃ*) with the same scythe.²⁰

If we imagine the weapon which has now been described to be attached to the end of a pole, it would assume the form and be applicable to all the purposes of the modern halbert. Such must have been the *asseret falcatus* used by the Romans at the siege of Ambracia.²¹ (*Vid. ARIES, ANTENNA.*) Sometimes the iron head was so large as to be fastened, instead of the ram's head, to a wooden beam, and worked by men under a testudo.²²

Lastly, the Assyrians, the Persians, the Medes, and the Syrians in Asia,²³ and the Gauls and Britons in Europe (*vid. COVINUS*), made themselves formidable on the field of battle by the use of chariots with scythes, fixed at right angles (*εἰς πλάγιον*) to the axle and turned downward, or inserted parallel to the axle into the felly of the wheel, so as to revolve, when the chariot was put in motion, with more than thrice the velocity of the chariot itself; and sometimes also projecting from the extremities of the axle.

FAMILIA. The word "familia" contains the same element as the word "famulus," a slave, and the verb "famulari." In its widest sense it signifies the totality of that which belongs to a Roman citizen who is *sui juris*, and therefore a *paterfamilias*. Thus, in the third kind of testamentary disposition mentioned by Gaius,²⁴ the word "familia" is explained by the equivalent "patrimonium;" and the person who received the familia from the testator (*qui a testatore familiam accipiebat mancipio*) was called "familia emptor." In the same sense we find the expression "erciscundæ familiæ."²⁵

But the word "familia" is sometimes limited to signify "persons," that is, all those who are in the

power of a paterfamilias, such as his sons (*filii-familias*), daughters, grandchildren, and slaves. When "familia" is used in this sense, it is opposed to inanimate things; and this seems to be the sense of the word familia in the formula adopted by the "familiae emptor" on the occasion of taking the testator's familia by a fictitious purchase: "*Familiam pecuniamque tuam*," &c. In another sense "familia" signifies all the free persons who are in the power of a paterfamilias; and in a more extended sense of this kind, all those who are agnati, that is, all who are sprung from a common ancestor, and would be in his power if he were living. (*Vid. COGNATI*.) With this sense of familia is connected the status familiæ, by virtue of which a person belonged to a particular familia, and thereby had a capacity for certain rights which only the members of the familia could claim. A person who changed this status ceased to belong to the familia, and sustained a capitis diminutio minima. (*Vid. ADOPTIO, CAPUT*.) Members of the same family were "familiares;" and hence familiaris came to signify an intimate friend. Slaves who belonged to the same familia were called, with respect to this relation, familiares. Generally, "familiaris" might signify anything relating to a familia.

Sometimes "familia" is used to signify the slaves belonging to a person,¹ or to a body of persons (*societas*), in which sense they are sometimes opposed to liberti,² where the true reading is "liberti."³

In the passage of the Twelve Tables which declares that in default of any heres suus, the property of the intestate shall go to the next agnatus; the word "familia" signifies the property only: "*Agnatus proximus familiam habeto*." In the same section in which Ulpian⁴ quotes this passage from the Twelve Tables, he explains agnati to be "*cognati virilis sexus per mares descendentes ejusdem familiae*," where the word "familia" comprehends only persons.⁵

The word familia is also applied (improperly) to sects of philosophers, and to a body of gladiators: in the latter sense with less impropriety.

A paterfamilias and a materfamilias were respectively a Roman citizen who was sui juris, and his lawful wife. A filiusfamilias and a filiafamilias were a son and daughter in the power of a paterfamilias. The familia of a paterfamilias, in its widest sense, comprehended all his agnati; the extent of which term, and its legal import, are explained under COGNATI. The relation of familia and gens is explained under GENS.

The five following personal relations are also comprehended in the notion of familia: 1. Manus, or the strict marriage relation between husband and wife; 2. Servitus, or the relation of master and slave; 3. Patronatus, or the relation of former master to former slave; 4. Mancipii causa, or that intermediate state between servitus and libertas, which characterized a child who was mancipiated by his father (*vid. EMANCIPATIO*); 5. Tutela and Curatio, the origin of which must be traced to the Patria Potestas. These relations are treated under their appropriate heads.

The doctrine of representation, as applied to the acquisition of property, is connected with the doctrine of the relations of familia; but, being limited with reference to potestas, manus, and municipium, it is not coextensive nor identical with the relations of familia. Legal capacity is also connected with the relations of familia, though not identical with, but rather distinct from them. The notions of liberti and servi, sui juris and alieni, are comprised in the above-mentioned relations of familia. The dis-

inction of Cives, Latini, Peregrini, are entirely unconnected with the relations of familia. Many of the relations of familia have also no effect on legal capacity, for instance, marriage as such. That family relationship which has an influence on legal capacity is the Patria Potestas, in connexion with which the legal capacities and incapacities of filiusfamilias, filiafamilias, and a wife in manu, may be most appropriately considered.¹

FAMILIÆ EMPTOR. (*Vid. FAMILIA*.)

FAMILIÆ ERCISCUNDÆ ACTIO. Every heres, who had full power of disposition over his property, was entitled to a division of the hereditas, unless the testator had declared, or the co-heredes had agreed, that it should remain in common for a fixed time. The division could be made by agreement among the co-heredes; but in case they could not agree, the division was made by a judex. For this purpose every heres had against each of his co-heredes an actio familiæ erciscundæ, which, like the actiones communi dividundo, and finium regundorum, was of the class of Mixtæ Actiones, or, as they were sometimes called, Duplicitæ Judicia, because, as in the familiæ erciscundæ judicium, each heres was both plaintiff and defendant (actor and reus); though he who brought the actio and claimed a judicium (*ad judicium provocavit*) was properly the actor. A heres, either ex testamento or ab intestato, might bring this action. All the heredes were liable to the bonorum collatio (*vid. BONORUM COLLATIO*), that is, bound to allow, in taking the account of the property, what they had received from the testator in his lifetime, as part of their share of the hereditas, at least so far as they had been enriched by such donations.

This action was given by the Twelve Tables. The word Familia here signifies the "property," as explained in the previous article, and is equivalent to hereditas.

The meaning and origin of the verb *erciscere*, or *herciscere*, have been a subject of some dispute. It is, however, certain that the word means "division."²

FANUM. (*Vid. TEMPLUM*.)

*FAR, Spelt, often put for corn generally. According to Martyn, it is a sort of corn very like wheat; but the chaff adheres so strongly to the grain that it requires a mill to separate them, like barley. The far of the Romans was the same with the *ζέα* or *ζέα* of the Greeks. "The *ρίζη* of Theophrastus, the *δύρα* of Homer, as well as the *far* and *adoreum* of the Romans, were in all probability," says Adams, "merely varieties of Spelt." "Far was the corn of the ancient Italians," remarks Martyn, "and was frequently used in their sacrifices and ceremonies, whence it is no wonder that this word was often used for corn in general." The modern botanical name of Far is *Triticum spelta*. Dioscorides mentions two kinds of Zea: one the simple kind, *μονόκόκκος*, *Triticum monococcum*; the other the double, *δικοκκος*, *Triticum spelta*. Homer makes mention of Zea, as does also Theophrastus; the latter gives it the epithet of robust or hardy, which is also applied to it by Virgil.

FARTOR (*αἰνευτής*) was a slave who fattened poultry.³ Donatus⁴ says that the name was given to a maker of sausages; but compare Becker, *Gallus*, ii, p. 190.

The name of fartores or *crammers* was also given to the nomenclatores, who accompanied the candidates for the public offices at Rome, and gave them the names of such persons as they might meet.⁵

1. (Cic. ad Div., xiv, 4.—Ad Quint., ii, Epist. 6.)—2. (Cic. Brut., 22.)—3. (Cic. ad Fam., i, 3.)—4. (Frag., tit. 26, i.)—5. (Dig. 59, tit. 1, s. 195; 10, tit. 2.)

FASCES were rods bound in the form of a bundle, and containing an axe (*securis*) in the middle, the iron of which projected from them. These rods were carried by lictors before the superior magistrates at Rome, and are often represented on the reverse of consular coins.¹ The following woodcuts give the reverses of four consular coins; in the first of which we see the lictors carrying the fasces on their shoulders; in the second, two fasces, and between them a sella curulis; in the third, two fasces crowned, with the consul standing between them; and in the fourth, the same, only with no crowns around the fasces.

The next two woodcuts, which are taken from the consular coins of C. Norbanus, contain, in addition to the fasces, the one a spica and caduceus, and the other a spica, caduceus, and prora.

The fasces appear to have been usually made of birch (*betulla*), but sometimes also of the twigs of the elm.³ They are said to have been derived from Vetulonia, a city of Etruria.⁴ Twelve were carried before each of the kings by twelve lictors; and on the expulsion of the Tarquins, one of the consuls was preceded by twelve lictors with the fasces and secures, and the other by the same number of lictors with the fasces only, or, according to some accounts, with crowns round them.⁵ But P. Valerius Publicola, who gave to the people the right of provocatio, ordained that the secures should be removed from the fasces, and allowed only one of the consuls to be preceded by the lictors while they were at Rome.⁶ The other consul was attended only by a single accensus. (*Vid. ACCENSUS.*) When they were out of Rome, and at the head of the army, each of the consuls retained the axe in the fasces, and was preceded by his own lictors as before the time of Valerius.⁷ (*Vid. CONSUL.*)

When the decemviri were first appointed, the fasces were only carried before the one who presi-

ded for the day;¹ and it was not till the second decemvirate, when they began to act in a tyrannical manner, that the fasces with the axe were carried before each of the ten.² The fasces and secures were, however, carried before the dictator even in the city,³ and he was also preceded by 24 lictors, and the magister equitum by six.

The prætors were preceded in the city by two lictors with the fasces,⁴ but out of Rome and at the head of an army by six, with the fasces and secures, whence they are called by the Greek writers *στρατηγοὶ ἑξαπελῆκες*.⁵ The proconsuls also were allowed, in the time of Ulpian, six fasces.⁶ The tribunes of the plebs, the ædiles and quæstors, had no lictors in the city,⁷ but in the provinces the quæstors were permitted to have the fasces.⁸

The lictors carried the fasces on their shoulders, as is seen in the coin of Brutus given above; and when an inferior magistrate met one who was higher in rank, the lictors lowered their fasces to him. This was done by Valerius Publicola when he addressed the people;⁹ and hence came the expression *submittere fasces* in the sense of to yield, to confess one's self inferior to another.¹⁰

When a general had gained a victory, and had been saluted as Imperator by his soldiers, he usually crowned his fasces with laurel.¹¹

FASCIA, *dim.* **FASCIOLA**, a band or fillet of cloth, worn, 1. round the head as an ensign of royalty¹² (*vid. DIADEMA*. Woodcut to article *Falx*): 2. by women over the breast¹³ (*vid. STROPHIUM*): 3. round the legs and feet, especially by women. Cicero reproached Clodius for wearing fasciæ upon his feet, and the *CALANTICA*, a female ornament, upon his head.¹⁴ Afterward, when the toga had fallen into disuse, and the shorter pallium was worn in its stead, so that the legs were naked and exposed, *fasciæ crurales* became common even with the male sex.¹⁵ The Emperor Alexander Severus¹⁶ always used them, even although, when in town, he wore the toga. Quintilian, nevertheless, asserts that the adoption of them could only be excused on the plea of infirm health.¹⁷ White fasciæ, worn by men,¹⁸ were a sign of extraordinary refinement in dress: the mode of cleaning them was by rubbing them with a white tenacious earth, resembling our pipe-clay (*fasciæ cretata*).¹⁹ The finer fasciæ, worn by ladies, were purple.²⁰ The bandages wound about the legs, as shown in the illuminations of ancient MSS., prove that the Roman usage was generally adopted in Europe during the Middle Ages.

By metaphor, the term "fascia" was applied in architecture to a long, flat band of stone, marble, or wood. Thus the architrave of an Ionic or Corinthian entablature consists of three contiguous horizontal fasciæ.²¹

On the use of fasciæ in the nursing of children,²² *vide INCUNABULA*.

FASCINUM (*βασκανία*), fascination, enchantment. The belief that some persons had the power of injuring others by their looks, was as prevalent among the Greeks and Romans as it is among the superstitious in modern times. The *ὀφθαλμὸς βάσκανος*, or evil eye, is frequently mentioned by ancient

writers.¹ Plutarch, in his Symposium,² has a separate chapter *περὶ τῶν καταθασκαίνειν λεγόμενων, καὶ βάσκανον ἔχειν ὀφθαλμόν*. The evil eye was supposed to injure children particularly, but sometimes cattle also; whence Virgil³ says,

"Nescio quis teneros oculus mihi fuscina agnos."

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the phallus, called by the Romans fascinus, which was hung round the necks of children (*turpicula res*).⁴ Pliny,⁵ also, says that *Satyria signa*, by which he means the phallus, were placed in gardens and on hearths as a protection against the fascinations of the envious; and we learn from Pollux⁶ that smiths were accustomed to place the same figures before their forges for the same purpose. Sometimes other objects were employed for this purpose. Pisiistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination.⁷

Another common mode of averting fascination was by spitting into the folds of one's own dress.⁸

According to Pliny,⁹ Fascinus was the name of a god, who was worshipped among the Roman sacra by the vestal virgins, and was placed under the chariot of those who triumphed as a protection against fascination; by which he means, in all probability, that the phallus was placed under the chariot.¹⁰

*FASCLUS, the Kidney Bean, *Phaseolus vulgaris*, L., called by the Greeks *φασίολος*. The kidney beans are said to have been very common among the Romans, and hence the epithet *vilis* applied to the *fascelus* by Virgil.¹¹ According to Pliny,¹² the Romans ate both seeds and shells, as we do now. Féé thinks that the Greek names *φασίολος*, *φασήολος*, and *φασίλος*, are so many diminutives from *φασήλος*, a small boat or canoe, the Kidney Bean resembling such in form.¹³

FASTI. *Fas* signifies *divine law*: the epithet *fastus* is properly applied to anything in accordance with divine law, and hence those days upon which legal business might, without impiety (*sine piaculo*), be transacted before the prætor, were technically denominated *fasti dies*, i. e., *lawful days*. Varro and Festus derive *fastus* directly from *fari*,¹⁴ while Ovid¹⁵ may be quoted in support of either etymology.

*The sacred books in which the *fasti dies* of the year were marked, were themselves denominated *fasti*; the term, however, was employed in an extended sense to denote registers of various descriptions, and many mistakes have arisen among commentators from confounding *fasti* of different kinds. It will be useful, therefore, to consider separately the two great divisions, which have been distinguished as *Fasti Sacri* or *Fasti Kalendares*, and *Fasti Annales* or *Fasti Historici*.

I. FASTI SACRI OR KALENDAIRES. For nearly four centuries and a half after the foundation of the city, a knowledge of the calendar was possessed exclusively by the priests. One of the pontifices regularly proclaimed the appearance of the new moon, and at the same time announced the period which would intervene between the Kalends and the Nones. On the Nones the country people assem-

bled for the purpose of learning from the Rex Sacrorum the various festivals to be celebrated during the month, and the days on which they would fall.¹ In like manner, all who wished to go to law were obliged to inquire of the privileged few on what day they might bring their suit, and received the reply as if from the lips of an astrologer.² The whole of this lore, so long a source of power and profit, and therefore jealously enveloped in mystery, was at length made public by a certain Cn. Flavius, scribe to Appius Cæcus,³ who, having gained access to the pontifical books, copied out all the requisite information, and exhibited it in the Forum for the use of the people at large. From this time forward such tables became common, and were known by the name of *Fasti*. They usually contained an enumeration of the months and days of the year; the Nones, Ides, Nundinæ, Dies Fasti, Nefasti, Comitiales, Atri, &c. (*vid. CALENDAR*), together with the different festivals, were marked in their proper places: astronomical observations on the risings and settings of the fixed stars, and the commencement of the seasons, were frequently inserted, and sometimes brief notices annexed regarding the introduction and signification of certain rites, the dedication of temples, glorious victories, and terrible disasters. In later times it became common to pay homage to the members of the imperial family by noting down their exploits and honours in the calendar, a species of flattery with which Antonius is charged by Cicero.⁴

It will be seen from the above description that these *fasti* closely resembled a modern almanac (*Fastorum libri appellantur totius anni descriptio*); and the celebrated work of Ovid may be considered as a poetical *Year-book* or *Companion to the Almanac*, having been composed to illustrate the *Fasti* published by Julius Cæsar, who remodelled the Roman year. All the more remarkable epochs are examined in succession, the origin of the different festivals explained, the various ceremonies described, the legends connected with the principal constellations narrated, and many curious discussions interwoven upon subjects likely to prove interesting to his countrymen; the whole being seasoned with frequent allusions to the glories of the Julian line.

Several specimens of *fasti*, more or less perfect, on stone and marble, have been discovered at different times in different places, none of them, however, older than the age of Augustus. The most remarkable, though one of the least entire, is that known as the *Kalendarium Prænestinum* or *Fasti Verriani*. Suetonius, in his short treatise on distinguished grammarians, tells us that a statue of Verrius Flaccus, preceptor to the grandsons of Augustus, stood in the lower part of the forum of his native town, Præneste, opposite to the *Hemicyclium*, on which he had exhibited to public view the *fasti* arranged by himself, and engraved on marble slabs. In the year 1770 the remains of a circular building were discovered in the immediate vicinity of the modern Palestrina, together with several fragments of marble tablets, which were soon recognised as forming part of an ancient calendar; and, upon farther examination, no doubt was entertained by the learned that these were the very *fasti* of Verrius described by Suetonius. An Italian antiquary, named Foggini, continued the excavations, collected and arranged the scattered morsels with great patience and skill; and in this manner the months of January, March, April, and December, to which a very small portion of February was afterward added,

1. (Aclephr., Ep., i., 15.—Heliad., Æthiop., iii., 7.—Compare with Ilin., II. N., vii., 2.)—2. (v., 7.)—3. (Eclog., iii., 103.)—4. (Varro, De Ling. Lat., vii., 97, Müller.)—5. (II. (Müller, Archæol. der Kunst, § 436, I., 2.—Böttiger, Klein. Schr., iii., p. 111.—Becker, Charikles, ii., p. 109, 291.)—11. (Georg., i., 227.)—12. (H. N., xviii., 7.)—13. (Flare de Virgile, p. Iv.)—14. (Varro, De Ling. Lat., vi., 2.—Festus, s. v. *Fasti*.)—15. (Fast., i., 47.)

1. (Macrobi., i., 15.)—2. (Cic., Pro Muren., 11.)—3. (Liv., ix., 46.—Plin., H. N., xxxiii., 1.—Aul. Gell., vi., 9.—Vsl. Max., ii., 5.)—4. (Philipp., ii., 34.—Compare Tacit., Ann., i., 15.)—5. (Festus.)

were recovered; and, although much defaced and mutilated, form a very curious and useful monument. They appear to have embraced much information concerning the festivals, and a careful detail of the honours bestowed upon, and the triumphs achieved by, Julius, Augustus, and Tiberius. The publication of Foggini contains not only an account of this particular discovery, but also the complete *fasti* of the Roman year, so far as such a compilation can be extracted from the ancient calendars now extant. Of these he enumerates eleven, the names being derived either from the places where they were found, or from the family who possessed them when they first became known to the literary world:

1. *Calendarium Maffieorum*, which contains the twelve months complete.
2. *Cal. Prænestinum*, described above.
3. *Cal. Capranicorum*, August and September complete.
4. *Cal. Amiterninum*, fragments of the months from May to December.
5. *Cal. Antiatinum*, fragments of the last six months.
6. *Cal. Esquilinum*, fragments of May and June.
7. *Cal. Farnesianum*, a few days of February and March.
8. *Cal. Pincianum*, fragments of July, August, and September.
9. *Cal. Venusinum*, May and June complete.
10. *Cal. Vaticanum*, a few days of March and April.
11. *Cal. Alifanum*, a few days of July and August.

Some of the above, with others of more recent date, are given in the *Corpus Inscriptionum* of Gruter, in the 11th vol. of the *Thesaurus Rom. Antiq.* of Grævius, and in other works of a similar description; but the fullest information upon all matters connected with the *Fasti Sacri* is embodied in the work of Foggini, entitled *Fastorum anni Romani a Verrio Flacco ordinatorum reliquæ*, &c., Romæ, 1779; and in *Jac. Van Vaassen Animadverss. ad Fastos Rom. Sacros fragmenta*, Traj. ad Rhen., 1795: to which add Ideler's *Handbuch der Mathematischen und Technischen Chronologie*, Berlin, 1826.

Before quitting this part of our subject, we may make mention of a curious relic, the antiquity of which has been called in question without good cause, the *Calendarium Rusticum Farnesianum*. This Rural Almanac is cut upon four sides of a cube, each face being divided into three columns, and each column including a month. At the top of the column is carved the appropriate sign of the zodiac; then follows the name of the month, the number of the days, the position of the nones, the length of the day and night, the name of the sign through which the sun passes, the god under whose protection the month was placed, the various agricultural operations to be performed, and a list of the principal festivals. Take May as an example:

MENSIS

(*Vid.* the commentary of Morcelli in his *Opera Epigraphica*, vol. i., 77.)

II. *FASTI ANNALES* OR *HISTORICI*. Chronicles such as the *Annales Maximi* (*vid.* *ANNALES*), containing the names of the chief magistrates for each year, and a short account of the most remarkable events noted down opposite to the days on which they occurred, were, from the resemblance which they bore in arrangement to the sacred calendars, denominated *fasti*; and hence this word is used, especially by the poets, in the general sense of *historical records*.¹

In prose writers, *fasti* is commonly employed as the technical term for the registers of consuls, dictators, censors, and other magistrates, which formed part of the public archives.² Again, when Cicero remarks, in the famous epistle to Lucceius,³ "*Etenim ordo ille annalium mediocriter nos retinet quasi enumeratione fastorum*," he means that the regular succession of events merely detailed in chronicles fixed the attention but feebly, and was little more interesting than a mere catalogue of names.⁴

A most important specimen of *fasti* belonging to this class, executed probably at the beginning of the reign of Tiberius, has been partially preserved. In the year 1547, several fragments of marble tablets were discovered in excavating the Roman Forum, and were found to contain a list of consuls, dictators with their masters of horse, censors with the lustra which they closed, triumphs and ova tions, all arranged in regular succession according to the years of the Catonian era. These had evidently extended from the expulsion of the kings to the death of Augustus, and, although defective in many places, have proved of the greatest value in chronology. The different pieces were collected and arranged under the inspection of Cardinal Alexander Farnese, and deposited in the Capitol, where they still remain. From this circumstance they are generally distinguished as the *Fasti Capitolini*. In the years 1817 and 1818, two other fragments of the same marble tablets were discovered in the course of a new excavation in the Forum. A facsimile of them was published at Milan, by Borghesi, in 1818.

The *Fasti Consulares* are given at the close of this work.

FASTIGIUM. An ancient Greek or Roman temple, of rectangular construction, is terminated at its upper extremity by a triangular figure, both in front and rear, which rests upon the cornice of the entablature as a base, and has its sides formed by the cornices which terminate the roof. (*Vid.* woodcut, p. 61.) The whole of this triangle above the trabeation is implied in the term *fastigium*, called frontispiece (*fronton*, *frontispizio*) by French and Italian architects, but pediment by our own. The flat surface within the frame, when distinguished from the general term, is denominated *tympaanum* by the Latins,⁵ from its resemblance to the skin in the frame of a drum, and *ἀέτωμα*, or *ἀετός*, by the Greeks,⁶ either because its figure resembles that of an eagle with outstretched wings,⁷ or because the tympanum of the earliest temples, which were dedicated to Jupiter, was usually ornamented by an eagle in relief,⁸ an instance of which is afforded by the coin represented in the following woodcut.⁹

1. (Horat., Sat., I., iii., 112.—Carm., IV., xiii., 13; III., xvii., 7.)
—2. (Liv., ix., 18.—Cic., Pro Sext., 14.—Compare Cic., Philipp., xiii., 12.—Tacit., Ann., iii., 17, 18.)—3. (ad Fam., v., 12.)—4. (Compare ad Att., iv., 8.)—5. (Vitruv., iii., 3, p. 99, ed. Bipont.)
—6. (Aristoph., Aves, 1110.—Paus., i., 24, § 5; ii., 7, § 3; v. 10, § 2; ix., 11, § 4.)—7. (Eustath. ad II., 24, p. 1352, l. 37.)
—8. (Pind., Olymp., xiii., 29.)—9. (Beger, Spicil. Antiq., p. 6.)

But far richer sculptures from the chisel of the most eminent artists¹ were subsequently introduced, the effect of which may be seen in the restored pediment of the Temple of Jupiter Panhellenius in the British Museum: the fragments of the Elgin marbles, in the same place, were originally placed in the ἀέτωμα, or ἐν τοῖς ἀέτωσιν of the Parthenon. Terra-cotta figures were applied in a similar manner by the Romans in the early ages.²

The dwelling-houses of the Romans had no gable-ends; consequently, when the word is applied to them,³ it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to an apex as distinguished from a flat one. The fastigium, properly so called, was appropriated to the temples of the gods, from the original construction of which its form naturally sprung;⁴ and, therefore, when the Romans began to bestow divine honours upon Cæsar, among other privileges which they decreed to him was the liberty of erecting a fastigium to his house,⁵ that is, a portico and pediment towards the street, like that of a temple. In like manner, the pent of a pavement, which slopes away on each side from its central line, so as to allow of the water draining off in hypæthral buildings, &c., is termed *fastigium*,⁶ and the piles of the bridge which Cæsar threw across the Rhine are described as *fastigata*,⁷ converging like the two sides of a pediment.

FAX (φάωξ), a Torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Bellona, Hymen (woodcut, p. 209), Phosphorus, by females in Bacchanalian processions (p. 257), and, in an inverted position, by Sleep and Death. In the annexed woodcut, the female figure in the middle is copied from a fictile vase. The winged figure on the left

hand, asleep and leaning on a torch, is from a funeral monument at Rome: the word "Somnus" is inscribed beside it. The other winged figure, also with the torch inverted, is taken from an antique gem, and represents Cupid under the character

1. (Paus., II. cc.)—2. (Cic., Divin., i., 10.—Vitruv., iii., 2, p. 89.—Plin., H. N., xxxv., 43, 46; xxxvi., 2.)—3. (Cic., Ep. de Orat., iii., 4.—Virg., Æn., viii., 491.)—4. (Cic., De Orat., iii., 46.)—5. (Cic., Phil., ii., 43.—Florus, iv., 2.—Plut., Cæ., 81, compared with ACROTIERIUM.)—6. (Vitruv., v., 9, p. 151.)—7. (Cæ., Bell. Gall., iv., 15.)

of Ἀνσώπυς,¹ or "Lethæus Amor." In ancient marbles, the torch is sometimes more ornamented than in the examples now produced; but it always appears to be formed of wooden staves or twigs, either bound by a rope drawn round them in a spiral form, as in the above middle figure, or surrounded by circular bands at equal distances, as in the two exterior figures, and in the woodcut at p. 257. The inside of the torch may be supposed to have been filled with flax, tow, or other vegetable fibres, the whole being abundantly impregnated with pitch, rosin, wax, oil, and other inflammable substances. This inference from the representations of torches on ancient monuments of all kinds is confirmed by the testimony of Athenæus² and Pliny,³ who mention that the branches of the oak, ilex, hazel, and hornbeam were chiefly used for making them by being cut into staves of the requisite forms. They were also made of the branches of the vine,⁴ which are exceedingly vascular, and certainly well adapted for imbibing and retaining fluids. A torch of vine was called *λοφύλις*. Another admirable plant for making torches was the Spanish broom,⁵ the long twigs of which resemble rushes, and are full of pith.

As the principal use of torches was to give light to those who went abroad after sunset, they were apt to be extinguished and rendered useless by a shower of rain. Hence the expression, "This torch is full of water."⁶ In allusion to the time when they were used, the portion of the Roman day immediately succeeding sunset was called *fax* or *prima fax*.⁷

Torches, as now described, appear to have been more common among the Romans than the Greeks, who usually employed the more ancient and more simple Τάρνα, or the lamp. (Vid. LUCERNA.) The use of torches after sunset, and the practice of celebrating marriages at that time, probably led to the consideration of the torch as one of the necessary accompaniments and symbols of marriage. Among the Romans, the *fax nuptialis*,⁸ having been lighted at the parental hearth, was carried before the bride by a boy whose parents were alive.⁹ The torch was also carried at funerals (*fax sepulchralis*),¹⁰ both because these were often nocturnal ceremonies, and because it was used to set fire to the pile. Hence the expression of Propertius,¹¹ "*Virinus insignis inter utramque facem*."¹² The torch-bearer turned away his face from the pile in setting it on fire.¹⁴

FEBRUARIUS. (Vid. CALENDAR, ROMAN.)

FECIALES. (Vid. FETIALES.)

*FELIS, the Cat. The αἰλουρος of the Greeks is the *Felis* Cat., L., or Wild Cat. Some apply the term *κάττις* to the Domestic Cat. "The common Cat," observes Griffith, "is said to be originally from the forests of Europe. In the savage state it is of a brown-gray colour, with transverse deeper stripes; the tail has two or three dark bands, and the extremity is black. The genuine Wild Cat is to be found in the remote parts of Great Britain, and may be called, as Mr. Pennant remarks, the English Tiger. Its manners are similar to those of the Lynx, living in woods, and preying during the night on every animal it can conquer."

*FEL TERRÆ, a name given to the herb *Centaureum Chironia* (Κενταύριον τὸ μικρὸν καὶ λυμναῖον).

(Menander, ed. Mein., p. 24.)—8. (Aul. Gell., iii., 2.—Macrobius, Sat., i., 2.)—9. (Cic., Pro Cluent., 6.)—10. (Plaut., Cas., i., 30.—Ovid, Epist., xi., 101.—Servius in Virg., Eclog., viii., 29.—Plin., H. N., xvi., 18.—Festus, s. v. Patrima.)—11. (Ovid, Epist., iii., 120.)—12. (iv., 12, 46.)—13. (Vid. also Ovid, Epist., xxi., 172.—Fast., ii., 561.—Virg., Æn., xi., 143.—Servius, ad loc.—Tacit., Ann., iii., 4.—Sen., Epist., 123.—Id., de Brev. Vit., 20.)—14. (Virg., Æn., vi., 224.)

on account of its bitterness, "*propter amaritudinem summam.*"

FEMINA'LIA were worn in winter by Augustus Caesar, who was very susceptible of cold.¹ Casaubon supposes them to have been bandages or fillets (*vid. Fascia*) wound about the thighs; it seems more probable that they were breeches resembling ours, since garments for the thighs (*περιμήρια*) were worn by the Roman horsemen;² and the column of Trajan, the arch of Constantine, and other monuments of the same period, present numerous examples of both horse and foot soldiers who wear breeches, closely fitted to the body, and never reaching much below the knees. (See woodcuts, p. 11, 78, 95.)

FENESTRA. (*vid. House.*)

FENUS. (*vid. Interest of Money.*)

FERA'LIA. (*vid. Funus.*)

FERCULUM (from *fer-o*) is applied to any kind of tray or platform used for carrying anything. Thus it is used to signify the tray or frame on which several dishes were brought in at once at dinner;³ and hence *fercula* came to mean the number of courses at dinner, and even the dishes themselves.⁴

The ferculum was also used for carrying the images of the gods in the procession of the circus⁵ (*vid. Circus*, p. 256), the ashes of the dead in a funeral,⁶ and the spoils in a triumph;⁷ in all which cases it appears to have been carried on the shoulders or in the hands of men. The most illustrious captives were sometimes placed on a ferculum in a triumph, in order that they might be better seen.⁸

FERETRUM. (*vid. Funus.*)

FERIÆ, holydays, were, generally speaking, days or seasons during which freeborn Romans suspended their political transactions and their lawsuits, and during which slaves enjoyed a cessation from labour.⁹ All feriæ were thus dies nefasti. The feriæ included all days consecrated to any deity; consequently, all days on which public festivals were celebrated were feriæ or dies feriati. But some of them, such as the feria vindemialis, and the feriæ æstivæ, seem to have had no direct connexion with the worship of the gods. The nundinæ, however, during the time of the kings and the early period of the Republic, were feriæ only for the populus, and days of business for the plebeians, until, by the Hortensian law, they became fasti, or days of business for both orders.¹⁰

All feriæ were divided into two classes, *feriæ publica* and *feriæ privata*. The latter were only observed by single families or individuals, in commemoration of some particular event which had been of importance to them or their ancestors. As family feriæ, are mentioned the *feriæ Claudia*, *Æmilia*, *Julia*, *Cornelia*, &c., and we must suppose that all the great Roman families had their particular feriæ, as they had their private sacra. Among the family-holydays we may also mention the *feriæ denicales*, i. e., the day on which a family, after having lost one of its members by death, underwent a purification.¹¹ Individuals kept feriæ on their birthdays, and other occasions which marked any memorable event of their lives. During the time of the Empire, the birthday of an emperor sometimes assumed the character of a feria publica, and was celebrated by the whole nation with games and sacrifices. Thus the birthday of Augustus, called Augustalia, was celebrated with great splendour even in the time of

Dion Cassius.¹ The day on which Augustus had returned from his wars was likewise for a long time made a holiday of.² The dies natalicii of the cities of Rome and Constantinople were at a still later period likewise reckoned among the feriæ.³

All *feriæ publica*, i. e., those which were observed by the whole nation, were divided into *feriæ stativæ*, *feriæ conceptivæ*, and *feriæ imperativæ*. *Feriæ stativæ* or *statæ* were those which were held regularly, and on certain days marked in the calendar.⁴ To these belonged some of the great festivals, such as the Agonalia, Carmentalia, Inpercalia, &c. *Feriæ conceptivæ* or *conceptæ* were held every year, but not on certain or fixed days, the time being every year appointed by the magistrates or priests (*quotannis a magistratibus vel sacerdotibus concipiuntur*).⁵ Among these we may mention the feriæ Latinæ, feriæ Sementivæ, Paganalia, and Compitalia. *Feriæ imperativæ* are those which were held on certain emergencies at the command of the consuls, prætors, or of a dictator. The books of Livy record many feriæ imperativæ, which were chiefly held in order to avert the dangers which some extraordinary prodigy seemed to forbid, but also after great victories.⁶ They frequently lasted for several days, the number of which depended upon the importance of the event which was the cause of their celebration. But whenever a rain of stones was believed to have happened, the anger of the gods was appeased by a *sacrum novemdiale*, or *feriæ per novem dies*. This number of days had been fixed at the time when this prodigy had first been observed.⁷ Respecting the legitimate forms in which the feriæ conceptivæ and imperativæ were announced and appointed, see Brisson., *De Form.*, p. 107, &c.

The manner in which all public feriæ were kept bears great analogy to our Sunday. The people generally visited the temples of the gods, and offered up their prayers and sacrifices. The most serious and solemn seem to have been the feriæ imperativæ, but all the others were generally attended by rejoicings and feasting.⁸ All kinds of business, especially lawsuits, were suspended during the public feriæ, as they were considered to pollute the sacred season: the rex sacrorum and the flamines were not even allowed to behold any work being done during the feriæ; hence, when they went out, they were preceded by their heralds (*præcia*, *præclamitatores*, or *calatores*), who enjoined the people to abstain from working, that the sanctity of the day might not be polluted by the priests seeing persons at work.⁹ Those who neglected this admonition were not only liable to a fine, but, in case their disobedience was intentional, their crime was considered to be beyond the power of any atonement; whereas those who had unconsciously continued their work might atone for their transgression by offering a pig. It seems that doubts as to what kinds of work might be done at public feriæ were not unfrequent, and we possess some curious and interesting decisions given by Roman pontiffs on this subject. One Umbro declared it to be no violation of the feriæ if a person did such work as had reference to the gods, or was connected with the offering of sacrifices; all work, he moreover declared, was allowed which was necessary to support the urgent wants of human life. The pontiff Scævola, when asked what kind of work might be done on a dies feriatus, answered that any work might be done if

any sufferiſg or injury ſhould be the reſult of neglect or delay, *e. g.*, if an ox ſhould fall into a pit, the owner might employ workmen to lift it out; or if a houſe threatened to fall down, the inhabitants might take ſuch meaſures as would prevent its falling, without polluting the feriæ.¹ Reſpecting the various kinds of legal affairs which might be brought before the prætor on days of public feriæ, *vid.* Digest. 2, tit. 12, s. 2.

It ſeems to have been owing to the immense increaſe of the Roman Republic, and of the accumulation of buſineſs ariſing therefrom, that ſome of the feriæ, ſuch as the Compitalia and Luperalia, in the courſe of time ceaſed to be obſerved, until they were reſtored by Auguſtus, who revived many of the ancient religious rites and ceremonies.² Marcus Antoninus again increaſed the number of days of buſineſs (*dies faſti*) to 230, and the remaining days were feriæ.³ After the introduction of Chriſtianity in the Roman Empire, the old feriæ were aboliſhed, and the Sabbath, together with the Chriſtian feſtivals, were ſubſtituted; but the manner in which they were kept was nearly the ſame as that in which the feriæ had been obſerved. Lawsuits were accordingly illegal on Sundays and holydays, though a maſter might emancipate his ſlave if he liked.⁴ All work, and all political as well as juridical proceedings, were ſuſpended; but the country people were allowed freely and unreſtrainedly to apply themſelves to their agricultural labours, which ſeem at all times to have been diſtinguiſhed from, and thought ſuperior to, all other kinds of work: for, as mentioned below, certain feriæ were inſtituted merely for the purpoſe of enabling the country people to follow their rural occupations without being interrupted by lawsuits and other public tranſactions.

After this general view of the Roman feriæ, we ſhall proceed to give a ſhort account of thoſe feſtivals and holydays which were designated by the name of feriæ.

Ferîæ Latînæ, or ſimply *Latînæ* (the original name was *Latîar*), had, according to the Roman legends, been inſtituted by the laſt Tarquin in commemoration of the alliance between the Romans and Latins.⁶ But Niebuhr⁷ has ſhown that the feſtival, which was originally a panegyris of the Latins, is of much higher antiquity; for we find it ſtated that the towns of the Priſcans and Latins received their ſhares of the ſacrifice on the Alban Mount—which was the place of its celebration—along with the Albans and the thirty towns of the Alban commonwealth. All that the laſt Tarquin did was to convert the original Latin feſtival into a Roman one, and to make it the means of hallowing and cementing the alliance between the two nations. Before the union, the chief magiſtrate of the Latins had preſided at the feſtival; but Tarquin now aſſumed this diſtinction, which ſubſequentlly, after the deſtruction of the Latin commonwealth, remained with the chief magiſtrates of Rome.⁸ The object of this panegyris on the Alban Mount was the worſhip of Jupiter Latîaris, and, at leaſt as long as the Latin republic exiſted, to deliberate and decide on matters of the confederacy, and to ſettle any diſputes which might have ariſen among its members. As the feriæ Latînæ belonged to the conceptivæ, the time of their celebration greatly depended on the ſtate of affairs at Rome, as the conſuls were never allowed to take the field until they had held the Latînæ.⁹

This feſtival was a great engine in the hands of the magiſtrates, who had to appoint the time of its celebration (*conſcipere, edicere, or indicere Latînas*); as it might often ſuit their purpoſe either to hold the feſtival at a particular time or to delay it, in order to prevent or delay ſuch public proceedings as ſeemed injurious and pernicious, and to promote others to which they were favourably diſpoſed. This feature, however, the feriæ Latînæ had in common with all other feriæ conceptivæ. Whenever any of the forms or ceremonies cuſtomary at the Latînæ had been neglected, the conſuls had the right to propoſe to the ſenate, or the college of pontiffs, that their celebration ſhould be repeated (*inſtaurari*).¹ Reſpecting the duration of the feriæ Latînæ, the common opinion formerly was, that at firſt they only laſted for one day, to which ſubſequentlly a ſecond, a third, and a fourth were added;² but it is clear that this ſuppoſition was founded on a confuſion of the feriæ Latînæ with the Ludi Maximi, and that they laſted for ſix days, one for each decury of the Alban and Latin towns.³ The feſtive ſeaſon was attended by a ſacred truce, and no battle was allowed to be given during thoſe days.⁴ In early times, during the alliance of the Romans and Latins, the chief magiſtrates of both nations met on the Alban Mount and conducted the ſolemnities, at which the Romans, however, had the preſidency. But afterward the Romans alone conducted the celebration, and offered the common ſacrifice of an ox to Jupiter Latîaris, in the name and on behalf of all who took part in it. The fleſh of the victim was diſtributed among the ſeveral towns whoſe common ſanctuary ſtood on the Alban Mount.⁵ Beſides the common ſacrifice of an ox, the ſeveral towns offered each ſeparately lambs, cheeſes, or a certain quantity of milk⁶ or cakes. Multitudes flockeſt to the Alban Mount on the occaſion, and the ſeaſon was one of great rejoicings and feaſting. Various kinds of games were not wanting, among which may be mentioned the *oscillatio* (ſwinging). It was a ſymbolic game, and the legend reſpecting its origin ſhows that it was derived from the Latins. Pliny^a mentions that during the Latin holydays a race of four-horſe chariots (*quadrigæ certant*) took place in the Capitol, in which the victor received a draught of abyſynthum.

Although the Roman conſuls were always preſent on the Alban Mount, and conducted the ſolemn ſacrifice of an ox, yet we read that the ſuperintendence of the Latînæ, like that of other feſtivals, was given by the ſenate to the ædiles, who, therefore, probably conducted the minor ſacrifices, the various games, and other ſolemnities.⁹ While the conſuls were engaged on the Alban Mount, their place at Rome was filled by the præfectus urbi. (*Vid. PRÆFECTUS URBI*.)

The two days following the celebration of the Latin holydays were conſidered as *dies religioſi*, ſo that no marriages could be contracted.¹⁰ From Dion Caſſius we ſee that in his times the feriæ Latînæ were ſtill ſtrictly obſerved by the Romans, whereas the Latin towns had, at the time of Cicero, almoſt entirely given up taking any part in them. The Romans ſeem to have continued to keep them down to the fourth century of our æra.¹¹

Ferîæ Sementivæ, or *Sementina dies*, was kept in ſeaſon for the purpoſe of praying for a good

1. (Macrob. l. c., and *inj.*, 3.—Virg., *Georg.*, i., 270, with the remarks of J. H. Voſſ.—Cato, *De Roſt.*, 2.—Columella, ii., 22.—Compare Matth., xii., 11.—Luke, xiv., 5.)—2. erop; it lasted only for one day, which was fixed by the pontiffs.¹

Feria vindemialis lasted from the 22d of August to the 15th of October, and was instituted for the purpose of enabling the country people to get in the fruits of the field and to hold the vintage.²

Feria æstivæ were holidays kept during the hottest season of summer, when many of the wealthier Romans left the city and went into the country. They seem to have been the same as the *messis feria*,⁴ and lasted from the 24th of June till the 1st of August.

Feria prædianæ are said to have been preparatory days, or such as preceded the ordinary *feriæ*; although they did not belong to the *feriæ*, and often even were *dies utri*, they were on certain occasions inaugurated by the chief pontiff, and thus made *feriæ*.⁶

*FERULA, the ferula or fennel-giant, *Ferula communis*, L. Martyn⁶ describes it as "a large plant, growing to the height of six or eight feet, with leaves cut into small segments, like those of fennel, but larger. The stalk is thick, and full of a fungous pith, whence it is used by old and weak persons to support them, on account of its lightness." The pith was used by the ancients as a kind of tinder, and is said to be still employed for that purpose in Sicily.⁷ According to the old classical legend, Prometheus, when he stole the fire from the skies, brought it to earth in the hollow of a *ferula*, or, as the Greeks termed it, *ῥάβδος*. The flowers of this plant are yellow, and grow in large umbels, like those of fennel. Féé⁸ thinks that the *ferula* of Virgil ought rather to be identified with the *Ferula Orientalis* of Tournefort, which that traveller met with very frequently in Greece. The people of Cyprus, at the present day, call the *ῥάβδος* by the name of *ἀνάρθηκας*. Sibthorp says it is very abundant in this island. The Latin term *ferula* is derived, according to etymologists, from *ferire*, "to strike," because scholars were anciently corrected with the *ferula* by their teachers. From the lightness of the stalk, the infliction must have been more alarming than painful. The ferule of the modern preceptor resembles the classical *ferula* only in name, being capable of giving much greater pain. A willow-stick or branch would bear a much nearer resemblance to the ancient instrument of punishment.⁹ Martial¹⁰ alludes to the custom of employing the *ferula* for correction in the following lines:

"Ferulaque tristes, sceptræ pædagogorum
Cessent;"

and Juvenal¹¹ also says,

"Et nos ergo manum ferulæ subduzimus."

*FERULAGO (*ῥαβδόκιον*), a smaller species of *ferula*.¹²

FESCENNINA, *scil.* carmina, one of the earliest kinds of Italian poetry, which consisted of rude and jocose verses, or, rather, dialogues of extempore verses,¹³ in which the merry country folks assailed and ridiculed one another.¹⁴ This amusement seems originally to have been peculiar to country people, but it was also introduced into the towns of Italy and at Rome, where we find it mentioned as one of those in which young people indulged at weddings.¹⁵ The fescennina were one of the popular amusements at various festivals, and on many

other occasions, but especially after the harvest was over. After their introduction into the towns, they seem to have lost much of their original rustic character, and to have been modified by the influence of Greek refinement;¹ they remained, however, in so far the same, as they were at all times irregular, and mostly extempore doggerel verses. Sometimes, however, versus fescennini were also written as satires upon persons.² That these rallies had no malicious character, and were not intended to hurt or injure, may be inferred from the circumstance that one person often called upon another to answer and retort in a similar strain. The fescennina are generally believed to have been introduced among the Romans from Etruria, and to have derived their name from Fescennia, a town of that country. But, in the first place, Fescennia was not an Etruscan, but a Faliscan town;³ and, in the second, this kind of amusement has at all times been, and is still, so popular in Italy, that it can scarcely be considered as peculiar to any particular place. The derivation of a name of this kind from that of some particular place was formerly a favourite custom, as may be seen in the derivation of *cærimonia* from *Cære*. Festus⁴ endeavours to solve the question by supposing fescennina to be derived from *fascinum*, either because they were thought to be a protection against sorcerers and witches, or because *fascinum* (*phallus*), the symbol of fertility, had in early times, or in rural districts, been connected with the amusements of the fescennina. But, whatever may be thought of this etymology, it is of importance not to be misled by the common opinion that the fescennina were of Etruscan origin.

FESTUCA. (*Vid.* SERVUS.)

FETIALES, a college⁶ of Roman priests, who acted as the guardians of the public faith. It was their province, when any dispute arose with a foreign state, to demand satisfaction, to determine the circumstances under which hostilities might be commenced, to perform the various religious rites attendant on the solemn declaration of war, and to preside at the formal ratification of peace. These functions are briefly but comprehensively defined by Varro: "*Fetiales . . . fidei publicæ inter populos præerant: nam per hos fiebat ut justum conciperetur bellum et inde desitum, ut federe fides pacis constitueretur. Ex his mittebantur, antequam conciperetur, qui res repeterent, et per hos etiam nunc fit fœdus*," to which we may add the old law quoted by Cicero,⁷ "FÆDERUM, PACIS, BELLII, INDUCIARUM ORATORES FETIALES JUDICESQUE SUNTO; BELLA DISCEPTANTO." Dionysius⁸ and Livy⁹ detail at considerable length the ceremonies observed by the Romans in the earlier ages, when they felt themselves aggrieved by a neighbouring people. It appears that, when an injury had been sustained, four *fetiales*¹⁰ were deputed to seek redress, who again elected one of their number to act as their representative. This individual was styled the *pater patratus populi Romani*. A fillet of white wool was bound round his head, together with a wreath of sacred herbs gathered within the enclosure of the Capitoline Hill (*vid.* VERBENÆ, SAGMINA), whence he was sometimes named *Verbenarius*.¹¹ Thus equipped, he proceeded to the confines of the offending tribe, where he halted and addressed a prayer to Jupiter, calling the god to witness, with heavy imprecations, that his complaints were well-founded and his demands reasonable. He then crossed the border, and the same form was repeated in nearly the same words to the first native of the soil whom he might chance to

meet, again a third time to the sentinel or any citizen whom he encountered at the gate of the chief town; and a fourth time to the magistrates in the Forum in presence of the people. If a satisfactory answer was not returned within thirty days, after publicly delivering a solemn denunciation—in which the gods celestial, terrestrial, and infernal were invoked—of what might be expected to follow, he returned to Rome, and, accompanied by the rest of the fetiales, made a report of his mission to the senate. If the people,¹ as well as the senate, decided for war, the pater patratus again set forth to the border of the hostile territory, and launched a spear tipped with iron, or charred at the extremity and smeared with blood (emblematic, doubtless, of fire and slaughter) across the boundary, pronouncing, at the same time, a solemn declaration of war. The demand for redress and the proclamation of hostilities were alike termed *clarigatio*, which word the Romans in later times explained by *clare repetere*;² but Götting³ and other modern writers connect it with the Doric form of *κῆρυξ* and *κηρύκειον*.

Several of the formulæ employed on these occasions have been preserved by Livy⁴ and Aulus Gellius,⁵ forming a portion of the *Jus Fetiale* by which the college was regulated. The services of the fetiales were considered absolutely essential in concluding a treaty,⁶ and we read that, at the termination of the second Punic war, fetiales were sent over to Africa, who carried with them their own verbenæ and their own flint-stones for smiting the victim. Here also the chief was termed *pater patratus*.⁷

The institution of these priests was ascribed by tradition, in common with other matters connected with religion, to Numa,⁸ and although Livy⁹ speaks as if he attributed their introduction to Ancus Marcius, yet in an earlier chapter¹⁰ he supposes them to have existed in the reign of Hostilius. The whole system is said to have been borrowed from the Æquicolæ or the Ardeates,¹¹ and similar usages undoubtedly prevailed among the Latin states; for it is clear that a formula, preserved by Livy,¹² must have been employed when the pater patratus of the Romans was put in communication with the pater patratus of the Prisci Latini.

The number of the fetiales cannot be ascertained with certainty, but some have inferred, from a passage quoted from Varro by Nonius,¹³ that it amounted to twenty, of whom Niebuhr supposes ten were elected from the Ramnes and ten from the Titien-ses; but Götting¹⁴ thinks it more probable that they were at first all chosen from the Ramnes, as the Sabines were originally unacquainted with the use of fetiales. They were originally selected from the most noble families; their office lasted for life;¹⁵ and it seems probable that vacancies were filled up by the college (*co-optatione*) until the passing of the lex Domitia, when, in common with most other priests, they would be nominated in the comitia tributa. This, however, is nowhere expressly stated.

The etymology of *fetialis* is uncertain. Varro would connect it with *fidus* and *fœdus*; Festus with *ferio* or *facio*; while some modern scholars suppose it to be allied to *φημί*, and thus *φητιάλεις* would be *oratores*, *speakers*. In inscriptions we find both *fetialis* and *facialis*; but since, in Greek MSS., the word always appears under some one of the forms *φητιάλεις*, *φειτιάλεις*, *φαιτιάλεις*, the orthography we have adopted in this article is probably correct.

The explanation given by Livy¹⁶ of the origin of

the term *Pater Patratus* is satisfactory: "*Pater Patratus ad jusjurandum patrandum, id est, sanciendum fit fœdus*;" and we may at once reject the speculations of Servius¹ and Plutarch,² the former of whom supposes that he was so called because it was necessary that his father should be alive, the latter that the name indicated that his father was living, and that he himself was the father of children.

FIBULA (περόνη, περονίς, περονητρίς: τὸ ῥήγι, ἐπὶ πορπί: ἐνερῆ), a Brooch, consisting of a pin (*acus*) and of a curved portion furnished with a hook (*καλὴς*). The curved portion was sometimes a circular ring or disc, the pin passing across its centre (woodcut, figs. 1, 2), and sometimes an arc, the pin being as the chord of the arc (fig. 3). The forms of brooches, which were commonly of gold or bronze, and more rarely of silver,⁴ were, however, as various in ancient as in modern times; for the fibula served in dress, not merely as a fastening, but also as an ornament.⁵

Women wore the fibula both with the *Amictus* and the *indulus*; men wore it with the *amictus* only. Its most frequent use was to pin together two parts of the scarf (*vid. CHLAMYs*), shawl, or blanket, which constituted the *amictus*, so as to fasten it over the right shoulder.⁶ (Woodcuts, p. 11, 15, 78, 171, 227, 235, 244, 291.) More rarely we see it over the breast. (Woodcuts, p. 47, 186, 235.) The epithet *ἐτερόπορος* was applied to a person wearing the fibula on one shoulder only;⁷ for women often wore it on both shoulders. (Woodcuts, p. 96, 218, 257.) In consequence of the habit of putting on the *amictus* with the aid of a fibula, it was called *περόνημα* or *ἐμπερόνημα*,⁸ *πόρπημα*,⁹ or *ἀμπερόνη περονητρίς*.¹⁰ The splendid shawl of Ulysses, described in the *Odyssey*,¹¹ was provided with two small pipes for admitting the pin of the golden brooch; this contrivance would secure the cloth from being torn. The highest degree of ornament was bestowed upon brooches after the fall of the Western Empire. Justin II.,¹² and many of the emperors who preceded him, as we perceive from the portraits on their medals, wore upon their right shoulders fibulae, from which jewels, attached by three small chains, depended.¹³

It has been already stated that women often wore the fibula on both shoulders. In addition to this, a lady sometimes displayed an elegant row of brooches down each arm upon the sleeves of her tunic,¹⁴ examples of which are seen in many ancient statues. It was also fashionable to wear them on the breast;¹⁵ and another occasional distinction of female attire, in later times, was the use of the fibula in tucking up the tunic above the knee.

Not only might slight accidents to the person arise from wearing brooches,¹⁶ but they were some-

times used, especially by females, to inflict serious injuries. The pin of the fibula is the instrument which the Phrygian women employ to deprive Polymnestor of his sight, by piercing his pupils,¹ and with which the Athenian women, having first blinded a man, then despatch him.² Œdipus strikes the pupils of his own eyeballs with a brooch: taken from the dress of Jocasta.³ For the same reason, *περονίω* meant to pierce as with a fibula (*περόνησε*, "pinned him").

Very large brooches are sometimes discovered, evidently intended to hold up curtains or tapestry. (Vid. *TAPES*, *VELUM*.)

Brooches were succeeded by buckles, especially among the Romans, who called them by the same name. The preceding woodcut shows on the right hand the forms of four bronze buckles from the collection in the British Museum. This article of dress was chiefly used to fasten the belt (*vid. BALTEUS*) and the girdle (*vid. ZONA*).⁴ It appears to have been, in general, much more richly ornamented than the brooch; for, although Hadrian was simple and unexpensive in this as well as in other matters of costume,⁵ yet many of his successors were exceedingly prone to display buckles set with jewels (*fibula gemmata*).

The terms which have now been illustrated as applied to articles of dress, were also used to denote pins variously introduced in carpentry; *e. g.*, the linchpins of a chariot;⁷ the wooden pins inserted through the sides of a boat, to which the sailors fasten their lines or ropes;⁸ the trenails which unite the posts and planks of a wooden bridge;⁹ and the pins fixed into the top of a wooden triangle, used as a mechanical engine.¹⁰

The practice of infibulating singers, alluded to by Juvenal and Martial, is described in Rhodius (*De Aëia*) and Pitiscus.

FICTILE (*κεράμος*, *κεράμιον*, *δσρακον*, *δστράκιον*), earthenware, a vessel or other article made of baked clay.

The instruments used in pottery (*ars figulina*) were the following: 1. The wheel (*τροχός*, *orbis*, *rota*, "rota figularis"¹¹), which is mentioned by Homer,¹² and is among the most ancient of all human inventions. According to the representations of it on the walls of Egyptian tombs,¹³ it was a circular table, placed on a cylindrical pedestal, and turning freely on a point. The workman, having placed a lump of clay upon it, whirled it swiftly with his left hand, and employed his right in moulding the clay to the requisite shape. Hence a dish is called "the daughter of the wheel" (*τροχηλάτος κόρη*¹⁴). 2. Pieces of wood or bone, which the potter (*κεραμεύς*, *figulus*) held in his right hand, and applied occasionally to the surface of the clay during its revolution. A pointed stick, touching the clay, would inscribe a circle upon it; and circles were in this manner disposed parallel to one another, and in any number, according to the fancy of the artist. By having the end of the stick curved or indented, and by turning it in different directions, he would impress many beautiful varieties of form and outline upon his vases. 3. Moulds (*formæ*, *τύποι*¹⁵), used either to decorate with figures in relief (*πρόστυπα*) vessels which had been thrown on the wheel, or to produce foliage, animals, or any other appearances on *ΑΝΤΕΦΙΧΑ*, on cornices of terra-cotta, and imitative or ornamental

pottery of all other kinds, in which the wheel was not adapted to give the first shape. The annexed woodcut shows three moulds, which were found near Rome by M. Seroux d'Agincourt.¹ They are cut in stone. One of them was probably used for making *αντεφίχα*, and the other two for making

hearts and legs, designed to be suspended by poor persons "ex voto" in the temples and sanctuaries. (Vid. *DONARIA*.) Copies of the same subject, which might, in this manner, be multiplied to any extent, were called "ectypa." 4. Gravers or scalpels, used by skilful modellers in giving to figures of all kinds a more perfect finish and a higher relief than could be produced by the use of moulds. These instruments, exceedingly simple in themselves, and deriving their efficiency altogether from the ability and taste of the sculptor, would not only contribute to the more exquisite decoration of earthen vessels, but would be almost the only tools applicable for making "Dii fictiles," or gods of baked earth, and other entire figures.² These were among the earliest efforts of the plastic art, and even in times of the greatest refinement and luxury they continued to be regarded with reverence.

Vessels of all kinds were very frequently furnished with at least one handle (*ansa*, *ὄνας*, *ὄς*). The *AMPHORA* was called *ΔΙΟΤΑ* because it had two. The name of the potter was commonly stamped upon the handle, the rim, or some other part. Of this we have an example in the amphora, adapted for holding grain or fruits, oil or wine, which is here introduced from the work of Seroux d'Agincourt. The figure on the right hand shows the name in the genitive case, "Maturī," impressed on an oblong surface, which is seen on the handle of the amphora.

The earth used for making pottery (*κεράμικη γῆ*) was commonly red, and often of so lively a colour as to resemble coral. Vauquelin found, by analysis, that a piece of Etruscan earthenware contained the following ingredients: silica, 53; alumina, 15; lime 8; oxide of iron, 24. To the great abundance

of the last constituent the deep red colour is to be attributed. Other pottery is brown or cream-coloured, and sometimes white. The pipe-clay, which must have been used for white ware, is called "*figlina creta*."¹ Some of the ancient earthenware is throughout its substance black, an effect produced by mixing the earth with comminuted asphaltum (*gagates*), or with some other bituminous or oleaginous substance. It appears, also, that asphaltum, with pitch and tar, both mineral and vegetable, was used to cover the surface like a varnish. In the finer kinds of earthenware this varnish served as a black paint, and to its application many of the most beautiful vases owe the decorations which are now so highly admired.² But the coarser vessels, designed for common purposes, were also smeared with pitch, and had it burned into them, because by this kind of encaustic they became more impervious to moisture and less liable to decay.³ Hence a "*colium pictum fictile*" was used, as well as a glass jar, to hold pickles.⁴ Also the year of the vintage was inscribed by the use of pitch, either upon the amphoræ themselves, or upon the labels (*pittacia*, *schedia*) which were tied round their necks.⁵ Although oily or bituminous substances were most commonly employed in pottery, to produce, by the aid of fire (*εὐ δὲ μελανθεῖν*), the various shades of black and brown, the vessels, before being sent for the last time to the furnace (*vid. Fornax*), were sometimes immersed in that finely-prepared mud, now technically called "*slip*," by which the surface is both smoothed and glazed, and at the same time receives a fresh colour. Ruddle, or red ochre (*μίλος, rubrica*), was principally employed for this purpose.⁷ To produce a farther variety in the paintings upon vases, the artists employed a few brightly-coloured earths and metallic ores.

As we might expect concerning an art so indispensable as that of the potter, it was practised to a great extent in every ancient nation; even the most uncivilized not being strangers to it, and sometimes displaying a surprising degree of dexterity. The remains of an ancient pottery have been found in Britain, and some of the potters' names, preserved on their works, are probably British. We are told of a place called the Potteries (*Figlina*) in Gaul. Numa instituted a corporation of potters at Rome.⁸ Mention has already been made of Egypt, and there are frequent allusions to the art in the ancient writings of the Jews. We also read of its productions in Tralles, Pergamum, Cnidus, Chios, Sicyon, Corinth, Cumæ, Adria, Modena, and Nola, from which city the exports of earthenware were considerable, and where some of the most exquisite specimens are still discovered. But three places were distinguished above all others for the extent and excellence of this beautiful manufacture: 1. Samos, to which the Romans resorted for the articles of earthenware necessary at meals, and intended for use rather than display.⁹ 2. Athens, a considerable part of which was called Ceramicus, because it was inhabited by potters. In this quarter of the city were temples dedicated to Athena, as presiding over every kind of handicraft, and to the two fire-gods, Hephaistos and Prometheus, the latter of whom was also the mythical inventor of the art of modelling. Various traditions respecting Coræbus and others point to the early efforts of the Athenian

potters;¹ and it is a remarkable circumstance, that the enemies of free trade, and especially of Athenian influence at Ægina and Argos, imposed restrictions on the use of these productions.² The Athenian ware was of the finest description: the master-pieces were publicly exhibited at the ΠΑΝΑΘΗΝÆΑ, and were given, filled with oil, to the victors at the games; in consequence of which, we now read on some of them, in the British Museum and other collections, the inscription Τῶν Ἀθηνητῶν ὀβλῶν, or other equivalent expressions.³

Many other specimens were presents given to relations and friends on particular occasions, and often distinguished by the epithets *καλός* and *καλή* added to their names. A circumstance which contributed to the success of the Athenians in this manufacture, was a mine of fine potters' clay in the Colian Promontory, near Phalerum.⁴ The articles made from it became so fashionable, that Plutarch,⁵ describing an act of extreme folly, compares it to that of the man who, having swallowed poison, refuses to take the antidote unless it be administered to him in a cup made of Colian clay. Some of the "*Panathenaic*" vases, as they were called, are two feet in height, which accords with what is said by ancient authors of their uncommon size.⁶ A diota was often stamped upon the coins of Athens, in allusion to the facts which have now been explained. 3. Etruria, especially the cities of Arretium and Tarquinii. While the Athenian potters excelled all others in the manufacture of vessels, the Tuscans, besides exercising this branch of industry to a great extent, though in a less tasteful and elaborate manner, were very remarkable for their skill in producing all kinds of statuary in baked clay. Even the most celebrated of the Roman temples were adorned, both within and without, by the aid of these productions. The most distinguished among them was an entire quadriga, made at Veii, which surmounted the pediment of the Temple of Jupiter Capitolinus.⁷ The Etrurians also manifested their partiality to this branch of art by recurring to it for the purpose of interment; for while Plioy mentions⁸ that many persons preferred to be buried in earthen jars, and in other parts of Italy the bones of the dead have been found preserved in amphoræ, Etruria alone has afforded examples, some of them now deposited in the British Museum, of large sarcophagi made wholly of terra-cotta, and ornamented with figures in bas-relief and with recumbent statues of the deceased.

Among many qualities which we admire in the Greek pottery, not the least wonderful is its thinness (*λεπτά*) and consequent lightness, notwithstanding the great size of the vessels, and the perfect regularity and elegance of their forms. That it was an object of ambition to excel in this respect we learn from the story of a master and his pupil, who contended which could throw the thinnest clay, and whose two amphoræ, the result of the trial, were preserved in the temple at Erythrae.

The Greeks and Romans contented themselves with using earthenware on all occasions until the time of Alexander the Great: the Macedonian conquests introduced from the East a taste for vessels of gold and silver, in which, however, the Spartans refused to indulge themselves. The Persians, on the contrary, held earthenware in so low estimation, that they condemned persons to drink out of

fictive vessels as a punishment.¹ But, although the Romans, as they deviated from the ancient simplicity, made a great display of the more splendid kinds of vessels, yet they continued to look upon pottery not only with respect, but even with veneration.² They called to mind the magnanimity of the consul Curius, who preferred the use of his own earthenware to the gold of the Samnites;³ they reckoned some of their consecrated terra-cottas, and especially the above-mentioned quadriga, among the safeguards of their imperial city;⁴ and, bound by old associations and the traditions of their earliest history, they considered earthen vessels proper for religious ceremonies, although gold and silver might be admitted in their private entertainments;⁵ for Pliny says⁶ that the productions of this class, "both in regard to their skilful fabrication and their high antiquity, were more sacred, and certainly more innocent, than gold."

Another term, often used as synonymous with *fictile*, was *testa*. (*Vid. COLIX, DOLIVM, LATER, PATERA, PATINA, TEGULA.*)

FICTIO. Fictions in Roman law are like fictions in English law, of which it has been said that they are "those things that have no real essence in their own body, but are so acknowledged and accepted in law for some especial purpose." The fictions of the Roman law apparently had their origin in the edictal power, and they were devised for the purpose of providing for cases where there was no legislative provision. A fiction supposed something to be which was not; but the thing supposed to be was such a thing as, being admitted to be a fact, gave to some person a right, or imposed on some person a duty. Various instances of fictions are mentioned by Gaius. One instance is that of a person who had obtained the *bonorum possessio ex edicto*. As he was not heres, he had no direct action: he could neither claim the property of the defunct as his (legal) property, nor could he claim a debt due to the defunct as his (legal) debt. He therefore brought his suit (*intendit*) as heres (*fictio se herede*), and the formula was accordingly adapted to the fiction. In the *Publiciana Actio*, the fiction was that the possessor had obtained by usucapion the ownership of the thing of which he had lost the possession. A woman by *cœemptio*, and a male by being *adrogated*, ceased, according to the civil law, to be debtors, if they were debtors before; for by the *cœemptio* and *adrogatio* they had sustained a *capitis diminutio*, and there could be no direct action against them. But as this *capitis diminutio* might be made available for fraudulent purposes, an *actio utilis* was still allowed against such persons, the fiction being that they had sustained no *capitis diminutio*. The formula did not (as it appears from Gaius) express the fiction as a fact, but it ran thus: If it shall appear that such and such are the facts (the facts in issue), and that the party, plaintiff or defendant, would have such and such a right, or be liable to such and such a duty, if such and such other facts (the facts supposed) were true; *et reliqua*.⁷

It was by a fiction that the notion of legal capacity was extended to artificial persons, that is, to such persons as were merely supposed to exist for legal purposes. (*Vid. COLLEGIVM, FISCUS*.) Numerous instances of fictions occur in the chapters entitled *Juristische Personen* in Savigny's recent work, entitled *System des heut R. R.*, vol. ii.

*FIGUS, the Fig-tree (*συκή*), and also its fruit (*σῦ-*

κον). "The *συκή* of Theophrastus and Dioscorides is properly the *Ficus Carica*. The wild Fig-tree is called *ἐπιωδός* by Homer, and Eustathius, the commentator on that poet, describes pretty accurately the process of caprifigation. The *συκή Αἰγυπτίη*, called also *κερώνια*, is the *Ficus Religiosa*, according to Stackhouse; Schneider, however, makes it the *Ceratonia Siliqua*, L., or Carob-tree. The *συκή Ἀλεξανδρία* is the *Pyrus Amelanchier* according to Sprengel, but the *Lonicera Pyrenaica* according to Stackhouse. The *συκή Ἰνδική* is the *Ficus Indica*, or Banyan, according to Sprengel, but, as Stackhouse maintains, the *Rhizophora Mangle*, or Mangrove.¹ The Banyan, or Indian Fig-tree, is noticed by Theophrastus, Pliny, Strabo, Solinus, Diodorus Siculus, Quintus Curtius, Arrian, and Athenæus. This tree forms a conspicuous object in Hindu mythology. The branches, after projecting to a certain distance, drop and take root in the earth. These branches, in their turn, become trunks, and give out other branches, and thus a single tree forms a little forest." "The fig," says Adams, in his Commentary on Paul of Argina, "was a great favourite with the ancients. Galen states that it is decidedly nutritious, but that the flesh formed from it is not firm and compact, like that from pork and bread, but soft and spongy, like that from beans. He says that figs increase the urinary and alvine discharges. Galen speaks doubtfully of dried figs."

FIDEICOMMISSUM may be defined to be a testamentary disposition, by which a person who gives a thing to another imposes on him the obligation of transferring it to a third person. The obligation was not created by words of legal binding force (*civilia verba*), but by words of request (*precative*), such as "*fideicommitto*," "*peto*," "*volo dari*," and the like; which were the operative words (*verba utilia*). If the object of the fideicommissum was the hereditas, the whole or a part, it was called *fideicommissaria hereditas*, which is equivalent to a universal fideicommissum; if it was a single thing or a sum of money, it was called *fideicommissum singule rei*. The obligation to transfer the former could only be imposed on the heres; the obligation of transferring the latter might be imposed on a legatee.

By the legislation of Justinian, a fideicommissum of the hereditas was a universal succession; but before his time the person entitled to it was sometimes "*heredis loco*," and sometimes "*legatarii loco*." The heres still remained heres after he had parted with the hereditas. Though the fideicommissum resembled a vulgar substitution, it differed from it in this: in the case of a vulgar substitution, the substituted person only became heres when the first person named heres failed to become such; in the case of the fideicommissum, the second heres had only a claim on the inheritance when the person named the heres had actually become such. There could be no fideicommissum unless there was a heres.

The person who created the fideicommissum must be a person who was capable of making a will; but he might create a fideicommissum without having made a will. The person who was to receive the benefit of the fideicommissum was the *fideicommissarius*; the person on whom the obligation was laid was the *fiduciarius*. The *fideicommissarius* himself might be bound to give the fideicommissum to a second *fideicommissarius*. Originally the *fideicommissarius* was considered as a purchaser (*emptoris loco*); and when the heres transferred to him the hereditas, mutual covenants (*cautiones*) were entered into, by which the heres was

1. (Athen., vi., p. 229., C.—Id., xi., 464, A.—Id., 463, C., D.)
2. (Ovid, Met., viii., 690.—Cic. ad Att., vi., 1.—Juv., iii., 168.—Id., x., 25.)—3. (Florus, i., 18.)—4. (Serv. ad Virg., Æn., vi., 188.)—5. (Tertull., l. c.)—6. (H. N., xxxv., 46.)—7. (Gaius, iv., 32, &c.)

not to be answerable for anything which he had been bound to do as heres, nor for what he had given bona fide; and if an action was brought against him as heres, he was to be defended. On the other hand, the fideicommissarius (*qui recipiebat hereditatem*) was to have whatever part of the hereditas might still come to the hands of the heres, and was to be allowed to prosecute all rights of action which the heres might have. But it was enacted by the senatus consultum Trebellianum, in the time of Nero, that when the heres had given up the property to the fideicommissarius, all right of action by or against the heres should be transferred to the fideicommissarius. The prætor accordingly gave utiles actiones to and against the fideicommissarius, which were promulgated by the edict. From this time the heres ceased to require from the fideicommissarius the covenants which he had formerly taken as his security against his general liabilities as heres.

As fideicommissa were sometimes lost because the heres would not accept the inheritance, it was enacted by the senatus consultum Pegasianum, in the time of Vespasian, that the fiduciarius might retain one fourth of the hereditas, and the same power of retainer was allowed him in the case of single things. In this case the heres was liable to all debts and charges (*onera hereditaria*); but the same agreement was made between him and the fideicommissarius which was made between the heres and the legatus partarius, that is, the profit or loss of the inheritance was shared between them according to their shares (*pro rata parte*). Accordingly, if the heres was required to restore not more than three fourths of the hereditas, the senatus consultum Trebellianum took effect, and any loss was borne by him and the fideicommissarius in proportion to their shares. If the heres was required to restore more than three fourths or the whole, the senatus consultum Pegasianum applied. If the heres refused to take possession of (*adire*) the hereditas, the fideicommissarius could compel him, by application to the prætor, to take possession of it, and to restore it to him; but all the costs and charges accompanying the hereditas were borne by the fideicommissarius.

Whether the heres was sole heir (*ex asse*), and required to restore the whole or a part of the hereditas, or whether he was not sole heir (*ex parte*), and was required to restore the whole of such part, or a part of such part, was immaterial: in all cases, the S. C. Pegasianum gave him a fourth.

By the legislation of Justinian, the senatus consulta Trebellianum and Pegasianum were consolidated, and the following rules were established: The heres who was charged with a universal fideicommissum always retained one fourth part of the hereditas, now called Quarta Trebellianica, and all claims on behalf of or against the hereditas were shared between the fiduciarius and fideicommissarius, who was considered heredis loco. If the fiduciarius suffered himself to be compelled to take the inheritance, he lost his Quarta, and any other advantage that he might have from the hereditas. If the fiduciarius was in possession, the fideicommissarius had a personal actio ex testamento against him for the hereditas. If not in possession, he must at least verbally assent to the claim of the fideicommissarius, who had then the hereditatis petitio fideicommissaria against any person who was in possession of the property.

The Quarta Trebellianica is, in fact, the Falcidia, applied to the case of universal fideicommissa. Accordingly, the heres only was entitled to it, and not a fideicommissarius, who was himself charged with a fideicommissum. If there were several heredes

charged with fideicommissa, each was entitled to a quarta of his portion of the hereditas. The heres was entitled to retain a fourth out of the hereditas, not including therein what he took as legatee.

The fiduciarius was bound to restore the hereditas at the time named by the testator, or, if no time was named, immediately after taking possession of it. He was entitled to be indemnified for all proper costs and charges which he had sustained with respect to the hereditas; but he was answerable for any damage or loss which it had sustained through his culpa.

Res singulæ might also be the objects of a fideicommissum, as a particular piece of land, a slave, a garment, piece of silver, or a sum of money; and the duty of giving it to the fideicommissarius might be imposed either on the heres or on a legatee. In this way a slave also might receive his liberty, and the request to manumit might be addressed either to the heres or the legatarius. The slave, when manumitted, was the libertus of the person who manumitted him. There were many differences between fideicommissa of single things and legacies. A person about to die intestate might charge his heres with a fideicommissum, whereas a legacy could only be given by a testament, or by a codicil which was confirmed by a proper declaration of the testator in a will; but a fideicommissum could be given by a simple codicil not so confirmed. A heres instituted by a will might be requested by a codicil, not so confirmed as above, to transfer the whole hereditas, or a part, to a third person. A woman who was prevented by the provisions of the Voconia lex from taking a certain hereditas, might take it as a fideicommissum. The Latini, also, who were prohibited by the lex Junia from taking hereditates and legacies by direct gift (*directo jure*), could take by fideicommissa. It was not legal to name a person as heres, and also to name another who, after the death of the heres, should become heres; but it was lawful to request the heres, on his death, to transfer the whole or a part of the hereditas to another. In this way a testator indirectly exercised a testamentary power over the property for a longer period than the law allowed him to do directly. A man sued for a legacy per formulam; but he sued for a fideicommissum before the consul or prætor for fideicommissa at Rome, and in the provinces before the præses. A fideicommissum was valid if given in the Greek language, but a legacy was not until a late period.

It appears that there were no legal means of enforcing the due discharge of the trust called fideicommissum till the time of Augustus, who gave the consuls jurisdiction in fideicommissa. In the time of Claudius, prætores fideicommissarii were appointed: in the provinces, the præsides took cognizance of fideicommissa. The consuls still retained their jurisdiction, but only exercised it in important cases.¹ The proceeding was always extra ordinem.² Fideicommissa seem to have been introduced in order to evade the civil law, and to give the hereditas, or a legacy, to a person who was either incapacitated from taking directly, or who could not take as much as the donor wished to give. Gaius, when observing that peregrini could take fideicommissa, observes that "this" (the object of evading the law) "was probably the origin of fideicommissa;" but by a senatus consultum made in the time of Hadrian, such fideicommissa were claimed by the fiscus. They are supposed to be the commendationes mortuorum mentioned by Cicero.³ We have an example in the case of Q. P. Rufus,⁴ who, being in exile, was legally incapacitated from taking anything under the will of a Roman citizen, but could claim

1. (Quintil., Instit., iii., 6.)—2. (Gaius, ii., 228.—Ulp., Frag., tit. 25, s. 12.)—3. (De Fin., iii., 20.)—4. (Val. Max., iv., 2, 9)

from his mother, who was the *heres fiduciarius*. They were also adopted in the case of gifts to women, in order to evade the *lex Voconia* (*vid. VOCONIA LEX*), and in the case of proscribed persons; ¹ *incertæ personæ*, Latini, peregrini, cœlibes, orbi. But the *senatus consultum Pegasianum* destroyed the capacity of cœlibes and orbi to take *fideicommissa*, and gave them to those persons mentioned in the will who had children, and in default of such to the *populus*, as in the case of *hereditates* and *legata*. (*Vid. BONA CADUCA*.) Municipia could not take as *heredes* (*vid. COLLEGIO*); but by the *senatus consultum Apronianum*, which was probably passed in the time of Hadrian, they could take a *fideicommissa hereditas*.² (*Vid. HEREDITAS*.) *Fideicommissa* were ultimately assimilated to legacies. (*Vid. LEGATUM*.)³

FIDEJUSSIO. (*Vid. INTERCESSIO*.)

FIDEPROMISSIO. (*Vid. INTERCESSIO*.)

FIDES. (*Vid. LYRA*.)

FIDICULÆ is said to have been an instrument of torture, consisting of a number of strings. According to some modern writers, it was the same as the *equuleus*, or, at all events, formed part of it. (*Vid. EQUULEUS*.) The term, however, appears to be applied to any strings, whether forming part of the *equuleus* or not, by which the limbs or extremities of individuals were tied tightly.⁴

FIDUCIA. If a man transferred his property to another on condition that it should be restored to him, this contract was called *fiducia*, and the person to whom the property was so transferred was said *fiduciam accipere*.⁵ A man might transfer his property to another for the sake of greater security in time of danger, or for other sufficient reason.⁶ The contract of *fiducia* or *pactum fiduciæ* also existed in the case of *pignus*, and in the case of mancipiation. (*Vid. EMANCIPATIO*.) The *hereditas* itself might be an object of *fiducia*. (*Vid. FIDEICOMMISSUM*.) The trustee was bound to discharge his trust by restoring the thing: if he did not, he was liable to an *actio fiduciæ* or *fiduciaria*, which was an *actio bonæ fidei*.⁷ If the trustee was condemned in the action, the consequence was *infamia*. Cicero enumerates the *judicium fiduciæ* with that of *tutelæ* and *societatis*, as "*judicia summæ existimationis et pæne capitis*,"⁸ where he is evidently alluding to the consequence of *infamia*.⁹

When the object for which a thing was transferred to another was attained, a *remancipatio* of those things which required to be transferred by mancipatio or in *jure cessio* was necessary; and with this view a particular contract (*pactum fiduciæ*) was inserted in the formula of mancipatio. If no *remancipatio* took place, but only a simple *restitutio*, *usucapio* was necessary to restore the *Quiritarian* ownership, and this was called *usureceptio*. The contract of *fiducia* might be accompanied with a condition, by virtue of which the *fiducia* might cease in a given case, and thus the *fiducia* was connected with the *Commissoria lex*, as we see in *Paulus*¹⁰ and in *Cicero*,¹¹ "*fiducia commissa*," which may be explained by reference to *COMMISSUM*.¹²

FIDUCIARIA ACTIO. (*Vid. ACTIO*.)

FIGLINÆ. (*Vid. FICTILE*.)

*FILIÆ, Fern. The general resemblance which several of the *Ferns* have to one another, has led modern botanical writers to apprehend that the an-

cients did not distinguish very nicely between them. The *πτέρις* of the Greeks, therefore, though *Sprengel* sets it down for the *Aspidium Filix mas*, was probably not restricted to it.¹ The *Filix* of *Virgil* appears to have been the *Pteris Aquilina*, L. Land which abounds with fern is always very poor.² The Latin name *filix* was given to this plant in allusion to the radical fibres, which resemble so many threads (*fila*). The Greek name is derived from *πτερόν*, "a wing," because the leaves are pinnated and expanded like wings. The specific appellation given by *Linnæus* to the female Fern, namely, *Aquilina*, is said to be derived from the following remarkable circumstance, that when the root of this plant is cut transversely, it presents a very exact representation of an eagle (*aquila*) with two heads. Hence this species of Fern is called in Germany the "*Imperial*."³

FIMBRIÆ (*κροσσοί*; *Ionice*, *θύσανοι*, *Greg. Corinth.*), thrums; tassels; a fringe.

When the weaver had finished any garment on the loom (*vid. ΤΕΤΛΑ*), the thrums, *i. e.*, the extremities of the threads of the warp, hung in a row at the bottom. In this state they were frequently left, being considered ornamental. Often, also, to prevent them from ravelling, and to give a still more artificial and ornamented appearance, they were separated into bundles, each of which was twisted (*στρεπτοῖς θύσανοις*),⁴ and tied in one or more knots. The thrums were thus, by a very simple process, transformed into a row of tassels. The linen shirts found in Egyptian tombs sometimes show this ornament along their lower edge, and illustrate, in a very interesting manner, the description of these garments by *Herodotus*.⁵ Among the Greeks and Romans, fringes were seldom worn except by females (*κροσσῶν χιτῶνα*).⁶ Of their manner of displaying them, the best idea may be formed by the inspection of the annexed woodcut, taken from a small bronze, representing a Roman lady who wears an inner and an outer tunic, the latter being fringed, and over these a large shawl or *pallium*.

Among barbarous nations, the *amictus* was often worn by men with a fringe, as is seen very conspicuously in the group of *Sarmatians* at p. 171. By crossing the bundles of thrums, and tying them at the points of intersection, a kind of network was produced, and we are informed of a fringe of this description, which was, moreover, hung with bells.⁷

1. (*Cic. Verr.*, i., 47.)—2. (*Ulp. Frag.*, tit. 22, s. 5.—*Plin. Ep.*, v., 7.)—3. (*Gaius*, ii., 247–269.—*Ulp. Frag.*, tit. 25.)—4. (*Val. Max.*, iii., 5.—*Sueton.*, *Tib.*, 62; *Cal.*, 33.—*Cod. Theodos.*, 9, tit. 35, s. 1.—*Sigonius De Jud.*, iii., 17.)—5. (*Cic. Top.*, c. 10.)—6. (*Gaius*, ii., 60.)—7. (*Cic. Off.*, iii., 15.—*Id.*, ad *Fam.*, vii., 12.)—8. (*Cic. Pro Ros. Com.*, c. 6.)—9. (*Gaius*, ii., 60.—*Id.*, iii., 201.—*Rosshirt, Grundlinien*, &c., § 99.—*Rein, Das Röm. Privatrecht*.—*Hein-ecc.*, *Syntagma*, ed. *Haubold*.)

1. (*Adams, Append.*, s. v.)—2. (*Martyu ad Virg.*, *Georg.*, ii., 189.)—3. (*Fée, Flore de Virgile*, p. lvi.)—4. (*Brucke, Anal.*, i., 416.)—5. (*Id.*, 81.)—6. (*Brucke*, ii., 525.—*Jacobs*, &c., ad *hæc*—*Pollux*, vii., 64.—*Sueton.*, *Jul.*, 45.)—7. (*Diod. Sic.*, xviii., 26)

With the progress of luxury it appears that the ancients manufactured fringes separately, and sewed them to the borders of their garments. They were also made of gold thread and other costly materials. Of this kind was the ornament, consisting of a hundred golden tassels, which surrounded the mythical shield of Jupiter, the *αἰγίς θυσανόεσσα*, and which depended from the girdle of Juno.¹

In consequence of the tendency of wool to form itself into separate bundles like tassels (*θυσανόδον*), the poets speak of the golden fleece as consisting of them;² and Cicero, declaiming against the effeminacy of Gabinus, applies the same expression to his curling locks of hair.³

FINIUM REGUNDORUM ACTIO. If the boundaries of contiguous estates were accidentally confused, each of the parties interested in the re-establishment of the boundaries might have an action against the other for that purpose. This action belonged to the class of *duplicia iudicia*. (*Vid. FAMILIÆ EXCISUNDÆ ACTIO*.) In this action each party was bound to account for the fruits and profits which he had received from any part of the land which did not belong to him, and also to account for any injury which it had sustained through his culpa. Each party was also entitled to compensation for improvements made in the portion of land which did not belong to him.⁴

FISCUS. The following is Savigny's account of the origin and meaning of this term:

In the republican period, the state was designated by the term *Ærarium*, in so far as it was viewed with respect to its rights of property, which ultimately resolved themselves into receipts into, and payments out of, the public chest. On the establishment of the imperial power, there was a division of the provinces between the senate, as the representative of the old Republic, and the Cæsar; and there was, consequently, a division of the most important branches of public income and expenditure. The property of the senate retained the name of *Ærarium*, and that of the Cæsar, as such, received the name of *Fiscus*. The private property of the Cæsar (*res privata Principis, ratio Cæsaris*) was wholly distinct from that of the *Fiscus*. The word *Fiscus* signified a wicker-basket or pannier, in which the Romans were accustomed to keep and carry about large sums of money;⁵ and hence *Fiscus* came to signify any person's treasure or money chest. The importance of the imperial *Fiscus* soon led to the practice of appropriating the name to that property which the Cæsar claimed as Cæsar, and the word *Fiscus*, without any adjunct, was used in this sense (*res fisci est*).⁶ Ultimately the word came to signify generally the property of the state, the Cæsar having concentrated in himself all the sovereign power, and thus the word *Fiscus* finally had the same signification as *Ærarium* in the republican period. It does not appear at what time the *Ærarium* was merged in the *Fiscus*, though the distinction of name and of thing continued at least to the time of Hadrian. In the later periods, the words *Ærarium* and *Fiscus* were often used indiscriminately, but only in the sense of the imperial chest, for there was then no other public chest. So long as the distinction existed between the *Ærarium* and the *Fiscus*, the law relating to them severally might be expressed by the terms *jus populi* and *jus fisci*, as in Paulus,⁷ though there is no reason for applying the distinction to the time when Paulus wrote; for, as already observed, it had then long ceased.

The *Fiscus* had a legal personal existence; that

is, as the subject of certain rights, it was legally a person, by virtue of the same fiction of law which gave a personal existence to corporations, and the communities of cities and villages. But the *Fiscus* differed in many respects from other persons existing by fiction of law; and, as an instance, it was never under any incapacity as to taking an hereditas, which for a long time was the case with corporations, for the reason given by Ulpian. (*Vid. COLLEGIORUM*.) These reasons would also apply to the *Populus* as well as to a *Municipium*, and yet the *populus* is never alluded to as being under such disability; and, in fact, it could not, consistently with being the source of all rights, be under any legal disabilities.

Various officers, as *Procuratores*, *Advocati* (*vid. ADVOCATUS*), *Patroni*, and *Præfecti*, were employed in the administration of the *Fiscus*. Nerva established a *Prætor Fiscalis* to administer the law in matters relating to the *Fiscus*. The patrimonium, or private property of the Cæsar, was administered by *Procuratores Cæsaris*. The privileges of the *Fiscus* were, however, extended to the private property (*ratio*) of the Cæsar, and of his wife the *Angusta*.¹

Property was acquired by the *Fiscus* in various ways, enumerated in the Digest,² many of which may be arranged under the head of penalties and forfeitures. Thus, if a man was led to commit suicide in consequence of having done some criminal act (*flagitium*), or if a man made counterfeit coin, his property was forfeited to the *fiscus*.³ The officers of the *Fiscus* generally received information (*nuntiaciones*) of such occurrences from private individuals, who were rewarded for their pains. Treasure (*thesaurus*) which was found in certain places was also subject to a claim on the part of the *Fiscus*. To explain the rights and privileges of the *Fiscus*, and its administration, would require a long discussion.⁴

FISTULA. (*Vid. CASTELLUM, TIBIA*.)

FLABELLUM, dim. FLABELLULUM (*βρῆς, βρῆσσις, dim. βρῆσσιον*), a Fan. "The exercise of the fan," so wittily described by Addison,⁵ was wholly unknown to the ancients. Neither were their fans so constructed that they might be furled, unfurled, and fluttered, nor were they even carried by the ladies themselves. They were, it is true, of elegant forms, of delicate colours (*prasino flabello*), and sometimes of costly and splendid materials, such as peacocks' feathers;⁶ but they were stiff and of a fixed shape, and were held by female slaves (*flabelliferæ*), by beautiful boys,⁷ or by eunuchs,⁸ whose duty it was to wave them so as to produce a cooling breeze.⁹ A gentleman might, nevertheless, take the fan into his own hand, and use it in fanning a lady as a compliment.¹⁰ The woodcut at p. 225 shows a female bestowing this attendance upon her mistress. The fan which she holds is apparently made of separate feathers joined at the base, and also united both by a thread passing along their tips, and by another stronger thread tied to the middle of the shaft of each feather. Another use of the fan was to drive away flies from living persons, and from articles of food which were either placed upon the table or offered in sacrifice.

1. (Dig. 49, tit. 14, s. 6.)—2. (49, tit. 14, s. 1.)—3. (Paulus, Sent. Recept., v. 12.)—4. (Dig. 49, tit. 14: "De Jure Fisci."—Cod. x., l. 1.—Cod. Theod., x., l. 1.—Paulus, Sent. Recept., v. 12.—Savigny, System des heut. Röm. R., vol. ii.—"Fragmentum veteris jurisconsulti de Jure Fisci," printed in Göschen's edition of Gaius.—Savigny, "Neu entdeckte Quellen des Röm. R.," Zeitschrift, ii.)—5. (Spect., No. 102.)—6. (Mart., iii., 40.) 7. (Propert., ii., 15.)—8. (Philemon, as translated by Plautus Triumnum, ii., 1, 22.)—9. (Strabo, Epig., 22.)—10. (Eurip., Orest., 1408-1412.—Menander, p. 175, ed. Meineke, and as translated by Terence, Eun., iii., 5, 45-54.)—11. (Brunck, Anal., ii., 92.)—12. (Ovid, A. A., i., 161.—Amor., ii., 2, 35.)

1. (Hom., Il., ii., 498.—Ib., v., 738.—Ib., xiv., 181.—Ib., xvii., 93.)—2. (Ælian, II. A., xvi., 11.)—3. (Pind., Pyth., iv., 411.—Apoll. Rhod., iv., 1140.)—4. (Cic. in Pis., ii., 1.)—5. (Dig. 10, tit. 1.)—6. (Cic., I Verr., e. 8.—Phædr., Fab., ii., 7.)—7. (Juv., Sat., iv., 54.)—8. (Sent. Recept., v., 12.)

When intended for a fly-flapper, it was less stiff, and was called *muscarium*¹ and *μυσοσθῆ*.² In short, the manner of using fans was precisely that which is still practised in China, India, and other parts of the East; and Euripides says³ that the Greeks derived their knowledge of them from "barbarous" countries. The Emperor Augustus had a slave to fan him during his sleep,⁴ for the use of fans was not confined to females.

Besides separate feathers, the ancient fan was sometimes made of linen, extended upon a light frame.⁵ From the above-cited passage of Euripides and the ancient scholia upon it, compared with representations of the flabellum in ancient paintings, it also appears to have been made by placing the two wings of a bird back to back, fastening them together in this position, and attaching a handle at the base.⁶

A more homely application of the fan was its use in cookery (*vid. Focv*). In a painting which represents a sacrifice to Isis,⁷ a priest is seen fanning the fire upon the altar with a triangular flabellum, such as is still used in Italy. This practice gave origin among classical writers to expressions corresponding to ours, meaning to fan the flame of hope,⁸ of love (*ρῆπιζεν*)⁹, or of sedition.¹⁰

FLAGRUM, *dim.* FLAGELLUM (*μάστιξ*), a Whip, a Scourge, to the handle of which was fixed a lash made of cords (*jumbus*)¹¹ or thongs of leather (*loris*;¹² *σκυτίνα*)¹³, especially thongs made from the ox's hide (*bubulis exuvii*)¹⁴. The lash was often twisted.¹⁵ A whip with a single lash was called *scutica*,¹⁶ but it often had two lashes (*λιγυρὰ μαστιγι διπλῆ*)¹⁷, and is so represented on various ancient monuments. (*Vid.* woodcut, p. 66.)

The whip was used in a great variety of ways: 1. by boys in whipping the top (*vid. Buxum*); 2. in threshing corn, when it was formed as a *flail* (*periclis flagellatur*)¹⁸; 3. in driving a chariot,¹⁹ or riding on horseback.²⁰ For this purpose the whip was sometimes splendidly ornamented (*φαεινῇ*)²¹. As a check to the cruel treatment of animals, Constantine enacted a law forbidding any one in riding and driving to use a severer instrument than a switch or whip with a short point or spur at the end.²² 4. In Spartan and Roman education.²³ The weapon of the Roman pedagogue was an eel's skin, and was therefore called *anguilla*.²⁴ 5. In compelling soldiers to fight under Asiatic monarchs.²⁵ 6. In gratifying private resentment.²⁶ 7. In punishing criminals,²⁷ especially before crucifixion. (*Vid. Crux*.) 8. In punishing slaves for running away²⁸ or deserting to the enemy,²⁹ or merely to gratify the caprice and cruelty of their owners. Thus females were punished by their mistresses.³⁰ The whip used to punish slaves was a dreadful instrument (*horribile flagellum*)³¹, knotted with bones, or heavy, indented circles of bronze (*ἀσπραγαλωτή*)³², or terminated by hooks, in which case it was aptly denominated a *scorpion*.³³ The infliction of punishment with it

upon the naked back of the sufferer¹ was sometimes fatal,² and was carried into execution by a class of persons, themselves slaves, who were called *lorarii*. It appears that there was another class, who submitted to be thus whipped for hire.³ A slave who had been flogged was called *flagrio* (*μαστιγῆς*)⁴, which, of course, became a term of mockery and contempt. During the Saturnalia the scourge was deposited under the seal of the master.⁵ 9. In the contests of gladiators,⁶ two of whom seem to be represented on the coin here introduced. (*Vid.* woodcut.) 10. In the worship of Cybele, whose

priests pretended to propitiate her, and excited the compassion and reverence of the multitude by flogging themselves with scourges such as that here represented, from a bas-relief of this goddess in the museum of the Capitol at Rome. They were strung with *tali* (*ἀσπραγαλοι*) from the feet of sheep,⁷ and resembled the scourges employed to punish slaves. 11. In the hands of Bellona and the Furies.⁸

FLAMEN, the name for any Roman priest who was devoted to the service of one particular god (*Divisque aliis alii sacerdotes, omnibus pontifices, singulis flamines sunt*)⁹, and who received a distinguishing epithet from the deity to whom he ministered. (*Horum, sc. flaminum, singuli cognomina habent ab eo deo quod sacra faciunt*).¹⁰ The most dignified were those attached to Diiovis, Mars, and Quirinus, the *Flamen Dialis*, *Flamen Martialis*, and *Flamen Quirinalis*. The first two are said by Plutarch¹¹ to have been established by Romulus; but the greater number of authorities agree in referring the institution of the whole three, in common with all other matters connected with state religion, to Numa.¹² The number was eventually increased to fifteen:¹³ the three original flamens were always chosen from among the patricians, and styled *Majores*;¹⁴ the rest from the plebeians, with the epithet *Minores*.¹⁵ Two rude lines of Ennius¹⁶ preserve the names of six of these, appointed, says the poet, by Numa:

"*Volturnalem, Palatulem, Furinalem,
Florumleque, Falacrem et Pomonalem fecit
Hic idem . . .*"

to which we may add the *Flamen Volcanalis*¹⁷ and the *Flamen Carmentalis*.¹⁸ We find in books of antiquities mention made of the *Virbialis*, *Laurentialis*, *Lavinialis*, and *Lucullaris*, which would complete the list; but there is nothing to prove that these four were Roman, and not merely provincial priests.

It is generally stated, upon the authority of Aulus Gellius,¹⁹ that the flamens were elected at the Com-

tia Curiata, and this was doubtless the case in the earlier times; but, upon examining the passage in question, it will be seen that the grammarian speaks of their induction into office only, and therefore we may conclude that subsequently to the passing of the *Lex Domitia* they were chosen in the Comitia Tributa, especially since so many of them were plebeians. After being nominated by the people, they were received (*capiti*) and installed (*inaugurabatur*) by the Pontifex Maximus,¹ to whose authority they were at all times subject.²

The office was understood to last for life; but a flamen might be compelled to resign (*flaminio abire*) for a breach of duty, or even on account of the occurrence of an ill-omened accident while discharging his functions.³

Their characteristic dress was the apex (*vid. APEX*), the *læna* (*vid. LÆNA*), and a laurel wreath. The name, according to Varro and Festus, was derived from the band of white wool (*flum, flamen, flamen*) which was wrapped round the apex, and which they wore, without the apex, when the heat was oppressive.⁴ This etymology is more reasonable than the transformation of *pleamines* (from *pileus*) into *flamines*.⁵ The most distinguished of all the flamens was the *Dialis*; the lowest in rank the *Pomonalis*.⁶

The former enjoyed many peculiar honours. When a vacancy occurred, three persons of patrician descent, whose parents had been married according to the ceremonies of *confarreatio* (*vid. MARRIAGE*), were nominated by the Comitia, one of whom was selected (*captus*), and consecrated (*inaugurabatur*) by the Pontifex Maximus.⁷ From that time forward he was emancipated from the control of his father, and became *sui juris*.⁸ He alone, of all priests, wore the *albugalcris* (*vid. ALBUS GALERUS*); he had a right to a *lictor*,¹⁰ to the *toga prætexta*, the *sella curulis*, and to a seat in the senate in virtue of his office. This last privilege, after having been suffered to fall into disuse for a long period, was asserted by C. Valerius Flaccus (B.C. 209), and the claim allowed, more, however, says Livy, in deference to his high personal character than from a conviction of the justice of the demand.¹¹ The *Rex Sacrificulus* alone was entitled to recline above him at a banquet: if one in bonds took refuge in his house, the chains were immediately struck off, and conveyed through the *impluvium* to the roof, and thence cast down into the street.¹² If a criminal on his way to punishment met him, and fell suppliant at his feet, he was respite for that day;¹³ usages which remind us of the right of sanctuary attached to the persons and dwellings of the papal cardinals.

To counterbalance these high honours, the *Dialis* was subjected to a multitude of restrictions and privations, a long catalogue of which has been compiled by Aulus Gellius¹⁴ from the works of Fabius Pictor and Masurius Sabinus, while Plutarch, in his Roman Questions, endeavours to explain their import. Among these were the following:

It was unlawful for him to be out of the city for a single night;¹⁵ a regulation which seems to have been modified by Augustus, in so far that an absence of two nights was permitted;¹⁶ and he was forbidden to sleep out of his own bed for three nights consecutively. Thus it was impossible for him to

undertake the government of a province. He might not mount upon horseback, nor even touch a horse, nor look upon an army marshalled without the pomerium, and hence was seldom elected to the consulship. Indeed, it would seem that originally he was altogether precluded from seeking or accepting any civil magistracy;¹ but this last prohibition was certainly not enforced in later times. The object of the above rules was manifestly to make him literally *Jovi adsiduum sacerdotem*; to compel constant attention to the duties of the priesthood; to leave him in a great measure without any temptation to neglect them. The origin of the superstitions which we shall next enumerate is not so clear, but the curious will find abundance of speculation in Plutarch,² Festus,³ and Pliny.⁴ He was not allowed to swear an oath, nor to wear a ring (*nisi pervio et casso*), that is, as they explain it, unless plain and without stones;⁵ nor to strip himself naked in the open air, nor to go out without his proper headdress, nor to have a knot in any part of his attire, nor to walk along a path overcanopied by vines. He might not touch flour, nor leavened bread, nor a dead body; he might not enter a *bustum* (*vid. BUSTUM*), but was not prevented from attending a funeral. He was forbidden either to touch or to name a dog, a she-goat, ivy, beans, or raw flesh. None but a free man might cut his hair; the clippings of which, together with the parings of his nails, were buried beneath a *felix arbor*. No one might sleep in his bed, the legs of which were smeared with fine clay; and it was unlawful to place a box containing sacrificial cakes in contact with the bedstead.

Flaminica was the name given to the wife of the *dialis*. He was required to wed a virgin according to the ceremonies of *confarreatio*, which regulation also applied to the two other flamines majores;⁶ and he could not marry a second time. Hence, since her assistance was essential in the performance of certain ordinances, a divorce was not permitted, and if she died the *dialis* was obliged to resign. The restrictions imposed upon the *flaminica* were similar to those by which her husband was fettered.⁷ Her dress consisted of a dyed robe (*tenenato operitur*); her hair was plaited up with a purple band in a conical form (*tutulum*); and she wore a small square cloak with a border (*rica*), to which was attached a slip cut from a *felix arbor*.⁸ It is difficult to determine what the *rica* really was; whether a short cloak, as appears most probable, or a napkin thrown over the head. She was prohibited from mounting a staircase consisting of more than three steps (the text of Aulus Gellius is uncertain, but the object must have been to prevent her ankles from being seen); and when she went to the *aræi* (*vid. ARÆI*), she neither combed nor arranged her hair. On each of the *nundinæ* a ram was sacrificed to Jupiter in the regia by the *flaminica*.⁹

After the death of the flamen Mernia, who was chosen consul suffectus on the expulsion of Cinna,¹⁰ and who, upon the restoration of the Marian faction, shed his own blood in the sanctuary (B.C. 87), calling down curses on his enemies with his dying breath,¹¹ the priesthood remained vacant until the consecration of Servius Maluginensis (B.C. 11) by Augustus, then Pontifex Maximus. Julius Cæsar had, indeed, been nominated in his 17th year, but was never installed; and during the whole of the above period,

Max., ix., xii., 5.)—11. (Velleius, ii., 22.)

the duties of the office were discharged by the Pontifex Maximus.¹

The municipal towns also had their flamens. Thus the celebrated affray between Milo and Clodius took place while the former was on his way to Lanuvium, of which he was then dictator, to declare the election of a flamen (*ad flaminem prodendum*). After the deification of the emperors, flamens were appointed to superintend their worship in Rome and in all the provinces; and we find constantly in inscriptions such titles as *FLAMEN AVGVSTALIS*; *FLAMEN TIBERII CÆSARIS*; *FLAMEN D. JULII*, &c., and sometimes *FLAMEN DIVORVM OMNIVM* (so. *imperatorum*).

FLAMINIA, according to Festus and Aulus Gellius,² was the house of the Flamen Dialis, from which it was unlawful to carry out fire except for sacred purposes.

Flaminia, according to Festus, was also a name given to a little priestess (*sacerdotula*), who assisted the *flaminica* in her duties.

COIN OF FLAMEN MARTIALIS.³

FLAMMEUM. (*Vid.* MARRIAGE.)

FLORALIA, or *Florales Ludi*, a festival which was celebrated at Rome in honour of Flora or Chloris. It was solemnized during five days, beginning on the 28th of April and ending on the 2d of May.⁴ It was said to have been instituted at Rome in 238 B.C., at the command of an oracle in the Sibylline Books, for the purpose of obtaining from the goddess the protection of the blossoms (*ut omnia bene deflorescerent*).⁵ Some time after its institution at Rome its celebration was discontinued; but in the consulship of L. Postumius Albinus and M. Popilius Lænas (173 B.C.), it was restored, at the command of the senate, by the ædile C. Servilius,⁶ as the blossoms in that year had severely suffered from winds, hail, and rain. The celebration was, as usual, conducted by the ædiles,⁷ and was carried on with excessive merriment, drinking, and lascivious games.⁸ From Valerius Maximus we learn that theatrical and mimic representations formed a principal part of the various amusements, and that it was customary for the assembled people on this occasion to demand the female actors to appear naked upon the stage, and to amuse the multitude with their indecent gestures and dances. This indecency is probably the only ground on which the absurd story of its origin, related by Lactantius,⁹ is founded. Similar festivals, chiefly in spring and autumn, are in southern countries seasons for rejoicing, and, as it were, called forth by the season of the year itself, without any distinct connexion with any particular divinity; they are to this day very popular in Italy,¹⁰ and in ancient times we find them celebrated from the southern to the northern extremity of Ita-

ly.¹ (*Vid.* Anthesphoria.) The Floralia were originally festivals of the country people, which were afterward, in Italy as in Greece, introduced into the towns, where they naturally assumed a more dissolute and licentious character, while the country people continued to celebrate them in their old and merry, but innocent manner. And it is highly probable that such festivals did not become connected with the worship of any particular deity until a comparatively late period.² This would account for the late introduction of the Floralia at Rome, as well as for the manner in which we find them celebrated there.³

FOCALE, a covering for the ears and neck, made of wool, and worn by infirm and delicate persons.⁴

FOCUS, *dim.* *FO'CVLVS* (ἔσθια : ἐσθάρια, ἐσθάρης, *dim.* ἐσθάριον), a fireplace, a hearth, a brazier. The fireplace, considered as the highest member of an altar, is described under *ARA*, p. 77. Used by itself, it possessed the same sacred character, being, among the Romans, dedicated to the Lares of each family.⁵ It was, nevertheless, made subservient to all the requirements of ordinary life.⁶ It was sometimes constructed of stone or brick, in which case it was elevated only a few inches above the ground, and remained on the same spot; but it was also frequently made of bronze, and it was then variously ornamented, and was carried continually from place to place. This movable hearth or brazier was properly called *foculus* and ἐσθάρια. One is shown at p. 148. Another, found at Cære in Etruria, and preserved in the British Museum, is represented in the annexed woodcut.

In Aristophanes' persons are told "to bring the brazier and the fan." (*Vid.* *FLABELLUM*.) When a brazier was brought to Alexander the Great, scantily supplied with fuel in very cold weather, he requested to have either wood or frankincense, giving his host the option of treating him either as a man or a god.⁸ In the time of the Roman emperors, the brazier of burning charcoal was sometimes brought to table with the meat for the purpose of keeping it hot, so that, as Seneca says, the kitchen accompanied the dinner.

In accordance with the sentiments of veneration with which the domestic fireplace was regarded, we find that the exercise of hospitality was at the same time an act of religious worship. Thus the roasting of a hog in the cottage of the swineherd in the *Odyssey*⁹ is described as a sacrifice. To swear "by the royal hearth" was the most sacred oath among the Scythians.¹⁰ Suppliants, strangers, all who sought for mercy and favour, had recourse to the domestic hearth as to an altar.¹¹ The phrase

1. (Suet., Jul., c. 1, compared with Velleius, ii., 43, and the commentators. See also Suet., Octav., 31.—Dion Cass., liv., 36.—Tacit., Ann., iii., 58. "*pro aris et focis*" was used to express attachment to all that was most dear and venerable.¹

Among the Romans the focus was placed in the *Atrium*, which, in primitive times, was their kitchen and dining-room.² There it remained, as we see in numerous examples at Pompeii, even after the progress of refinement had led to the use of another part of the house for culinary purposes. On festivals the housewife decorated the hearth with garlands;³ a woollen filet was sometimes added.⁴ In farmhouses, the servants, who were often very numerous, were always disposed for the purpose of taking their meals around the hearth.⁵

The focus, though commonly square, admitted of a great variety of forms and ornaments. At Pharæ, in Achaia, a marble hearth was placed before a statue of Mercury in the Forum, having bronze lamps fastened to it with lead.⁶ To adapt the focus to culinary purposes, a gridiron, supported by four feet, was placed over the fire, so as to hold pots and pans as well as steaks, chops, and other pieces of meat which were to be roasted.⁷ Some of the braziers found at Pompeii also include contrivances for boiling water.

FEDERATÆ CIVITATES, FÆDERATI, SOCII. In the seventh century of Rome these names expressed those Italian states which were connected with Rome by a treaty (*fœdus*). These names did not include Roman colonies or Latin colonies, or any place which had obtained the Roman *civitas*. Among the *fœderati* were the Latini, who were the most nearly related to the Romans, and were designated by this distinctive name; the rest of the *fœderati* were comprised under the collective name of *Socii* or *Fœderati*. They were independent states, yet under a general liability to furnish a contingent to the Roman army. Thus they contributed to increase the power of Rome, but they had not the privileges of Roman citizens. The relations of any particular federate state to Rome might have some peculiarities, but the general relation was that expressed above; a kind of condition, inconsistent with the sovereignty of the federates, and the first stage towards unconditional submission. The discontent among the *fœderati*, and their claims to be admitted to the privileges of Roman citizens, led to the Social War. The Julia lex (B.C. 90) gave the *civitas* to the *Socii* and *Latini*; and a lex of the following year contained, among other provisions, one for the admission to the Roman *civitas* of those peregrini who were entered on the lists of the citizens of federate states, and who complied with the provisions of the lex. (*Vid. CIVITAS*.) It appears, however, that this lex Julia, and probably also the lex of the following year, contained a condition that the federate state should consent to accept what the *leges* offered, or, as it was technically expressed, "*populus fundus feret*."⁸ Those who did not become *fundi populi* did not obtain the *civitas*. Balbus, the client of Cicero, was a citizen of Gades, a federate town in Spain. Pompey had conferred the Roman *civitas* on Balbus, by virtue of certain powers given to him by a lex. It was objected to Balbus that he could not have the *civitas*, unless the state to which he belonged, "*fundus factus esset*;" which was a complete misapprehension, for the term *fundus*, in this sense, applied to a whole state or community, whether federate or other free state, which accept-

ed what was offered, and not to an individual of such state or community who might accept the Roman *civitas* without asking the consent of his fellow-citizens at home, or without all of them receiving the same privilege that was offered to himself. The people of a state which had accepted the Roman *civitas* (*fundus factus est*) were called, in reference to their condition after such acceptance, "*fundani*." This word only occurs in the Latin inscription (the *lex Romana*) of the tablet of Heraclea, l. 85, and proves that the inscription is posterior to the *lex Julia de Civitate*. It has, indeed, been supposed that the word may refer to the acceptance by the state of Heraclea of this lex which is on the tablet; but there is no doubt that it refers to the prior lex which gave the *civitas*. (*Vid. FUNDUS*.)

It must be observed that the acceptance of the two *leges* above mentioned could only refer to the federate states and the few old Latin states. The *Latinae coloniae* also received the *civitas* by the *Julia lex*; but, as they were under the sovereignty of Rome, their consent to the provisions of this lex was not required.

Before the passing of the *Julia lex*, it was not unusual for the *Socii* and *Latini* to adopt Roman *leges* into their own system, as examples of which Cicero mentions the *lex Furia de Testamentis* and the *lex Voconia de Mulierum Hereditatibus*; and he adds that there were other instances.¹ In such cases, the state which adopted a Roman *lex* was said "*in eam legem fundus fieri*." It hardly needs remark, that the state which adopted a Roman *lex* did not thereby obtain for its citizens any privileges with respect to the Roman state: the federate state merely adopted the provisions of the Roman *lex* as being applicable to its own circumstances.

An apparent difficulty is caused by the undoubted fact that the provisions of the *lex Julia* required that the states which wished to avail themselves of its benefits should consent to accept them. As the federate states commenced the war in order to obtain the *civitas*, it may be asked, why was it given to them on the condition of becoming "*fundi*?" In addition to the reasons for such condition, which are suggested by Savigny, it may be observed that the *lex* only expressed in terms what would necessarily have been implied if it had not been expressed: a federate state must of necessity declare by a public act its consent to accept such a proposal as was contained in the *lex Julia*. It appears from the cases of Heraclea and Naples, that the citizens of a federate state were not in all cases unanimous in changing their former alliance with Rome into an incorporation with the Roman state. (*Vid. CIVITAS*.)

There were federate cities beyond the limits of Italy, as shown by the example of Gades: Saguntum and Massilia also are enumerated among such cities.²

***FÆNUM GRÆCUM**, Fenugreek. (*Vid. TELI* and BUCERAS*.)

FÆNUS. (*Vid. INTEREST OF MONEY*.)

FOLLIS, *dim.* **FOLLICULUS**, an inflated ball of leather, perhaps originally the skin of a quadruped filled with air: Martial³ calls it "light as a feather." Boys and old men, among the Romans, threw it from one to another with their arms and hands, as a gentle exercise of the body, unattended with dangers.⁴ The Emperor Augustus⁵ became fond of the exercise as he grew old.

1. (*Pro Balbo*, c. 8.)—2. (*Savigny*, *Volksschluss der Tafel von Heraclea*, *Zeitschrift*, &c., vol. ix.—*Mazoechi*, *Tab. Herc.*, p. 465.)—3. (*iv.*, 19.)—4. (*Mart.*, vii., 31.—*Id.*, xiv., 45, 47.—*Athen.*, i., 25.)—5. (*Sueton.*, *Octav.*, 83.)

Boxers practised upon an inflated skin hung up for the purpose (*follis pugilatorius*¹).

The terra *folis* is also applied to a leather purse or bag;² and the diminutive *folliculus* to the swollen capsule of a plant, the husk of a seed, or anything of similar appearance.³

Two inflated skins (*δύο φύσαι*; ⁴ ζώπυρα; ⁵ πρηστήρες⁶), constituting a pair of bellows, and having valves adjusted to the natural apertures at one part for admitting the air, and a pipe inserted into another part for its emission, were an essential piece of furniture in every forge and foundry.⁷ Among the Egyptians, the two bellows were blown by a man who stood with his right and left foot pressing upon each alternately, and who drew each upward by means of a cord, so as to fill it with air again as soon as the weight of his body was taken away from it.⁸ According to the nature and extent of the work to be done, the bellows were made of the hides of oxen (*taurinis folibus*⁹), or of goats (*hircinis*¹⁰) and other smaller animals. The nozzle of the bellows was called *ἀκροφύσιον* or *ἀκροστόμιον*.¹¹ In bellows made after the fashion of those exhibited in the lamp here introduced from Bartoli,¹² we may imagine the skin to have been placed between the two boards, so as to produce a machine like that which we now commonly employ.

FORCEPS (*πυράγχα*), Tongs or Pincers; an instrument invented, as the etymology indicates, for taking hold of what is hot (*forum*¹³), used by smiths, and therefore attributed to Vulcan and the Cyclopes.¹⁴ (*Vid. INCUS, MALLEUS*.)

A forceps of an appropriate form (*δοντάγχα*) was employed for drawing teeth,¹⁵ and another to extract from the wounded the heads of arrows and other missiles (*ἀρδοθήγχα*¹⁶). Pincers were used from the earliest times by tyrants as an instrument of torture.¹⁷ The term *καρκίνος*, which properly meant a crab, was applied metaphorically to pincers, on account of the similarity of this instrument to the claw of the crab.¹⁸

FORES. (*Vid. HOUSE*.)

FORFEX, *dim. FORFICULA* (*ψαλῖς*, *dim. ψαλίδιον*), Shears,¹⁹ used, 1. in shearing sheep, as represented in the annexed woodcut, which is taken from a carnelian in the Stosch collection of antique gems at Berlin; 2. in cutting hair;²⁰ 3. in clipping

hedges, myrtles, and other shrubs (*ψαλιστοὶ μύρτι- νῶνες*¹); 4. in clearing bad grapes from the bunch.²

In military manœuvres the forfex was a tenaille, *i. e.*, a body of troops arranged in the form of an acute angle, so as to receive and overcome the opposite body, called a *CUNEUS*.³

In architecture the term *ψαλῖς* denoted a construction which was probably the origin of the arch.⁴ consisting of two stones leaning against each other so as to form an acute angle overhead, as is seen in the entrance to the Pyramid of Cheops and in the ruins of Mycenæ, and gradually brought nearer to the forms which we now employ. (See woodcut, p. 85.)⁵

The same terms were also metaphorically applied to the mandibles of insects, which are like minute shears, and to the claws of crustacea (*ψαλιδόστομοι*⁶).

FORI. (*Vid. NAVIS*.)

FORMA, *dim. FORMULA*, second *dim. FORMELLA* (*τύπος*), a Pattern, a Mould; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making, 1. pottery (*vid. FICTILE*). 2. Pastry (*formella*⁷). Some of these, made of bronze, have been found at Pompeii. 3. Cheese.⁸ Hence the cheeses themselves are called *formulæ*.⁹ The finer moulds for this purpose were made of boxwood (*formæ buxæ*). (*Vid. BUXUS*) 4. Bricks.¹⁰ 5. Coins. These moulds were made of a kind of stone, which was indestructible by heat.¹¹ The mode of pouring into them the melted metal for casting the coins will be best understood from the annexed woodcut, which

represents one side of a mould, engraved by Seroux d'Agincourt.¹² Various moulds are engraved by Ficoroni.¹³ 6. Walls of the kind now called *pisé*,

(Serv. in Virg., Æn., viii., 453.)—20. (Euryp., Orest., 954.—Schol. in loc.—Brunck, Anal., iii., 9.—Virg., Catal., vii., 9.—“Ferro bidentī:” Ciris, 213.)

which were built in Africa, in Spain, and about Tarentum¹. 7. The shoemaker's last was also called *forma*² and *tenipellum*,³ in Greek *καλόπους*,⁴ whence Galen says⁵ that physicians who want discrimination in the treatment of their patients are like shoemakers who make shoes from the same last (*ἐνὶ καλόποδι*) for all their customers.

The spouts and channels of aquæducts are called *formæ*, perhaps from their resemblance to some of the moulds included in the above enumeration.⁶

FORMULA. (*Vid. Actio*.)

FORNACALIA was a festival in honour of Fornax, the goddess of furnaces, in order that the corn might be properly baked.⁷ This ancient festival is said to have been instituted by Numa.⁸ The time for its celebration was proclaimed every year by the Curio Maximus, who announced in tablets, which were placed in the Forum, the different part which each curia had to take in the celebration of the festival. Those persons who did not know to what curia they belonged, performed the sacred rites on the *Quirinalia*, called from this circumstance the *Stultorum feria*, which fell on the last day of the Fornacalia.⁹

The Fornacalia continued to be celebrated in the time of Lactantius.¹⁰

FORNAX, *dim.* FORNACULA (*κάμινος*, *dim.* *καμίνιον*), a Kiln, a Furnace. The construction of the kilns used for baking earthenware (*vid. FICTILE*) may be seen in the annexed woodcut, which represents part of a Roman pottery discovered at Castor, in Northamptonshire.¹¹ The dome-shaped roof has been destroyed, but the flat circular floor on which the earthenware was set to be baked is preserved entire. The middle of this floor is supported

by a thick column of brickwork, which is encircled by the oven (*furnus*, *κλίβανος*). The entrance to the oven (*præfurnium*) is seen in front. The lower part of a smelting-furnace, shaped like an inverted bell, and sunk into the earth, with an opening and a channel at the bottom for the discharge of the melted metal, has been discovered near Arles.¹² In Spain these furnaces were raised to a great height, in order that the noxious fumes might be carried off.¹³ They were also provided with long flues (*longinquæ aris cuniculo*¹⁴), and with chambers (*cameræ*) for purpose of collecting more plentifully the oxides

and other matters by sublimation.¹ Homer describes a blast-furnace with twenty crucibles (*χαανοί*²). Melting-pots or crucibles have been found at Castor,³ and at different places in Egypt, in form and material very like those which we now employ.⁴

Furnaces of an appropriate construction were erected for casting large statues of bronze,⁵ and for making lampblack.⁶ (*Vid. ATRAMENTUM*.) The limekiln (*fornax calcaria*) is described by Cato.⁷ Of the mode of heating baths, *vid. p.* 151.

The early Romans recognised, under the name of Fornax or Dea Fornacalis, a divinity who presided over ovens and furnaces. (*Vid. FORNACALIA*.)

FORNIX, in its primary sense, is synonymous with *ARCUS*,⁸ but more commonly implies an arched vault, constituting both roof and ceiling to the apartment which it encloses.⁹ It is composed of a semicylindrical and oblong arch like the *Camera*, but differs from it in construction, consisting entirely of stone or brick, whereas the other was formed upon a framework of wood, like the skeleton of a ship!¹⁰ (*vid. CAMERA*); both of which methods appear to have been sometimes united, as in the roof of the Tullianum, described by Sallust,¹¹ where the ribs of the *Camera* were strengthened by alternate courses of stone arches. "*Tullianum . . . muniunt undique parietes, atque insuper Camera, lapideis fornicibus vincita.*" If the stone chamber now seen at Rome under the Mamertine prisons was really the Tullianum, as commonly supposed, it is not constructed in the manner described, being neither *cameratum* nor *fornicatum*, but consisting of a circular dome, formed by projecting one course of stones beyond the course below it, like the treasury of Atreus at Mycenæ, described at *p.* 85. (*Vid. ARCUS*.)

From the roof alone, the same word came to signify the chamber itself, in which sense it designates a long narrow vault, covered by an arch of brick or masonry (*tectum fornicatum*), similar to those which occupy the ground-floors of the modern Roman palaces. Three such cells are represented in the annexed woodcut, from the remains of a villa at Mola di Gaeta, which passes for the Formian villa of Cicero. They are covered internally with a coating of stucco, tastefully ornamented, and painted in streaks of azure, pink, and yellow.

Being small and dark, and situated upon the level of the street, these vaults were occupied by prostitutes¹² (*vid. CIRCUS*, *p.* 255); whence comes the meaning of the word *fornicatio* in the ecclesiastical writers, and its English derivation.

Fornix is also a Sallyport in the walls;¹³ a triumphal arch;¹⁴ and a street in Rome, which led to the Campus Martius, was called Via Fornicata,¹⁵ probably on account of the triumphal arches built across it.

FORTY, THE (*οἱ τετράρακοντα*), were certain officers chosen by lot, who made regular circuits through the demi of Attica, whence they are called *δικασταὶ κατὰ δήμους*, to decide all cases of *αἰκία* and

τὰ περὶ τῶν βιαιῶν, and also all other private causes, where the matter in dispute was not above the value of ten drachmæ. Their number was originally thirty, but was increased to forty after the expulsion of the thirty tyrants and the restoration of the democracy by Thrasybulus, in consequence, it is said, of the hatred of the Athenians to the number of thirty. They differed from other *δικασταὶ*, inasmuch as they acted as *εὐαγγεῖς*, as well as decided causes; that is, they received the accusation, drew up the indictment, and attended to all that was understood in Athenian law by the *ἡγεμονία τοῦ δικαστηρίου*. They consequently may be classed among the regular magistrates of the state.¹

FORUM. As the plan of the present work does not include a topographical description of the various fora at Rome, the following article only contains a brief statement of the purposes which they served.

Forum originally signified an open place (*area*) before any building, especially before a sepulchur,² and seems, therefore, etymologically to be connected with the adverb *foras*. The characteristic features of a Roman forum were, that it was a levelled space of ground of an oblong form, and surrounded by buildings, houses, temples, basilicæ, or porticoes.³ It was originally used as a place where justice was administered, and where goods were exhibited for sale.⁴ We have, accordingly, to distinguish between two kinds of fora, of which some were exclusively devoted to commercial purposes, and were real market-places, while others were places of meeting for the popular assembly and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called *fora judicialia*, to distinguish them from the mere market-places.

Among the *fora judicialia*, the most important was the *Forum Romanum*, which was simply called *Forum* as long as it was the only one of its kind which existed at Rome. At a late period of the Republic, and during the Empire, when other *fora judicialia* were built, the *Forum Romanum* was distinguished from them by the epithets *vetus* or *magnum*. It was situated between the Palatine and the Capitoline Hills, and its extent was seven jugera, whence Varro⁵ calls it the "*Septem jugera forensia*." It was originally a swamp or marsh, but was said to have been filled up by Romulus and Tatius, and to have been set apart as a place for the administration of justice, for holding the assemblies of the people, and for the transaction of other kinds of public business.⁶ In this widest sense the Forum included the comitium, or the place of assembly for the curiæ,⁷ which was separated from the Forum in its narrower sense, or the place of assembly for the comitia tributa, by the Rostra.⁸ These ancient rostra were an elevated space of ground or a stage (*suggestum*), from which the orators addressed the people, and which derived its name from the circumstance that, after the subjugation of Latium, its sides were adorned with the beaks (*rostra*) of the ships of the Antiates.⁹ In subsequent times, when the curiæ had lost their importance, the accurate distinction between comitium and forum likewise ceased, and the comitia

tributa were sometimes held in the Circus Flaminius; but towards the end of the Republic the Forum seems to have been chiefly used for judicial proceedings and as a money-market; hence Cicero¹ distinguishes between a speaker in the popular assembly (*orator*) and the mere pleader: "*Ego istos non modo oratoris nomine, sed ne foro quidem dignos putarim*." The orators, when addressing the people from the rostra, and even the tribunes of the people in the early times of the Republic, used to front the comitium and the curia; but C. Gracchus,² or, according to Varro³ and Cicero,⁴ C. Licinius, introduced the custom of facing the Forum, thereby acknowledging the sovereignty of the people. In 308 B.C., the Romans adorned the Forum, or, rather, the bankers' shops (*argentarias*) around, with gilt shields which they had taken from the Samnites; and this custom of adorning the Forum with these shields and other ornaments was subsequently always observed during the time of the Ludi Romani, when the ædiles rode in their chariots (*tensæ*) in solemn procession around the Forum.⁵ After the victory of C. Duilius over the Carthaginians, the Forum was adorned with the celebrated columna rostrata. (*VID. COLUMNA.*) In the upper part of the Forum, or the comitium, the laws of the Twelve Tables were exhibited for public inspection, and it was probably in the same part that, in 304 B.C., Cn. Flavius exhibited the Fasti, written on white tables (*in albo*), that every citizen might be able to know the days on which the law allowed the administration of justice.⁶ Besides the ordinary business which was carried on in the Forum, we read that gladiatorial games were held in it,⁷ and that prisoners of war and faithless colonists or legionaries were put to death there.⁸

A second forum judicarium was built by J. Cæsar, and was called *Forum Cæsaris* or *Julii*. The levelling of the ground alone cost him above a million of sesterces, and he adorned it, besides, with a magnificent temple of Venus Genetrix.⁹

A third forum was built by Augustus, and called *Forum Augusti*, because the two existing ones were not found sufficient for the great increase of business which had taken place. Augustus adorned his forum with a temple of Mars and the statues of the most distinguished men of the Republic, and issued a decree that only the *judicia publica* and the *sortiones judicum* should take place in it.¹⁰ After the *Forum Augusti* had severely suffered by fire, it was restored by Hadrianus.¹¹

The three fora which have been mentioned seem to have been the only ones that were destined for the transaction of public business. All the others, which were subsequently built by the emperors, such as the *Forum Trajani* or *Ulpium*, the *Forum Sallustii*, *Forum Diocletiani*, *Forum Aureliani*, &c., were probably more intended as embellishments of the city than to supply any actual want.

Different from these fora were the numerous markets at Rome, which were neither as large nor as beautiful as the former. They are always distinguished from one another by epithets expressing the particular kinds of things which were sold in them, e. g., *forum boarium*, according to Festus, the cattle-market; according to others, it derived the name boarium from the statue of an ox which stood there.¹² *forum olitorium*, the vegetable market;¹³ *forum pis-*

carium, fish-market; *forum cupedinis*, market for dainties; *forum coquinum*, a market in which cooked and prepared dishes were to be had, &c.

(Respecting the fora in the provinces, see the articles *COLONIA* and *CONVENTUS*; compare Sigonius, *De Antiq. jur. Ital.*, ii., 15, and Walter, *Gesch. des Röm. Rechts.*, p. 206.)

*FRAGUM, the Strawberry, *Fragaria Vesca*, L. It is worthy of remark, that the Strawberry was unknown to the ancient Greeks. Not so, however, with the Romans. It is described by Pliny,¹ and had been previously mentioned by Virgil² and Ovid.³ The Strawberry appears to have come originally from the Alps and the forests of Gaul. Myrepsus, a physician of the thirteenth century, is the first Greek writer that makes mention of it. The name which he gives it, *φραγούλι*, is still applied to it by the modern Greeks, dropping, however, the fourth letter (*φράουλι*). Planudes, in his Greek version of Ovid, translates *fragum* by *κόμαρον*. This, however, is an error, since *κόμαρον* is the fruit of the wild Strawberry, which is a very different thing from that which we are here considering. (*Vid. ARBUTUM.*)

FRAMEA. (*Vid. HASTA.*)

FRA'TRES ARVA'LES. (*Vid. ARVALES FRATRES.*)

*FRAXINUS, the Ash, *Fraxinus Ornus*, L., called by the Greeks *μελία*. The *βουμελία* of Theophrastus is the *Fraxinus excelsior*.⁴ "There are about forty species of the Ash: the common Ash (*Fraxinus excelsior*) is one of the most useful of trees. It has been known from the remotest period of history, and is very generally diffused. The Ash is called, by way of eminence, "the Husbandman's tree," nothing being equal to it for agricultural implements, and for all sorts of poles, ladders, long handles, and other purposes which require strength and elasticity combined with comparative lightness. Hesiod derives his brazen men from it; and the Edda, or sacred book of the Northmen, gives the same origin to all the human race. From one species of Ash, which grows wild in the mountains of Calabria, and does not attain to a great size, manna is gathered. It is procured by cutting the trunk towards the end of July, and collecting the juice which exudes."⁵

FRENUM (*χαλινός*), a Bridle. That Bellerophon might be enabled to perform the exploits required of him by the King of Lycia, he was presented by Minerva with a bridle as the means of subduing the winged horse Pegasus, who submitted to receive it while he was slaking his thirst at the fountain Peirene. See the annexed woodcut, from a bas-relief

which represents this event, and compare Pindar, *Olymp.*, xiii., 85-115. Such was the Grecian account of the invention of the bridle, and in refer-

ence to it Minerva was worshipped at Corinth under the titles *Ἰππία* and *Χαλινίτις*.¹ The several parts of the bridle, more especially the bit, are engraved in ancient authorities in the treatises of Inverpizi (*De Frenis*), Ginzrot (*Ueber Wägen*), and Bracy Clark (*Chalimology*, Lond., 1835).

The bit (*oreæ*; ² *δῆγμα*; ³ *σθμῶν*) was commonly made of several pieces, and flexible, so as not to hurt the horse's mouth; for the Greeks considered a kind and gentle treatment the best discipline, although, when the horse was intractable, they taught it submission by the use of a bit which was armed with protuberances resembling wolves' teeth, and therefore called *lupatum*.⁴ The bit was held in its place by a leathern strap passing under the chin, and called *ὑποχαλινίδια*, for which a chain (*ψαλιν*) was often substituted; a rope or thong, distinct from the reins, was sometimes fastened to this chain or strap by means of a ring, and was used to lead the horse (*ῥυτα/ωγεῖς*).⁵ The upper part of the bridle, by which it was fixed round the ears, is called by Xenophon *κορυφαία*,⁷ and it included the *ἀμρυξ*, which was often ornamental. The cheek-pieces (*παρήιον*,⁸ *παργαβίδιον*), which joined this upper portion to the bit, were also, in some cases, richly adorned, especially among the nations of Asia. Those who took delight in horsemanship bestowed, indeed, the highest degree of splendour and elegance upon every part of the bridle, not excepting the bit, which, though commonly of bronze or iron, was sometimes silver or gold (*fulcrum manducum sub dentibus aurum*).⁹ These precious metals were also either embossed (*frena calata*)¹¹ or set with jewels.¹²

Not only was the bridle dispensed with in the management of creatures invented by the imagination of the poet,¹³ but of some which were actually trained by man to go without it. Thus the Numidian *desultor* guided his two horses by the whip, and the Gallic *essedarius*, on the banks of the Rhone, directed and animated his mules entirely by the voice.¹⁴ (*Vid. woodcuts*, p. 217, 269, 332, 378, 403.)

FRIGIDA'RIUM. (*Vid. BATHS*, p. 148.)

FRITILLUS (*φύμῶς*), a Dicebox, of a cylindrical form, and therefore called also *trurricula*,¹⁵ and formed with parallel indentations (*gradus*) on the inside, so as to make a rattling noise when the dice were shaken in it.¹⁶ When games of chance became general among the Romans, so that even boys engaged in them, they had fritilli small in proportion to their age.¹⁷

FRONTALE. (*Vid. AMPYX.*)

FRUCTUS. (*Vid. USUSFRUCTUS.*)

FRUMENTARIII were officers under the Roman Empire, who acted as spies in the provinces, and reported to the emperors anything which they considered of importance.¹⁸ They appear to have been called *Frumentarii* because it was their duty to collect information in the same way as it was the duty of other officers, called by the same name, to collect corn. They were accustomed to accuse persons falsely, and their office was at length abolished by Diocletian. They were succeeded in later times by the *agentes rerum*.¹⁹ We frequently find, in inscriptions, mention made of *Frumentarii* belonging

1. (H. N., xxv., 9.)—2. (Eclog., iii., 92.)—3. (Met., xiii., 816.—Ib., i., 104.)—4. (Billerbeck, *Flora Classica*, p. 135.)—5. (Theophrast., H. P., iii., 3.)—6. (Library of Ent. Knowledge.)

1. (Paus., II., iv., 1, 5.)—2. (Festus, s. v.)—3. (Brunck, *Anal.*, ii., 237.)—4. (Æschyl., *Prom.*, 1045.)—5. (Xen., *De Re Equ.*, vi., 13.—Ib., x., 6.—Virg., *Georg.*, iii., 208.—Hor., *Carm.*, i., 8, 7.—Ovid, *Amor.*, i., 2, 15.)—6. (Xen., l. c.—Aristoph., *Pac.*, 154.)—7. (iii., 2.)—8. (Hom., II., iv., 142.)—9. (Eur., *at loc.*)—10. (Virg., *Æn.*, vii., 279.)—11. (Apul., *De Deo Soc.*)—12. (Claud., *Epig.*, 34, 36.)—13. (Æschyl., *Prom.*, 294.)—14. (Claud., *Epig.*, 4.)—15. (Mart., *xiv.*, 16.)—16. (Hor., *Sat.*, ii., 7, 17.—Mart., *iv.*, 14.—Ib., *xiv.*, i.)—17. (Jov., *xiv.*, 5.)—18. (Aurel. Vict., *De Ces.*, 39, sub fin.—Spart., *Hadr.*, II.—Capitol., *Macrin.*, 12.—Ib., *Commod.*, 4.)—19. (Aurel. Vict., l. c.)

to particular legions,¹ from which it has been supposed that the *Frumentarii*, who acted as spies, were soldiers attached to the legions in the provinces; they may, however, have been different officers, whose duty it was to distribute the corn to the legions.

**FUCUS* (φύκος), a marine shrub (according to some, the same with red alkanet), from which the ancients made a dye or paint. "Various species of *Fuci*," observes Adams, "are described by Theophrastus and Dioscorides, but in such general terms that it appears to me a vain task to attempt to determine them. It is farther deserving of remark, that Galen, Aëtius, and Oribasius, describe a sort of ceruse under this name. It would appear that it was used as a paint, and in this sense it occurs in Lucian's fine epigram in the *Anthology*."²

FUGA LATA. (*Vid.* BANISHMENT, ROMAN.)

FUGA LIBERA. (*Vid.* BANISHMENT, ROMAN.)

FUGITIVUS. (*Vid.* SERVUS.)

FULCRUM. (*Vid.* LECTUS.)

FULLO (κναφεύς, γναφεύς), also called *NACCA*,³ a Fuller, a washer or scourer of cloth and linen. The fullones not only received the cloth as it came from the loom in order to scour and smooth it, but also washed and cleansed garments which had been already worn. As the Romans generally wore woollen dresses, which were often of a light colour, they frequently needed, in the hot climate of Italy, a thorough purification. The way in which this was done has been described by Pliny and other ancient writers, but is most clearly explained by some paintings which have been found on the walls of a fullonica at Pompeii. Two of these paintings are given by Gell,⁴ and the whole of them in the Museo Borbonico;⁵ and the latter of which works the following cuts have been taken.

The clothes were first washed, which was done in tubs or vats, where they were trodden upon and stamped by the feet of the fullones, whence Seneca speaks⁶ of *saltus fullonicus*. The following woodcut represents four persons thus employed, of whom three are boys, probably under the superintendence of the man. Their dress is tucked up, leaving the legs bare; the boys seem to have done their work, and to be wringing the articles on which they had been employed.

The ancients were not acquainted with soap, but they used in its stead different kinds of alkali, by which the dirt was more easily separated from the clothes. Of these, by far the most common was the urine of men and animals, which was mixed with the water in which the clothes were washed.⁷ To procure a sufficient supply of it, the fullones were accustomed to place at the corners of the streets vessels, which they carried away after they had been filled by the passengers.⁸ We are told by Suetonius⁹ that Vespasian imposed a *urina vectigal*, which is supposed by Casaubon and others to have

been a tax paid by the fullones. Nitrum, of which Pliny¹ gives an account, was also mixed with the water by the scourers. Fuller's earth (*creta fullonica*), of which there were many kinds, was employed for the same purpose. We do not know the exact nature of this earth, but it appears to have acted in the same way as our fullers' earth, namely, partly in scouring and partly in absorbing the greasy dirt. Pliny² says that the clothes should be washed with the Sardinian earth.

After the clothes had been washed, they were hung out to dry, and were allowed to be placed in the street before the doors of the fullonica.⁴ When dry, the wool was brushed and carded to raise the nap, sometimes with the skin of a hedgehog, and sometimes with some plants of the thistle kind. The clothes were then hung on a vessel of basket-work (*viminca caeca*), under which sulphur was placed in order to whiten the cloth; for the ancient fullers appear to have known that many colours were destroyed by the volatile steam of sulphur.⁵ A fine white earth, called Cimolian by Pliny, was often rubbed into the cloth to increase its whiteness.⁶ The preceding account is well illustrated by the following woodcut.

On the left we see a fullo brushing or carding a white tunic, suspended over a rope, with a card or brush, which bears considerable resemblance to a modern horsebrush. On the right, another man carries a frame of wicker-work, which was, without doubt, intended for the purpose described above; he has also a pot in his hand, perhaps intended for holding the sulphur. On his head he wears a kind of garland, which is supposed to be an olive garland, and above him an owl is represented sitting. It is thought that the olive garland and the owl indicate that the establishment was under the patronage of Minerva, the tutelary goddess of the loom. Sir W. Gell imagines that the owl is probably the picture of a bird which really existed in the family. On the left a well-dressed female is sitting, examining a piece of work which a younger girl brings to her. A *calantica* (*vid.* CALANTICA) upon her head, a necklace, and bracelets, denote a person of higher rank than one of the ordinary work-people of the establishment.

In the following woodcut we see a young man in a green tunic giving a piece of cloth, which appears to be finished, to a young woman, who wears a green under-tunic, and over it a yellow tunic with red stripes. On the right is another female in a white tunic, who appears to be engaged in cleaning one of the cards or brushes. Among these paintings there was a press, worked by two upright screws, in which the cloth was placed to be smoothed. A drawing of this press is given in the article *COCHLEA*, p. 272.

(Ep., 15.)—7. (Plin., H. N., xxviii., 18, 26.—Athen., xi., p. 484.)—8. (Martial, vi., 93.—Macrob., *Satur.*, ii., 12.)—9. (Vesp., 23.)

1. (H. N., xxxi., 46.)—2. (Plin., H. N., xviii., 4.)—3. (H. N., xxxv., 57.)—4. (Dig. 43, tit. 10, s. 1, § 4.)—5. (Apul., *Met.*, ix., p. 208, Bipont.—Plin., H. N., xxxv., 50, 57.—Pollux, *Onom.*, vii., 41.)—6. (Theophrast., *Char.*, 10.—Plaut., *Aulul.*, iv., 9, 6.—Plin., H. N., xxxv., 57.)

The establishment or workshop of the fullers was called *Fullonica*,¹ *Fullonicum*,² or *Fullonium*.³ Of such establishments there were great numbers in Rome, for the Romans do not appear to have washed at home even their linen clothes.⁴ The trade of the fullers was considered so important, that the censors C. Flaminius and L. Æmilius, B.C. 220, prescribed the mode in which the dresses were to be washed.⁵ Like the other principal trades in Rome, the Fullones formed a collegium.⁶ To large farms a fullonica was sometimes attached, in which the work was performed by the slaves who belonged to the *familia rustica*.⁷

The fullo was answerable for the property while it was in his possession; and if he returned by mistake a different garment from the one he had received, he was liable to an action *ex locato*; to which action he was also subject if the garment was injured.⁸ Woollen garments which had been once washed were considered to be less valuable than they were previously;⁹ hence Martial¹⁰ speaks of a *toga lota terque quaterque* as a poor present.

The Greeks were also accustomed to send their garments to fullers to be washed and scoured, who appear to have adopted a similar method to that which has been described above.¹¹ The word *πλύων* denoted the washing of linen, and *κναφεύειν* or *γναφεύειν* the washing of woollen clothes.¹²

FULLONICA. (Vid. FULLO.)

FUNALE (σκολάξ¹³), a Link, used in the same manner as a torch (vid. FAX), but made of papyrus and other fibrous plants, twisted like a rope, and smeared with pitch and wax.¹⁴ It was, indeed, as Antipater describes it, "a light coated with wax" (*λαμπάς κηροχίτων*).¹⁵ For this reason it was also called *cereus*. Funalia are sculptured upon a monument of considerable antiquity preserved at Padua.¹⁶ At the Saturnalia they were presented by clients to their superiors, and were lighted in honour of Saturn.¹⁷

FUNALIS EQUUS. (Vid. CURRUS, p. 332.)

FUNAMBULUS (καλοβάτης, σχινοβάτης), a Rope-dancer. The art of dancing on the tight-rope was carried to as great perfection among the Romans as it is with us.¹⁸ If we may judge from a series of paintings discovered in the excavations¹⁹ from which

the figures in the annexed woodcut are selected, the performers, who were principally Greeks,¹ placed themselves in an endless variety of graceful and

sportive attitudes, and represented the characters of bacchanals, satyrs, and other imaginary beings. Three of the persons here exhibited hold the thyrsus, which may have served for a balancing-pole. Two are performing on the double pipe, and one on the lyre; two others are pouring wine into vessels of different forms. They all have their heads enveloped in skins or caps, probably intended as a protection in case of falling. The Emperor Antoninus, in consequence of the fall of a boy, caused feather beds (*culcitras*) to be laid under the rope, to obviate the danger of such accidents.² One of the most difficult exploits was running down the rope³ at the conclusion of the performance. It was a strange attempt of Germanicus and of the Emperor Galba to exhibit elephants walking on the rope.⁴

FUNDA (σφενδόνη), a Sling. The light troops of the Greek and Roman armies (p. 94) consisted in great part of slingers (*funditores*, *σφενδόνηται*). The sling was also very much employed by the Jews, Phœnicians, and Egyptians, by the Carduchi and the Persians,⁵ by the Spaniards,⁶ and by many other nations. The manner in which it was wielded may be seen in the annexed figure⁷ of a soldier

with a provision of stones in the sinus of his pallium, and with his arm extended in order to whirl the sling about his head.⁸ Besides stones, plum-

nets, called *glandes* (μολυβδίδες), of a form between acorns and almonds, were cast in moulds to be thrown with slings.¹ They have been found on the plain of Marathon, and in other parts of Greece, and are remarkable for the inscriptions and devices which they exhibit, such as thunderbolts, the names of persons, and the word ΔΕΞΑΙ, meaning "Take this."²

The celebrity of the natives of the Balearic Isles as slingers is said to have arisen from the circumstance that, when they were children, their mothers obliged them to obtain their food by striking it with a sling.³ Among the Greeks, the Achæans and Acarnanians attained to the greatest expertise in the use of this weapon.

The sling, as depicted in the Egyptian tombs, had at one end a loop for making it fast to the hand. It was made of wool,⁴ hair, hemp, or leather⁵ (*stuppea*,⁶ *habena*). Its advantages were, that it might be carried any distance without the slightest inconvenience; that soldiers accustomed to the use of it might employ it when their other weapons were unavailable (*positis hastis*)⁷; and that it was very effective in checking an enemy, especially in stony places, in mountain passes, and upon eminences.⁸ Hunters also used the sling to kill their game.¹⁰

While the sling was a very efficacious and important instrument of ancient warfare, stones thrown with the hand alone were also much in use both among the Romans¹¹ and with other nations (*οἱ περὶ πόδας*).¹² The Libyans carried no other arms than three spears and a bag full of stones.¹³

The casting-net was sometimes called *funda*.¹⁴ (*VID. RETE.*)

FUNDUS. The primary signification of this word appears to be the bottom or foundation of a thing; and its elementary part (*fud*) seems to be the same as that of *βυθός* and *πυθμήν*, the *n* in *fundus* being used to strengthen the syllable. The conjectures of the Latin writers as to the etymology of *fundus* may be safely neglected.

Fundus is often used as applied to land, the solid substratum of all man's labours. According to Florentinus,¹⁵ the term *fundus* comprised all land and constructions on it; but usage had restricted the name of *ædes* to city houses, *villa* to rural houses, *area* to a plot of ground in a city not built upon, *ager* to a plot of ground in the country, and *fundus* to *ager cum ædificiis*. This definition of *fundus* may be compared with the uses of that word by Horace and other writers. In one passage,¹⁶ Horace places *domus* and *fundus* in opposition to one another, *domus* being, apparently, there used as equivalent to *ædes*.

The term *fundus* often occurred in Roman wills, and the testator frequently indicated the *fundus* to which his last dispositions referred by some name, such as *Sempronianus*, *Seianus*; sometimes, also, with reference to a particular tract of country, as *Fundus Trebatianus qui est in regione Atellana*.¹⁷ A *fundus* was sometimes devised *cum omni instrumento*, with its stock and implements of husbandry. Occasionally a question arose as to the extent of the word *instrumentum*, between or among the parties who derived their claim from a testator.¹⁸

Fundus has a derived sense which flows easily enough from its primary meaning. "*Fundus*," says Festus, "*dicitur populus esse rei, quam alienat, hoc*

est auctor."¹⁹ (*VID. AUCTOR.*) In this sense "*fundus esse*" is to confirm or ratify a thing; and in Gellius²⁰ there is the expression "*sententia legis fundus subscriptorque fieri*." (*VID. FÆDERATI.*)

FUNDITORES. (*VID. FUNDA.*)

***FUNGUS** (μύκης), the Mushroom. "The esculent mushrooms of the ancients comprehended, no doubt, the *Agaricus campestris*, and other species of this genus. The *Agaricus acris* and other species were embraced under their poisonous mushrooms. It will be interesting to the medical student to compare the account of the poisonous mushrooms given by Nicander, with Orfila's observations on the same in his work 'on Poisons.'"²¹ Diphilus, an ancient author quoted by Athenæus, says that *Fungi* are grateful to the stomach, laxative, and nutritious, but of difficult digestion and flatulent. Apicius directs to eat them with pepper, oil, salt, &c. Horace points out the best kind of *Fungi*, and the poets, generally, mention mushrooms as a delicacy at the tables of gourmands.²²

FUNIS. (*VID. NAVIS.*)

FUNUS. It is proposed in the following article to give a brief account of Greek and Roman funerals, and of the different rites and ceremonies connected therewith.

The Greeks attached great importance to the burial of the dead. They believed that souls could not enter the Elysian fields till their bodies had been buried; and, accordingly, we find the shade of Elpenor in the *Odyssey*²³ earnestly imploring Ulysses to bury his body. Ulysses also, when in danger of shipwreck, deplores that he had not fallen before Troy, as he should in that case have obtained an honourable burial.²⁴ So strong was this feeling among the Greeks, that it was considered a religious duty to throw earth upon a dead body which a person might happen to find unburied;²⁵ and among the Athenians, those children who were released from all other obligations to unworthy parents, were nevertheless bound to bury them by one of Solon's laws.²⁶ The neglect of burying one's relatives is frequently mentioned by the orators as a grave charge against the moral character of a man,²⁷ since the burial of the body by the relations of the dead was considered a religious duty by the universal law of the Greeks. Sophocles represents Antigone as disregarding all consequences in order to bury the dead body of her brother Polynices, which Creon, the king of Thebes, had commanded to be left unburied. The common expressions for the funeral rites, τὰ δίκαια, νόμιμα or νομιζόμενα, προσήκοντα, show that the dead had, as it were, a legal and moral claim to burial.

The common customs connected with a Greek funeral are described by Lucian in his treatise *De Luctu*;²⁸ and there is no reason for supposing that they differ much from those which were practised in earlier times. After a person was dead, it was the custom first to place in his mouth an obolus, called δανάκη (*vid. DANACE*), with which he might pay the ferryman in Hades. The body was then washed and anointed with perfumed oil, and the head was crowned with the flowers which happened to be in season. The deceased was then dressed in as handsome a robe as the family could afford, in order, according to Lucian, that he might not be cold on the passage to Hades, nor be seen naked by Cerberus; this garment appears to have been usu-

ally white.¹ These duties were not performed by hired persons, like the *pollinctores* among the Romans, but by the women of the family, upon whom the care of the corpse always devolved.²

The corpse was then laid out (*πρόθεσις, προτίθεσθαι*) on a bed (*κλίνη*), which appears to have been of the ordinary kind, with a pillow (*προσκεφάλαιον*) for supporting the head and back.³ It is said that the bed on which the corpse was laid out was originally placed outside the house;⁴ but at Athens we know it was placed inside, by one of Solon's laws.⁵ The object of this formal *πρόθεσις* was, that it might be seen that the deceased had died naturally, and that no violence had been done to him.⁶ Plato⁷ assigns another reason, namely, that there might be no doubt that the person was dead, and says that the body ought only to be kept in the house so long as may be necessary to ascertain that fact. By the side of the bed there were placed painted earthen vessels called *λήκηδοι*,⁸ which were also buried with the corpse; examples of which may be seen in the drawings of the coffins given by Böttiger⁹ and Stackelberg.¹⁰ Great numbers of these painted vases have been found in modern times, and they have been of great use in explaining many matters connected with antiquity. A honey-cake, called *μελιττοῦτα*, which appears to have been intended for Cerberus, was also placed by the side of the corpse.¹¹ Before the door a vessel of water was placed, called *δοσρακον, ἀρδάλιον* or *ἀρδάνιον*, in order that persons who had been in the house might purify themselves by sprinkling water on their persons.¹² The relatives stood around the bed, the women uttering great lamentations, rending their garments, and tearing their hair.¹³ Solon attempted to put a stop to this,¹⁴ but his regulations on the subject do not appear to have been generally observed. It was formerly the practice to sacrifice victims before carrying out the dead; but this custom was not observed in the time of Plato.¹⁵ No females under 60 years of age, except the nearest relatives (*ἐντὸς ἀνεψιφάδων*), were allowed to be present while the corpse was in the house.¹⁶

On the day after the *πρόθεσις*, or the third day after death, the corpse was carried out (*ἐκφορά, ἐκκομιδή*) for burial early in the morning and before sunrise, by a law of Solon, which law appears to have been revived by Demetrius Phalereus.¹⁷ A burial soon after death was supposed to be pleasing to the dead. Thus we find the shade of Patroclus saying to Achilles,¹⁸

Θάπτε με ὅττι τάχιστα, πύλος αἰδῶο περήσω.

In some places it appears to have been usual to bury the dead on the day following death.¹⁹ The men walked before the corpse, and the women behind.²⁰ The funeral procession was preceded or followed by hired mourners (*ῥήνηφοδοί*), who appear to have been usually Carian women, though Plato speaks of men engaged in this office. They played mournful tunes on the flute.²¹

The body was either buried or burned. Lucian²² says that the Greeks burn and the Persians bury their dead; but modern writers are greatly divided

in opinion as to which was the usual practice. Wachsmuth¹ says that in historical times the dead were always buried; but this statement is not strictly correct. Thus we find that Socrates speaks of his body being either burned or buried;² the body of Timoleon was burned,³ and so was that of Philopæmon.⁴ The word *θάπτειν* was used in connexion with either mode; it is applied to the collection of the ashes after burning, and accordingly we find the words *καίειν* and *θάπτειν* used together.⁵ The proper expression for interment in the earth is *κατορύττειν*, whence we find Socrates speaking of τὸ σῶμα ἢ καίμενον ἢ κατορύττεσθαι. In Homer the bodies of the dead are burned;⁶ but interment was also used in very ancient times. Cicero⁷ says that the dead were buried at Athens in the time of Cecrops; and we also read of the bones of Orestes being found in a coffin at Tegea.⁸ The dead were commonly buried among the Spartans⁹ and the Sicyonians;¹⁰ and the prevalence of this practice is proved by the great number of skeletons found in coffins in modern times, which have evidently not been exposed to the action of fire. Both burning and burying appear to have been always used to a greater or less extent at different periods, till the spread of Christianity at length put an end to the former practice.

The dead bodies were usually burned on piles of wood called *πυράι*. The body was placed on the top; and in the heroic times it was customary to burn with the corpse animals, and even captives or slaves. Thus, at the funeral of Patroclus, Achilles killed many sheep, oxen, horses, and dogs, and also twelve captive Trojans, whose bodies he burned with those of his friend.¹¹ Oils and perfumes were also thrown into the flames. When the pyre was burned down, the remains of the fire were quenched with wine, and the relatives and friends collected the bones.¹² The bones were then washed with wine and oil, and placed in urns, which were sometimes made of gold.¹³

The corpses which were not burned were buried in coffins, which were called by various names, as *σοροί, πύλοι, ληροί, λάρνακες, δοῦραι*, though some of these names were also applied to the urns in which the bones were collected. They were made of various materials, but were usually of baked clay or earthenware. Their forms are very various, as may be seen by a reference to Stackelberg, *Die Gräber der Hellenen*, pl. 7, 8. The following woodcut contains two of the most ancient kind; the figure in the middle is the section of one.

The dead were usually buried outside the town, as it was thought that their presence in the city brought pollution to the living. At Athens the dead were formerly buried in their own houses,¹⁴ but in historical times none were allowed to be buried within the city.¹⁵ Lycurgus, in order to remove all superstition respecting the presence of the dead, allowed of burial in Sparta;¹⁶ and at Megara, also, the dead were buried within the town.¹⁷

Persons who possessed lands in Attica were frequently buried in them, and we therefore read of tombs in the fields.¹⁸ Tombs, however, were most

frequently built by the side of roads and near the gates of the city. Thus the tomb of Thucydides was near the Melitian gate;¹ but the most common place of burial was outside of the Itonian gate, near the road leading to the Peiræus, which gate was for that reason called the burial-gate (*Ἡρία πύλαι*).² Those who had fallen in battle were buried at the public expense in the outer Cerameicus, on the road leading to the Academia.³

The tombs were regarded as private property, and belonged exclusively to the families whose relatives had been buried in them.⁴

Tombs were called *θήκαι*, *τάφοι*, *μνήματα*, *μνημεῖα*, *σῆματα*. Many of these were only mounds of earth or stones (*χώματα*, *σθλώναι*, *τύμβοι*). Others were built of stone, and frequently ornamented with great taste. Some of the most remarkable Greek tombs are those which have been recently discovered in Lycia by Mr. Fellows. In the neighbourhood of Antiphellus the tombs are very numerous. They all have Greek inscriptions, which are generally much destroyed by the damp sea-air. The following woodcut, taken from Mr. Fellows's work,⁵ contains one of these tombs, and will give an idea of the general appearance of the whole.

At Xanthus the tombs are still more numerous. They are cut into, or are formed by cutting away, the rock, leaving the tombs standing like works of sculpture.⁶ The same is the case at Telmessus, where they are cut out of the rock in the form of temples. They are generally approached by steps, and the columns of the portico stand out about six feet from the entrance to the cella; the interiors vary but little; they are usually about six feet in height, and nine feet by twelve in size. One side is occupied by the door, and the other sides contain benches on which the coffins or urns have been placed.⁷

Some Greek tombs were built under ground, and called *hypogæa* (*ὑπόγαια* or *ὑπόγεια*). They correspond to the Roman *conditoria*.⁸ (Vid. CONDITORIUM.)

At Athens the dead appear to have been usually buried in the earth, and originally the place of their interment was not marked by any monument.⁹ Afterward, however, so much expense was incurred in the erection of monuments to the deceased, that it was provided by one of Solon's laws that no one

should erect a monument which could not be completed by ten men in the course of three days.¹ This law, however, does not seem to have been strictly observed. We read of one monument which cost twenty-five minæ,² and of another which cost more than two talents.³ Demetrius Phalereus also attempted to put a stop to this expense by forbidding the erection of any funeral monument more than three cubits in height.⁴

The monuments erected over the graves of persons were usually of four kinds: 1. *στήλαι*, pillars or upright stone tablets; 2. *κίονες*, columns; 3. *ναῖδια* or *ἡρώα*, small buildings in the form of temples; and, 4. *τράπεζαι*, flat square stones, called by Cicero *mensæ*. The term *στήλαι* is sometimes applied to all kinds of funeral monuments, but properly designates upright stone tablets, which were usually terminated with an oval heading called *ἐπιθήμα*. These *ἐπιθήματα* were frequently ornamented with a kind of arabesque work, as in the two following specimens taken from Stackelberg.⁵ The shape of the *ἐπιθήμα*, however, some-

times differed: among the Sicyonians it was in the shape of the *ἀστὴρ* or *fastigium* (vid. FASTIGIUM), which is placed over the extremity of a temple.

The *κίονες* or columns were of various forms. The three in the following woodcut are taken from Stackelberg⁷ and Millin.⁸

The following example of an *ἡρώων*, which is also taken from Stackelberg,⁹ will give a general idea of monuments of this kind. Another *ἡρώων* is given in the course of this article.

The inscriptions upon these funeral monuments usually contain the name of the deceased person, and that of the demus to which he belonged, as well as, frequently, some account of his life. A work on these monuments, entitled *Περὶ Μνημάτων*, was written by Diodorus Periegetes.¹⁰

Orations in praise of the dead were sometimes pronounced; but Solon ordained that such orations should be confined to persons who were honoured with a public funeral.¹¹ In the heroic ages games

1. (Id., ii., 26.)—2. (Lys., c. Diog., p. 905.)—3. (Demosth., c. Steph., i., p. 1125, 15.)—4. (Cic., l. c.)—5. (I. c.)—6. (Pl. 3.)—7. (Pl. 44, 46.)—8. (Peint. de Vases Ant., vol. ii., pl. 51.)—9. (Pl. 1.)—10. (Plot., Them., 32.)—11. (Cic., De Leg., ii., 26.)

were celebrated at the funeral of a great man, as in the case of Patroclus;¹ but this practice does not seem to have been usual in the historical times.

All persons who had been engaged in funerals were considered polluted, and could not enter the temples of the gods till they had been purified. Those persons who were reported to have died in foreign countries, and whose funeral rites had been performed in their own cities, were called *υστερόποτοι* and *δευτερόποτοι* if they were alive. Such persons were considered impure, and could only be delivered from their impurity by being dressed in swaddling clothes, and treated like newborn infants.²

After the funeral was over the relatives partook of a feast, which was called *περίδειπνον* or *νεκρόδειπνον*.³ This feast was always given at the house of the nearest relative of the deceased. Thus the relatives of those who had fallen at the battle of Chæroneia partook of the *περίδειπνον* at the house of Demosthenes, as if he were the nearest relative to them all.⁴ These feasts are frequently represented on funeral monuments. In one corner a horse's head is usually placed, which was intended to represent death as a journey. The following woodcut, which represents a *περίδειπνον* or *νεκρόδειπνον*, is taken from the *Marmora Ozon.*, i., tab. 52, No. 135. A similar example of a *περίδειπνον* is given at the beginning of Hobhouse's *Travels*.⁵

On the second day after the funeral a sacrifice to the dead was offered, called *τρίτα*. Pollux⁶ enumerates in order all the sacrifices and ceremonies which followed the funeral: *τρίτα, ἐντατα, τριακά-*

δες, ἐναγίσματα, χοαί. Aristophanes¹ alludes to the *τρίτα*. The principal sacrifice, however, to the dead was on the ninth day, called *ἐντατα* or *ἐντα*.² The mourning for the dead appears to have lasted till the thirtieth day after the funeral,³ on which day sacrifices were again offered.⁴ At Sparta the time of mourning was limited to eleven days.⁵ During the time of mourning it was considered indecorous for the relatives of the deceased to appear in public;⁶ they were accustomed to wear a black dress,⁷ and in ancient times cut off their hair as a sign of grief (*Πλόκαμος πενθητήριος*).⁸

The tombs were preserved by the family to which they belonged with the greatest care, and were regarded as among the strongest ties which attached a man to his native land.⁹ In the Docimasia of the Athenian archons it was always a subject of inquiry whether they had kept in proper repair the tombs of their ancestors.¹⁰ On certain days the tombs were crowned with flowers, and offerings were made to the dead, consisting of garlands of flowers and various other things; for an account of which, see Æschyl., *Pers.*, 609, &c.; *Choëph.*, 86, &c. The act of offering these presents was called *ἐναγίστω*, and the offerings themselves *ἐναγίσματα*, or, more commonly, *χοαί*. Such offerings at the tombs are represented upon many *λήκυθοι*, or painted vases, of which an example is given in the following woodcut.¹¹ The tomb is built in the form of a temple (*ἡρώων*), and upon it is a representation of the deceased. See also Stackelberg, pl. 44-46, and Millin, vol. ii., pl. 32, 38, for farther examples.

The *γενέσια* mentioned by Herodotus¹² appear to have consisted in offerings of the same kind, which were presented on the anniversary of the birthday of the deceased. The *νεκύσια* were probably offerings on the anniversary of the day of the death; though, according to some writers, the *νεκύσια* were the same as the *γενέσια*.¹³ Meals were also presented to the dead, and burned.¹⁴

Certain criminals, who were put to death by the state, were also deprived of the rites of burial, which was considered as an additional punishment. There were certain places, both at Athens and Sparta, where the dead bodies of such criminals were cast.¹⁵ A person who had committed suicide was not deprived of burial, but the hand with which he had killed himself was cut off and buried by it-

self.¹ The bodies of those persons who had been struck by lightning were regarded as sacred (*ἱεροὶ νεκροί*); they were never buried with others,² but usually on the spot where they had been struck.³ (Vid. BIDENTAL.)

We now proceed to give an account of Roman funerals. They were conducted, in some respects, in the same manner as Greek funerals; but as they differ in many important particulars, a separate account of each is given in this article.

When a Roman was at the point of death, his nearest relative present endeavoured to catch the last breath with his mouth.⁴ The ring was taken off the finger of the dying person;⁵ and as soon as he was dead, his eyes and mouth were closed by the nearest relative,⁶ who called upon the deceased by name (*inclamare, conclamare*), exclaiming *habeo et vult*.⁷ The corpse was then washed, and anointed with oil and perfumes by slaves, called *Polinctores*, who belonged to the *Libitinarii*, or undertakers, called by the Greeks νεκροβάπται.⁸ The *Libitinarii* appear to have been so called because they dwelt near the Temple of Venus Libitina, where all things requisite for funerals were sold.⁹ Hence we find the expressions *vitare Libitinam* and *evadere Libitinam* used in the sense of escaping death.¹⁰ At this temple an account (*ratio, epheMERIS*) was kept of those who died, and a small sum was paid for the registration of their names.¹¹

A small coin was then placed in the mouth of the corpse, in order to pay the ferryman in Hades,¹² and the body was laid out on a couch in the vestibule of the house, with its feet towards the door, and dressed in the best robe which the deceased had worn when alive. Ordinary citizens were dressed in a white toga, and magistrates in their official robes.¹³ If the deceased had received a crown, while alive, as a reward for his bravery, it was now placed on his head,¹⁴ and the couch on which he was laid was sometimes covered with leaves and flowers. A branch of cypress was also usually placed at the door of the house, if he was a person of consequence.¹⁵

Funerals were usually called *funera iusti* or *exsequia*; the latter term was generally applied to the funeral procession (*pompa funebris*). There were two kinds of funerals, public and private; of which the former was called *funus publicum*¹⁶ or *indictum*, because the people were invited to it by a herald;¹⁷ the latter, *funus tacitum*,¹⁸ *translativum*,¹⁹ or *plebeum*. A person appears to have usually left a certain sum of money in his will to pay the expenses of his funeral; but if he did not do so, nor appoint any one to bury him, this duty devolved upon the persons to whom the property was left, and if he died without a will, upon his relatives according to their order of succession to the property.²⁰ The expenses of the funeral were in such cases decided by an arbiter according to the property and rank of the deceased,²¹ whence *arbitria* is used to signify the funeral expenses.²² The following description of the mode in which a funeral was conducted only applies strictly to the funerals of the great; the same pomp and ceremony could not, of

course, be observed in the case of persons in ordinary circumstances.

All funerals in ancient times were performed at night,¹ but afterward the poor only were buried at night, because they could not afford to have any funeral procession.² The corpse was usually carried out of the house (*efferebatur*) on the eighth day after the death.³ The order of the funeral procession was regulated by a person called *Designator* or *Dominus Funeris*, who was attended by lictors dressed in black.⁴ It was headed by musicians of various kinds (*cornicines, siticines*), who played mournful strains,⁵ and next came mourning women, called *Præfica*,⁶ who were hired to lament and sing the funeral song (*nænia* or *lessus*) in praise of the deceased. These were sometimes followed by players and buffoons (*scurra, histriones*), of whom one, called *Archimimus*, represented the character of the deceased, and imitated his words and actions.⁷ Then came the slaves whom the deceased had liberated, wearing the cap of liberty (*pileati*); the number of whom was occasionally very great, since a master sometimes liberated all his slaves in his will, in order to add to the pomp of his funeral.⁸ Before the corpse the images of the deceased and of his ancestors were carried,⁹ and also the crowns or military rewards which he had gained.¹⁰

The corpse was carried on a couch (*lectica*), to which the name of *Feretrum*¹¹ or *Capulum*¹² was usually given; but the bodies of poor citizens and of slaves were carried on a common kind of bier or coffin, called *Sandapila*.¹³ The *Sandapila* was carried by bearers, called *Vespæ* or *Vespillones*,¹⁴ because, according to Festus,¹⁵ they carried out the corpses in the evening (*vespertino tempore*). The couches on which the corpses of the rich were carried were sometimes made of ivory, and covered with gold and purple.¹⁶ They were often carried on the shoulders of the nearest relatives of the deceased,¹⁷ and sometimes on those of his freedmen.¹⁸ Julius Cæsar was carried by the magistrates,¹⁹ and Augustus by the senators.²⁰

The relatives of the deceased walked behind the corpse in mourning; his sons with their heads veiled, and his daughters with their heads bare and their hair dishevelled, contrary to the ordinary practice of both.²¹ They often uttered loud lamentations, and the women beat their breasts and tore their cheeks, though this was forbidden by the Twelve Tables (*Mulieris genas ne radunt*).²² If the deceased was of illustrious rank, the funeral procession went through the Forum,²³ and stopped before the *rostra*, where a funeral oration (*laudatio*) in praise of the deceased was delivered.²⁴ This practice was of great antiquity among the Romans, and is said by some writers to have been first introduced by Poplicola, who pronounced a funeral oration in honour of his colleague Brutus.²⁵ Women, also, were honoured by funeral orations.²⁶ From the Forum the corpse was carried to the place of burning or burial, which, according to a law of

the Twelve Tables, was obliged to be outside the city.¹

The Romans in the most ancient times buried their dead,² though they also early adopted, to some extent, the custom of burning, which is mentioned in the Twelve Tables.³ Burning, however, does not appear to have become general till the later times of the Republic; Marius was buried, and Sulla was the first of the Cornelian gens whose body was burned.⁴ Under the Empire burning was almost universally practised, but was gradually discontinued as Christianity spread,⁵ so that it had fallen into disuse in the fourth century.⁶ Persons struck by lightning were not burned, but buried on the spot, which was called *Bidental*, and was considered sacred. (*Vid. BIDENTAL.*) Children, also, who had not cut their teeth, were not burned, but buried in a place called *Suggundarium*.⁷ Those who were buried were placed in a coffin (*arca* or *loculus*), which was frequently made of stone,⁸ and sometimes of the Assian stone, which came from Assos in Troas, and which consumed all the body, with the exception of the teeth, in 40 days,⁹ whence it was called *Sarcophagus*. This name was in course of time applied to any kind of coffin or tomb.¹⁰

The corpse was burned on a pile of wood (*pyra* or *rogus*). Servius¹¹ thus defines the difference between *pyra* and *rogus*: "*Pyra est lignorum congeries*; *rogus, cum jam ardere cæperit, dicitur.*" This pile was built in the form of an altar, with four equal sides, whence we find it called *ura sepulcrici*¹² and *funeris ura*.¹³ The sides of the pile were, according to the Twelve Tables, to be left rough and unpolished,¹⁴ but were frequently covered with dark leaves.¹⁵ Cypress-trees were sometimes placed before the pile.¹⁶ On the top of the pile the corpse was placed, with the couch on which it had been carried,¹⁷ and he nearest relative then set fire to the pile with his ace turned away. (*Vid. FAX.*) When the flames began to rise, various perfumes were thrown into the fire (called by Cicero¹⁸ *sumptuosa respersio*), though this practice was forbidden by the Twelve Tables; cups of oil, ornaments, clothes, dishes of food, and other things, which were supposed to be agreeable to the deceased, were also thrown upon the flames.¹⁹

The place where a person was burned was called *Bustum* if he was afterward buried on the same spot (*vid. BUSTUM*), and *Ustrina* or *Ustrinum* if he was buried at a different place. Persons of property frequently set apart a space, surrounded by a wall, near their sepulchres, for the purpose of burning the dead; but those who could not afford the space appear to have sometimes placed the funeral pyre against the monuments of others, which was frequently forbidden in inscriptions on monuments (*Huic monumento ustrinum applicari non licet*²⁰).

If the deceased was an emperor or an illustrious general, the soldiers marched (*decurrerant*) three times round the pile,²¹ which custom was observed annually at a monument built by the soldiers in honour of Drusus.²² Sometimes animals were slaughtered at the pile, and in ancient times captives and slaves, since the Manes were supposed to be

fond of blood; but afterward gladiators, called *Bustuarii*, were hired to fight round the burning pile. (*Vid. BUSTUM.*)

When the pile was burned down, the embers were soaked with wine, and the bones and ashes of the deceased were gathered by the nearest relatives,¹ who sprinkled them with perfumes, and placed them in a vessel called *urna*,² which was made of various materials, according to the circumstances of individuals. Most of the funeral urns in the British Museum are made of marble, alabaster, or baked clay. They are of various shape, but most commonly square or round; and upon them there is usually an inscription or epitaph (*titulus* or *epitaphium*), beginning with the letters D. M. S. or only D. M., that is, *DIS MANIBUS SACRUM*, followed by the name of the deceased, with the length of his life, &c., and also by the name of the person who had the urn made. The following examples, taken from urns in the British Museum, will give a general knowledge of such inscriptions. The first is to Serullia Zosimenes, who lived 26 years, and is dedicated by her son Prosdecius:

D. M.
SERVILLÆ ZOSIMENI
QVÆ VIXIT ANN. XXVI
BENE MEREN. FECIT
PROSDECIVS FILIVS.

The next is an inscription to Licinius Successus, who lived 13 years, one month, and 19 days, by his most unhappy parents, Comicus and Auriola:

DIS MAN.
COMICVS. ET
AVRIOLA. PARENTES
INFELICISSIMI
LICINIO SUCCESSO.
V. A. XIII. M. I. D. XIX.

The following woodcut is a representation of a sepulchral urn in the British Museum. It is of an upright rectangular form, richly ornamented with foliage, and supported at the sides by pædasters. It is erected to the memory of Cossutia Prima. Its height is twenty-one inches, and its width, at the base, fourteen inches six eighths. Below the inscription an infant genius is represented driving a car drawn by four horses.

After the bones and ashes of the deceased had been placed in the urn, the persons present were thrice sprinkled by a priest with pure water from a branch of olive or laurel for the purpose of purification;¹ after which they were dismissed by the *præficus*, or some other person, by the solemn word *I licet*, that is, *ire licet*.² At their departure they were accustomed to bid farewell to the deceased by pronouncing the word *Vale*.³

The urns were placed in sepulchres, which, as already stated, were outside the city, though in a few cases we read of the dead being buried within the city. Thus Valerius, Publicola, Tubertus, and Fabricius were buried in the city; which right their descendants also possessed, but did not use.⁴ The vestal virgins and the emperors were buried in the city, according to Servius,⁵ because they were not bound by the laws. By a rescript of Hadrian, those who buried a person in the city were liable to a penalty of 40 aurei, which was to be paid to the *fiscus*; and the spot where the burial had taken place was confiscated.⁶ The practice was also forbidden by Antoninus Pius⁷ and Theodosius II.⁸

The verb *sepelire*, like the Greek *θάπτειν*, was applied to every mode of disposing of the dead,⁹ and *sepulcrum* signified any kind of tomb in which the body or bones of a man were placed (*Sepulcrum est, ubi corpus ossave hominis condita sunt*¹⁰). The term *humare* was originally used for burial in the earth,¹¹ but was afterward applied, like *sepelire*, to any mode of disposing of the dead; since it appears to have been the custom, after the body was burned, to throw some earth upon the bones.¹²

The places for burial were either public or private. The public places of burial were of two kinds; one for illustrious citizens, who were buried at the public expense, and the other for poor citizens, who could not afford to purchase ground for the purpose. The former was in the Campus Martius, which was ornamented with the tombs of the illustrious dead (*vid. CAMPUS MARTIUS*), and in the Campus Esquilinus;¹³ the latter was also in the Campus Esquilinus, and consisted of small pits or caverns, called *puticuli* or *puticulae*;¹⁴ but as this place rendered the neighbourhood unhealthy, it was given to Mæcenas, who converted it into gardens, and built a magnificent house upon it. Private places for burial were usually by the sides of the roads leading to Rome; and on some of these roads, such as the Via Appia, the tombs formed an almost uninterrupted street for many miles from the gates of the city. They were frequently built by individuals during their lifetime;¹⁵ thus Augustus, in his sixth consulship, built the Mausoleum for his sepulchre between the Via Flaminia and the Tiber, and planted round it woods and walks for public use.¹⁶ The

heirs were often ordered by the will of the deceased to build a tomb for him;¹ and they sometimes did it at their own expense (*de suo*), which is not unfrequently recorded in the inscription on funeral monuments, as in the following example taken from an urn in the British Museum:

DIIS MANIBVS
L. LEPIDIO EPAPHRÆ
PATRIS OPTIMI
L. LEPIDIOVS
MAXIMVS F.
DE. SVO.

Sepulchres were originally called *busta*,² but this word was afterward employed in the manner mentioned under *Bustum*. Sepulchres were also frequently called *Monumenta*,³ but this term was also applied to a monument erected to the memory of a person in a different place from where he was buried.⁴ *Conditoria* or *conditiva* were sepulchres under ground, in which dead bodies were placed entire, in contradistinction to those sepulchres which contained the bones and ashes only. They answered to the Greek *ὑπόγειον* or *ὑπόγειον*. (*Vid. CONDITORIUM*.)

The tombs of the rich were commonly built of marble, and the ground enclosed with an iron railing or wall, and planted round with trees.⁵ The extent of the burying-ground was marked by Cippi. (*Vid. CIPPUS*.) The name of Mausoleum, which was originally the name of the magnificent sepulchre erected by Artemisia to the memory of Mausolus, king of Caria,⁶ was sometimes given to any splendid tomb.⁷ The open space before a sepulchre was called *forum* (*vid. FORUM*), and neither this space nor the sepulchre itself could become the property of a person by usucapion.⁸

Private tombs were either built by an individual for himself and the members of his family (*sepulchra familiaria*), or for himself and his heirs (*sepulchra hereditaria*).⁹ A tomb which was fitted up with niches to receive the funeral urns was called *columbarium*, on account of the resemblance of these niches to the holes of a pigeon-house. In these tombs the ashes of the freedmen and slaves of great families were frequently placed in vessels made of baked clay, called *olla*, which were let into the thickness of the wall within these niches, the lids only being seen, and the inscriptions placed in front. A representation of a *columbarium* is given on page 288.

Tombs were of various sizes and forms, according to the wealth and taste of the owner. The following woodcut, which represents part of the street of tombs at Pompeii, is taken from Mazois, *Pompeiana*, part i., pl. 18.

All these tombs were raised on a platform of masonry above the level of the footway. The first building on the right hand is a funeral triclinium, which presents to the street a plain front about twenty feet in length. The next is the family tomb

of Nævoleia Tyche; it consists of a square building, containing a small chamber, and from the level of the outer wall steps rise, which support a marble cippus richly ornamented. The burial-ground of Nestacidus follows next, which is surrounded by a low wall; next to which comes a monument erected to the memory of C. Calventius Quietus. The

building is solid, and was not, therefore, a place of burial, but only an honorary tomb. The wall in front is scarcely four feet high, from which three steps lead up to a cippus. The back rises into a pediment; and the extreme height of the whole from the footway is about seventeen feet. An unoccupied space intervenes between this tomb and the next, which bears no inscription. The last building on the left is the tomb of Scarus, which is ornamented with bas-reliefs representing gladiatorial combats and the hunting of wild beasts.

The tombs of the Romans were ornamented in various ways, but they seldom represented death in a direct manner.¹ A horse's head was one of the most common representations of death, as it signified departure; but we rarely meet with skeletons upon tombs. The following woodcut, however,

which is taken from a bas-relief upon one of the tombs of Pompeii, represents the skeleton of a child lying on a heap of stones. The dress of the female, who is stooping over it, is remarkable, and is still preserved, according to Mazois, in the country around Sora.²

A sepulchre, or any place in which a person was buried, was *religiosus*; all things which were left or belonged to the *Dii Manes* were *religiosa*; those consecrated to the *Dii Superi* were called *Sacra*.³ Even the place in which a slave was buried was considered *religiosus*.⁴ Whoever violated a sepulchre was subject to an action termed *sepulchri violati actio*.⁵ Those who removed the bodies or bones from the sepulchre were punished by death, or deportatio in insulam, according to their rank; if the sepulchre was violated in any other way, they were punished by deportatio, or condemnation to the mines.⁶ The title in the Digest,⁷ "*De Religiosis et Sumtibus Funerum*," &c., also contains much curious information on the subject, and is well worth perusal.

After the bones had been placed in the urn at the funeral, the friends returned home. They then underwent a farther purification called *suffitio*, which consisted in being sprinkled with water and stepping over a fire.⁸ The house itself was also swept with a certain kind of broom, which sweeping or purification was called *exverra*, and the person who did it *everriator*.⁹ The *Denicales Fera* were also days set apart for the purification of the family.¹⁰ The mourning and solemnities connected with the dead lasted for nine days after the funeral, at the end of which time a sacrifice was performed called *Novendiale*.¹¹

A feast was given in honour of the dead, but it is uncertain on what day; it sometimes appears to

have been given at the time of the funeral, sometimes on the *Novendiale*, and sometimes later. The name of *Silicernium* was given to this feast,¹ of which the etymology is unknown. Among the tombs at Pompeii there is a funeral triclinium for the celebration of these feasts, which is represented in the annexed woodcut.² It is open to the sky, and the walls are ornamented by paintings of animals in the centre of compartments, which have borders of flowers. The triclinium is made of stone, with a pedestal in the centre to receive the table.

After the funeral of great men, there was, in addition to the feast for the friends of the deceased, a distribution of raw meat to the people, called *Visceratio*,³ and sometimes a public banquet.⁴ Combats of gladiators and other games were also frequently exhibited in honour of the deceased. Thus, at the funeral of P. Licinius Crassus, who had been pontifex maximus, raw meat was distributed to the people, a hundred and twenty gladiators fought, and funeral games were celebrated for three days, at the end of which a public banquet was given in the Forum.⁵ Public feasts and funeral games were sometimes given on the anniversary of funerals. Faustus, the son of Sulla, exhibited in honour of his father a show of gladiators several years after his death, and gave a feast to the people, according to his father's testament.⁶ At all banquets in honour of the dead, the guests were dressed in white.⁷

The Romans, like the Greeks, were accustomed to visit the tombs of their relatives at certain periods, and to offer to them sacrifices and various gifts, which were called *Inferia* and *Parentalia*. The Romans appear to have regarded the Manes or departed souls of their ancestors as gods, whence arose the practice of presenting to them oblations, which consisted of victims, wine, milk, garlands of flowers, and other things.⁸ The tombs were sometimes illuminated on these occasions with lamps.⁹ In the latter end of the month of February there was a festival, called *Feralia*, in which the Romans were accustomed to carry food to the sepulchres for the use of the dead.¹⁰

The Romans, like ourselves, were accustomed to wear mourning for their deceased friends, which appears to have been black, under the Republic, for both sexes. Under the Empire, the men continued to wear black in mourning,¹¹ but the women wore white.¹² They laid aside all kinds of ornaments,¹³ and did not cut either their hair or beard.¹⁴ Men appear to have usually worn their mourning for only a few days,¹⁵ but women for a year when they lost a husband or parent.¹⁶

In a public mourning on account of some signal calamity, as, for instance, the loss of a battle or the death of an emperor, there was a total cessation from business, called *Justitium*, which was usually ordained by public appointment. During this period

the courts of justice did not sit, the shops were shut, and the soldiers freed from military duties.¹ In a public mourning the senators did not wear the latus clavus and their rings,¹ nor the magistrates their badges of office.²

FURCA, which properly means a fork, was also the name of an instrument of punishment. It was a piece of wood in the form of the letter A, which was placed upon the shoulders of the offender, whose hands were tied to it. Slaves were frequently punished in this way, and were obliged to carry about the furca wherever they went;³ whence the appellation of *furcifer* was applied to a man as a term of reproach.⁴ The furca was used in the ancient mode of capital punishment among the Romans: the criminal was tied to it, and then scourged to death. The *patibulum* was also an instrument of punishment, resembling the furca; it appears to have been in the form of the letter II.⁵ Both the furca and patibulum were also employed as crosses, to which criminals appear to have been nailed (in *furca suspendere*).⁶

FURIO/SUS. (Vid. CURATOR, p. 329.)

FURNUS. (Vid. FORNAX, PISTOR.)

FUROR. (Vid. CURATOR, p. 329.)

FURTI ACTIO. (Vid. FURTUM.)

FURTUM, "theft," is one of the four kinds of delicts which were the foundation of obligations; it is also called, in a sense, "crimen." (Vid. CRIMEN.) Movable things only could be the objects of furture; for the fraudulent handling (*contractatio fraudulosa*) of a thing against the owner's consent was furture, and contractatio is defined to be "loco movere." But a man might commit theft without carrying off another person's property. Thus it was furture to use a thing deposited (*depositum*). It was also furture to use a thing which had been lent for use, in a way different from that which the lender had agreed to; but with this qualification, that the borrower must believe that he was doing it against the owner's consent, and that the owner would not consent to such use if he was aware of it; for *dolus malus* was an essential ingredient in furture. Accordingly, both *dolus malus* on the part of the person charged with furture, and the want of consent on the part of the owner of the thing, were necessary to constitute furture. Another requisite of furture⁷ is the "*lucri faciendi gratia*," the intention of appropriating another person's property. This was otherwise expressed by saying that furture consisted in the intention (*furtum ex affectu consistit*). It was not necessary, in order to constitute furture, that the thief should know whose property the thing was. A person who was in the power of another, and a wife in *manu*, might be the objects of furture. A debtor might commit furture by taking a thing which he had given as a pledge (*pignori*) to a creditor, or by taking his property when in the possession of a bona fide possessor. Thus there might be furture of a thing itself, of the use of it, and of the possession.

A person might commit furture by aiding in a furture, as if a man should jostle you in order to give another the opportunity of taking your money; or drive away your sheep or cattle in order that another might get possession of them: but if it were done merely in a sportive way, and not with a view of aiding in a theft, it was not furture, though per-

haps there might be in such case an *actio utilis* under the *lex Aquilia*, which gave such an action even in the case of culpa. (Vid. DAMNUM.)

Furtum was either manifestum or nec manifestum. It was clearly manifestum when the person was caught in the act; but in various other cases there was a difference of opinion as to whether the furture was manifestum or not. Some were of opinion that it was furture manifestum so long as the thief was engaged in carrying the thing to the place to which he designed to carry it; and others maintained that it was furture manifestum if the thief was ever found with the stolen thing in his possession. That which was not manifestum was nec manifestum. Furtum conceptum and oblatum were not species of theft, but species of action. It was called conceptum furture when a stolen thing was sought and found, in the presence of witnesses, in the possession of a person, who, though he might not be the thief, was liable to an action called *furti concepti*. If a man gave you a stolen thing, in order that it might be found (*conciperetur*) in your possession rather than his, this was called furture oblatum, and you had an action *furti oblatis* against him, even if he was not the thief. There was also the action *prohibiti furti* against him who prevented a person from searching for a stolen thing (*furtum*); for the word *furtum* signifies both the act of theft and the thing stolen.

The punishment for furture manifestum by the law of the Twelve Tables was capitalis, that is, it affected the person's caput: a freeman who had committed theft was flogged and consigned (*addictus*) to the injured person; but whether the thief became a slave in consequence of this additio, or an adjudicated, was a matter in dispute among the ancient Romans. The edict subsequently changed the penalty into an *actio quadrupli*, both in the case of a slave and a freeman. The penalty of the Twelve Tables, in the case of a furture nec manifestum, was duplum, and this was retained in the edict: in the case of the conceptum and oblatum it was tripulum, and this also was retained in the edict. In the case of prohibitorium, the penalty was quadruplum, according to the provisions of the edict; for the law of the Twelve Tables had affixed no penalty in this case, but merely enacted that if a man would search for stolen property, he must be naked all but a cloth round his middle, and must hold a dish in his hand. If he found anything, it was furture manifestum. The absurdity of the law, says Gaius, is apparent; for if a man would not let a person search in his ordinary dress, much less would he allow him to search undressed, when the penalty would be so much more severe if anything was found.¹

The *actio furti* was given to all persons who had an interest in the preservation of the thing stolen (*cujus interest rem salvam esse*), and the owner of a thing, therefore, had not necessarily this action. A creditor might have this action even against the owner of a thing pledged, if the owner was the thief. A person to whom a thing was delivered (bailed) in order to work upon it, as in the case of clothes given to a tailor to mend, could bring this action, and not the owner, for the owner had an action (*locati*) against the tailor. But if the tailor was not a responsible person, the owner had his action against the thief, for in such case the owner had an interest in the preservation of the thing. The rule was the same in a case of commodatum (vid. COMMODATUM); but in a case of depositum, the depositum was under no obligation for the safe custody of the thing (*custodiam prestare*), and he was under no liability except in the case of *dolus*;

1. (Tacit. Ann., i., 16.—Id. ib., ii., 82.—Liv., ix., 7.—Suet., Cal., 24.)—2. (Liv., ix., 7.)—3. (Tacit. Ann., iii., 4.—Meursius de Funere.—Stackelberg, "Die Gräber der Hellenen," Berl., 1837.—Kirchmann, "De Funeribus Romanis."—Becker, Charities, vol. ii., p. 166-210.—Gallus, vol. ii., p. 271-301.)—4. 1. (Compare Grimm, Von der Poesie im Recht, Zeitschrift ii., 91.)

if then the deposited thing was stolen, the owner alone had the *actio furti*.

An impubes might commit theft (*obligatur crimine furti*) if he was bordering on the age of puberty, and, consequently, of sufficient capacity to understand what he was doing. If a person who was in the power of another committed *furtum*, the *actio furti* was against the latter.

The right of action died with the offending person. If a peregrinus committed *furtum*, he was made liable to an action by the fiction of his being a Roman citizen;¹ and by the same fiction he had a right of action if his property was stolen.

He who took the property of another by force was guilty of theft, inasmuch as he took it against the will of the owner; but in the case of this delict, the praetor gave a special action *vi bonorum raptorum*. The origin of the action *vi bonorum raptorum* is referred by Cicero to the time of the civil wars, when men had become accustomed to acts of violence and to the use of arms against one another. Accordingly, the edict was originally directed against those who, with bodies of armed men (*hominibus armatis coactisque*), did injury to the property of another or carried it off (*quid aut raperint aut damni dederint*). With the establishment of order under the Empire the prohibition against the use of arms was less needed, and the word *armatis* is not contained in the edict as cited in the Digest.² The application of the edict would, however, have still been very limited, if it had been confined to cases where numbers were engaged in the violence or robbery; and, accordingly, the jurists discovered that the edict, when properly understood, applied also to the case of a single person committing *damnum* or carrying off property. Originally the edict comprehended both *damnum* and *bona rapta*, and, indeed, *damnum* effected *vi hominibus armatis coactisque* was that kind of violence to the repression of which the edict was at first mainly directed. Under the Empire the reasons for this part of the edict ceased, and thus we see that in Ulpian's time the action was simply called "*vi bonorum raptorum*." In the Institutes and Code the action applies to robbery only, and there is no trace of the other part of the edict. This instructive illustration of the gradual adaptation, even of the edictal law, to circumstances, is given by Savigny,³ who has also given the masterly emendation of Dig. 47, tit. 8, s. 2, § 7, by Heise.

Besides the *actio furti*, the owner of the thing had a personal action for the recovery of the stolen thing (*rei persecutio*) or its value (*condictio furtiva*) against a thief and his heredes, as well as the *rei vindicatio*, the reason of which is given by Gaius.⁴ Infamia was a consequence of condemnation in the *actio furti*.

The strictness of the old law in the case of actions of theft was gradually modified, as already shown. By the law of the Twelve Tables, if theft (*furtum*) was committed in the night, the thief, if caught in the act, might be killed: and he might also be killed in the daytime if he was caught in the act, and defended himself with any kind of a weapon (*telum*); if he did not so defend himself, he was whipped, and became *addictus* if a freeman (as above stated); and if a slave, he was whipped and thrown down a precipice.

The following are peculiar kinds of *actiones furti*: 1. *Actio de tigno juncto*, against a person who employed another person's timber in his building; 2. *Actio arborum furtim cæsarum*, against a person who secretly cut wood on another person's ground;

3. *Actio furti adversus nautas et caupones*, against *nautæ* and *caupones* (*vid. ΕΧΕΚΡΙΤΟΣ*), who were liable for the acts of the men in their employment.

There were two cases in which a bona fide possessor of another person's property could not obtain the ownership by usucapion; and one of them was the case of a *res furtiva*, which was provided for in the Twelve Tables.

(Gaius, ii., 183-209.—Gellius, xi., 18.—Dig. 47 tit. 2.—Inst. 4, tit. 1.—Dirksen, *Uebersicht*, &c., p. 564-594.—Heinec., *Syntag.*, ed. Haubold.—Rein., *Das Röm. Recht.*, p. 345.—Rosshirt, *Grundlinien*, &c.—Marezoll, *Lehrbuch*, &c.)

FUSCINA (*τρίαινα*), a Trident; more commonly called *tridens*, meaning *tridens stimulus*, because it was originally a three-pronged goad, used to incite horses to greater swiftness. Neptune was supposed to be armed with it when he drove his chariot, and it thus became his usual attribute, perhaps with an allusion, also, to the use of the same instrument in harpooning fish. (See woodcuts, p. 187, 245.) With it (*trifida cuspidē*) he was said to have broken a passage through the mountains of Thessaly for the river Peneus. The trident was also attributed to Nereus⁵ and to the Tritons.⁶

In the contests of gladiators, the *Retiarius* was armed with a trident.⁷

FUSTUARIUM (*ξύλοκοπία*) was a capital punishment inflicted upon Roman soldiers for desertion, theft, and similar crimes. It was administered in the following manner: When a soldier was condemned, the tribune touched him slightly with a stick, upon which all the soldiers of the legion fell upon him with sticks and stones, and generally killed him upon the spot. If, however, he escaped, for he was allowed to fly, he could not return to his native country, nor did any of his relatives dare to receive him into their houses.⁸ This punishment continued to be inflicted in the later times of the Republic,⁹ and under the Empire.¹⁰

Different from the *fustuarius* was the *animadversio fustium*, which was a corporeal punishment inflicted under the emperors upon freemen, but only those of the lower orders (*tenuiorēs*).¹¹ It was a less severe punishment than the flogging with flagella, which punishment was confined to slaves.¹² (*Vid. FLAGRUM*.)

FUSUS (*ὑψακτος*), the Spindle, was always, when in use, accompanied by the distaff (*colus*, *ἡλεκάρη*), as an indispensable part of the same apparatus.¹³ The wool, flax, or other material having been prepared for spinning, and having sometimes been dyed (*ιοδυνεὲς εἶρος ἐχουσα*¹⁴), was rolled into a ball (*τολύτη*, *glomus*¹⁵), which was, however, sufficiently loose to allow the fibres to be easily drawn out by the hand of the spinner. The upper part of the distaff was then inserted into this mass of flax or wool (*colus comta*¹⁶), and the lower part was held under the left arm in such a position as was most convenient for conducting the operation. The fibres were drawn out, and, at the same time, spirally twisted, chiefly by the use of the fore finger and thumb of the right hand (*δακτύλοις ἑλίσσας*¹⁷; *pollice docto*¹⁸); and the thread (*filum*, *stamen*, *νήμα*) so produced was wound upon the spindle until the quantity was as great as it would carry.

1. (Hom., II., xii., 27.—Od., iv., 506.—Ib., v., 292.—Virg., Georg., i., 13.—Id., Æn., i., 138, 145.—Ib., ii., 610.—Cic., De Nat. Deor., i., 36.—Philost., Imag., ii., 14.)—2. (Claud., De Rap. Pros., ii., 179.)—3. (Virg., Æn., ii., 418.)—4. (Accius, ap. Cic., De Nat. Deor., ii., 35.—Mart., i., 26, 3.)—5. (Juv., ii., 148.—Ib., viii., 203.—Vid. GLADIATOR.)—6. Cons., 177.)

1. (Gaius, iv., 37.)—2. (47, tit. 8.)—3. (Zeitschrift, v. "Ueber Cicero pro Tullio und die Actio vi bonorum raptorum.")—4. (iv., 4.)

The spindle was a stick ten or twelve inches long, having at the top a slit or catch (*dens, ἀγκίστρον*), in which the thread was fixed, so that the weight of the spindle might continually carry down the thread as it was formed. Its lower extremity was inserted into a small wheel, called the whorl (*porticellum*), made of wood, stone, or metal (see woodcut), the use of which was to keep the spindle more steady, and to promote its rotation: for the spinner, who was commonly a female, every now and then twirled round the spindle with her right hand,¹ so as to twist the thread still more completely; and whenever, by its continual prolongation, it let down the spindle to the ground, she took it out of the slit, wound it upon the spindle, and, having replaced it in the slit, drew out and twisted another length. All these circumstances are mentioned in detail by Catullus.² The accompanying woodcut is taken from a series of bas-reliefs representing the arts of Minerva upon a frieze of the Forum Palladium at Rome. It shows the operation of spinning at the moment when the woman has drawn out a sufficient length of yarn to twist it by whirling the spindle with her right thumb and fore finger, and previously to the act of taking it out of the slit to wind it upon the bobbin (*πῆνιον*) already formed.

The distaff was about three times the length of the spindle, strong and thick in proportion, commonly either a stick or a reed, with an expansion near the top for holding the ball. It was sometimes of richer materials, and ornamented. Theocritus has left a poem³ written on sending an ivory distaff to the wife of a friend. Golden spindles were sent as presents to ladies of high rank;⁴ and a golden distaff is attributed by Homer and Pindar to goddesses, and other females of remarkable dignity, who are called *χρυσήλατοι*.

It was usual to have a basket to hold the distaff and spindle, with the balls of wool prepared for spinning, and the bobbins already spun.⁵ (*Vid. CATALLUS.*)

In the rural districts of Italy, women were forbidden to spin when they were travelling on foot, the act being considered of evil omen.⁶ The distaff and spindle, with the wool and thread upon them, were carried in bridal processions; and, without the wool and thread, they were often suspended by females as offerings of religious gratitude, especially in old age, or on relinquishing the constant use of them.⁷ (*Vid. DONARIA*, p. 376.) They were most frequently dedicated to Pallas, the patroness of spinning, and of the arts connected with it. This goddess was herself rudely sculptured with a distaff and spindle in the Trojan Palladium.⁸ They were

also exhibited in the representations of the three Fates, who were conceived, by their spinning, to determine the life of every man; and, at the same time, by singing, as females usually did while they sat together at their work, to predict his future lot.¹

G.

GABINUS CINCTUS. (*Vid. Toga.*)

GÆSUM (*γαῖσός*), a term probably of Celtic origin, denoting a kind of javelin which was used by the Gauls wherever their ramifications extended.² Hody, in order to prove the comparatively late date of the Septuagint version of the book of Joshua, in which this word occurs,³ has proved that it was not known to the Romans, Greeks, or Egyptians until some time after the death of Ptolemæus Lagi.⁴ It was a heavy weapon,⁵ the shaft being as thick as a man could grasp, and the iron head barbed, and of an extraordinary length compared with the shaft.⁶ The Romans adopted the use of the *gæsum* from the Iberians.⁷

*GAGA'TES LAPIS (*γαγάτης λίθος*), a species of Fossil, supposed to have been the same with the modern *Jet*. This last is still even called *Gagates* by some mineralogists, a name derived from the river Gagas, in Lycia, about whose mouth this mineral was found.⁸ "The Gagates," says Adams, "is a fossil bituminous substance, containing carbon and ethereal oil. Without doubt it is *jet*, which, in the systems of modern mineralogists, is held to be a variety of lignite. The Gagates is called 'Black Amber' by Pliny; and, in fact, it is nearly allied to amber; for, when rubbed for some time, it becomes electric like amber."⁹

GAUUS. (*Vid. INSTITUTIONES.*)

*GALACTITES LAPIS (*γαλακτίτης λίθος*), stone of an ashen colour, according to Dioscorides, sweet taste, and yielding a milky juice when triturated. Pliny makes it to have been of a milky colour, and to have been brought from the vicinity of the Nile.¹⁰ (*Vid. GALAXIAS.*)

*GALAXIAS LAPIS (*γαλαξίας*), a stone of an ashen colour, intersected sometimes with white and red veins. "It may be gathered from Dioscorides and Pliny," observes Dr. Moore,¹¹ "with the authors cited in the notes of Hardouin, that *galaxias*, *galactites*, *morochthus*, *maroxus*, *morochites*, *leucogæa*, *leucographia*, *leucographis*, and *synophites*, differed in little except name, or were, in fact, varieties of the same substance, which came either from the Nile or the Achelous; was ash-coloured, or greenish, or leek-coloured, sometimes with red and white veins; was readily soluble; and when rubbed on stone or a rough garment, left a white mark; besides which, when dissolved, or when triturated in water, it appears to have resembled milk in colour and in taste. Now minerals that answer the above description tolerably well are Spanish chalk and certain other varieties of steatite, which are found of the colours indicated; may be mixed with, and suspended in, water, so as to give it a milky appearance, and a smooth, sweetish taste; and which, moreover, make a white mark when rubbed upon stone or cloth."¹²

*IL, a name given by Galen to the Lamprey, according to Artedi.¹³

*GALBANUM. (*Vid. CHALBANE.*)

*GALE (*γαλή*), commonly thought to have been the *Mustela vulgaris*, or Weasel. There are, how-

ever, according to Adams, objections to this opinion. The *Putorius*, or Fomart, is noticed by Isidorus, but no mention of it occurs in the works of the Greek authors now extant.¹

GA'LEA (κράνος, poet. κύρως, πῆληξ), a Helmet, a Casque. The helmet was originally made of skin or leather, whence is supposed to have arisen its appellation *κυνήη*, meaning properly a helmet of dog-skin, but applied to caps or helmets made of the hide of other animals (ταυρείη, κτιδέη,² αἰγινή,³ *galea lupina*⁴), and even to those which were entirely of bronze or iron (πάγχαλκος⁵). The leathern basis of the helmet was also very commonly strengthened and adorned by the addition of either bronze or gold, which is expressed by such epithets as χαλκήρης, εὐχαλκος, χρυσεῖη. Helmets which had a metallic basis (κράνη χαλκά⁶) were in Latin properly called *cassides*,⁷ although the terms *galea* and *cassis* are often confounded. A casque (*cassis*) found at Pompeii is preserved in the collection at Goodrich Court, Herefordshire.⁸ The perforations for the lining and exterior border are visible along its edge. A side and a front view of it are presented in the annexed woodcut.

Two casques very like this were fished up from the bed of the Alpheus, near Olympia, and are in the possession of Mr. Hamilton.⁹ Among the materials used for the lining of helmets were felt (πίλος¹⁰) and sponge.¹¹

The helmet, especially that of skin or leather, was sometimes a mere cap conformed to the shape of the head, without either crest or any other ornament (ὑφαλόν τε καὶ ἄλοφον¹²). In this state it was probably used in hunting (*galea venatoria*¹³), and was called *καταίτις*,¹⁴ in Latin *Curo*. The preceding woodcut shows an example of it as worn by Diomedes in a small Greek bronze, which is also in the collection at Goodrich Court.¹⁵ The additions by which the external appearance of the helmet was varied, and which served both for ornament and protection, were the following:

1. Bosses or plates, proceeding either from the top (φάλος¹⁶) or the sides, and varying in number from one to four (ἑμφάλος, δὶφάλος,¹⁷ τετράφαλος¹⁸). The φάλος was often an emblematical figure, referring to the character of the wearer. Thus, in the colossal statue of Minerva in the Parthenon at Athens, she bore a sphinx on the top of her helmet, and a griffon on each side.¹⁹

2. The helmet thus adorned was very commonly surmounted by the crest (*crista*, λόφος²⁰), which was often of horsehair (ἵππουρι ἱπποδίαση;²¹ λόφων ἐλθειραι;²² *hirsuta juba*²³), and made so as to look imposing and terrible,²⁴ as well as handsome²⁵ (εὐλοφος²⁶). In the Roman army the crest served not only for ornament, but also to distinguish the different centuries, each of whom wore a casque of a peculiar form and appearance.²⁷

3. The two cheek-pieces (*bucculae*,¹ παραναβίδες²), which were attached to the helmet by hinges, so as to be lifted up and down. They had buttons or ties at their extremities for fastening the helmet on the head.³

4. The beaver or visor, a peculiar form of which is supposed to have been the αἰλώπις τρυφάλεια, i. e., the perforated beaver.⁴ The gladiators wore helmets of this kind,⁵ and specimens of them, not unlike those worn in the Middle Ages, have been found at Pompeii.

Woodcuts illustrative of these four classes of additions to the simple cap or morion occur at p. 26, 27, 94, 95, 133, 268, 332, 381, 429. The five following helmets, more highly ornamented, are selected from antique gems, and are engraved of the size of the originals.

*ΓΑΛΕΟΣ ΑΣΤΗΡΙΑΣ (γαλεὸς ἀστηρίας), a species of Fish, either a variety of the *Squalus Mustelus*, or else the Spotted Dog-fish, *Squalus Canicula*.⁶

*ΓΑΛΕΟΣ ΚΥΩΝ (γαλεὸς κύων), the *Squalus Galcus*, I., or Tope. It is a very voracious species of Shark, and its flesh has an offensive smell.⁷

*ΓΑΛΕΟΣ ΛΕΙΟΣ (γαλεὸς λείος), a species of Fish, the *Squalus Mustelus*, L., or Smooth Hound, or Smooth Shark of Pennant. *Mustelus* is the Latin translation of γαλεός, and generic for the *Squali*.

*ΓΑΛΕΟΣ ΡΟΔΙΟΣ (γαλεὸς ῥόδιος), a variety of the *Accipenser Sturio*, or Sturgeon.⁸

GALERUS. (Vid. COMA, p. 293.)

*GALIOPSIS (γαλιόψις), a plant, of which the following description is given by Dioscorides:¹⁴ "The whole plant, with its stem and leaves, resembles the nettle; but its leaves are smoother, and considerably fetid when rubbed; its flowers are small and purplish." "It is difficult to say," remarks Adams, "whether this description applies better to the *Galiopsis Tetrahit* (common Hemp-nettle), or to the *Lamium purpureum* (Red Dead-nettle). Bauhin prefers the latter; and, indeed, I am not aware that any of the commentators acknowledge it as the former, although it appears to me not inapplicable. Sibthorp, however, has fixed on a plant different from either, namely, the *Scrofularia peregrina*, or Nettle-leaved Figwort. I am wholly unacquainted with it."¹⁵

*GALIUM (γάλιον), the *Galium Verum*, or Yellow Bedstraw. The Greek name is derived from γάλα, "milk," because the plant was used instead of runnet to curdle milk. Sibthorp found it in Samos and in the Peloponnesus. The *Galium Ferrucosum* is the ἀπαρίνη of Dioscorides.¹²

GALLI was the name of the priests of Cybele, whose worship was introduced at Rome from Phrygia

1. (Juv., x., 134.)—2. (Eustath. in II., v., 743.)—3. (Val. Flacc., vi., 626.)—4. (Hom., II., xi., 353.—Hase, Life of Aac. Greeks, ch. v.)—5. (Juv., viii., 203.)—6. (Aristot., H. A., v., 10.—Id. ib., vi., 11.—Adams, Append., s. v.)—7. (Aristot., H. A., v., 11.—Plin., H. N., ix., 46.—Adams, Append., s. v.)—8. (Aristot., H. A., vi., 18.—Adams, Append., s. v.)—9. (Adams, Append., s. v.)—10. (Id. v., 93.)—11. (Adams, Append., s. v.)—12. (Dioscor., iv., 94.—Adams, Append., s. v.)

(B.C. 204¹). The Galli were, according to an ancient custom, always castrated (*spadones, seminares, semiviri, nec viri nec feminae*), and it would seem that, impelled by religious fanaticism, they performed this operation on themselves.² In their wild, enthusiastic, and boisterous rites, they resembled the Corybantes,³ and even went farther, inasmuch as in their fury they mutilated their own bodies.⁴ They seem to have been always chosen from a poor and despised class of people; for, while no other priests were allowed to beg, the Galli (*famuli Idææ matris*) were allowed to do so on certain days.⁵ The chief priest among them was called archigallus.⁶ The origin of the name of Galli is uncertain: according to Festus,⁷ Ovid,⁸ and others, it was derived from the river Gallus in Phrygia, which flowed near the temple of Cybele, and the water of which was fabled to put those persons who drank of it into such a state of madness that they castrated themselves.⁹ The supposition of Hieronymus¹⁰ that Galli was the name of the Gauls, which had been given to these priests by the Romans in order to show their contempt of that nation, is unfounded, as the Romans must have received the name from Asia or from the Greeks, by whom, as Suidas¹¹ informs us, Gallus was used as a common noun for eunuch. There exists a verb *gallare*, which signifies to rage (*insanire, bacchari*), and which occurs in one of the fragments of Varro¹² and in the *Antholog. Lat.*, tom. i., p. 34, ed. Burmann.

*GALLUS (ἄλεκτωρ or ἄλεκτρον), the Cock. "There are few facts in natural history," observes Griffith, "so difficult to determine with precision as to point out the places which the species of our common cock inhabited at first in its state of freedom and independence. Our common cock, according to M. Temminck, seems to have originated from the *Jago Cock* (*Gallus Giganteus*), a very large wild species, which inhabits the island of Sumatra, and from the species *Bankiva*, another primitive cock, found in the forests of Java. If, as there is every reason for believing, the temperate climes of Asia and the countries of Europe did not in ancient times possess the cock in a wild state, we must ascend to the earliest epoch of navigation, and presume the domestication of this useful bird to date from those remote periods. Under the reign of that great prince, who ruled with so much glory over the tribes of Israel, the peacock constituted an acquisition worthy of being enumerated in the list of riches imported into Judæa by his adventurous fleets. As this discovery of the peacock was made in the time of Solomon, it cannot be deemed very extraordinary that the cock, which inhabits the same countries as that bird, should about the same time have attracted the attention of the Hebrews. Be this as it may, it is quite certain that the cock, as well as the peacock, has been transported by man into the different countries in which these species exist at the present day in a state of domestication."—Mention is made of the crowing of the cock in the *Βαρζαχουμαχία* of Homer. On the supposition, therefore, that the poem is genuine, this would be the first notice of the domestic fowl occurring in the Greek writers. As, however, all the other early poets are silent in relation to this bird, Knight founds on this circumstance an argument against the authenticity of the poem in question. He admits, however, at the same time, that a representation of the cock ap-

pears on the silver coins of the people of Samothrace and Himeræ at least six centuries before the Christian era. Athenæus cites a passage from a Greek writer named Menodotus, in which the cock is spoken of as a native of Persia; and in another part of his work he quotes from Cratinus, who calls the cock a Persian bird. Aristophanes also styles the domestic fowl a bird of Persian origin in his comedy of the *Aves*. Beck, however, in his commentary on Aristophanes, thinks that the cock was called Persian from the resemblance of its comb to the Persian covering for the head; but the passage cited by Athenæus from Menodotus assigns a much more probable reason.—Cock-fighting became in time a favourite amusement among the Greeks. Pliny says that battles of this kind were annually exhibited at Pergamum, in the same manner as combats of gladiators. Cock-fights were also represented by the Greeks on coins and cut stones. Various means were also employed to increase the irritability and courage of these birds. Dioscorides and Pliny speak of a plant named *adiantum* having been used for this purpose. Garlic was also given, as we are told by Xenophon.—The following singular description of the cock is given by Pliny: "After the peacock, the birds which are most sensible to glory are those active sentinels which Nature has furnished to arouse us from our matin slumbers, and send us to our daily occupations. They are acquainted with the stars, and every three hours they indicate by their crowing the different periods of the day. They retire to repose with the setting sun, and from the fourth military watch they recall us loudly to our cares and labours. They do not suffer the daybeam to surprise us without timely warning. Their crowing announces the hour of morning; and the crowing itself is announced by the clapping of their wings. Each farmyard has its peculiar king; and among these monarchs, as among princes of our own race, empire is the meed of victory. They appear to comprehend the design of those weapons with which their feet are armed. It is not uncommon for two rivals to perish in the combat. If one be conqueror, he immediately sings forth his triumph and proclaims his supremacy: the other retreats and disappears, ashamed of his defeat. The gait of the cock is proud and commanding; he walks with head erect and elevated crest. Alone of all birds, he habitually looks up to the sky, raising at the same time his curved and scythe-formed tail, and inspiring terror in the lion himself, that most intrepid of animals. Some of these birds seem actually born for nothing but warfare and battles; some have rendered the countries which produced them famous, such as Rhodes and Tanagra. The second rank is assigned to those from Melos and Chalcis—birds truly worthy of the homage they receive from the Roman purple! Their repasts are solemn presages; they regulate daily the conduct of our magistrates, and open or close to them their dwellings. They prescribe repose or movement to the Roman fasces; they command or prohibit battles; they have announced all the victories gained throughout the universe; in a word, they lord it over the masters of the world. Their very entrails and fibres are not less agreeable to the gods than the richest victims. Their prolonged notes in the evening, and at extraordinary hours, constitute presages. By crowing all night long, they announced to the Bœotians a celebrated victory over the Lacedæmonians: thus did the diviners interpret it, because this bird never crows when he is conquered."¹³—The cock was sacred to Mars, on account of its courageous spirit and pug-

1. (Griffith's Cuvier, vol viii, p 170, &c.)

zacious habits; and also to Æsculapius, to Night, and to the Lares. It was sacred to these last on account of its vigilant qualities.—It remains but to add, that the ἀλεκτροῦν Ἰνδικὸς of Ælian would appear to have been some one of the larger Gallinaceæ of India, and not the Turkey, or *Meleagris Gallinago*, although, as Adams remarks, Barrington and others contend that it was known in Africa and India before the discovery of America.¹

GAMELIA (γαμηλία). The demes and phratrises of Attica possessed various means to prevent intruders from assuming the rights of citizens. (*Vid.* DIAPSEPRISIS.) Among other regulations, it was ordained that every bride, previous to her marriage, should be introduced by her parents or guardians to the phratría of her husband (γαμηλίαν ὑπὲρ γυναικὸς εἰσφέρειν²). This introduction of the young women was accompanied by presents to their new phratres, which were called γαμηλία.³ The women were enrolled in the lists of the phratrises, and this enrolment was also called γαμηλία. The presents seem to have consisted in a feast given to the phratres, and the phratres, in return, made some offerings to the gods on behalf of the young bride.⁴ The acceptance of the presents, and the permission to enrol the bride in the registers of the phratría, was equivalent to a declaration that she was considered a true citizen, and that, consequently, her children would have legitimate claims to all the rights and privileges of citizens.⁵

Γαμηλία was also the name of a sacrifice offered to Athena on the day previous to the marriage of a girl. She was taken by her parents to the temple of the goddess in the Acropolis, where the offerings were made on her behalf.⁶

The plural, γαμηλίας, was used to express wedding solemnities in general.⁷

GAMOS. (*Vid.* MARRIAGE, ΓΡΕΚΕ.)

GAUSAPA, GAUSAPE, or GAUSAPUM, a kind of thick cloth, which was on one side very woolly, and was used to cover tables,⁸ beds,⁹ and by persons to wrap themselves up after taking a bath,¹⁰ or in general to protect themselves against rain and cold.¹¹ It was worn by men as well as women.¹² It came in use among the Romans about the time of Augustus,¹³ and the wealthier Romans had it made of the finest wool, and mostly of a purple colour. The gausapum seems, however, sometimes to have been made of linen, but its peculiarity of having one side more woolly than the other always remained the same.¹⁴ As Martial¹⁵ calls it *gausapa quadrata*, we have reason to suppose that, like the Scotch plaid, it was always, for whatever purpose it might be used, a square or oblong piece of cloth.¹⁶

The word gausapa is also sometimes used to designate a thick wig, such as was made of the hair of Germans, and worn by the fashionable people at Rome in the time of the emperors.¹⁷ Persius¹⁸ also applies the word in a figurative sense to a thick and full beard.

GENESIA. (*Vid.* FUNUS, p. 458.)

*GENISTA, Spanish Broom, or *Spartium junceum*, L. It grows abundantly in most parts of Italy, and the peasants weave baskets of its slender branches. The flowers are very sweet, last long, and are agreeable to bees. Pliny says it was used in dyeing, but he means the *Genista tinctoria*, called

by some Wood-wax and Green-weed. Martyn thinks that the Spanish Broom might be used for the same purpose.¹

GENS. This word contains the same element as the Latin *genus* and *gignō*, and as the Greek γένος, γί-γν-ομαι, &c., and it primarily signifies *kin*. But the word has numerous significations, which have either a very remote connexion with this its primary notion, or perhaps none at all.

Gens sometimes signifies a whole political community, as Gens Latinorum, Gens Campanorum, &c.; though it is probable that in this application of the term, the notion of a distinction of race or stock is implied, or at least the notion of a totality of persons distinguished from other totalities by intermarriage and increase of their numbers among themselves only. Cicero² speaks of "*Gentes universæ in civitatem receptæ, ut Sabinorum, Volscorum, Hernicorum.*" It is a consequence of such meaning of gens, rather than an independent meaning, that the word is sometimes used to express a people with reference to their territorial limits.

The meaning of the word in the expression *jus gentium* is explained under *Jus*.

The words Gens and Gentiles have a special meaning in the system of the Roman law and in the Roman constitution. Cicero³ has preserved a definition of gentiles which was given by Scævola the pontifex, and which, with reference to the time, must be considered complete. Those were gentiles, according to Scævola, (1) who bore the same name, (2) who were born of freemen (*ingenui*), (3) none of whose ancestors had been a slave, and, (4) who had suffered no *capitis diminutio*. This definition contains nothing which shows a common bond of union among gentiles, except the possession of a common name; but those who had a common name were not gentiles, if the three other conditions contained in this definition were not applicable to them. There is also a definition of gentilis by Festus: "That is called Gens Ælia which is composed (*conficitur*) of many familiæ. Gentilis is both one who is of the same stock (*genus*) and one who is called by the same name (*simili nomine*), as Cincius says, those are my gentiles who are called by my name." "*Gentilis dicitur et ex eodem genere ortus, et is qui simili nomine appellatur.*" The second *et* is sometimes read *ut*, which is manifestly not the right reading, as the context shows. Besides, if the words "*ut is qui simili nomine appellatur*" are to be taken as an illustration of "*ex eodem genere ortus*," as they must be if *ut* is the true reading, then the notion of a *common name* is viewed as of necessity being contained in the notion of *common kin*, whereas there may be common kin without common name, and common name without common kin. Thus neither does common name include all common kin, nor does common kin include all common name; yet each includes something that the other includes.

We cannot conclude anything more from the *conficitur* of Festus than that a gens contained several familiæ, or that several familiæ were comprehended under one gens. According to the definition, persons of the same *genus* (*kin*) were gentiles, and also persons of the same name were gentiles. If Festus meant to say that all persons of the same gens and all persons of the same name were gentiles, his statement is inconsistent with the definition of the pontifex; for persons might be of the same gens, and might have sustained a *capitis diminutio* either by adoption, or adrogation, or by emancipation: in all these cases the gens would remain, for the natural relationship was not affected by any change in

1. (Adams, Append., s. v. ἀλεκτρον.)—2. (Isæus, De Pyrrh. hered., p. 62, 65, &c.—Id., De Ciron. hered., p. 208.—Demosth., c. Eubul., p. 1312 and 1320.)—3. (Suidas, s. v.—Schol. ad Dem., c. me juristical status of a person : in the cases of adoption and adrogation the name would be lost, in the case of emancipation it would be retained. If the definition of Festus means that among those of the same genus there may be gentiles, and among those of the same name gentiles may also be included, his definition is true ; but neither part of the definition is absolutely true, nor, if both parts are taken together, is the whole definition absolutely true. It seems as if the definition of gentiles was a matter of some difficulty ; for while the possession of a common name was the simplest general characteristic of gentilitas, there were other conditions which were equally essential.

The name of the gens was always characterized by the termination *ia*, as Julia, Cornelia, Valeria.

When a man died intestate and without agnati, his familia (*vid.* *FAMILIA*), by the law of the Twelve Tables, came to the gentiles ; and in the case of a lunatic (*furiosus*) who had no guardians, the guardianship of the lunatic and his property belonged to the agnati and to the gentiles ; to the latter, we may presume, in case the former did not exist.

Accordingly, one part of the *jus gentilitium* or *jus gentilitatis* related to successions to the property of intestates who had no agnati. A notable example of a dispute on this subject between the Claudii and Marcelli is mentioned in a difficult passage of Cicero.¹ The Marcelli claimed the inheritance of an intestate son of one of the liberti or freedmen of their familia (*stirpe*) ; the Claudii claimed the same by the gentile rights (*gente*). The Marcelli were plebeians, and belonged to the patrician Claudian gens. Niebuhr observes that this claim of the Claudii is inconsistent with Cicero's definition, according to which no descendant of a freedman could be a gentilis ; and he concludes that Cicero (that is, Scævola) must have been mistaken in this part of his definition. But it must be observed, though the descendants of freedmen might have no claim as gentiles, the members of a gens might, as such, have claims against them ; and in this sense the descendants of freedmen might be gentiles. It would seem as if the Marcelli united to defend their supposed paternal rights to the inheritance of the sons of freedmen against the claims of the gens ; for the law of the Twelve Tables gave the inheritance of a freedman only, who died intestate and without heirs, to his patron, and not the inheritance of the son of a freedman. The question might be this : whether the law, in the case supposed, gave the hereditas to the gens as having a right paramount to the paternal right. It may be that the Marcelli as being included in the Claudian gens, were supposed to have merged their paternal rights (if they really existed in the case in dispute) in those of the gens. Whether, as members of the gens, the plebeian Marcelli would take as gentiles what they lost as patroni, may be doubted.

It is generally said or supposed that the hereditas which came to a gens was divided among the gentiles, which must mean the heads of familiae. This may be so ; at least, we must conceive that the hereditas, at one period at least, must have been a benefit to the members of the gens : Cæsar is said² to have been deprived of his gentilitas hereditas.

If determining that the property of intestates should ultimately belong to the gens, the law of the Twelve Tables was only providing for a case which, in every civilized country, is provided for by positive law ; that is, the right to the property of a person who dies without having disposed of it, or leaving those whom the law recognises as entitled to it. The gens had thus a relation to the gentiles similar to that which subsists in modern states between

the sovereign power and persons dying intestate and without heirs or next of kin. The mode in which such a succession was applied by the gens was probably not determined by law ; and as the gens was a kind of juristical person, analogous to the community of a civitas, it seems not unlikely that originally inheritances accrued to the gens *as such*, and were common property. The gens must have had some common property, such as sacella, &c. It would be no difficult transition to imagine, that what originally belonged to the gens as such, was in the course of time distributed among the members, which would easily take place when the familiae included in a gens were reduced to a small number.

There were certain sacred rites (*sacra gentilitia*) which belonged to a gens, to the observance of which all the members of a gens, as such, were bound, whether they were members by birth, adoption, or adrogation. A person was freed from the observance of such sacra, and lost the privileges connected with his gentile rights, when he lost his gens, that is, when he was adrogated, adopted, or even emancipated ; for adrogation, adoption, and emancipation were accompanied by a *diminutio capitis*.

When the adoption was from one familia into another of the same gens, the name of the gens was still retained ; and when a son was emancipated, the name of the gens was still retained ; and yet, in both these cases, if we adopt the definition of Scævola, the adopted and emancipated persons lost the gentile rights, though they were also freed from the gentile burdens (*sacra*). In the case of adoption and adrogation, the adopted and adrogated person who passed into a familia of another gens must have passed into the gens of such familia, and so must have acquired the rights of that gens. Such a person had sustained a *capitis diminutio*, and its effect was to destroy his former gentile rights, together with the rights of agnation. The gentile rights were, in fact, implied in the rights of agnation, if the paterfamilias had a gens. Consequently, he who obtained, by adrogation or adoption, the rights of agnation, obtained also the gentile rights of his adopted father. In the case of adrogation, the adrogated person renounced his gens at the Comitia Curiata, which solemnity might also be expressed by the term "*sacra detestari*," for sacra and gens are often synonymous. Thus, in such case, adrogation, on the part of the adopted father, corresponded to *detestatio sacrorum* on the part of the adrogated son. This *detestatio sacrorum* is probably the same thing as the *sacrorum alienatio* mentioned by Cicero.¹ It was the duty of the pontifices to look after the due observance of the gentile sacra, and to see that they were not lost.² Each gens seems to have had its peculiar place (*sacellum*) for the celebration of the sacra gentilitia, which were performed at stated times. The sacra gentilitia, as already observed, were a burden on the members of a gens *as such*. The sacra privata were a charge on the property of an individual ; the two kinds of sacra were thus quite distinct.

According to the traditional accounts of the old Roman constitution, the gentes were subdivisions of the curiæ analogous to the curiæ, which were subdivisions of the tribes. There were ten in each curiæ, and, consequently, one hundred gentes in each tribe, and three hundred in the three tribes. Now if there is any truth in the tradition of this original distribution of the population into tribes, curiæ, and gentes, it follows that there was no necessary kinship among those families which belong-

1. (*De Orat.*, i., 39.)—2. (*Sueton.*, Jul., 1.)

1. (*Orator.*, c. 42.)—2. (*Pro Dome*, c. 13, &c.)
469

ed to a gens, any more than among those families which belonged to one curia.

We know nothing historically of the organization of civil society, but we know that many new political bodies have been organized out of the materials of existing political bodies. It is useless to conjecture what was the original organization of the Roman state. We must take the tradition as it has come down to us. The tradition is not, that familiæ related by blood were formed into gentes, that these gentes were formed into curiæ, that these curiæ were formed into tribes. Such a tradition would contain its own refutation, for it involves the notion of the construction of a body politic by the aggregation of families into unities, and by farther combinations of these new unities. The tradition is of three fundamental parts (in whatever manner formed), and of the divisions of them into smaller parts. The smallest political division is gens. No farther division is made, and thus, of necessity, when we come to consider the component parts of gens, we come to consider the individuals comprised in it. According to the fundamental principles of Roman law, the individuals arrange themselves into familiæ under their respective patres-familiæ. It follows, that if the distribution of the people was effected by a division of the larger into smaller parts, there could be no necessary kin among the familiæ of a gens; for kinship among all the members of a gens could only be effected by selecting kindred familiæ, and forming them into a gens. If the gens was the result of subdivision, the kinship of the original members of such gens, whenever it existed, must have been accidental.

There is no proof that the Romans considered that there was kinship among the familiæ originally included in a gens. Yet as kinship was evidence of the rights of agnatio, and, consequently, of gentile rights, when there had been no capitis diminutio, it is easy to see how that which was evidence of the rights of agnatio, and, consequently, of gentile rights, might be viewed as part of the definition of gentilis, and be so extended as to comprehend a supposed kinship among the original members of the gens. The word *gens* itself would also favour such a supposition, especially as the word *genus* seems to be often used in the same sense.¹ This notion of kinship appears also to be confirmed by the fact of the members of the gens being distinguished by a common name, as Cornelia, Julia, &c. But many circumstances besides that of a common origin may have given a common name to the gentiles; and, indeed, there seems nothing more strange in all the gentiles having a common name, than there being a common name for all the members of a curia and a tribe.

As the gentes were subdivisions of the three ancient tribes, the populus (in the ancient sense) alone had gentes, so that to be a patrician and to have a gens were synonymous; and thus we find the expressions gens and patricii constantly united. Yet it appears, as in the case already cited, that some gentes contained plebeian familiæ, which it is conjectured had their origin in marriages between patricians and plebeians before there was connubium between them. When the lex was carried which established connubium between the plebs and the patres, it was alleged that this measure would confound the gentile rights (*jura gentium*).² Before this connubium existed, if a gentilis married a woman not a gentilis, it followed that the children could not be gentiles; yet they might retain the gentile name, and thus, in a sense, the family might be gentile without the gentile privileges. Such mar-

riages would, in effect, introduce confusion; and it does not appear how this would be increased by giving to a marriage between a gentile man and a woman not gentilis, the legal character of connubium; the effect of the legal change was to give the children the gentilitas of their father. It is sometimes said that the effect of this lex was to give the gentile rights to the plebs, which is an absurdity; for, according to the expression of Livy,³ which is conformable to a strict principle of Roman law, "*patrem sequuntur liberi*," and the children of a plebeian man could only be plebeian. Before the passing of this lex, it may be inferred, that if a patrician woman married out of her gens (*e gente, e patribus enupsit*), it was no marriage at all, and that the children of such marriage were not in the power of their father, and, it seems a necessary consequence, not Roman citizens. The effect would be the same, according to the strict principles of Roman law, if a plebeian married a patrician woman before there was connubium between them; for if there was no connubium, there was no legal marriage, and the offspring were not citizens, which is the thing complained of by Canuleius.⁴ It does not appear, then, how such marriages will account for plebeian familiæ being contained in patrician gentes, unless we suppose that when the children of a gentile man and a plebeian woman took the name of the father, and followed the condition of the mother, they were in some way or other, not easy to explain, considered as citizens and plebeians. But if this be so, what would be the status of the children of a patrician woman by a plebeian man?

Niebuhr assumes that the members of the gens (gentiles) were bound to assist their indigent fellows in bearing extraordinary burdens; but this assertion is founded on the interpretation given to the words *τοὺς γένει προσήκοντας* of Dionysius,⁵ which have a simpler and more obvious meaning. Whatever probability there may be in the assumption of Niebuhr, as founded on the passage above cited, and one or two other passages, it cannot be considered as a thing demonstrated.

A hundred new members were added to the senate by the first Tarquin. These were the representatives of the Luceres, the third and inferior tribe, which is indicated by the gentes of this tribe being called *Minores* by way of being distinguished from the older gentes, *Majores*, of the Ramnes and Titites, a distinction which appears to have been more than nominal. (*Vid. SENATUS.*) See the curious letter of Cicero to Pætus.⁶

If the gentes were such subdivisions of a curia, as already stated, it may be asked what is meant by new gentes being introduced among the curiæ, for this undoubtedly took place. Tullus Hostilius incorporated the Julii, Servilii, and others among the Patricii, and, consequently, among the curiæ. The Claudii were a Sabine gens, who, it was said,⁷ were received among the patricii after the banishment of the kings. A recent writer (Goettling) attempts to remove this difficulty by assuming, according to his interpretation of Dionysius,⁸ a division of the curiæ into ten decuriæ, and by the farther assumption of an indefinite number of gentes in each decuria. Consistently with this, he assumes a kinship among the members of the same gens, according to which hypothesis the several patres-familiæ of such gens must have descended, or claimed descent, from a common ancestor. Thus the gentes would be nothing more than aggregates of kindred families; and it must have been contrived, in making the division into decuriæ, that all the members of a gens (thus understood) must have

1. (Cic., Pro Balbo, c. 14.)—2. (Liv., iv., 1.)
470

1. (iv., 4.)—2. (Liv., iv., 4.)—3. (ii., 10.)—4. (ad Fam., ix., 21.)
—5. (Liv., iv., 3.)—6. (ii., 7.)

been included in the same decuria. But to assume this is nothing more than to say that the political system was formed by beginning with aggregations of families; for if the ultimate political division, the decuriæ, was to consist of aggregates of gentes (thus understood), such arrangement could only be effected by making aggregation of families the basis of the political system, and then ascending from them to decuriæ, from decuriæ to curiæ, and from curiæ to tribes; a proceeding which is inconsistent with saying that the curiæ were subdivided into decuriæ, for this mode of expression implies that the curiæ were formed before the decuriæ. But the introduction of new gentes is conceivable even on the hypothesis of the gens being a mere political division. If the number was originally limited, it is perfectly consistent with what we know of the Roman constitution, which was always in a state of progressive change, to suppose that the strict rule of limitation was soon neglected. Now if a new gens was introduced, it must have been assimilated to the old gentes by having a distinctive name; and if a number of foreigners were admitted as a gens, it is conceivable that they would take the name of some distinguished person among them, who might be the head of a family consisting of many branches, each with a numerous body of retainers. And this is the better tradition as to the patrician Claudii, who came to Rome with Atta Claudius, their head (*gentis princeps*), after the expulsion of the kings, and were co-opted (*co-optati*) by the patres among the patricii; which is the same thing as saying that this immigrating body was recognised as a Roman gens.¹ According to the tradition, Atta Claudius received a tract of land for his clients on the Anio, and a piece of burying-ground, under the Capitol, was given to him by the state (*publice*). According to the original constitution of a gens, the possession of a common burying-place, and the gentile right to interment therein, were a part of the gentile sacra.²

It is probable that even in the time of Cicero the proper notion of a gens and its rights were ill understood; and still later, owing to the great changes in the constitution, and the extinction of so many ancient gentes, the traces of the *jus gentilitium* were nearly effaced. Thus we find that the words *gens* and *familia* are used indifferently by later writers, though Livy carefully distinguishes them. The "elder Pliny speaks of the *sacra Servilium familiæ*; Macrobius of the *sacra familiæ Claudiarum*, *Æmilium*, *Juliarum*, *Corneliarum*; and an ancient inscription mentions an *Ædituus* and a *Sacerdos Sergiarum familiæ*, though those were all well-known ancient gentes, and these *sacra*, in the more correct language of the older writers, would certainly have been called *sacra gentilitia*.³

In the time of Gaius (the age of the Antonines), the *jus gentilitium* had entirely fallen into disuse.⁴ Thus an ancient institution, which formed an integral part of the old constitution, and was long held together by the conservative power of religious rites, gradually lost its primitive character in the changes which circumstances impressed on the form of the Roman state, and was finally extinguished.

The word *Gens* has recently been rendered in English by the word *House*, a term which has here been purposely neglected, as it is not necessary, and can only lead to misconception.

The subject of the gens is discussed with great acuteness both by Niebuhr⁵ and by Malden.⁶

The views of Goettling are contained in his *Ges-*

schichte der Röm. Staatsverfassung, Halle, 1840. See also Savigny, *Zeitschrift*, ii. p. 380, &c., and Unterholzner, *Zeitschrift*, v., p. 119.

**GENTIANA* (*γεντιανή*), Gentian, or Bitterwort, deriving its name from *Gentius*, a king of Illyricum, who first discovered its properties. All the plants of the family of *Gentianaceæ* are most useful in medicine, on account of the pure, intense bitter which they contain. According to Pliny, the best kind of Gentian was obtained from Illyricum. It was found also in abundance at the foot of the Alps, in moist grounds.¹ According to modern botanical writers, the gentianaceous plants are found chiefly in mountainous situations, "where they breathe a pure and rarefied air, are exposed to bright light during the short summers of such regions, and, although fixed during winter in places intensely cold, yet are so well prepared to resist it by the warmth of their summer, and so much protected by the snow which covers them, as to suffer no injury." The *γεντιανή* of Dioscorides is the *Gentiana lutea*. Such, at least, is the opinion of all the earlier commentators, and which is adopted by Adams, though Sprengel remains undecided.²

GENTILES. (*Vid. GENS.*)

GENTYLITAS. (*Vid. GENS.*)

GEOMOROI (*γεωμόροι*, Doric *γαμόροι*) is the name of the second of the three classes into which Theseus is said to have divided the inhabitants of Attica.³ This class was, together with the third, the *δημουργοί*, excluded from the great civil and priestly offices, which belonged exclusively to the *eupatrids*, so that there was a great distinction between the first and the two inferior classes. We possess, however, no means to ascertain any particulars respecting the relation in which the *γεωμόροι* stood to the two other classes. The name may either signify independent land-owners, or peasants who cultivated the lands of others as tenants. The *γεωμόροι* have, accordingly, by some writers been thought to be free land-owners, while others have conceived them to have been a class of tenants. It seems, however, inconsistent with the state of affairs in Attica, as well as with the manner in which the name *γεωμόροι* was used in other Greek states, to suppose that the whole class consisted of the latter only; there were, undoubtedly, among them a considerable number of freemen, who cultivated their own lands,⁴ but had by their birth no claims to the rights and privileges of the nobles. We do not hear of any political distinctions between the *γεωμόροι* and the *δημουργοί*; and it may either be that there existed none at all, or, if there were any originally, that they gradually vanished. This would account for the fact that Dionysius⁵ only mentions two classes of Atticans; one corresponding to the Roman patricians, the other to the plebeians.⁶

In Samos the name *γεωμόροι* was applied to the oligarchical party, consisting of the wealthy and powerful.⁷ In Syracuse the aristocratical party was likewise called *γεωμόροι* or *γαμόροι*, in opposition to the *δemos*.⁸

GEPHURA. (*Vid. BRIDGE.*)

**GERANIUM* (*γέρανιον*), the Geranium. "The distinguishing character of this order is to have a fruit composed of five cocci or cases, connected with as many thin flat styles, consolidated round a long conical beak." From the resemblance which this

beak bears to that of a crane (*γέρανος*) arises the name of the order. The first species of Dioscorides is the *Geranium tuberosum*. Sibthorp found this in Crete, occurring very frequently among the standing grain, and also in Arcadia. The second species of the Greek writer is, according to Bauhin, the *Geranium rotundifolium*; but Sprengel, as Adams remarks, is undecided between it and the *Erodium malachoides*.¹ Pliny states² that the Geranium was called by some authors *Myrrhis*, by others *Myrtis*. In this, according to Fée,³ he is altogether wrong, the *Myrrhis* of Dioscorides being a very different plant. Equally erroneous is his account of the medicinal properties of the Geranium. Pliny's first species is, according to Billerbeck, the *G. moschatum*, called also *Circutium moschatum*. The modern Greeks call it *μοσκολάχανον*. Sibthorp found it in Argolis.⁴

*GERANOS (*γέρανος*), the Crane, or *Ardea Grus*, L. The natural history of the common Crane is given very accurately by Aristotle and Elian. Homer alludes to the autumnal migration of cranes in the third book of the *Iliad*; Oppian mixes together the circumstances of the spring and autumnal migrations.⁵ "The Cranes," observes Griffith, "though aborigines of the North, visit the temperate regions, and advance towards those of the South. The ancients, seeing them arrive alternately from both extremities of the then known world, named them equally *Birds of Scythia* and *Birds of Libya*. As they were accustomed to alight in large flocks in Thessaly, Plato has denominated that country the *Pasture of the Cranes*. Their fabled combats with the pygmies are well known. The Cranes, quitting Sweden, Scotland, the Orcades, Podolia, Lithuania, and all northern Europe, come in the autumnal season, and settle in the marshy parts of France, Italy, &c., pass thence into still more southern regions, and, returning in the spring, bury themselves anew in the cold bosom of the North." A want of acquaintance with the habits of these birds has led many of the commentators on Anacreon into error. The poet, in one of his odes, speaks of the journeying of the Crane to other climes as one of the signs of returning spring. This has been supposed to refer to the departure of the bird from its home, whereas, in fact, the return from southern regions is meant to be indicated. The period of the departure of the Cranes for the North is the commencement of spring; they prefer the summer of the North, since a moderate degree of temperature appears to agree with them best. The clamorous noise of these birds in their annual migrations is often alluded to by the ancient poets. Thus, besides the Greek poets already mentioned, Virgil has the following:

"*Quales sub nubibus atris*

Strymoniæ dant signa grues, atque æthera tranant
Cum sonitu, fugiuntque Notos clamore secundo."

The various inflections of their flight have, from ancient times, been regarded as presages of the weather, and indications of atmospheric temperature. Their cries in the daytime are ominous of rain. More noisy clamours announce the coming tempest; a steady and elevated flight in the morning forebodes serene weather; a lower flight, or a retreat to the earth, is the symptom of a storm. Hence Virgil,⁶ in speaking of the coming tempest, observes,

"*Illum surgentem, vallibus imis*
Aëria fugere grues."

The flesh of the young is delicate; it used to constitute one of the dishes at the banquets of Rome, and was sold in the markets of that city. The Crane is said to be a long-lived bird. The philosopher Leonicus Thomæus, according to Paulus Jo-
vius, kept one alive for forty years.⁷¹

GERMANI. (*Vid. COGNATI.*)

GEROUSIA (*γερούσια*). In connexion with this subject, it is proposed to give a general view of the Spartan constitution, and to explain the functions of its legislative and administrative elements. In the later ages of Spartan history, one of the most prominent of these was the college of the five ephors; but, as an account of the ephorality is given in a separate article (*vid. EPHORI*), we shall confine our inquiries to the kings, the *γέρωντες* or councillors, and the *ἐκκλησία*, or assembly of Spartan freemen.

I. *The Kings*. The kingly authority of Sparta was, as it is well known, coeval with the settlement of the Dorians in the Peloponnesus, and confined to the descendants of Aristodemus, one of the Heracleid leaders, under whom, according to the Spartan legend, the conquest of Laconia was achieved. To him were born twin sons, Eurysthenes and Procles; and from this cause arose the diarchy, or divided royalty, the sovereignty being always shared by the representatives of the two families which claimed descent from them: the precedence in point of honour was, however, granted to the older branch, who were called Agiads, as the younger house was styled Eurypontides, from certain alleged descendants of the twin brothers.² Such was the national legend; but, as we read that the sanction of the Pythian oracle was procured for the arrangement of the diarchy,⁴ we may conclude that it was not altogether fortuitous, but rather the work of policy and design; nor, indeed, is it improbable that the nobles would gladly avail themselves of an opportunity to weaken the royal authority by dividing it.

The descent of the Spartan kings from the national heroes and leaders contributed in no small degree to support their dignity and honour; and it is, perhaps, from this circumstance partly that they were considered as heroes, and enjoyed a certain religious respect.⁵ The honours paid to them were, however, of a simple and heroic character, such as a Spartan might give without derogating from his own dignity or forgetting his self-respect. Thus we are told that the kings united the character of priest and king, the priesthoods of Zeus Uranus⁶ and the Lacedæmonian Zeus being filled by them; and that, in their capacity of national high-priests, they officiated at all the public sacrifices offered on behalf of the state.⁷ Moreover, they were amply provided with the means for exercising the heroic virtue of hospitality; for this purpose, public or domain lands were assigned to them in the district of the perioeci, or provincial subjects, and certain perquisites belonged to them whenever any animal was slain in sacrifice. Besides this, the kings were entitled to various payments in kind (*πασῶν τῶν σκῶν ἀπὸ τῶν κοινῶν χοίρων*), that they might never be in want of victims to sacrifice; in addition to which, they received, twice a month from the state, an *ἐρίσιον τελεῖον*, to be offered as a sacrifice to Apollo, and then served up at the royal table. Whenever, also, any of the citizens made a public sacrifice to the gods, the kings were invited to the feast, and honoured above the other guests: a double portion of food was given to them, and they commenced the libations to the gods.⁸ All these distinctions are of

1. (Dioscor., iii., 121.—Adams, Append., s. v.)—2. (H. N., xvi., 11.)—3. (ad Plin., l. c.)—4. (Billerbeck, Flora Classica, p. 175.)—5. (Hom., Il., 3, 3.—Oppian, Hal., 1., 620.—Adams, Append., s. v.)—6. (Geor., i., 374-5.)

1. (Griffith's Cuvier, vol. viii., p. 476, &c.)—2. (Herod., i., 52.)—3. (Niebuhr, Hist. of Rome, i., p. 356.)—4. (Herod., l. c.)—5. (Xen., De Rep. Lac., c. 15.)—6. (Herod., vi., 56.)—7. (Xen., De Rep. Lac., 15.)—8. (Herod., vi., 57.)

a simple and antiquated character, and, so far as they go, prove that the Spartan sovereignty was a continuation of the heroic or Homeric. The distinctions and privileges granted to the king as commander of the forces in war, lead to the same conclusion. These were greater than he enjoyed at home. He was guarded by a body of 100 chosen men, and his table was maintained at the public expense: he might sacrifice in his sacerdotal capacity as many victims as he chose, the skins and backs of which were his perquisites; and he was assisted by so many subordinate officers, that he had nothing else to do except to act as priest and strategus.¹

The accession and demise of the Spartan kings were marked by observances of an Oriental character.² The former event was signalized by a remission of all debts due from private individuals to the state or the king; and on the death of a king, the funeral solemnities were celebrated by the whole community. There was a general mourning for ten days, during which all public business was suspended: horsemen went round the country to carry the tidings, and a fixed number of the perioeci, or provincials, was obliged to come from all parts of the country to the city, where, with the Spartans and Helots, and their wives, to the number of many thousands, they made loud lamentations, and proclaimed the virtues of the deceased king as superior to those of all his predecessors.³

In comparison with their dignity and honours, the constitutional powers of the kings were very limited. In fact, they can scarcely be said to have possessed any; for, though they presided over the council of *γέροντες* as *ἀρχαγέται*, or *principes senatus*, and the king of the elder house probably had a casting vote (a supposition which Dr. Thirlwall thinks may perhaps reconcile the difference between Herodotus, vi., 57, and Thucydides, i., 20), still the voice of each counted for no more than that of any other senator: when absent, their place was supplied and their proxies tendered by the councillors who were most nearly related to them, and therefore of a Heracleid family. Still the kings had some important prerogatives; thus they had, in common with other magistrates, the right of addressing the public assembly; besides this, they sat in a separate court of their own, where they gave judgment in all cases of heiresses claimed by different parties: a function formerly exercised by the kings at Athens, but afterward transferred to the archon eponymus.⁴ They also appointed the four "Pythians," whose duty it was to go as messengers to consult the god at Delphi. Adoptions also took place in their presence, and they held a court in all cases connected with the maintenance of the public roads; probably in their capacity of generals, and as superintendents of the intercourse with foreign nations.⁵ In foreign affairs, indeed, their prerogatives were considerable: thus they were the commanders of the Spartan forces, and had the privilege of nominating from among the citizens persons to act as "proxeni," or protectors and entertainers of foreigners visiting Sparta. But their chief power was in war; for after they had once crossed the borders of Laconia in command of troops, their authority became unlimited. They could send out and assemble armies, despatch ambassadors to collect money, and refer those who applied to themselves for justice to the proper officers appointed for that purpose.⁶ Two ephors, indeed, accompanied the kings on their expeditions, but those magistrates had no authority to interfere with the kings' operations: they simply

watched over the proceedings of the army.¹ Moreover, there can be no doubt that the kings were, on their return home, accountable for their conduct as generals,² and more especially after the increase of the ephoral authority. Their military power, also, was not connected with any political functions, for the kings were not allowed to conclude treaties or to decide the fate of cities without communicating with the authorities at home.³ In former times the two kings had a joint command; this, however, led to inconveniences, and a law was in consequence passed, that for the future one only of the two kings should have the command of the army on foreign expeditions.⁴

II. *The γερουσία, or Assembly of Elders.* This body was the aristocratic element of the Spartan polity, and not peculiar to Sparta only, but found in other Dorian states, just as a *βουλή*, or democratical council was an element of most Ionian constitutions.

The *γερουσία* or *γερωνία* at Sparta included the two kings, its presidents, and consisted of thirty members: a number which seems connected with the divisions of the Spartan people. Every Dorian state, in fact, was divided into three tribes: the Hylleis, the Dymanes, and the Pamphyli, whence the Dorians are called *τρεχάικες*, or thrice divided.⁵ The tribes at Sparta were again subdivided into *ὠβαί*, also called *φρατρίαί*,⁶ a word which signifies a union of families, whether founded upon ties of relationship, or formed for political purposes, irrespective of any such connexion. The *ὠβæ* were, like the *γέροντες*, thirty in number, so that each *ὠβα* was represented by its councillor: an inference which leads to the conclusion that two *ὠβæ* at least of the Hyllean tribe must have belonged to the royal house of the Heracleids. No one was eligible to the council till he was sixty years of age,⁷ and the additional qualifications were strictly of an aristocratic nature. We are told, for instance, that the office of a councillor was the reward and price of virtue,⁸ and that it was confined to men of distinguished character and station (*καλοὶ κύαθοί*).

The election was determined by vote, and the mode of conducting it was remarkable for its old-fashioned simplicity. The competitors presented themselves one after another to the assembly of electors;⁹ the latter testified their esteem by acclamations, which varied in intensity according to the popularity of the candidates for whom they were given. These manifestations of esteem were noted by persons in an adjoining building, who could judge of the shouting, but could not tell in whose favour it was given. The person whom these judges thought to have been most applauded was declared the successful candidate. The different competitors for a vacant place offered themselves upon their own judgment,¹⁰ probably always from the *ὠβæ*, to which the councillor whose place was vacant had belonged; and as the office was for life, and therefore only one vacancy could (in ordinary cases) happen at a time, the attention of the whole state would be fixed on the choice of the electors. The office of a councillor, however, was not only for life, but also irresponsible,¹¹ as if a previous reputation and the near approach of death were considered a sufficient guarantee for integrity and moderation. But the councillors did not always prove so, for Aristotle¹² tells us that the members of the *γερουσία* received bribes, and frequently showed partiality in their decisions.

1. (Xen., De Rep. Lac., 14, 15.—Herod., vi., 55.)—2. (Herod., vi., 58.)—3. (Herod., i. c.)—4. (Herod., vi., 57.)—5. (Müller, Dor., iii., 6, § 7.)—6. (Xen., De Rep. Lac., 13.—Thucyd., v., 60.—Id., viii., 5.)

1. (Xen., i. c.)—2. (Thucyd., v., 63.)—3. (Xen., Hell., ii., 2, 12.—Id. ib., v., 3, 24.)—4. (Herod., v., 57.)—5. (Od., xix., 174.)—6. (Müller, Dor., iii., 5, § 3.)—7. (Plut., Lycurg., 26.)—8. (Aristot., Polit., ii., 6, 15.—Demosth., c. Lept., p. 489.)—9. (Plut., Lycurg., 26.)—10. (Aristot., Polit., ii., 6, § 18.)—11. (Aristot., Polit., ii., 6—12. (I. c.)

The functions of the councillors were partly deliberative, partly judicial, and partly executive. In the discharge of the first they prepared measures and passed preliminary decrees,¹ which were to be laid before the popular assembly, so that the important privilege of initiating all changes in the government or laws was vested in them. As a criminal court they could punish with death and civil degradation (*ἀτιμία*), and that, too, without being restrained by any code of written laws,² for which national feeling and recognised usages would form a sufficient substitute. They also appear to have exercised, like the Areiopagus at Athens, a general superintendence and inspection over the lives and manners of the citizens (*arbitri et magistri disciplinae publicae*), and probably were allowed "a kind of patriarchal authority to enforce the observance of ancient usage and discipline."³ It is not, however, easy to define with exactness the original extent of their functions, especially as respects the last-mentioned duty, since the ephors not only encroached upon the prerogatives of the king and council, but also possessed, in very early times, a censorial power, and were not likely to permit any diminution of its extent.

III. The *ἐκκλησία*, or Assembly of Spartan Freeman. This assembly possessed, in theory at least, the supreme authority in all matters affecting the general interests of the state. Its original position at Sparta is shortly explained by a *rethra* or ordinance of Lycurgus, which, in the form of an oracle, exhibits the principal features of the Spartan polity: "Build a temple," says the Pythian god, "to Hellenian Zeus and Hellenian Athena; divide the tribes, and institute thirty obas; appoint a council with its princes; call an assembly (*ἀπελλάζειν*) between Babyca and Knakion, then make a motion and depart; and let there be a right of decision and power to the people" (*δύμῳ δε κυριάν ἦμεν καὶ κράτος*).⁴

By this ordinance full power was given to the people to adopt or reject whatever was proposed to them by the king and other magistrates. It was, however, found necessary to define this power more exactly, and the following clause, ascribed to the kings Theopompus and Polydorus, was added to the original *rethra*: "but if the people should follow a crooked opinion, the elders and the princes shall withdraw" (*τοὺς προεβουγενέας καὶ ἀρχαγέτας ἀποστατήριον ἦμεν*). Plutarch⁵ interprets these words to mean, "That in case the people do not either reject or approve in toto a measure proposed to them, the kings and councillors should dissolve the assembly, and declare the proposed decree to be invalid." According to this interpretation, which is confirmed by some verses in the *Eunomia* of Tyrtaeus, the assembly was not competent to originate any measures, but only to pass or reject, without modification, the laws and decrees proposed by the proper authorities: a limitation of its power, which almost determined the character of the Spartan constitution, and justifies the words of Demosthenes, who observed,⁶ that the *γερονσία* at Sparta was in many respects supreme: *Δεσπότης ἐστὶ τῶν πολλῶν*. All citizens above the age of thirty, who were not labouring under any loss of franchise, were admissible to the general assembly, or *ἀπελλα*,⁷ as it was called in the old Spartan dialect; but no one except public magistrates, and chiefly the ephors and kings, addressed the people without being specially called upon.⁸ The same public functionaries also put the question to the vote.⁹ Hence, as the magistrates only (*τὰ τίλην ἢ ἀρχαί*) were the leaders and speak-

ers of the assembly, decrees of the whole people are often spoken of as the decision of the authorities only, especially in matters relating to foreign affairs. The intimate connexion of the ephors with the assembly is shown by a phrase of very frequent occurrence in decrees (*ἔδοξε τοῖς ἐφόροις καὶ τῇ ἐκκλησίᾳ*). The method of voting was by acclamation; the place of meeting between the brook Knakion and the bridge Babyca, to the west of the city, and enclosed.¹ The regular assemblies were held every full moon; and on occasions of emergency, extraordinary meetings were convened.²

The whole people alone could proclaim "a war, conclude a peace, enter into an armistice for any length of time; and all negotiations with foreign states, though conducted by the kings and ephors, could be ratified by the same authority only." With regard to domestic affairs, the highest offices, such as magistracies and priesthoods, were filled "by the votes of the people; a disputed succession to the throne was decided upon by them; changes in the constitution were proposed and explained, and all new laws, after a previous decree in the senate, were confirmed by them."³ It appears, therefore, to use the words of Müller, that the popular assembly really possessed the supreme political and legislative authority at Sparta, but it was so hampered and checked by the spirit of the constitution, that it could only exert its authority within certain prescribed limits, so that the government of the state is often spoken of as an aristocracy.

Besides the *ἐκκλησία* which we have just described, we read in later times of another, called the small assembly,⁴ which appears to have been convened on occasions of emergency, or which were not of sufficient importance to require the decision of the entire body of citizens. This more select assembly was probably composed of the *ἄμιοι*, or superior citizens, or of some class enjoying a similar precedence, together with some of the magistrates of the state (*vid. Ecclesiorum*); and if, as appears to have been the case, it was convened more frequently than the greater assembly, it is evident that an additional restraint was thus laid upon the power of the latter,⁵ the functions of which must have often been superseded by it.⁶

The preceding remarks will enable us to decide a question which has been raised, What was the real nature of the constitution of Sparta? From the expressions of Greek writers, every one would at once answer that it was aristocratic; but it has been asserted that the aristocracy at Sparta was an aristocracy of conquest, in which the conquering people, or Dorians, stood towards the conquered, or Achaeans, in the relation of nobles to commons, and that it was principally in this sense that the constitution of Sparta was so completely anti-popular or oligarchical.⁷ Now this, indeed, is true; but it seems no less true that the Spartan government would have been equally called an oligarchy or aristocracy even if there had been no subject class at all, on account of the disposition and administration of the sovereign power within the Spartan body alone. The fact is, that, in theory at least, the Spartan constitution, as settled by Lycurgus, was a decided democracy, with two hereditary officers, the generals of the commonwealth, at its head; but in practice (at least before the encroachment of the ephors) it was a limited aristocracy, that is, it worked as if the supreme authority was settled in the hands of a minority. The principal circumstances which justify us in considering it as such are briefly "the

1. (Plut., *Lycurg.*, 6.)—2. (Herod., vii., 134.)—3. (Müller *Dor.*, 4, § 9.)—4. (Xen., *Hell.*, iii., 3, 18.)—5. (Philol. *Museum* ii., p. 65.)—6. (Wachsmuth, *Hellen. Alterthumsk.*, II., i., p. 212.)—7. (Arnold, *Thucyd.*, Append. ii.)

restraints imposed upon the assembly, the extensive powers of the councillors, their election for life, their irresponsibility, the absence of written laws, of "paid offices, of offices determined by lot," and other things thought by the Greeks characteristic of a democracy. Independent of which, we must remember that Sparta was at the head of the oligarchical interest in Greece, and always supported, as at Corcyra and Argos, the oligarchical party in opposition to the democratic, which was aided by Athens. In fact, Dr. Arnold himself observes, that even in the relations of the conquering people among themselves, the constitution was far less popular than at Athens. We must, however, bear in mind that the constitution, as settled by Lycurgus, was completely altered in character by the usurpation of the ephors. To such an extent was this the case, that Plato¹ doubted whether the government at Sparta might not be called a "tyranny," in consequence of the extensive powers of the ephorality, though it was as much like a democracy as any form of government could well be; and yet, he adds, not to call it an aristocracy (*i. e.*, a government of the *ἀριστοί*) is quite absurd. Moreover, Aristotle,² when he enumerates the reasons why the Spartan government was called an oligarchy, makes no mention of the relations between the Spartans and their conquered subjects, but observes that it received this name because it had many oligarchical institutions, such as that none of the magistrates were chosen by lot; that a few persons were competent to inflict banishment and death.

Perhaps the shortest and most accurate description of the constitution of Sparta is contained in the following observations of Aristotle:³ Some affirm that the best form of government is one mixed of all the forms, wherefore they praise the Spartan constitution; for some say that it is composed of an oligarchy, and a monarchy, and a democracy: a monarchy on account of the kings, an oligarchy on account of the councillors, and a democracy on account of the ephors; but others say that the ephorality is a "tyranny," whereas, on the other hand, the public tables and the regulations of daily life are of a democratic tendency.

GERRA. (*Vid.* ECCLESIA, p. 385.)

*GETEUM (*γέτειον*), also called *Gethyon* (*γέθυον*), a plant to be referred to the genus *Allium*, or Garlic, but the particular species of which cannot be satisfactorily determined.⁴

*GETHYLLIS (*γέθυλλίς*), most probably the same as the preceding.

*GEUM, the herb Avena or Bennet, the *Caryophyllata vulgaris*, L. The French term is *Benoite*, the German *Benedictwurcz*. It grows in shady, woody grounds. The root is bitter and aromatic, and was prescribed by the ancient physicians not only in affections of the breast and side, but also in cases of dyspepsy.⁵

*GINGIDIVM (*γινγιδίον*), according to Knellius and Stephens, a species of Chervil. This opinion, however, is controverted by Matthioli and Bauhin. Adams makes it the *Daucus Gingidium*, a variety of the *Daucus Carota*, or wild Carrot.⁶

*GINNUS or HINNUS (*γίννος, ἵννος*). "Buffon remarks, that Aristotle applies the term *γίννος* in two senses: first, to denote an imperfect animal, proceeding sometimes from the horse and ass; and, secondly, to signify the particular production of the great mule and the mare. Aristotle, therefore, was aware of the fact that the mule can sometimes propagate its species."⁷

*GITH or GIT, the seed of the Melanthion or Pepper-wort, the *Nigella sativa*. It was employed by the ancients as a condiment. (*Vid.* MELANTHIUM.)

GLADIATO'RES (*μονομάχοι*) were men who fought with swords in the amphitheatre and other places for the amusement of the Roman people (*Gladiator est, qui in arena, populo spectante, pugnavit*). They are said to have been first exhibited by the Etrurians, and to have had their origin from the custom of killing slaves and captives at the funeral pyres of the deceased.¹ (*Vid.* BUSTUM, FUNUS, p. 460.) A show of gladiators was called *munus*, and the person who exhibited (*edebat*) it, *editor*, *munerator*, or *dominus*, who was honoured during the day of exhibition, if a private person, with the official signs of a magistrate.²

Gladiators were first exhibited at Rome in B.C. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father.³ They were at first confined to public funerals, but afterward fought at the funerals of most persons of consequence, and even at those of women.⁴ Private persons sometimes left a sum of money in their will to pay the expenses of such an exhibition at their funerals.⁵ Combats of gladiators were also exhibited at entertainments,⁶ and especially at public festivals by the aediles and other magistrates, who sometimes exhibited immense numbers with the view of pleasing the people.⁷ (*Vid.* AEDILES, p. 25.) Under the Empire, the passion of the Romans for this amusement rose to its greatest height, and the number of gladiators who fought on some occasions appears almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibited.¹⁰

Gladiators consisted either of captives,¹¹ slaves,¹² and condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned *ad gladium*, in which case they were obliged to be killed at least within a year; and others *ad ludum*, who might obtain their discharge at the end of three years.¹³ Freeman, who became gladiators for hire, were called *auctorati*,¹⁴ and their hire *auctoramentum* or *gladiatorium*.¹⁵ They also took an oath on entering upon the service, which is preserved by Petronius:¹⁶ "In verba Eumolpi sacramentum juravimus, uri, vinciri, verberari, ferroque necari, et quicquid aliud Eumolpus jussisset, tamquam legitimi gladiatores domino corpora animasque religiosissime addicimus."¹⁷ Even under the Republic freeborn citizens fought as gladiators,¹⁸ but they appear to have belonged only to the lower orders. Under the Empire, however, both knights and senators fought in the arena,¹⁹ and even women;²⁰ which practice was at length forbidden in the time of Severus.²¹

Gladiators were kept in schools (*ludi*), where they were trained by persons called *lanista*.²² The whole body of gladiators under one lanista was frequently called *familia*.²³ They sometimes were the property of the lanistæ, who let them out to persons who wished to exhibit a show of gladiators;

but at other times belonged to citizens, who kept them for the purpose of exhibition, and engaged lanistæ to instruct them. Thus we read of the ludus Æmilius at Rome,¹ and of Cæsar's ludus at Capua.² The superintendence of the ludi, which belonged to the emperors, was intrusted to a person of high rank, called *curator* or *procurator*.³ The gladiators fought in these ludi with wooden swords, called *rudes*.⁴ Great attention was paid to their diet, in order to increase the strength of their bodies, whence Cicero⁵ speaks of "*gladiatoria totius corporis firmitas*." They were fed with nourishing food, called *gladiatoria sagina*.⁶ A great number of gladiators were trained at Ravenna, on account of the salubrity of the place.⁷

Gladiators were sometimes exhibited at the funeral pyre, and sometimes in the Forum, but more frequently in the amphitheatre. (*Vid. AMPHITHEATRUM*.) The person who was to exhibit a show of gladiators published, some days before the exhibition, bills (*libelli*) containing the number and sometimes the names of those who were to fight.⁸ When the day came, they were led along the arena in procession, and matched by pairs;⁹ and their swords were examined by the editor to see if they were sufficiently sharp.¹⁰ At first there was a kind of sham battle, called *prælusio*, in which they fought with wooden swords or the like,¹¹ and afterward, at the sound of the trumpet, the real battle began. When a gladiator was wounded, the people called out *habet* or *hoc habet*; and the one who was vanquished lowered his arms in token of submission. His fate, however, depended upon the people, who pressed down their thumbs if they wished him to be saved, but turned them up if they wished him to be killed,¹² and ordered him to receive the sword (*ferum recipere*), which gladiators usually did with the greatest firmness.¹³ If the life of a vanquished gladiator was spared, he obtained his discharge for that day, which was called *missio*;¹⁴ and hence, in an exhibition of gladiators *sine missione*,¹⁵ the lives of the conquered were never spared. This kind of exhibition, however, was forbidden by Augustus.¹⁶

Palms were usually given to the victorious gladiators;¹⁷ and hence a gladiator who had frequently conquered is called "*plurimarum palmarum gladiator*;"¹⁸ money also was sometimes given.¹⁹ Old gladiators, and sometimes those who had only fought for a short time, were discharged from the service by the editor at the request of the people, who presented each of them with a *rudis* or wooden sword, whence those who were discharged were called *Rudiarii*.²⁰ If a person was free before he entered the ludus, he became, on his discharge, free again; and if he had been a slave, he returned to the same condition again. A man, however, who had been a gladiator, was always considered to have disgraced himself, and, consequently, it appears that he could not obtain the equestrian rank if he afterward acquired sufficient property to entitle him to it;²¹ and a slave who had been sent into a ludus, and there manumitted either by his then owner or another owner, merely acquired the status of a *pergrinus* *delicticus*.²² (*Vid. DEDICTICI*.)

Shows of gladiators were abolished by Constantine,¹ but appear, notwithstanding, to have been generally exhibited till the time of Honorius, by whom they were finally suppressed.²

Gladiators were divided into different classes, according to their arms and different mode of fighting, or other circumstances. The name of the most important of these classes is given in alphabetical order:

*Andabate*³ wore helmets without any aperture for the eyes, so that they were obliged to fight blind fold, and thus excite the mirth of the spectators. Some modern writers say that they fought on horseback, but this is denied by Orelli.⁴

Caternarii was the name given to gladiators when they did not fight in pairs, but when several fought together.⁵

Dimacheri appear to have been so called, because they fought with two swords.⁶

Equites were those who fought on horseback.⁷

Essedarii fought from chariots like the Gauls and Britons. (*Vid. ESSEDA*.) They are frequently mentioned in inscriptions.⁸

Fiscales were those, under the Empire, who were trained and supported from the fiscus.⁹

Hoplomachi appear to have been those who fought in a complete suit of armour.¹⁰ Lipsius considers them to have been the same with the Samnites, and that this name was disused under the emperors, and *hoplomachi* substituted for it.

Laqueatores were those who used a noose to catch their adversaries.¹¹

Meridiani were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators were very slightly armed.¹²

Mirmillones are said to have been so called from their having the image of a fish (*mormyr*, *μορμύρος*) on their helmets.¹³ Their arms were like those of the Gauls, whence we find that they were also called Galli. They were usually matched with the *retiarii* or Thracians.¹⁴

Ordinarii was the name applied to all the regular gladiators, who fought in pairs, in the ordinary way.¹⁵

Postulaticii were such as were demanded by the people from the editor, in addition to those who were exhibited.¹⁶

Provocatores fought with the Samnites,¹⁷ but we do not know anything respecting them except their name. They are mentioned in inscriptions.¹⁸ The *προβοκάτωρ* mentioned by Artemidorus¹⁹ appears to be the same as the provocator.

Retiarii carried only a three-pointed lance, called *tridens* or *fuscina* (*vid. FUSCINA*), and a net (*rete*), which they endeavoured to throw over their adversaries, and then to attack them with the *fuscina* while they were entangled. The *retiarius* was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he betook himself to flight, and endeavoured to prepare his net for a second cast, while his adversary followed round the arena in order to kill him before he could make a second attempt. His adversary was usually a *secutor* or a *mirmillo*.²⁰ In the following

woodcut, taken from Winckelmann,¹ a combat is represented between a retiarius and a mirmillo; the

former has thrown his net over the head of the latter, and is proceeding to attack him with the fuscina. The lanista stands behind the retiarius.

Samnites were so called because they were armed in the same way as that people, and were particularly distinguished by the oblong *scutum*.²

Secutores are supposed by some writers to be so called, because the secutor, in his combat with the retiarius, pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the *supposititii*, mentioned by Martial,³ who were gladiators substituted in the place of those who were wearied or were killed.⁴ If the old reading in a letter of Cicero's⁵ is correct, Julius Cæsar had no less than 500 *secutores* in his ludus at Capua; but it appears probable that we ought to read *scutorum* instead of *secutorum*.

Supposititii. (Vid. *Secutores*.)

Thrares or *Threces* were armed, like the Thracians, with a round shield or buckler,⁶ and a short

sword or dagger (*sica*'), which is called *falx supina*.

by Juvenal.¹ They were usually matched, as already stated, with the mirmillones. The preceding woodcut, taken from Winckelmann,² represents a combat between two Thracians. A lanista stands behind each.

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists.³ Several statues of gladiators have come down to us, which are highly admired as works of art: of these, the most celebrated is the gladiator of the Borghese collection, now in the Museum of the Louvre, and the dying gladiator, as it is called, in the Capitoline Museum. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scæurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. These bas-reliefs are represented in the following woodcuts from Mazois.⁴ The figures are made of stucco, and appear to have been moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the frieze are written the name of the person to whom the gladiators belonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with visors, which cover the whole face, and are armed with spears and round bucklers. In the second pair, the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hand towards them. His antagonist stands behind him, waiting the signal of the people. Like all the other gladiators represented on the frieze, they wear the *subligaculum*, or short apron fixed above the hips. The one on the left appears to be a mirmillo, and the one on the right, with an oblong shield (*scutum*), a Samnite. The third pair consists of a Thracian and a mirmillo, the latter of whom is defeated. The fourth group consists of four figures; two are *secutores* and two *retiarii*. The secutor on his knee appears to have been defeated by the retiarius behind him, but as the fuscina is not adapted for producing certain death, the other secutor is called upon to do it. The retiarius in the distance is probably destined to fight in his turn with the surviving secutor. The last group consists of a mirmillo and a Samnite, the latter is defeated.

In the next woodcut two combats are represented. In the first a Samnite has been conquered

by a mirmillo; the former is holding up his hand to the people to implore mercy, while the latter apparently wishes to become his enemy's executioner before receiving the signal from the people, but the lanista holds him back. In the other combat a mirmillo is mortally wounded by a Samnite.

It will be observed that the right arm of every figure is protected by armour, which the left does not require, on account of the shield.¹ (Vid. *BESTIRIL*, VENATIO.)

*GLADIOLUS (ξίφιον and φασγάνιον), Corn-flag or Sword-grass. Gaza, in his version of Theophrastus, renders the Greek term by *ensis*. The people of Zante call it, at the present day, *ἀγριοκόκορος*; the rest of the modern Greeks, *σπαθόκορπον*. Sibthorp found a variety, which he names *G. triphyllus*. The botanical name for the Gladiolus of the ancients is *G. communis* or *vulgaris*. This is found in the fields of the Ægean islands at the beginning of spring.²

GLADIUS (ξίφος, poet. ἄορ, φάσγανον), a Sword or Glaive, by the Latin poets called *ensis*. The ancient sword had generally a straight, two-edged blade (*ἀμφορες*), rather broad, and nearly of equal width from hilt to point. Gladiators, however, used a sword which was curved like a cimeter.³ In times of the remotest antiquity swords were made of bronze, but afterward of iron.⁴ The Greeks and Romans wore them on the left side (vid. p. 93; woodcut, p. 597⁶), so as to draw them out of the sheath (*vagina*, *κόλεος*) by passing the right hand in front of the body to take hold of the hilt with the thumb next to the blade. Hence Æschylus distinguishes the army of Xerxes by the denomination of *μαχαίροφόρον ἔθνος*,⁷ alluding to the obvious difference in their appearance in consequence of the use of the *ACINACES* instead of the sword.

The early Greeks used a very short sword. (Vid. woodcut, p. 94.) Iphicrates, who made various improvements in armour about 400 B.C., doubled its length,⁸ so that an iron sword found in a tomb at Athens, and represented by Dodwell,⁹ was two feet five inches long, including the handle, which was also of iron. The Roman sword, as was the case also with their other offensive weapons, was larger, heavier, and more formidable than the Greek.¹⁰ Its length gave occasion to the joke of Lentulus upon his son-in-law, who was of very low stature, "Who tied my son-in-law to his sword?"¹¹ To this Roman sword the Greeks applied the term *σπάθη*,¹² which was the name of a piece of wood of the same form used in weaving. (Vid. *TELA*.) The British glaive was still larger than the Roman.¹³ In a monument found in London, and preserved at Oxford, the glaive is represented between three and four feet long.¹⁴

The principal ornament of the sword was bestowed upon the hilt.¹⁵ (Vid. *CAPULUS*.)

Gladius was sometimes used in a wide sense, so as to include *Pugio*.¹⁶

GLANDES. (Vid. *FUNDA*.)

*GLANS. "This term," observes Martyn, "seems to have been used by the Romans in the same sense that we employ the word *Mast*, namely, to indicate the fruit of the beech, oak, or other forest-trees. Thus the fruit of the beech is called *glans* by Pliny, '*fagi glans, nuclei similis*.' But, strictly speaking, it means only such fruits as con-

tain but one seed, which is covered at the lower part with a husk, and is naked at the upper part. thus the fruit of an oak, which we commonly call an acorn, is properly a *glans*. 'Glandem,' says Pliny, '*quæ proprie intelligitur, ferunt robur, quercus, æsculus, cerrus, ilex, suber*.'"¹

*GLASTUM (γλάστις), Woad, or *Isatis tinctoria*, long celebrated for producing a dye of a beautiful blue colour. The ancient Britons, according to Cæsar and other writers, stained their bodies with the juice of this plant, a custom which, according to Pliny, extended even to females. Two kinds of *Isatis* are mentioned by the ancient writers; the domesticated, or *sativa*, the same with the *I. tinctoria*, and the wild, or *áypia*, corresponding to the *I. Lusitanica*.²

*GLAUCIUM (γλαύκιον), the Horned Poppy, named by Bauhin *Papaver corniculatum*, and by more modern botanists, *Glauicum corniculatum*, Curt. Sibthorp found it growing abundantly along the sandy shores of Greece.³

*GLAUCUS (γλαῦκος), the blue Shark, or *Squalus Glaucus*, called in French *Le Chien de Mer*. Ælian describes the paternal care of this fish for its offspring in guarding it against dangerous foes: *πατήρ δ' ἐν ἰχθύσιν ὁ γλαῦκος ὁλός ἐστι! κ. τ. λ.*⁴

*GLAUX (γλαύξ), "the *Strix Bubo*, L., known by the English names of Eagle Owl, Great Owl, and Great Horned Owl. The *ῥως* is the *Strix Otus*, or Horned Owl. The *αἰγύλιος* of Aristotle may be conjectured to be the *Strix nyctea*, or Great White Owl."⁵ Dodwell, speaking of the owls in modern Greece, observes, "There are many varieties of owls at Athens; the most common is the *Strix passerina*, which is very small and tame, and is the same that is represented on Athenian coins. They have a particular note, of which their Greek name, *Κουκουβασία*, is perfectly expressive, and to which that circumstance must have given rise, since, the cuckoo has received its appellation from a similar resemblance. It is a singular circumstance, that the Athenians are pleased with seeing the bird of Minerva perch upon their houses. In all other countries it is supposed as anciently to portend calamity and death."⁶ The selection of the owl as the emblem of Minerva originated, as is thought, from the circumstance of this bird's having a particular air of intelligence, owing to the elevation of the facial line.⁶

*IL a plant, which Tragus and Bauhin are inclined to refer to a species of *Polygala*, or Milkwort; but Sprengel follows Clusius in holding it to be the *Astragalus Glaux*. The English name of the *Astragalus* is Milkvetch.⁷

*GLECHON (γλήχων), the *Mentha pulegium*, or Pennyroyal. Apuleius says, "*Græci Blechon, alii Glechon, et Latini Pulegium*." The former of these two Greek expressions, namely, *Blechon* (βλήχων), of which the other (*Glechon*) is merely a dialectic variation, comes, according to the ancient writers, from *βλήχη*, "bleating," because the plant, when eaten by sheep and goats, makes them bleat. The Latin name *pulegium* was given to it because it was believed to kill fleas (*pulices*) by its odour. Two kinds of *pulegium* are mentioned by the ancients, the domesticated (*sativum*) and wild (*sylvestre*). Pliny gives a long enumeration of its medical properties, and cites the saying of Varro, that a crown of Pennyroyal was more fit to adorn an apartment than one of roses. The same writer distinguishes also between the male and female pu-

legnum, which Dioscorides does not, and, botanically speaking, this distinction is a vicious one. Apuleius, without doubt following Pliny, says that the female pulegium has a red flower, and the male a white one; but he gives no preference for medical purposes to either the one or the other kind.¹

*GLIS, the Rell-mouse, or *Glis esculentus*, a branch of the Dormouse family. It is the *μύσας* of the Greek writers, which is most probably the same with the *ἐλεῖος* of Aristotle. Linoæus calls it the *Myoxus Glis*.²

*GLOTTIS (γλωττίς), the name of a bird mentioned by Aristotle. "The most probable conjecture," says Adams, "which I can form respecting it, is, that it was the *Totanus Glottis*, Bechstein, called in English the Greenshank or Great Plover."³

*GLYCYRRHIZ' A (γλυκύριζα), Liquorice. Sprengel, in his R. H. H., acknowledges it to be the *Glycyrrhiza glabra*; but in his edition of Dioscorides he prefers the *G. glandulifera*. Baubin, Hill, Müller, and Dierbach agree that it is the variety of Liquorice now named *G. capite echinato*, which is described by Dioscorides. Sibthorp also makes it to be the *G. echinata*.⁴

*GLYCYMARIS (γλυκμαρίς), a fish of the testaceous order. Coray inclines to refer it to the *Area glycymaris*, L. Lamarck makes it a distinct genus.⁵

*GLYCYSTIDE (γλυκυστίδη), according to Dioscorides and Galen, a synonyme of the *πειονία*. "The two species described by them," remarks Adams, "are most probably the *Pæonia officinalis*, or Male Pæony, and the *P. corallina*. Stackhouse holds the *γλυκυστίδη* of Theophrastus to be the *P. nobilis*.⁶

*GNAPHALUM (γναφάλιον), according to Baubin, the "*Herba impia*" of Pliny, which he calls the *Gnaphalium vulgare*, but which is now termed *G. Germanicum* by British botanists. It is the common Cudweed of Great Britain. "This seems to be a probable view of the subject," remarks Adams, "but it becomes me to state that Sprengel, upon the authority of Matthioli, Dodonæus, and others, holds it to be a species of Lavender-cotton, namely, the *Olanthus maritimus*, Zink."⁷

*GNAPHALUS (γναφάλος), a bird of passage described by Aristotle. Buffon conjectures that it was the Bohemian Chatterer (*Garrulus Bohemicus*); an opinion discountenanced by Linnæus, but which Adams considers a very probable one.⁸

GNOMON. (Vid. HOROLOGIUM.)

*GOBIUS (κυβίως), the Sea Gudgeon or Gobey. Griffith thinks that the Gobey is the *Physcis* of the ancients, "the only fish that constructs a nest."⁹

*GOSSIPION. The Cotton-tree. (Vid. EPI-ΘΟΡΟΝ ΔΕΝΔΡΟΝ.)

GRADUS COGNATIONIS. (Vid. COGNATI.)

GRAMMATEUS (γραμματεὺς), a Clerk or Scribe. Among the great number of scribes employed by the magistrates and government of Athens, there were three of a higher rank, who were real state officers.¹⁰ Their functions are described by Pollux.¹¹ One of them was appointed by lot, by the senate, to serve the time of the administration of each prytany, though he always belonged to a different prytany from that which was in power. He was therefore called *γραμματεὺς κατὰ πρῶταίαν*.¹² His province was to keep the public records, and the de-

crees of the people which were made during the time of his office, and to deliver to the thesmothetæ the decrees of the senate.¹ Demosthenes, in another passage,² states that the public documents, which were deposited in the Metroon, were in the keeping of a public slave; whence we must suppose, with Schömann,³ that this servant, whose office was probably for life, was under the *γραμματεὺς*, and was his assistant. Previous to the archonship of Euclides, the name of this scribe was attached to the beginning of every decree of the people;⁴ and the name of the *γραμματεὺς* who officiated during the administration of the first prytany in a year was, like that of the archon eponymus, used to designate the year.

The second *γραμματεὺς* was elected by the senate by *χειροτονία*, and was intrusted with the custody of the laws (*ἐπὶ τὰς νόμους*).⁵ His usual name was *γραμματεὺς τῆς βουλῆς*, but in inscriptions he is also called *γραμματεὺς τῶν βουλευτῶν*.⁶ Further particulars concerning his office are not known.

A third *γραμματεὺς* was called *γραμματεὺς τῆς πόλεως*,⁷ or *γραμματεὺς τῆς βουλῆς καὶ τοῦ δήμου*. He was appointed by the people by *χειροτονία*, and the principal part of his office was to read any laws or documents which were required to be read in the assembly or in the senate.⁸

A class of scribes inferior to these were those persons who were appointed clerks to the several civil or military officers of the state, or who served any of the three *γραμματεῖς* mentioned above as under-clerks (*ὑπογραμματεῖς*).⁹ These persons were either public slaves or citizens of the lower orders, as appears from the manner in which Demosthenes speaks of them, and were not allowed to hold their office for two succeeding years.¹⁰

Different from these common clerks were the *ἀντιγραφεῖς*, checking-clerks or counter-scribes, who must likewise be divided into two classes, a lower and a higher one. The former comprised those who accompanied the generals and cashiers of the armies,¹¹ who kept the control of the expenditure of the sacred money, &c.¹² The higher class of *ἀντιγραφεῖς*, on the other hand, were public officers. Their number was, according to Harpocration,¹³ only two, the *ἀντιγραφεὺς τῆς διοικήσεως*, and the *ἀντιγραφεὺς τῆς βουλῆς*. The office of the former was to control the expenditure of the public treasury (*διοίκησις*); the latter was always present at the meetings of the senate, and recorded the accounts of money which was paid into the senate.¹⁴ He had also to lay the account of the public revenue before the people in every prytany, so that he was a check upon the *ἀποδέκται*. He was at first elected by the people by *χειροτονία*, but was afterward appointed by lot.¹⁵

The great number of clerks and counter-clerks at Athens was a necessary consequence of the institution of the *εὐθύνη*, which could not otherwise have been carried into effect.¹⁶

GRAPHE (γραφή), in its most general acceptation, comprehends all state trials and criminal prosecutions whatever in the Attic courts; but in its more limited sense, those only which were not dis-

Antig., § 127, n. 17 and 18.)

tinguished as the *εὐθύνη, ἐνδείξις, εἰσαγγελία* by a special name and a peculiar conduct of the proceedings. The principal characteristic differences between public and private actions are enumerated under *DICE*, and the peculiar forms of public prosecutions, such as those above mentioned, are separately noticed. Of these forms, together with that of the *γραφή*, properly so called, it frequently happened that two or more were applicable to the same cause of action; and the discretion of the prosecutor in selecting the most preferable of his available remedies was attended by results of great importance to himself and the accused. If the prosecutor's speech (*κατηγορία*), and the evidence adduced by him, were insufficient to establish the aggravated character of the wrong in question, as indicated by the form of action he had chosen, his ill-judged rigour might be alleged in mitigation of the punishment by the defendant in his reply (*ἀπολογία*), or upon the assessment of the penalty after judgment given; and if the case were one of those in which the dicasts had no power of assessing (*ἀτίμητος γραφή*), it might cause a total failure of justice, and even render the prosecutor liable to a fine or other punishment.¹

The courts before which public causes could be tried were very various; and, besides the ordinary heliastic bodies under the control of the nine archons, or the generals, or *logistæ*, the council, and even the assembly of the people, occasionally became judicial bodies for that purpose, as in the case of certain *docimasæ* and *eisangeliai*.² The proper court in which to bring a particular action was, for the most part, determined by the subject-matter of the accusation. In the trial of state offences, it was, in general, requisite that the ostensible prosecutor should be an Athenian citizen in the full possession of his franchise; but on some particular occasions,³ even slaves and resident aliens were invited to come forward and lay informations. In such cases, and in some *eisangeliai* and other special proceedings, the prosecution and conduct of the cause in court was carried on by advocates retained by the state (*ζυνήγοροι*) for the occasion; but with the exception of these temporary appointments, the protection of purely state interests seems to have been left to volunteer accusers.

In criminal causes the prosecution was conducted by the *κύριος* in behalf of the aggrieved woman, minor, or slave; his *προστάτης* probably gave some assistance to the resident alien in the commencement of proceedings, though the accusation was in the name of the person aggrieved, who also made his appearance at the trial without the intervention of the patron;⁴ and a complete foreigner would upon this occasion require the same or a still farther protection from the *proxenus* of his country. With the exception of cases in which the *apagoge*, *ephegesis* *endeixis*, or *eisangelia* was adopted, in the first three of which an arrest actually did, and in the last might take place, and accusations at the *euthunæ* and *docimasaiæ*, when the accused was, or was supposed by the law to be, present, a public action against a citizen commenced, like an ordinary lawsuit, with a summons to appear before the proper magistrate on a fixed day.⁵ The *anacrisis* then followed (*vid.* *ANACRISIS*); but the bill of accusation was called a *γραφή* or *φάσις*, as the case might be, and not an *ἐγκλημα* or *λίξις*, as in private actions; neither could a public prosecution be referred to an arbitrator (*vid.* *DIATETES*); and if it were compromised, would in many cases render the accuser liable to an action *καθυβέσεως*, if not ipso

facto to a fine of a thousand drachmæ.¹ The same sum was also forfeited when the prosecutor failed to obtain the voices of a fifth of the dicasts in all cases except those brought before the archon that had reference to injury (*κάκωσις*) done to women or orphans; and besides this penalty, a modified disfranchisement, as, for instance, an incapacity to bring a similar accusation, was incurred upon several occasions. Upon the conviction of the accused, if the sentence were death, the presiding magistrate of the court delivered the prisoner, who remained in the custody of the *Seythæ* during the trial, to the *Eleven*, whose business it was to execute judgment upon him. (*VID.* *ELEVEN, THE.*) If the punishment were confiscation of property, the demarchs made an inventory of the effects of the criminal, which was read in the assembly of the people, and delivered to the *poletæ*, that they might make a sale of the goods, and pay in the proceeds to the public treasury.²

GREGORIANUS CODEX. (*VID.* *COD. GREGORIANUS.*)

GROSOPHOS (γρόσφος). (*VID.* *HASTA.*)

GUBERNA'CULUM, *ant.* GUBERNUM (*πηδάλιον*), a Rudder. Before the invention of the rudder, which Pliny³ ascribes to Tiphys, the pilot of the ship *Argo*, vessels were both propelled and guided by oars alone. This circumstance may account for the form of the ancient rudder, as well as for the mode of using it. It was like an oar with a very broad blade, and was commonly placed on each side of the stern, not at its extremity. The annexed woodcut presents examples of its appearance as it is frequently exhibited on coins, gems, and other works of art. The figure in the centre is from one of Bartoli's lamps,⁴ and displays a Triton blowing the *Buccina*, and holding a rudder over his shoulder in his left hand. The first figure in the same woodcut is from a cameo in the Stosch collection. It represents a rudder with its helm or tiller (*vid.* *ANNA, CLAVUS*) crossed by the cornucopia. These two emblems of abundance and success are often found together, especially in representations of *Fortunæ*. In the third figure, taken from another cameo in the same collection, *Venus* leans with her left arm upon a rudder, which indicates her origin from the sea.

The usual position of the rudder at the side of the stern is seen in the woodcuts at p. 58, 62, 69.

The gubernaculum was managed by the *gubernator*⁵ (*κυβερνήτης*), who is also called the *rector*, as distinguished from the *magister*,⁷ and by the Greek poets *οἰακοστροφός* and *οἰακονόμος*,⁸ because he turns and directs the helm.⁹

A ship had sometimes one, but more commonly two rudders;¹ and they were distinguished as the right and the left rudder (*dextrum, sinistrum*). In the Caspian Sea, where the old practice not long ago remained in force, a modern traveller was nearly shipwrecked because the rudders were in the hands of two pilots who spoke different languages. To obviate such disasters among the ancients, the same steersman held both tillers, if the boat was small, as is clearly shown in the representation of one on a lamp.² In larger ships the extremities of the helms were joined by a pole, which was moved by one man, and kept the rudders always parallel. This construction is seen in the model of a ship which is preserved in the collection of Egyptian antiquities at Berlin, and which was discovered in the tomb of a priest. The contrivances for attaching the two rudders to one another, and to the sides of the ship, are called *ζεύγλαι*³ and *ζευκτηρία*.⁴

Ships constructed with a double prow and stern (*vid. ΑΜΦΙΠΡΥΜΝΟΙ ΝΗΣΕΣ*) had two rudders at each end.⁵ In the great ship built at Alexandria by Ptolemy Philopator, the four rudders were each thirty cubits in length.⁷

GUBERNATOR. (*vid. GUBERNACULUM*.)

GUSTATIO. (*vid. CŒNA*, p. 275.)

GUTTUS. (*vid. BATHS*, p. 151.)

GYMNASIARCHES. (*vid. GYMNASIUM*.)

GYMNASION. (*vid. GYMNASIUM*.)

GYMNASIUM (*γυμνάσιον*). The whole education of a Greek youth was divided into three parts, grammar, music, and gymnastics (*γράμματα, μουσική, and γυμναστική*), to which Aristotle⁸ adds a fourth, the art of drawing or painting. Gymnastics, however, were thought by the ancients a matter of such importance, that this part of education alone occupied as much time and attention as all the others put together; and while the latter necessarily ceased at a certain period of life, gymnastics continued to be cultivated by persons of all ages, though those of an advanced age naturally took lighter and less fatiguing exercises than boys and youths.¹⁰ The ancients, and more especially the Greeks, seem to have been thoroughly convinced that the mind could not possibly be in a healthy state unless the body was likewise in perfect health, and no means were thought, either by philosophers or physicians, to be more conducive to preserve or restore bodily health than well-regulated exercise. The word gymnastics is derived from *γυμνός* (naked), because the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short *χιτών*.¹¹

The great partiality of the Greeks for gymnastic exercises was productive of infinite good: they gave to the body that healthy and beautiful development by which the Greeks excelled all other nations, and which, at the same time, imparted to their minds that power and elasticity which will ever be admired in all their productions.¹² The plastic art, in particular, must have found its first and chief nourishment in the gymnastic and athletic performances; and it may be justly observed, that the Greeks would never have attained their pre-eminence in sculpture had not their gymnastic and athletic exhibitions made the artists familiar with the beautiful forms of the human body and its various attitudes. Respecting the advantages of gymnastics

in a medical point of view, some remarks are made at the end of this article. But we must, at the same time, confess, that at a later period of Greek history, when the gymnasia had become places of resort for idle loungers, their evil effects were no less striking. The chief objects for which they had originally been instituted were gradually lost sight of, and instead of being places of education and training, they became mere places of amusement.

Gymnastics, in the widest sense of the word, comprehended also the agonistic and athletic arts (*ἀγωνιστική and ἀθλητική*), that is, the art of those who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession. (*vid. ATHLETÆ and AGONOTHETÆ*.) Both originated in the gymnasia, in as far as the *athletæ*, as well as the *agonistæ*, were originally trained in them. The *athletæ*, however, afterward formed a distinct class of persons unconnected with the gymnasia; while the gymnasia, at the time when they had degenerated, were in reality little more than agonistic schools, attended by numbers of spectators. On certain occasions, the most distinguished pupils of the gymnasia were selected for the exhibition of public contests (*vid. LAMPHADOPHORIA*), so that, on the whole, there was always a closer connexion between the gymnastic and agonistic than between the gymnastic and athletic arts. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests, and were places of exercise for the purpose of strengthening and improving the body, or, in other words, places for physical education and training; and it is chiefly in this point of view that we shall consider them in this article.

Gymnastic exercises among the Greeks seem to have been as old as the Greek nation itself, as may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of Grecian story; but they were, as might be supposed, of a rude and mostly of a warlike character. They were generally held in the open air, and in plains near a river, which afforded an opportunity for swimming and bathing. The Attic legends, indeed, referred the regulation of gymnastics to Theseus;¹ but, according to Galen, it seems to have been about the time of Cleisthenes that gymnastics were reduced to a regular and complete system. Great progress, however, must have been made as early as the time of Solon, as appears from some of his laws which are mentioned below. It was about the same period that the Greek towns began to build their regular gymnasia as places of exercise for the young, with baths, and other conveniences for philosophers and all persons who sought intellectual amusements. There was probably no Greek town of any importance which did not possess its gymnasium. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasia have been discovered in modern times. Athens alone possessed three great gymnasia, the Lyceum (*Λύκειον*), Cynosarges (*Κυνοσάργει*), and the Academia (*Ἀκαδημία*); to which, in later times, several smaller ones were added. All buildings of this kind were, on the whole, built on the same plan, though from the remains, as well as from the descriptions still extant, we must infer that there were many differences in their detail. The most complete description of a gymnasium which we possess is that given by Vitruvius,² which, however, is very obscure, and at the same time defective, in as far as many parts which seem to have been essential to a gymnasium are not mentioned in it. Among the numerous plans which have been

drawn, according to the description of Vitruvius, that of W. Newton, in his translation of Vitruvius, vol. i., fig. 52, deserves the preference. The following woodcut is a copy of it, with a few alterations.

The peristylia (D) in a gymnasium, which Vitruvius incorrectly calls *palæstra*, are placed in the form of a square or oblong, and have two stadia (1200 feet) in circumference. They consist of four porticoes. In three of them (A B C), spacious exedrae, with seats, were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation, might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather. The double portico contained the following apartments: The Ephebeum (F), a spacious hall with seats, is in the middle, and by one third longer than broad. On the right is the Coryceum (G), perhaps the same room which in other cases was called Apodyterium; then came the Conisterium (H), adjoining; and next to the Conisterium, in the returns of the portico, is the cold bath, *λουτήριον* (I). On the left of the Ephebeum is the Elæothesium, where persons were anointed by the *alipstæ* (K). Adjoining the Elæothesium is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propnigium (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the returns the Laconicum (O) on one side, and opposite the Laconicum, the hot bath (P). On the outside three porticoes are built: one (Q) in passing out from the peristyle, and on the right and left the two stadal porticoes (R S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin to the columns, there may be margins for paths not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means, those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks *ἐκστῆς*, because in the winter season the *athletæ* exercised themselves in these covered stadia. The *ἐκστῆς* had groves or plantations between the two porticoes, and walks between the trees, with seats of signine work. Adjoining to

the *ἐκστῆς* (R) and double portico (S) are the uncovered walks (U), which in Greek are called *παρὰδομίδες*, to which the *athletæ*, in fair weather, go from the winter-xystus to exercise. Beyond the xystus is the stadium (W), so large that a multitude of people may have sufficient room to behold the contests of the *athletæ*.

It is generally believed that Vitruvius, in this description of his gymnasium, took that of Naples as his model; but two important parts of other Greek gymnasia, the apodyterium and the *sphæisterium*, are not mentioned by him. The Greeks bestowed great care upon the outward and inward splendour of their gymnasia, and adorned them with the statues of gods, heroes, victors in the public games, and of eminent men of every class. Hermes was the tutelary deity of the gymnasia, and his statue was consequently seen in most of them.

The earliest regulations which we possess concerning the gymnasia are in the laws of Solon. One of these laws forbade all adults to enter a gymnasium during the time that boys were taking their exercises, and at the festival of the *Hermæa*. The gymnasia were, according to the same law, not allowed to be opened before sunrise, and were to be shut at sunset.¹ Another law of Solon excluded slaves from gymnastic exercises.² Boys who were children of an Athenian citizen and a foreign mother (*νόθοι*), were not admitted to any other gymnasium but the *Cynosarges*.³ Some of the laws of Solon, relating to the management and the superintendence of the gymnasia, show that he was aware of the evil consequences which these institutions might produce, unless they were regulated by the strictest rules. As we, however, find that adults also frequented the gymnasia, we must suppose that, at least as long as the laws of Solon were in force, the gymnasia were divided into different parts for persons of different ages, or that persons of different ages took their exercises at different times of the day.⁴ The education of boys up to the age of sixteen was divided into the three parts mentioned above, so that gymnastics formed only one department; but during the period from their sixteenth to their eighteenth year, the instruction in grammar and music seems to have ceased, and gymnastics were exclusively pursued. In the time of Plato the salutary regulations of Solon appear to have been no longer observed, and we find persons of all ages visiting the gymnasia.⁵ Athens now possessed a number of smaller gymnasia, which are sometimes called *palæstræ*, in which persons of all ages used to assemble, and in which even the *Hermæa* were celebrated by the boys, while formerly this solemnity had only been kept in the great gymnasia, and to the exclusion of all adults.⁶ These changes, and the laxitude in the superintendence of these public places, caused the gymnasia to differ very little from the schools of the *athletæ*; and it is, perhaps, partly owing to this circumstance that writers of this and subsequent times use the words *gymnasium* and *palæstra* indiscriminately.⁷

Married as well as unmarried women were, at Athens and in all the Ionian states, excluded from the gymnasia; but at Sparta, and in some other Doric states, maidens, dressed in the short *χιτών*, were not only admitted as spectators, but also took part in the exercises of the youths. Married women, however, did not frequent the gymnasia.⁸

Respecting the superintendence and administration of the gymnasia at Athens, we know that Solon

1. (Æschin., c. Timarch., p. 38.)—2. (Æschin., c. Timarch., p. 147.—Plut., Solon, 1.—Demosth., c. Timocr., p. 736.)—3. (Plut., Them., 1.)—4. (Böckh, Corp. Inscr., n. 246 and 2214.)—5. in his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. His laws mention a magistrate, called the gymnasiarch (*γυμνασιάρχος* or *γυμνασιάρχης*), who was intrusted with the whole management of the gymnasia, and with everything connected therewith. His office was one of the regular liturgies, like the choregia and trierarchy,¹ and was attended with considerable expense. He had to maintain and pay the persons who were preparing themselves for the games and contests in the public festivals, to provide them with oil, and perhaps with the wrestlers' dust. It also devolved upon him to adorn the gymnasium, or the place where the agones took place.² The gymnasiarch was a real magistrate, and invested with a kind of jurisdiction over all those who frequented or were connected with the gymnasia; and his power seems even to have extended beyond the gymnasia, for Plutarch³ states that he watched and controlled the conduct of the ephebi in general. He had also the power to remove from the gymnasia teachers, philosophers, and sophists, whenever he conceived that they exercised an injurious influence upon the young.⁴ Another part of his duties was to conduct the solemn games at certain great festivals, especially the torch-race (*λαμπάδωφρία*), for which he selected the most distinguished among the ephebi of the gymnasia. The number of gymnasiarchs was, according to Ilibanius on Demosthenes,⁵ ten, one from every tribe.⁶ They seem to have undertaken their official duties in turns, but in what manner is unknown. Among the external distinctions of a gymnasiarch were a purple cloak and white shoes.⁷ In early times the office of gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were 12 or 13 gymnasiarchs in one year.⁸ This office seems to have been considered so great an honour, that even Roman generals and emperors were ambitious to hold it. Other Greek towns had, like Athens, their own gymnasiarchs, but we do not know whether, or to what extent, their duties differed from the Athenian gymnasiarch. In Cyrene the office was sometimes held by women.

Another office which was formerly believed to be connected with the superintendence of the gymnasia is that of xystarchus (*ξυστάρχος*). But it is not mentioned previous to the time of the Roman emperors, and then only in Italy and Crete. Krause⁹ has shown that this office had nothing to do with the gymnasia properly so called, but was only connected with the schools of the athlete.

An office which is likewise not mentioned before the time of the Roman emperors, but was, nevertheless, decidedly connected with the gymnasia, is that of Cosmetes. He had to arrange certain games, to register the names, and keep the lists of the ephebi, and to maintain order and discipline among them. He was assisted by an anticosmetes and two hypocosmetæ.¹⁰

An office of very great importance, in an educational point of view, was that of the sophronistæ (*σοφρονιστᾶι*). Their province was to inspire the youths with a love of *σωφροσύνη*, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day.¹¹ Their duty not only required them to be present at all the games of the ephebi, but to watch and correct

their conduct wherever they might meet them, both within and without the gymnasium. At the time of the Emperor Marcus Aurelius, only six sophronistæ, assisted by as many hyposophronistæ, are mentioned.¹

The instructions in the gymnasia were given by the gymnastæ (*γυμνασται*) and the pædotribæ (*παιδοτρίβαι*); at a later period hypopædotribæ were added. The pædotribes was required to possess a knowledge of all the various exercises which were performed in the gymnasia; the gymnastes was the practical teacher, and was expected to know the physiological effects and influences on the constitution of the youths, and therefore assigned to each of them those exercises which he thought most suitable.² These teachers were usually athlete who had left their profession, or could not succeed in it.³

The anointing of the bodies of the youths, and strewing them with dust, before they commenced their exercises, as well as the regulation of their diet, was the duty of the aliptæ. (*Vid. ALIPTÆ*.) These men sometimes also acted as surgeons or teachers.⁴ Galen⁵ mentions, among the gymnastic teachers, a *σφαριστικός*, or teacher of the various games at ball; and it is not improbable that in some cases particular games may have been taught by separate persons.

The games and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorians, however, they were regarded chiefly as institutions for hardening the body and for military training; among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beauty, and to make it the basis of a healthy and sound mind. But among all the different tribes of the Greeks, the exercises which were carried on in a Greek gymnasium were either mere games, or the more important exercises which the gymnasia had in common with the public agones in the great festivals.

Among the former we may mention, 1. The ball (*σφαίρις*, *σφαίρισμαχία*, &c.), which was in universal favour with the Greeks, and was here, as at Rome, played in a variety of ways, as appears from the words *ἀπὸρραξίς*, *ἐπίσκυρος*, *φανινάδα* or *ἀρπαστόν*, &c.⁶ Every gymnasium contained one large room for the purpose of playing at ball in it (*σφαίριστήριον*). 2. *Παίζειν ἑλκυστίνδα*, *διελκυστίνδα*, or *διὰ γραμμῆς*, was a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end across a line marked between them on the ground. 3. The top (*βέμβης*, *βέμιξις*, *ρόμβος*, *στρόβιλος*), which was as common an amusement with Greek boys as in our own days. 4. The *πεντάλιθος*, which was a game with five stones, which were thrown up from the upper part of the hand and caught in the palm. 5. *Σκαπέρδα*, which was a game in which a rope was drawn through the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia.⁷ These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running (*δρόμος*), throwing of the *δίσκος* and the *ἄκων*, jumping and leaping (*ἄλμα*, with and without *ἀλτήρες*), wrestling (*πάλη*), boxing (*πυγμή*), the pancratium (*παγκρά*

ιον), πένταθλος, λαμπαδοφορία, dancing (ὀρχήσεις), &c., are described in separate articles.

A gymnasium was, as Vitruvius observes, not a Roman institution, and Dionysius of Halicarnassus¹ expressly states that the whole ἀγωνιστική of the Romans, though it was practised at an early period in the Ludi Maximi, was introduced among the Romans from Greece. Their attention, however, to developing and strengthening the body by exercises was considerable, though only for military purposes. The regular training of boys in the Greek gymnastics was foreign to Roman manners, and even held in contempt.² Towards the end of the Republic, many wealthy Romans, who had acquired a taste for Greek manners, used to attach to their villas small places for bodily exercise, sometimes called gymnasia, sometimes palaestrae, and to adorn them with beautiful works of art.³ The Emperor Nero was the first who built a public gymnasium at Rome;⁴ another was erected by Commodus.⁵ But, although these institutions were intended to introduce Greek gymnastics among the Romans, yet they never gained any great importance, as the magnificent thermae, amphitheatres, and other colossal buildings had always greater charms for the Romans than the gymnasia.

For a fuller account of this important subject, which has been necessarily treated with brevity in this article, the reader is referred to Hieronymus Mercurialis, *De Arte Gymnastica*, Libri vi., 1st ed., Venice, 1573, 4th ibid., 1601.—Burette, *Histoire des Athlètes*, in the Mém. de l'Acad. des Inscriptions, i., 3.—J. H. Krause, *Theagenes, oder wissenschaftliche Darstellung der Gymnastik, Agonistik, und Festspiele der Hellenen*, Halle, 1835.—G. Löbker, *Die Gymnastik der Hellenen*, Münster, 1835.—Wachsmuth, *Hellen. Alterth.*, ii., 2, p. 51–64.—Müller, *Dor.*, iv., 5, § 4, &c.—Becker, *Gallus*, i., p. 270, &c.—Charikles, i., p. 309–345. The various histories of the education among the ancients, such as those of Hochheimer, Schwarz, Cramer, and others, likewise contain much useful information on the subject.

The Relation of Gymnastics to the Medical Art.—The games of the Greeks had an immediate influence upon the art of healing, because they considered gymnastics to be almost as necessary for the preservation of health as medicine is for the cure of diseases.⁶ It was for this reason that the gymnasia were dedicated to Apollo, the god of physicians.⁷ The directors of these establishments, as well as the persons employed under their orders, the bathers or aliptæ, passed for physicians, and were called so, on account of the skill which long experience had given them. The directors, called παλαιστροφύλακες, regulated the diet of the young men brought up in the gymnasia; the sub-directors, or *Gymnastai*, prescribed for their diseases;⁸ and the *inferiores* or bathers, aliptæ, intraliptæ, practised blood-letting, administered clysters, and dressed wounds, ulcers, and fractures.⁹ Two of these directors, Iccus of Tarentum and Herodicus of Seilymbria, a town of Thrace, deserve particular notice for having contributed to unite more closely medicine and gymnastics. Iccus, who appears to have lived before Herodicus (*Olymp.* lxxvii.¹⁰), gave his chief attention to correcting the diet of the wrestlers, and to accustoming them to greater moderation and abstemiousness, of which virtues he was

himself a perfect model.¹ Plato considers him, as well as Herodicus, to have been one of the inventors of medical gymnastics.² Herodicus, who is sometimes called Prodicus,³ lived at Athens a short time before the Peloponnesian war. Plato says that he was not only a sophist,⁴ but also a master of the gymnasium⁵ and physician,⁶ and, in fact, he united in his own person these three qualities. He was troubled, says the same author, with very weak health, and tried if gymnastic exercises would not help to improve it; and having perfectly succeeded, he imparted his method to others. Before him medical dietetics had been entirely neglected, especially by the Asclepiadæ.⁷ If Plato's account may be taken literally,⁸ he much abused the exercise of gymnastics, as he recommended his patients to walk from Athens to Megara, and to return as soon as they had reached the walls of the latter town. The distance from Athens to Megara was 210 stadia, as we learn from Procopius.⁹ Dio Chrysostom calls it a day's journey.¹⁰ Modern travellers reckon eight hours.¹¹ The author of the sixth book *De Morb. Vulgar.*¹² agrees with Plato: "Herodicus," says he, "caused people attacked with fever to die, from walking and too hard exercise, and many of his patients suffered much from dry rubbing." A short time after we find, says Fuller,¹³ that Hippocrates,¹⁴ with some sort of glory, assumes to himself the honour of bringing that method to a perfection, so as to be able to distinguish πότερον τὸ σπῆλον κρατεῖ τοὺς πόνους, ἢ οἱ πόνοι τὰ σπῆλα, i. e. whether he has expressed it. Pursuant to this, we find him in several places of his works recommending several sorts of exercises upon proper occasions; as, first, friction or chafing, the effects of which he explains,¹⁵ and tells us that, as in some cases it will bring down the bloatedness of the solid parts, in others it will incarn and cause an increase of flesh, and make the part thrive. He advises¹⁶ walking, of which they had two sorts, their round and straight courses. He gives his opinion¹⁷ of the Ἀνακίνηματα, or preparatory exercises, which served to warm and fit the wrestlers for the more vehement ones. In some cases he advises the Παλὴ, or common wrestling,¹⁸ and the Ἀκροχειρῆ, or wrestling by the hands only, without coming close, and also the Κωρυκομαχί, or the exercise of the Corycus, or the hanging ball;¹⁹ τὴν Χειρονομίαν, a sort of dexterous and regular motion of the hands and upper parts of the body, something after a military manner; the Ἀλίνδουσι, or rolling in sand; and once²⁰ we find mentioned, with some approbation, the Ἑπεροι Ἰπποι, *Equi Indefiniti*, by which is probably meant galloping long courses in the open field.

As for Galen, he follows Hippocrates in this as closely as in other things, and declares his opinion of the benefit of exercises in several places; his second book, "De Sanitate Tuenda," is wholly upon the use of the *strigil*, or the advantage of regular chafing: he has written a little tract, Περὶ τοῦ διὰ Μικρὰς Σφαλας Γυμνασίου, wherein he recommends an exercise, by which the body and mind are both at the same time affected. In his discourse to Thrasybulus, Πότερον ἱατρικῆς ἢ Γυμναστικῆς ἐστὶ τὸ ὕγιον, he inveighs against the athletic and other

(Ib., p. 700.)

violent practices of the *gymnasium*, but approves of the more moderate exercises as subservient to the ends of a physician, and, consequently, part of that art. The other Greek writers express a similar opinion; and the sense of most of them in this matter is collected in Oribasius's "Collecta Medicinalia." In those remains which are preserved of the writings of Antyllus, we read of some sorts of exercises that are not mentioned by Galen or any former author; among the rest, the *Cricilasia*, as the translators by mistake call it, instead of *Cricoëlasia*. This, as it had for many ages been disused, Mercurialis himself, who has made the most judicious inquiries into this subject,¹ does not pretend to explain; and I believe, says Freind,² though we have the description of it set down in Oribasius,³ it will be hard to form any idea of what it was.

The ancient physicians relied much on exercise in the cure of the dropsy,⁴ whereas we almost totally neglect it.⁵ Hippocrates⁶ prescribes for one that has a dropsy *ταλαιπώρια*, or *fatiguing exercises*, and he makes use of the same word in his Epidemics, and almost always when he speaks of the regimen of a dropsical person, implying that, though it be a labour for such people to move, yet they must undergo it; and this is so much the sense of Hippocrates, that Spon has collected it into one of the new Aphorisms which he has drawn out of his works. Celsus says of this case,⁷ "*Concutiendum multa gestatione corpus est.*" The Romans placed great reliance upon exercise for the cure of diseases; and Asclepiades, who lived in the time of Pompey the Great, brought this mode of treatment into great request. He called exercises *the common aids of physic*, and wrote a treatise on the subject, which is mentioned by Celsus in his chapter "De Frictione,"⁸ but the book is lost. He carried these notions so far, that he invented the *Lecti Pensiles*,⁹ or hanging beds, that the sick might be rocked to sleep; which took so much at that time that they came afterward to be made of silver, and were a great part of the luxury of that people; he had so many particular ways to make physic agreeable, and was so exquisite in the invention of exercises to supply the place of medicine, that perhaps no man in any age ever had the happiness to obtain so general an applause; and Pliny¹⁰ says by these means he made himself the delight of mankind. About his time the Roman physicians sent their consumptive patients to Alexandria, and with very good success, as we find by both the Plinys; this was done partly for the change of air, but chiefly for the sake of the exercise by the motion of the ship; and therefore Celsus says,¹¹ "*Si vera Phthisis est, opus est longa navigatione;*" and a little after he makes *Vehiculum* and *Navis* to be two of the chief remedies. As for the other more common exercises, they were daily practised, as is manifest from Celsus, Cælius, Auerellianus, Theodorus Priscianus, and the rest of the Latin physicians. And we do not want instances of cures wrought by these means. Suetonius¹² tells us that Germanicus was cured of a "*crurum gracilitas*," as he expresses it (by which he probably means *an atrophy*), by riding; and Plutarch, in his life of Cicero, gives us an account of his weakness, and that he recovered his health by travelling, and excessive diligence in rubbing and chafing his body.¹³ Pliny¹⁴ tells us that Annæus Gallio, who had been consul, was cured of a consumption by a sea voy-

age; and Ga'en gives us such accounts of the good effects of particular exercises, and they were practised so universally by all classes, that it cannot be supposed but they must have been able to produce great and good effects. However, from an attentive perusal of what we find on this subject in the classical authors, the reader can hardly fail of being convinced that the ancients esteemed gymnastics too highly, just as the moderns too much neglect them; and that in this, as in many other matters, both in medicine and in philosophy, truth lies between the two extremes.

GYMNASTAI. (*Vid. GYMNASIUM*, p. 483.)

GYMNE'SIOI (*γυμνήσιοι*) or GYMNE'TES (*γυμνήτες*) were a class of bond-slaves at Argos, who may be compared with the Helots at Sparta.¹ Their name shows that they attended their masters on military service in the capacity of light-armed troops. Müller² remarks that it is to these gymnesii that the account of Herodotus³ refers, that 6000 of the citizens of Argos having been slain in battle by Cleomenes, king of Sparta,⁴ the slaves got the government into their own hands, and retained possession of it until the sons of those who had fallen had grown to manhood. Afterward, when the young citizens had grown up, the slaves were compelled by them to retire to Tiryns, and then, after a long war, as it appears, were either driven from the territory, or again subdued.

GYMNOPAIDIA (*γυμνοπαῖδια*), the festival of "naked youths," was celebrated at Sparta every year in honour of Apollo Pythæus, Artemis, and Leto. The statues of these deities stood in a part of the Agora called *χορός*, and it was around these statues that, at the gymnopædia, Spartan youths performed their choruses and dances in honour of Apollo.⁵ The festival lasted for several, perhaps for ten days, and on the last day men also performed choruses and dances in the theatre; and during these gymnastic exhibitions they sang the songs of Thaletas and Aleman, and the pæans of Dionysodotus. The leader of the chorus (*προστάτης* or *χοροποιός*) wore a kind of chaplet, called *στέφανος θυραεατικοί*, in commemoration of the victory of the Spartans at Thyrea. This event seems to have been closely connected with the gymnopædia, for those Spartans who had fallen on that occasion were always praised in songs at this festival.⁶ The boys in their dances performed such rhythmic movements as resembled the exercises of the palaestra and the panceration, and also imitated the wild gestures of the worship of Dionysus.⁷ Müller⁸ supposes, with great probability, that the dances of the gymnopædia partly consisted of mimic representations, as the establishment of the dances and musical entertainments at this festival was ascribed to the musicians, at the head of whom was Thaletas.⁹ The whole season of the gymnopædia, during which Sparta was visited by great numbers of strangers, was one of great merriment and rejoicings,¹⁰ and old bachelors alone seem to have been excluded from the festivities.¹¹ The introduction of the gymnopædia, which subsequently became of such importance as an institution for gymnastic and orchestric performances, and for the cultivation of the poetic and musical arts at Sparta, is generally assigned to the year 665 B.C.¹²

GYNAICONOMOI (γυναικονόμοι) or GYNACOCOSMOI (γυναικόσμοι) were magistrates at Athens who superintended the conduct of Athenian women.¹ We know little of the duties of these officers, and even the time when they were instituted is not quite certain. Böckh² has endeavoured to show that they did not exist until the time of Demetrius Phalereus, whereas, according to others, they were instituted by Solon, whose regulations concerning the female sex certainly rendered some special officers necessary for their maintenance.³ Their name is also mentioned by Aristotle⁴ as something which he supposes to be well known to his readers. These circumstances induce us to think that the γυναικονόμοι, as the superintendents of the conduct of women, existed ever since the time of Solon, but that their power was afterward extended in such a manner that they became a kind of police for the purpose of preventing any excesses or indecencies, whether committed by men or by women. (See the Fragm. of Timocles and Menander, *ap. Athen.*, vi., p. 245, where a *καὶνὸς νόμος* is mentioned as the source from which they derived their increased power.—Compare Plut., *Sol.*, 21, *in fin.*) In their first and original capacity, therefore, they had to see that the regulations concerning the conduct of Athenian women were observed, and to punish any transgressions of them;⁵ in the latter capacity they seem to have acted as ministers of the areopagus, and, as such, had to take care that decency and moderation were observed in private as well as in public. Hence they superintended even the meetings of friends in their private houses, *e. g.*, at weddings and on other festive occasions.⁶ Meetings of this kind were not allowed to consist of more than thirty persons, and the γυναικονόμοι had the right to enter any house and send away all the guests above that number; and that they might be able, previous to entering a house, to form an estimate of the number of persons assembled in it, the cooks who were engaged for the occasion had to give in their names to the γυναικονόμοι.⁷ They had also to punish those men who showed their effeminate character by frantic or immoderate wailing at their own or other persons' misfortunes.⁸ The number of these officers is unknown. Meier⁹ thinks that they were appointed by lot; but Hermann,¹⁰ referring to Menander,¹¹ reckons them among those officers who were elected.

H. ASPIRATE.

HABENÆ (ἡνία) were, generally speaking, leathern thongs, by means of which things were held and managed. Hence the word was in particular applied, 1. To the reins by means of which horses were guided and managed.¹² The habenæ were, as with us, fixed to the bit or bridle (*frænum*). 2. To the thongs attached to a lance, by which it was held and wielded.¹³ (Compare *AMENTUM*.) 3. To the thong which was formed into a sling, by means of which stones were thrown.¹⁴ (*Vid. FUNDA*.) 4. To thongs by means of which the sandals were fastened to the feet.¹⁵ From this passage it is also clear that the habenæ in this case were not always made of leather, but of strings or cords, whence Gellius calls them *teretes habenæ*. 5. To the thongs formed into

a scourge with which young slaves were chastised. The commentators on this passage, indeed, differ about the meaning of habenæ; but if we consider the expressions of Ulpian,² "*impuberes scrii terrent tantum solent, et habenæ vel ferula cædi*," it is clear that the habenæ is the scourge itself.³

*HÆDUS (ἑριφος), I. the Kid.—II. (Hæli, ἑριφός), two stars on the arm of Auriga, called the Kids, and regarded as indicative of stormy weather. They were also called by the singular term *Capella*.⁴

*HÆMACHATES (αἱμαχάτης), a species of Agate, sprinkled with spots of jasper, or blood-red chalcedony; now called Dotted Agate. (*Vid. ACHATES*.)

*HÆMADORON (αἱμάδωρον), a parasitic plant briefly noticed by Theophrastus. Stackhouse hazards the conjecture that it was the *Orobanchæ*, L.⁵

*HÆMATITES (αἱματίτης), the well-known stone called Bloodstone. It is of a ferruginous colour, and consists principally of oxyde of iron. "The *Hæmatites* of the ancients," observes Dr. Moore, "comprehended, besides our red *hæmatite*, several other oxydes of iron, as may be seen from Pliny's description of five varieties of it, besides the magnetic. For magnetic oxyde of iron was also classed with hæmatite; but that, no doubt, because of the appearance it exhibited after having been exposed to a strong heat." From the descriptions given by Theophrastus and Pliny, it would appear, as remarked by the same writer, that compact and ochrey red and brown oxydes of iron were included under hæmatite.⁶

HÆRES. (*Vid. HERES*.)

*HALCYON (ἄλκυν), the Kingfisher, or *Alcedo Ispida*, L. "The Greek naturalists," observes Adams, "describe two species, or, more properly, varieties of this bird. The scholiast on Theocritus derives the word *παρὰ τοῦ ἐν ᾧ λι κτείν*, an etymology which we may with great safety reject. The Kingfisher builds its nests on the banks of rivers, and does not commit them to the sea, as some of the ancients represent. What they took for the nests of this bird were the bones which it had swallowed and vomited up. Pliny's description of its nest is tolerably accurate. Aristotle and several of the ancient poets represent the Kingfisher as frequenting the seaside, and this is probably true of it in the warm climates, but does not apply to it in northern latitudes. It remains to be mentioned, that Belon hazards the very improbable conjecture that the Vocal Kingfisher of Aristotle was the Greater Reed-sparrow; and that Aldrovandus could never determine satisfactorily what bird was meant by the *Halcyon* of the ancients, although it appears to me that Aristotle's description of the ἄλκυν applies in the main very well to the *Alcedo Ispida*."⁷

*HALIÆTUS (ἡλαιοῖτος), the Osprey. This bird is the "*Nisus*" of Virgil and Ovid. Naturalists, according to Adams, have recently adopted the opinion that the Osprey is the same as the Sea Eagle. Its scientific name is *Pandion Haliaetus*, Savigny.⁸

*HALICACABUM (ἡλικάκαβον), a plant, the Winter-cherry, or *Physalis Alkekengi*. The berry steeped in wine was employed as a diuretic. Sibthorp found it growing on Parnassus, and on the Bithynian Olympus, as well as around Constantinople.⁹

*HALIMUS (ἄλμος), a plant, a species of Orache, the *Atriplex Halimus*, L.—Τὰ ἄλμα are certain saline plants and their fruits, mentioned in the Sep-

tuagint version of the Scriptures. On the other hand, τὰ ἄλμα were certain herbs, so called because used by the Pythagoreans, who lived solely on a vegetable diet, and hence were termed οἱ ἄλμοι, as only eating in order to assuage hunger (ἀ priv., and λμός, "hunger").

HALŌA. (Vid. ALOA.)

HALTĒRES (ἄλτηρες) were certain masses of stone or metal, which were used in the gymnastic exercises of the Greeks and Romans. Persons who practised leaping frequently performed their exercises with halteres in both hands; but they were also frequently used merely to exercise the body in somewhat the same manner as our dumb-bells.² Pausanias³ speaks of certain statues of athletes

who were represented with halteres. They appear to have been made of various forms and sizes. The preceding woodcut is taken from Tassie, *Catalogue*, &c., pl. 46, No. 7978.⁴

HAMA. (Vid. BATILLUS.)

HAMAXA. (Vid. HARMAMAXA, PLAUSTRUM.)

HARMA. (Vid. CURRUS, HARMAMAXA.)

HARMAMAXA (ἀρμάμαξα) is evidently compounded of ἄρμα, a general term, including not only the Latin CURRUS, but other descriptions of carriages for persons; and ἄμαξα, which meant a cart, having commonly four wheels, and used to carry loads or burdens as well as persons.⁵ The harmamaxa was a carriage for persons, in its construction very similar to the CARPENTUM, being covered overhead and enclosed with curtains,⁶ so as to be used at night as well as by day;⁷ but it was in general larger, often drawn by four horses, or other suitable quadrupeds, and attired with ornaments more splendid, luxurious, and expensive, and in the Oriental style.⁸ It occupied among the Persians⁹ the same place which the carpentum did among the Romans, being used, especially upon state occasions, for the conveyance of women and children, of eunuchs, and of the sons of the king with their tutors.¹⁰ Also, as persons might lie in it at length, and it was made as commodious as possible, it was used by the kings of Persia, and by men of high rank in travelling by night, or in any other circumstances when they wished to consult their ease and their pleasure.¹¹

The body of Alexander the Great was transported from Babylon to Alexandria in a magnificent harmamaxa, the construction of which occupied two years, and the description of which, with its

paintings and ornaments in gold, silver, and vory employed the pen of more than one historian.¹

The harmamaxa was occasionally used by the Iadics of Greece. A priestess of Diana is represented as riding in one which is drawn by two white cows.²

HARMOSTÆ (from ἄρμωζω, to fit or join together) was the name of the governors whom the Lacedæmonians, after the Peloponnesian war, sent into their subject or conquered towns, partly to keep them in submission, and partly to abolish the democratical form of government, and establish in its stead one similar to their own.³ Although in many cases they were ostensibly sent for the purpose of abolishing the tyrannical government of a town, and to restore the people to freedom, yet they themselves acted like kings or tyrants, whence Dionysius⁴ thinks that harmostæ was merely another name for kings. How little sincere the Lacedæmonians were in their professions to restore their subject towns to freedom, was manifest after the peace of Antalcidas; for, although they had pledged themselves to re-establish free governments in the various towns, yet they left them in the hands of the harmostæ.⁵ The character of their rule is sufficiently described by the word κατέχειν, which Isocrates⁶ and Demosthenes⁷ use in speaking of the harmostæ.⁸ Even Xenophon⁹ could not help censuring the Lacedæmonians for the manner in which they allowed their harmostæ to govern.

It is uncertain how long the office of an harmostes lasted; but, considering that a governor of the same kind, who was appointed by the Lacedæmonians in Cythera, with the title of Cytherodices, held his office only for one year,¹⁰ it is not improbable that the office of harmostes was of the same duration.

ΑΡΙΑΓΗΣ ΓΡΑΦΗ (ἀρπαγῆς γραφή). This action seems, according to Lucian,¹¹ to have been applicable to cases of open robbery, attended with violence. Under these circumstances, the offenders would be included in the class of κακοῦργοι, and, as such, be tried before a court under the control and management of the Eleven. With respect to the punishment upon conviction, we have no certain information, but there seems no reason to doubt that it was capital, as in cases of burglary and stealing from the person.¹²

HARPAGO (ἀρπαγή: λῆκος: κρεάγγρα, dim. κρεάγρις), a Grappling-iron, a Drag, a Flesh-hook.¹³

The iron-fingered flesh-hook (κρεάγγρα σιδερόδακτύλος¹⁴) is described by the scholiast on Aristophanes¹⁵ as "an instrument used in cookery, resembling a hand with the fingers bent inward, used to take boiled meat out of the caldron." Four specimens of it, in bronze, are in the British Museum. One of them is here represented. Into its hollow extremity a wooden handle was inserted.

A similar instrument, or even the flesh-hook it-

selt,¹ was used to draw up a pail, or to recover anything which had fallen into a well.²

In war, the grappling-iron, thrown at an enemy's ship, seized the rigging, and was then used to drag the ship within reach, so that it might be easily boarded or destroyed.³ These instruments, aptly called "iron hands" (*ferreae manus*⁴), were employed by the consul Dullius against the Carthaginians,⁵ and were said to have been invented by Pericles.⁶

HARPASTUM (*ἁρπαστόν*, from *ἁρπάζω*) was a ball, used in a game of which we have no accurate account; but it appears, both from the etymology of the word and the statement of Galen,⁷ that a ball was thrown among the players, each of whom endeavoured to obtain possession of it. Hence Martial⁸ speaks of the *harpasta pulverulenta*. The game required a great deal of bodily exertion.⁹

HARUSPICES or ARUSPICES were soothsayers or diviners who interpreted the will of the gods. They originally came to Rome from Etruria, whence haruspices were often sent for by the Romans on important occasions.¹⁰ The art of the haruspices resembled in many respects that of the augurs, but they never acquired that political importance which the latter possessed, and were regarded rather as means for ascertaining the will of the gods than as possessing any religious authority. They did not, in fact, form any part of the ecclesiastical polity of the Roman state during the Republic; they are never called sacerdotes; they did not form a collegium, and had no magister at their head. The account of Dionysius,¹¹ that the haruspices were instituted by Romulus, and that one was chosen from each tribe, is opposed to all the other authorities, and is manifestly incorrect. In the time of the emperors, we read of a collegium or order of sixty haruspices;¹² but the time of its institution is uncertain. It has been supposed that such a collegium existed in the time of Cicero, since he speaks of a *summus magister*;¹³ but by this we are probably to understand, not a *magister collegii*, but merely the most eminent of the haruspices at the time.

The art of the haruspices, which was called *haruspicina*, consisted in explaining and interpreting the will of the gods from the appearance of the entrails (*exta*) of animals offered in sacrifice, whence they are sometimes called *extispices*, and their art *extispicium*;¹⁴ and also from lightning, earthquakes, and all extraordinary phenomena in nature, to which the general name of *portenta* was given.¹⁵ Their art is said to have been invented by the Etruscan Tages,¹⁶ and was contained in certain books called *libri haruspicini, fulgurales, and tonitruales*.¹⁷

This art was considered by the Romans so important at one time, that the senate decreed that a certain number of young Etruscans, belonging to the principal families of the state, should always be instructed in it.¹⁸ Niebuhr appears to be mistaken in supposing the passage in Cicero to refer to the children of Roman families.¹⁹ The senate sometimes consulted the haruspices,²⁰ as did also private persons.²¹ In later times, however, their art fell into disrepute among well-educated Romans; and Cicero²² relates a saying of Cato, that he wondered

that one haruspex did not laugh when he saw another. The Emperor Claudius attempted to revive the study of the art, which had then become neglected in the senate, under his directions, passed a decree that the pontifices should examine what parts of it should be retained and established;¹ but we do not know what effect this decree produced.

The name of haruspex is sometimes applied to any kind of soothsayer or prophet;² whence Juvenal³ speaks of *Armenius vel Commagenus haruspex*.

The latter part of the word haruspex contains the root *spec*; and Donatus⁴ derives the former part from *haruga*, a victim.⁵

(Göttling, *Gesch. der Röm. Staatsv.*, p. 213.—Walter, *Gesch. des Röm. Rechts*, p. 184.—Brissonius, *De Formul.*, i., 29, &c.)

HASTA (*ἔγχος*), a Spear. The spear is defined by Homer, *δόνυ χαλκήρεα*, "a pole fitted with bronze,"⁶ and *δόνυ χαλκοβαρές*, "a pole heavy with bronze."⁷ The bronze, for which iron was afterwards substituted, was indispensable to form the point (*αἰχμή*, *ἀκμή*;⁸ *λόγχη*;⁹ *acies*, *cuspis*, *spiculum*¹⁰) of the spear. Each of these two essential parts is often put for the whole, so that a spear is called *δόνυ* and *δωράτιον*, *αἰχμή*, and *λόγχη*. Even the more especial term *μελίλα*, meaning an ash-tree, is used in the same manner, because the pole of the spear was often the stem of a young ash, stripped of its bark and polished.¹¹ In like manner, the spear is designated by the term *κάμας*,¹² meaning, properly, the strong tall reed of the south of Europe, which served both for spears and for various other uses.¹³

The bottom of the spear was often enclosed in a pointed cap of bronze, called by the Ionic writers *σουλτήρ*¹⁴ and *οὐρίαχος*,¹⁵ and in Attic or common Greek *στόρας*.¹⁶ By forcing this into the ground, the spear was fixed erect.¹⁷ Many of the lancers (*δορυφόροι*, *αἰχμοφόροι*, *λογχοφόροι*, woodcut, p. 207) who accompanied the King of Persia had, instead of this spike at the bottom of their spears, an apple or a pomegranate, either gilt or silvered.¹⁸ With

this, or a similar ornament, the spear is often ter-

minated both on Persian and Egyptian monuments. Fig. 1 in the preceding woodcut shows the top and bottom of a spear which is held by one of the king's guards in the sculptures at Persepolis.¹ It may be compared with those in the hand of the Greek warrior at p. 94, which have the spike at the bottom. The spike at the bottom of the spear was used in fighting by the Greeks and Romans when the head was broken off.²

A well-finished spear was kept in a case (*doparothēnē*), which, on account of its form, is called by Homer a pipe (*σύντριψ*).³

The spear was used as a weapon of attack in three different ways: 1. It was thrown from catapults and other engines. (*Vir. Tormentum*.) 2. It was thrust forward as a pike. In this manner Achilles killed Hector by piercing him with his spear through the neck.⁴ The Eubœans were particularly celebrated as pikemen.⁵ 3. It was commonly thrown by the hand (*ἀκοντίζειν μακρόθεν*).⁶ The warrior, preparing to hurl it, raised his hand to his right ear.⁷ (Compare woodcut, p. 245.) He sometimes derived assistance from the use of the *ΑΜΕΝΤΟΝ* or the *ΑΝΣΑ*. He generally went to the field with two spears.⁸ (Woodcuts, p. 94, 227, 332.) On approaching the enemy, he first threw either one spear or both, and then, on coming to close quarters, drew his sword⁹ (*pila coniecerunt—gladiis geri res capta est*).¹⁰

Under the general terms *hasta* and *εγχος* were included various kinds of missiles, of which the principal were as follow:

Lancea (*λόγχη*), the lance, a comparatively slender spear commonly used by the Greeks. Iphicrates, who doubled the length of the sword (*vid. GLADIUS*), also added greatly to the dimensions of the lance.¹¹ This weapon was used by the Grecian horsemen,¹² and by means of an appendage to it, which is supposed by Stuart¹⁴ (woodcut, fig. 2) to be exhibited on the shafts of three spears in an ancient bas-relief, they mounted their horses with greater facility.¹⁶ The lance, on account of its length and its lightness, was carried by huntsmen.¹⁶

Pilum (*ῥυσός*), the javelin, much thicker and stronger than the Grecian lance,¹⁷ as may be seen on comparing the woodcuts at p. 94 and 95. Its shaft, often made of cornel,¹⁸ was partly square, and 5½ feet long.¹⁹ The head, nine inches long, was of iron, and is therefore now found only in the state described by Virgil, "*cæsa scabra robigine pila*."²⁰ It was used either to throw or to thrust with; it was peculiar to the Romans, and gave the name of *pilani* (p. 103) to the division of the army by which it was adopted²¹ (*pilatum agmen*).²² When Marius fought against the Cimbri, he ordered that, of the two nails or pins (*πρόναι*) by which the head was fastened to the staff, one should be of iron and the other of wood. The consequence was, that when the pilum struck the shields of the enemy, the trenail gave way, and the shaft was turned on one side, so that the spear could not be sent back again.²³

While the heavy-armed Roman soldiers bore the long lance and the thick and ponderous javelin, the

light-armed used smaller missiles, which, though of different kinds, were included under the general term *hasta velitaria*.¹ From *γρόσφος*, the corresponding Greek term,² the *velites*, or light-armed, are called by Polybius *γροσφομήχοι*.³ According to his description, the *γρόσφος* was a dart, with a shaft about three feet long and an inch in thickness: the iron head was a span long, and so thin and acuminate as to be bent by striking against anything, and thus rendered unfit to be sent back against the enemy. Fig. 3 in the preceding woodcut shows one which was found, with nearly four hundred others, in a Roman intrenchment at Meon Hill, in Gloucestershire.⁴

The light infantry of the Roman army used a similar weapon, called a *spil* (*νερούς verutum*,⁵ *σάβιον*).⁷ It was adopted by them from the Samnites⁸ and the Volsci.⁹ Its shaft was 3½ feet long, its point five inches.¹⁰ Fig. 4, in the preceding woodcut, represents the head of a dart in the Royal Collection at Naples; it may be taken as a specimen of the *verutum*, and may be contrasted with fig. 5, which is the head of a lance in the same collection. The Romans adopted, in like manner, the *Æsum*, which was properly a Celtic weapon;¹¹ it was given as a reward to any soldier who wounded an enemy.¹² *Sparus* is evidently the same word with the English *spar* and *spear*. It was the rudest missile of the whole class, and only used when better could not be obtained.¹³

Besides the terms *jaculum* and *spiculum* (*ἄκων, ἀκόντιον*), which probably denoted darts resembling in form the lance and javelin, but much smaller, adapted, consequently, to the light-armed (*jaculatores*), and used in hunting as well as in battle,¹⁴ we find in classical authors the names of various other spears, which were characteristic of particular nations. Thus Servius states¹⁵ that, as the *pilum* was proper to the Romans, and the *gæsum* to the Gauls, so the *sarissa* was the spear peculiar to the Macedonians. This was used both to throw and as a pike.¹⁶ It exceeded in length all other missiles. (See p. 101.) It was made of cornel, the tall, dense stem of which also served to make spears of other kinds.¹⁷ The Thracian *romphea*, which had a very long point, like the blade of a sword¹⁸ (*ρumpia*,¹⁹ *δομφαία*),²⁰ was probably not unlike the *sarissa*, since Livy asserts²¹ that, in a country partly covered with wood, the Macedonian phalanx was ineffective on account of their *prælongæ hastæ*, and that the *romphæa* of the Thracians was a hindrance for the same reason. With these weapons we may also class the Illyrian *sibina*, which resembled a hunting-pole²² (*sibon*).²³

The iron head of the German spear, called *framaea*, was short and narrow, but very sharp. The Germans used it with great effect either as a lance or a pike: they gave to each youth a framea and a shield on coming of age.²⁴ The *Falarica* or *Phalarica* was the spear of the Saguntines, and was impelled by the aid of twisted ropes: it was large and ponderous, having a head of iron a cubit in length, and a ball of lead at its other end; it sometimes

earrined flaming pitch and tow.¹ The *matara* and *vragula* were chiefly used in Gaul and Spain: the *iragula* was probably barbed, as it required to be cut out of the wound.² The *Aclis* and *CATELA* were much smaller missiles.

Among the decorations which the Roman generals bestowed on their soldiers, more especially for saving the life of a fellow-citizen, was a spear without a head, called *hasta pura*.³ The gift of it is sometimes recorded in funeral inscriptions.

The *celubaris hasta*,⁴ having been fixed into the body of a gladiator lying dead on the arena, was used at marriages to part the hair of the bride.⁵

A spear was erected at auctions (*vid. AUCTIO*), and when tenders were received for public offices (*locationes*). It served both to announce, by a conventional sign conspicuous at a distance, that a sale was going on, and to show that it was conducted under the authority of the public functionaries.⁶ Hence an auction was called *hasta*, and an auction-room *hastarium*.⁷ It was also the practice to set up a spear in the court of the *CENTUMVIRI*.

The throwing of spears was one of the gymnastic exercises of the Romans.⁸

HASTATI. (*Vid. ARMY, ROMAN*, p. 103.)

HECATOMBÆON. (*Vid. CALENDAR, GREEK*.)

HECATOMBAIA. (*Vid. HERÆA*.)

HECTICI (Ἑκτικοί), another name for the medical sect of the Episyntetici, as we learn from Galen,⁹ who says that "Agethinus the Lacedæmonian was the founder of a sect which he named Ἐπισυνθετική, and which some called Ἐκλεκτική, and others Ἑκτική." For their opinions (as far as they are known), *vid. EPISYNTHETICI*.

*HED'ERA (κίσσος or κίττος), the Ivy, *Hedera helix*. The ivy, as Fée remarks, is one of the best-known plants of antiquity, since, independently of the descriptions given of it by ancient poets and botanists, we see it sculptured on various monuments of former days. Theophrastus,¹⁰ and, after him, Dioscorides¹¹ and Pliny,¹² have distinguished three kinds of ivy, subdivided into several species. These three kinds, however, are now looked upon as mere varieties, and we may be said to know at the present day but a single species of *Hedera*, which modern botanical writers have designated by the epithet of *Helix* (ἑλίξ). Among the varieties of this species may be mentioned the *Hedera corymbosa* of modern botanists, the same with the *H. arborea* of the botanical writers of the Middle Ages. It is he kind beautifully described in the *Culex* of Virgil, and alluded to also in the 3d Eclogue, and in the Georgics of the same poet. The *Hedera nigra* of the 7th and 8th Eclogues is that which the ancients consecrated to Bacchus, and called, from him, *Dionysia*. It is the *Hedera poetica* of Bauhin, and served, when interlaced with the laurel, as a crown for warriors, poets, &c. The epithet *nigra*, given by Virgil to the *Hedera helix*, applies to its darkened berries and the sombre colour of its foliage. By the epithet *pallens*, on the other hand, he intends to indicate the flowers, as well as the *corymbi* before the fruit is matured.¹³ The following remarks of Martyn¹⁴ are worthy of perusal: "Many sorts of ivy are mentioned by the ancients, most of which seem to be rather varieties than distinct species. Theo-

phrastus says the three principal sorts are the white, the black, and that which is called *helix*. The black is our common ivy, and the *helix* seems to be only the same plant before it has arrived at the perfection of bearing fruit. For at first the leaves are angular, and the whole plant clings closely to the wall or tree that supports it: but when it comes to flower, a new shoot is detached from the support, bearing roundish leaves without angles. That the *helix* is the ivy in its barren state is plain from the account which Theophrastus gives of it. He says the leaves are angular, and more neat than those of ivy, which has them more round and simple. He adds also that it is barren. As for the white ivy, it seems to be unknown to us. Some, indeed, imagine it to be that variety of which the leaves are variegated with white. But Theophrastus expressly mentions the whiteness of the fruit; for he says some have only the fruit white, and others the leaves also. Dioscorides also mentions three principal sorts of ivy, the white, the black, and the *helix*. The white bears a white fruit; the black has either a black or saffron-coloured fruit; this kind they called also *Dionysia*; the *helix* bears no fruit at all, but has white twigs, and small, angular, reddish leaves. Pliny has confounded the ivy with the *cistus*, being deceived by the similarity between *κισσός* (or *κίττος*) and *κίστος*. The flower of the *cistus* does, indeed, bear a resemblance to that of the wild rose, as Pliny remarks, but it would be difficult to find any such similitude in the ivy."

HEDNA (ἑδνα). (*Vid. DOS, GREEK*.)

*HEDYOSMUS (ἡδύσμος), Garden-mint, or *Mentha sativa*. The ἡδύσμος ἄγριος of Dioscorides and others is the *Mentha gentilis*; the ἡδύσμος ἡμερος, the *Mentha crispata*. The *καλαμίνθη ἑτέρα* is the *M. sylvestris*.¹

*HEDYS'ARUM (ἡδύσαρον), a leguminous plant, *Coronilla securidica*. It was also called by the ancient writers *πελεκίνος*, which name, as well as *securidica*, refers to the axe-formed shape of its seeds. The modern Greek name is *πικρολοῦθι*. "Matthiols," observes Adams, "holds that the *Hedysarum* is either the *Coronilla securidica* or the *Astragalus hamosus*. Clusius brought into view the *Coronilla varia* and the *Bisserula pelecimus*. Stackhouse makes the *πελεκίνος* of Theophrastus, which is identical with the ἡδύσαρον, to be the *Coronilla securidica*, and in this opinion he has the support of Sibthorp. Schneider, however, is by no means satisfied that either the *Coronilla* or the *Bisserula* answers to the description of Dioscorides."²

*HEGEMONIA ΔΙΚΑΣΤΗΡ'ΙΟΥ (ἡγεμονία δικαστηρίου). (*Vid. EISAGOGES*.)

*ΕΙΡΤΜΟΥ ΓΡΑΦΗ (εἰρημὸν γραφή). This was an action for false imprisonment of a free citizen or stranger, and keeping such person in private custody. There are no orations upon this subject extant, nor, indeed, any direct allusions to it by name; but it is hinted at as a remedy that might have been adopted by Agatharchus, the painter, for the restraint put upon his personal liberty by Alcibiades;³ and in a passage of Dinarchus,⁴ where a miller is mentioned to have incurred capital punishment for a like offence. The thesmothetæ probably presided in the court before which offenders of this kind were brought to trial.⁵

*HELENIUM (ἑλένιον), a plant, Scabwort or Elecampane, *Inula Helenium*, L. "*Helanium*," says Lister, "*Inula Campana Italica dictum*." "It is probable," remarks Woodville, "that the Elecampane is the *Helanium foliis verbasci* of Dioscorides, and the *Inula* of Pliny." Sprengel and Dierbach also agree

in referring it to the *Inula Helenium*, L. The other species described by Dioscorides is referred by Bauhin and Sprengel to the *Tuecium marum*.¹

HELEPOLIS (ἐλεπόλις). When Demetrius Poliorcetes besieged Salamis, in Cyprus, he caused a machine to be constructed which he called "the taker of cities." Its form was that of a square tower, each side being 90 cubits high and 45 wide. It rested on four wheels, each eight cubits high. It was divided into nine stories, the lower of which contained machines for throwing great stones, the middle large catapults for throwing spears, and the highest other machines for throwing smaller stones, together with smaller catapults. It was manned with 200 soldiers, besides those who moved it by pushing the parallel beams at the bottom.²

At the siege of Rhodes, 306 B.C., Demetrius employed a helepolis of still greater dimensions and more complicated construction. Besides wheels, it had castors (ὀνιστρίπτα), so as to admit of being moved laterally as well as directly. Its form was pyramidal. The three sides which were exposed to attack were rendered fireproof by being covered with iron plates. In front, each story had port-holes, which were adapted to the several kinds of missiles, and were furnished with shutters that could be opened or closed at pleasure, and were made of skins stuffed with wool. Each story had two broad flights of steps, one for ascending, the other for descending.³ This helepolis was constructed by Epimachus the Athenian; and a much esteemed description of it was written by Dioclesides of Adhera.⁴ It was, no doubt, the greatest and most remarkable engine of the kind that was ever erected. In subsequent ages we find the name of "helepolis" applied to moving towers which carried battering-rams, as well as machines for throwing spears and stones.⁵ Towers of this description were used to destroy the walls of Jerusalem when it was taken by the Romans.⁶ (*VID. ARIES, TORMENTUM.*)

HELLEA. (*VID. DICASTERION.*)

HELIOCAMINUS. (*VID. HOUSE.*)

***HELIOTROPION** (ἡλιοτρόπιον). I. a plant, the Heliotrope, or Great Turnsole, *Heliotropium Europæum*, L. This is the species called μέλα by Dioscorides. Sprengel joins Lobelius and Gesner in referring the other species, or *ἡλιοτρόπιον μικρόν*, to the *Croton tinctorius*.⁷

II. A precious stone, the Heliotrope of Jameson. It is a sub-species of Jasper.⁸

***HELIX.** (*VID. HEDERA.*)

HELLANO-DICÆ (Ἑλληνοδικαί), the judges in the Olympic games, of whom an account is given under OLYMPIC GAMES. The same name was also given to the judges, or court-martial in the Lacedæmonian army;⁹ and they were probably first called by this name when Sparta was at the head of the Greek confederacy.

***HELLEBORUS** (ἑλλέβορος), Hellebore, a celebrated remedy among the ancients for the cure of insanity. Two kinds are spoken of, namely, the white and the black (λευκός and μέλας), but as to the identity of the plant itself much discussion has arisen. "Modern authorities on Botany," observes Adams, "differ widely in opinion respecting the white Hellebore of the ancients. Sibthorp most unaccountably decides it to have been the *Digitalis ferruginea*. Schulze, who is too prone to skeptical doubts on botanical questions, expresses himself

with great hesitation regarding it, but, upon the whole, inclines to the *Adonis vernalis*. Woodville and Dierbach are quite undecided. On the other hand, Matthioli, Dodonæus, Bauhin, Hill, and Stackhouse, find no difficulty in recognising it as the *Veratrum album*, L. Geoffroy also, no mean authority on these subjects, maintains that the description of Dioscorides agrees very well with the characters of the white Hellebore. And from the similarity of the effects produced by the administering of the *ἑ. λεῦκος*, as described by the ancient writers on Toxicology, to the known effects of the *Veratrum album*, I had no hesitation, some time ago, in recognising their identity; and it now gives me pleasure to discover that Sprengel, in his Annotations on Dioscorides, comes to the same conclusion. I had called the attention of the profession to this fact in the *London Medical and Physical Journal*, July, 1828; about eighteen months afterward, the *Savadtilla veratrum*, a Mexican species of Hellebore, was much cried up in this case.—The *ἑλλέβορος μέλας*, or Black Hellebore, is marked as being the *H. Orientalis*, Lam. Is it not a variety of the *Helleborus niger*, L.? This plant is the Christmas Rose of this country."¹

***HELLEBORINE** (ἑλλεβορίνη), a plant, which Sprengel suggests is the *Helleborus fatidus*; Stackhouse, the *Serapias Helleborine*. "The latter," remarks Adams, "is the same, I suppose, as the *Epipactis ensifolia* of Hooker."²

HELLENOTAMIAE (Ἑλληνοταμίαι), or treasurers of the Greeks, were magistrates appointed by the Athenians to receive the contributions of the allied states. They were first appointed B.C. 477, when Athens, in consequence of the conduct of Pausanias, had obtained the command of the allied states. The money paid by the different states, which was originally fixed at 460 talents, was deposited in Delos, which was the place of meeting for the discussion of all common interests; and there can be no doubt that the hellenotamiæ not only received, but were also the guardians of these moneys, which are called by Xenophon "Ἑλληνοταμία."³ The office was retained after the treasury was transferred to Athens on the proposal of the Samians,⁴ but was, of course, abolished on the conquest of Athens by the Lacedæmonians. The hellenotamiæ were not reappointed after the restoration of the democracy, for which reason the grammarians afford us little information respecting their duties. Böckh, however, concludes from inscriptions that they were probably ten in number, chosen by lot, like the treasurers of the gods, out of the Pentacosiedimni, and that they did not enter upon their office at the beginning of the year, but after the Panathenæa and the first Prytanea. With regard to their duties, Böckh supposes that they remained treasurers of the moneys collected from the allies, and that payments for certain objects were assigned to them. In the first place, they would, of course, pay the expenses of wars in the common cause, as the contributions were originally designed for that purpose; but as the Athenians, in course of time, considered the money as their own property, the Hellenotamiæ had to pay the Theorica and military expenses not connected with wars on behalf of the common cause.⁵

HELLOTTIA. (*VID. ELLOTIA.*)

***HELMINS** (ἑλμινς). This term, standing alone, is applied to intestinal worms in general. The *ἑλ-*

μινς πλάτεια is the *Tania lata*. Theophrastus says it is congenital in some countries, as Egypt. The medical authorities describe the *Dracunculus*, or Guinea-worm, which the Greeks call *δρακόντιον*, and the translators of the Arabians *vena medinensis*. (Vid. EULAI.)

HELOTES (ἑλωτες) were a class of bondsmen peculiar to Sparta. Different etymologies are given of their name. The common account is, that they were originally the people of the town of Helos, in Laconia, and that they were reduced to bondage after an unsuccessful revolt against the Spartans.¹ But the people of Ἐλος were not called ἑλωτες, but 'Ἐλειοι' or 'Ἐλεύται.' The name has been also derived from ἑλη, *marshes*, as it signified *inhabitants of the lowlands*. But Müller seems to be nearer the mark in explaining ἑλωτες as meaning *prisoners*, from the root of ἔλειν, *to take*, like *δύος* from the root of *δαμάω*. The ancient writers considered them to be Achæans, who had resisted the Dorian invaders to the last, and had been reduced to slavery as the punishment of their obstinacy.⁴ Müller, however, supposes that they were an aboriginal race, which was subdued at a very early period, and which immediately passed over as slaves to the Doric conquerors. But this theory, as Thirlwall has observed, does not account for the hereditary enmity between them and their masters; for, unless they lost their liberty by the Dorian conquest, there is no probability that it placed them in a worse condition than before.

The Helots were regarded as the property of the state, which, while it gave their services to individuals, reserved to itself the power of emancipating them.⁵ They were attached to the land, and could not be sold away from it. Several families, as many, perhaps, as six or seven, resided on each κλῆρος, in dwellings of their own. They cultivated the land, and paid to their masters as rent a fixed measure of corn, the exact amount of which had been fixed at a very early period, the raising of that amount being forbidden under heavy imprecations.⁶ The annual rent paid for each κλῆρος was eighty-two medimni of barley, and a proportionate quantity of oil and wine.⁷ Besides being engaged in the cultivation of the land, the Helots attended on their masters at the public meal, and many of them were, no doubt, employed by the state in public works.

In war the Helots served as light-armed troops (ψίλοι), a certain number of them attending every heavy-armed Spartan to the field; at the battle of Platea there were seven Helots to each Spartan.⁸ These attendants were probably called ἀμπίτραρες (i. e., ἀμπίσταντες⁹), and one of them, in particular, the θέρπων, or *servant*;¹⁰ though θέρπων was also used by the Dorians as a general name for armed slaves. The Helots only served as hoplite in particular emergencies, and on such occasions they were generally emancipated. The first instance of this kind was in the expedition of Brasidas, B.C. 424.¹¹

The treatment to which the Helots were subjected, as described by the later Greek writers, is marked by the most wanton cruelty. Thus Myron states that "the Spartans impose upon them every ignominious service, for they compel them to wear a cap of dog's skin, and to be clothed with a garment of sheep's skin, and to have stripes inflicted upon them every year for no fault, that they may never forget that they are slaves. And, besides all this, if

any rise by their qualities above the condition of a slave, they appoint death as the penalty, and their masters are liable to punishment if they do not destroy the most excellent."¹² And Plutarch¹³ states that Helots were forced to intoxicate themselves, and perform indecent dances as a warning to the Spartan youth. These descriptions are probably exaggerated; but we have abundant evidence, in addition to the direct assertion of Thucydides,¹⁴ that the Spartans always regarded the Helots with the greatest suspicion. Every means was taken to mark the distinction between them and their masters: they were obliged to wear the rustic garb described above, and they were not permitted to sing one of the Spartan songs.¹⁵ That the cruelty of their masters knew no restraint when it was stimulated by fear, is manifest enough from the institution of the κρυπτεία (vid. CRYPTÆIA), and from the fact related by Thucydides, that on one occasion, two thousand of the Helots, who had rendered the greatest service to the state in war, were induced to come forward by the offer of emancipation, and then were put to death.¹⁶

At the end of the second Messenian war (B.C. 668), the conquered Messenians were reduced to slavery, and included under the denomination of Helots. Their condition appears to have been the same, with some slight differences, as that of the other Helots; but they appear to have been distinguished by the remembrance of their freedom, and a readiness to seize any opportunity of regaining it, in which they at length succeeded, after the battle of Leuctra.¹⁷

The Helots might be emancipated, but there were several steps between them and the free citizen; and it is doubtful whether they were ever admitted to all the privileges of citizenship. Myron enumerates the following classes of emancipated Helots: ἀδεσπῶται, ἑρμκτῆρες, δεσποσινάυται, and νεοδαμῶδεις. Of these the ἀδεσπῶται were probably released from all service; the ἑρμκτῆρες were those employed in war (vid. ERYCTERES); the δεσποσινάυται served on board the fleet; and the νεοδαμῶδεις were those who had been possessed of freedom for some time. Besides these, there were the μύθωνες or μύθakes, who were domestic slaves, brought up with the young Spartans, and then emancipated. Upon being emancipated, they received permission to dwell where they wished. (Compare CITTITAS, GREEK, p. 260.)

(Müller, *Dorians*, iii., 3.—Thirlwall, *Greece*, vol. i., p. 309.—Hermann, *Political Antiquities of Greece*, § 19, 24, 23, 30, 48.—Wachsmuth, *Hellen. Alterth.*, I., i., 217, 19; ii., 59, 104, 209, 211, 370-1; II., i., 361.)

*HELIXINE (ἑλξίνη), a plant, of which Dioscorides describes two species: the latter of these is the Pellitory of the Wall, or *Parietaria officinalis*; the former is referred by Bauhin and others to the *Convolvulus arvensis*, or Gravel-bind.¹

HEMERA. (Vid. DIES.)

*HEMERIS (ἡμερίς), the Greek name given by Theophrastus to the *Quercus robur*. (Vid. QUERCUS.)²

*HEMEROCALLES (ἡμεροκαλλές). Sprengel, in the first edition of his R. H. H., sets this plant down for the *Panocratum maritimum*, having adopted the opinion of Lobel and Bauhin; but in the second edition he holds it to be the *Lilium Macedonicum*.³

*HEMEROCALLIS (ἡμεροκαλλίς), a plant. "The

earlier commentators," says Adams, "had remarked that the *ἡμεροκαλλίς* of Dioscorides is different from that of Theophrastus. The H. of Dioscorides is referred by Matthioli to the *Lilium bulbiferum*, and by Dodonæus to the *L. Martagon*. Sprengel seems to prefer the former. Sibthorp marks it as the *Lilium Chalcedonicum*."¹

HEMINA. (Vid. COTYLA.)

*HEMIONUS. (Vid. MULUS.)

*ENΔEKA, 'OI. (Vid. ELEVEN, THE.)

*HEPATIS (*ἥπατις*, or *ἀλόη ἥπατις*), the well-known species of Aloes called Hepatic. Dioscorides calls this species *τὸ ἥπατιζον*.²

*HEPATUS (*ἥπατος*), the name of a fish briefly noticed by Aristotle, Ælian, and Athenæus. "Arredi and Rondelet say it is the fish called *seipurus* by the modern Greeks; but this opinion is rejected by Coray, who, however, decides upon nothing satisfactory respecting it. Camus, in his notes on Aristotle, concludes that it was the *Ostrea margaritifera*, but Schweighæuser rejects this opinion also. Schneider, upon the whole, inclines to think that it ought to be referred to the genus *Gadus*."³

HEPHAISTEIA. (Vid. LAMPADOPHORIA.)

*HPAKAEIA ΛΙΘΟΣ (*ἡρακλεία λίθος*), an appellation given by some of the Greek writers to the Loadstone. Sir J. Hill thinks it was also applied to the Lydian stone; "but the passage of Theophrastus on which he founds his opinion is," remarks Adams, "of equivocal meaning; in fact, his own reading will not bear the interpretation which he gives it. And there can be no doubt, from a passage in Aëtius, that our Loadstone was indiscriminately called *μαγνής* and *ἡρακλεία λίθος*."⁴

HERÆA (*Ἥρα*) is the name of festivals celebrated in honour of Hera in all the towns of Greece where the worship of this divinity was introduced. The original seat of her worship, from which it spread over the other parts of Greece, was Argos; whence her festivals in other places were, more or less, imitations of those which were celebrated at Argos.⁵ The Argives had three temples of Hera: one lay between Argos and Mycenæ, 45 stadia from Argos; the second lay on the road to the Acropolis, and near it was the stadium in which the games and contests at the Heræa were held;⁶ the third was in the city itself.⁷ Her service was performed by the most distinguished priestesses of the place; one of them was the high-priestess, and the Argives counted their years by the date of her office.⁸ The Heræa of Argos were celebrated every fifth year, and, according to the calculation of Böckh,⁹ in the middle of the second year of every Olympiad. One of the great solemnities which took place on the occasion was a magnificent procession to the great Temple of Hera, between Argos and Mycenæ. A vast number of young men—for the festival is called a panegyris—assembled at Argos, and marched in armour to the temple of the goddess. They were preceded by one hundred oxen (*ἐκατόμβη*, whence the festival is also called *ἐκατόμβαια*). The high-priestess accompanied this procession, riding in a chariot drawn by two white oxen, as we see from the story of Cleobis and Biton related by Herodotus¹⁰ and Cicero.¹¹ The 100 oxen were sacrificed, and their flesh distributed among all the citizens.¹² The sacrifice itself was called *λεχέρνα*,¹³ or

"the hed of twigs."¹⁴ The games and contests of the Heræa took place in the stadium, near the temple on the road to the Acropolis. A hazen shield was fixed in a place above the theatre, which was scarcely accessible to any one, and the young man who succeeded in pulling it down received the shield and a garland of myrtle as his prize. Hence Pindar² calls the contest *ἀγὼν χάλκεος*. It seems that this contest took place before the procession went out to the Heræon, for Strabo³ states that the victor went with his prizes in solemn procession to that temple. This contest was said to have been instituted, according to some traditions, by Acrisius and Prætus,⁴ according to others by Archinos.⁵

The Heræa or Hecatombæa of Ægina were celebrated in the same manner as those of Argos.⁶

The Heræa of Samos, which island also derived the worship of Hera from Argos,⁷ were perhaps the most brilliant of all the festivals of this divinity. A magnificent procession, consisting of maidens and married women in splendid attire, and with floating hair,⁸ together with men and youths in armour,⁹ went to the Temple of Hera. After they arrived within the sacred precincts, the men deposited their armour, and prayers and vows were offered up to the goddess. Her altar consisted of the ashes of the victims which had been burned to her.¹⁰

The Heræa of Elis were celebrated every fifth year, or in the fourth year of every Olympiad.¹¹ The festival was chiefly celebrated by maidens, and conducted by sixteen matrons, who wove the sacred peplus for the goddess. But, before the solemnities commenced, these matrons sacrificed a pig, and purified themselves in the well Piera.¹² One of the principal solemnities was a race of the maidens in the stadium, for which purpose they were divided into three classes, according to their age. The youngest ran first, and the oldest last. Their only dress on this occasion was a *χιτών*, which came down to the knee, and their hair was floating. She who won the prize received a garland of olive-boughs, together with a part of a cow which was sacrificed to Hera, and might dedicate her own painted likeness in the temple of the goddess. The sixteen matrons were attended by as many female attendants, and performed two dances; the one called the dance of Physcoa, the other the dance of Hippodameia. Respecting farther particulars, and the history of this solemnity, see Paus., v., 16, § 2, &c.

Heræa were celebrated in various other places; e. g., in Cos,¹³ at Corinth,¹⁴ at Athens,¹⁵ at Cnossus in Crete.¹⁶

HERE'DITAS. (Vid. HERES, ROMAN.)

HERES (GREEK). The Athenian laws of inheritance are to be explained under this title. The subject may be divided into five parts, of which we shall speak: 1st, of personal capacity to inherit; 2dly, of the rules of descent and succession; 3dly, of the power of devising; 4thly, of the remedies of the heir for recovering his rights; 5thly, of the obligations to which he succeeded.

I. *Of Personal Capacity to Inherit*.—To obtain the right of inheritance as well as citizenship (*ἀρχιστεία* and *πολιτεία*), legitimacy was a necessary qualification. Those children were legitimate who were born in lawful wedlock.¹⁷ The validity of a marriage depended partly on the capacity of the con-

1. (Dioscor., iii., 126.—Adams, Append., s. v.)—2. (Geopon., vi., 6.—Adams, Append., s. v.)—3. (Aristot., H. A., ii.—Ælian, N. A., ix., 38.—Id. ib., xv., 11.—Athenæus, iii., 70.—Id., vii., 61. Rom., vii., 168.)—16. (Diod. Sic., v., 72.)—17. (Demosth., c. Neer., 1366.)

tracting parties, partly on the nature of the contract. On the first point little needs to be noticed here, except that brother and sister by the same mother were forbidden to marry; but consanguinity in general was so far from being deemed an objection, that marriage between collateral relations was encouraged, in order to keep the property in the family.¹ The contract was made by the husband with the father, brother, or other legal guardian (*κύριος*) of the intended wife; then only was she properly betrothed (*ἐγγυητή*). An heiress, however, was assigned or adjudged to the next of kin (*ἐπιδикаσθεῖσα*) by process of law, as explained under *ΕΠΙΔΙΚΑΣ*.² No ceremony was necessary to ratify the contract; but it was usual to betroth the bride in the presence of witnesses, and to give a marriage feast, and invite the friends and relatives, for the sake of publicity.³ A marriage without proper espousals was irregular; but the issue lost their heritable rights only, not their franchise; and the former, it seems, might be restored, if the members of their father's clan would consent to their being registered.⁴ As it was necessary for every man to be enrolled in his clan in order to obtain his full civil rights, so was the registration the best evidence of legitimacy, and the *φύραρες* and *συγγενεῖς* were usually called to prove it in courts of justice.⁵ For farther particulars, see Platner, *Beiträge*, 104, &c.—Wachsmuth, i., 2, 31, and 148; ii., 1, 204, &c.—Schömann, *Ant. J. P. Gr.*, v., 19, 21, 88.

II. *Of the Rules of Descent and Succession.*—Here we would premise that, as the Athenian law made no difference, in this respect, between real and personal estate, the words *heir*, *inherit*, &c., will be applied indiscriminately to both. When an Athenian died leaving sons, they shared the inheritance, like our heirs in gavelkind, and as they now do in France;⁶ a law no less favourable to that balance of property which Solon meant to establish, than the law of primogeniture was suited to the military aristocracies created in the feudal times. The only advantage possessed by the eldest son was the first choice in the division.⁷ If there was but one son, he took the whole estate; but if he had sisters, it was incumbent on him to provide for them, and give them suitable marriage portions; they were then called *ἐπιπρόκοι*.⁸ There was no positive law making it imperative on a brother to give his sister a portion of a certain amount; but the moral obligation to assign her a fortune corresponding to his own rank was strengthened by custom and public opinion, inasmuch that, if she was given in marriage portionless, it was deemed a slur upon her character, and might even raise a doubt of her legitimacy.⁹

On failure of sons and their issue, daughters and daughters' children succeeded (as to the law concerning heiresses, *vid. ΕΠΙΔΙΚΑΣ*); and there seems to have been no limit to the succession in the descending line.¹⁰ If the deceased left grandsons by different sons, it is clear that they would take the shares of their respective fathers. So if he had a granddaughter by one son, and a grandson by another, the latter would not exclude the former, as a

brother would a sister, but both would share alike. Of this there is no direct evidence; but it follows from a principle of Attic law, by which, on the birth of a son, his title to his father's inheritance, or to a share thereof, immediately accrued; if then he died before his father, but leaving issue, they claimed their grandfather's inheritance as representing him. It was otherwise with daughters. Their title did not thus accrue; and, therefore, it was the practice for the son of an heiress to be adopted into his maternal grandfather's house, and to become his son in point of law. Farther (as will presently be shown), the general preference of males to females did not commence till the deceased father's descendants were exhausted.

On failure of lineal descendants, the collateral branches were resorted to. And first came the issue of the same father with the deceased, viz., brothers and brothers' children, the children of a deceased brother taking the share of their father;¹ and after them, sisters and sisters' children, among whom the principle of representation also prevailed;² but whether sisters' children took *per stirpes* or *per capita*, does not appear.

Next come the descendants of the same grandfather with the deceased; cousins and cousins' children. Here the law declared that males and the issue of males should be preferred to females and their issue.³ Thus the son of an uncle would exclude the son of an aunt, while the son of an aunt would exclude the daughter of an uncle. On the same principle, Isæus⁴ contends that the son of a female first cousin prevented his mother's sister from inheriting, although he was farther removed from the deceased (*γένει ἀπωτέρω*) by one degree. This preference, however, was confined to those who were descended from the same common ancestor, that is to say, from the grandfather of the deceased; for the words *ἐκ τῶν αὐτῶν* in Demosthenes are to be explained by the *τρίτῳ γένει* of Isæus. Therefore, a first cousin once removed, claiming through a female, had a better title than a second cousin claiming through males; for a second cousin is descended, not from the grandfather, but only from the great-grandfather of the deceased, and so is beyond the legal degrees of succession (*ἔξω τῆς ἀγνοστίας* or *συγγενείας*). On this Eubulides founds his pretension to the estate of Hagnias, because he claims as representative (son by adoption) of his maternal grandfather, who was first cousin to Hagnias; whereas the father of his opponent, Macartatus, was second cousin to Hagnias, and (as Demosthenes expresses it) was not in the same branch of the family (*οὐκ ἐκ τοῦ οἴκου τοῦ Ἀγνίου*).⁵

On failure of first cousins and their issue, the inheritance went to the half-blood by the mother's side; brothers and sisters, nephews and nieces, cousins and their children, as before. But if there were no maternal kinsmen within the legal degree, it returned to the *agnati*, or next of kin on the paternal side (*τοὺς πρὸς πατρός*), whose proximity was traced by counting the degrees from the common ancestor.⁶

The succession of parents to their children is matter of dispute among the learned. From the silence of the orators, the absence of any example, and the express declaration of Isæus⁷ respecting the mother, it may be inferred that parents could not inherit at Athens. At Athens, the maxim *hereditas nunquam ascendit* held only of lineal, not of collateral ascent. For example, an uncle might

1. (Andoc., *Do Myst.*, 119.—Id., c. Alcib., 33, ed. Bekker.—Lys., c. Alc., 41, ed. Bekker.—Demosth., c. Leoch., 1083.—Id., c. Eubul., 1305.—Plut., *Cimon*, 4.—Id., *Themist.*, 32.)—2. Brot. *de doto*, 1014.)—10. (Isæus, *De Cir. hered.*, 39–40.—Id., *De Pyrrh. hered.*, 59.—Id., *De Philoct.*, 38, 67.—Demosth., c. Macart., 1057, 1058.)

1. (Isæus, *De Hagn. hered.*, i., 2.—Demosth., c. Macart., 1067.—Id., c. Leoch., 1083.)—2. (Isæus, *De Apoll. hered.*, 23.)—3. (Isæus, *De Hagn. hered.*, i., 2.—Demosth., c. Macart., 1067.)—4. (De Apoll. *hered.*, 25, 26.)—5. (c. Macart., 1070.)—6. (Isæus, *Do Hagn. hered.*, 1–18.—Demosth., c. Macart., 1067.)—7. (De Hagn. *hered.*, 26.)

inherit.¹ So also he might marry the heiress, as next of kin.² On this part of the subject the reader is referred to Wachsmuth, ii., 1, 212, &c.; Bunsen, *De jure hered. Athen.*; Sir William Jones's *Commentary* annexed to the translation of Isæus; and a short summary of the law by Schömann, *Ant. J. P. Gr.*, v., 20. These and other writers are not agreed on many of the foregoing points, which are left in much obscurity, owing to the mutilated state in which the laws have reached us, and the artifices used by the orators to misrepresent the truth.

It will assist the student to be informed that *ἀνεψιάδος* signifies a first cousin. *Ἀνεψιάδος* is a first cousin's son, formed in the same manner as *ἀδελφιδούς* from *ἀδελφός*, and *θυγατριδούς* from *θυγάτηρ*. Thus my first cousin's son is *ἀνεψιάδοις* to me, but not conversely. Again, though it is true that two or more second cousins may be spoken of collectively as *ἀνεψιάδοι*,³ yet one of them cannot be said to be *ἀνεψιάδος* to another. Herein consists the fallacy of those who maintain that second cousins came within the legal degrees of succession.

Κλῆρος is the subject matter of inheritance, or (in one sense of the word) the inheritance; *κληρονόμος*, the heir. *Ἀγχιστεία*, proximity of blood in reference to succession, and sometimes right of succession. *Συγγένεια*, natural consanguinity. *Συγγενεῖς*, collateral relatives, are opposed to *ἐκγονοί*, lineal descendants.

III. *Of the Power of Devising.*—That the owner had power to alienate his property during his lifetime, and that such alienation was valid in point of law, both as against the heir and all the rest of the world, is beyond a doubt. There was, however, an ancient law, which punished with degradation (*ἀτιμία*) a man who had wasted his patrimony (*τὸ πατρῶα κατεσθόκως*). He was considered an offender against the state, because he disabled himself from contributing to the public service. Prosecutions for such an offence were rare; but the reputation of a spendthrift was always prejudicial to a man in a court of justice.⁴

Every man of full age and sound mind, not under duress or improper influence, was competent to make a will; but if he had a son, he could not disinherit him, although his will might take effect on the contingency of the son not completing his seventeenth year.⁵ The bulk of the estate being left to the son, legacies might be given to friends and relatives, especially to those who performed the office of our executor or testamentary guardian.⁶ And in the division of property among sons, the recommendations of the father would be attended to.⁷ Also a provision, not exceeding a thousand drachmas, might be assigned to an illegitimate child.⁸

A daughter could not be disinherited, though the estate might be devised to any person on condition of his marrying her.⁹

It was only when a man had no issue that he was at full liberty to appoint an heir. His house and heritage were then considered desolate (*ἐρημος καὶ ἰώνυμος*), a great misfortune in the eyes of an Athenian; for every head of a family was anxious to transmit his name and religious usages to posterity. The same feeling prevailed among the Greeks in more ancient times. We learn from Hesychius and the Etymol. Mag. that distant relatives were called *χωρῶσαι*, because, when they inherited, the house was *χωρεῖν καὶ ἐρημος*.¹⁰ To

obviate this misfortune, an Athenian had two courses open to him. Either he might bequeath his property by will, or he might adopt a son in his lifetime. (*Vid. ΑΔΟΠΤΙΟΝ, GREEK.*)

Wills were in writing, and usually had one or more attesting witnesses, whose names were subscribed, but who did not know the contents. They were often deposited with friends, or other trustworthy persons, such as a magistrate. It was considered a badge of fraud if they were made secretly or in the presence of strangers.¹ A will was ambulatory until the death of the maker, and might be revoked, wholly or partially, by a new one. It seems, also, that there might be a parol revocation.² The client of Isæus, in the last-cited cause, contends that the testator sent for the depositary of his will with an intention to cancel it, but died before he got it into his possession; this (he says) was a virtual revocation. He calls witnesses to prove the testator's affection for himself and dislike of his opponents, and thence infers that the will was unnatural, and a proof of insanity. Similar arguments were often used.³

With respect to the proceeding by which a father publicly renounced his paternal authority over his son, *vid. ΑΠΟΚΕΡΝΞΙΣ*. Plato⁴ refers to it, and recommends that a father should not take such a step alone, but in conjunction with the other members of the family. At Athens, the paternal authority ceased altogether after the son had completed his nineteenth year; he was then considered to belong less to his father than to the state.⁵

IV. *Of the Remedies of the Heir for Recovering his Rights.*—A son or other male descendant might enter and take possession of the estate immediately after the owner's death.⁶ If he was prevented from so doing, he might bring an action of ejectment against the intruder. (*Vid. ΕΜΒΑΤΕΙΑ*.) Any one who disturbed a minor in the enjoyment of his patrimony was liable to a criminal prosecution (*κακώσεως εἰσαγγελία*). As to the proceedings in case of heiress, *vid. ΕΠΙΚΛΕΡΥΣ*.

Other heirs at law, and claimants by adoption or devise, were not at liberty to enter until the estate was formally adjudged to them. The proper course was to make application to the archon, who attended at his office for that purpose every month in the year except the last (*Sciroporion*). The party who applied was regarded as a suitor, and (on obtaining a hearing) was said *λαγχάνειν τοῦ κλήρου*.⁸

At the first regular assembly (*κυρία ἐκκλησία*), held after he had received notice, the archon caused proclamation to be made that such a person had died without issue, and that such and such persons claimed to be his heirs. The herald then asked *εἰ τις ἀμφισβητεῖν ἢ παρακαταβάλλειν βούλεται τοῦ κλήρου*: these words are variously interpreted. Perhaps the best explanation is this: *Ἀμφισβητεῖν* is a term of general import, applied to all who dispute the title of another, and would include those who claimed a moiety or other share of the estate. *Παρακαταβάλλειν* signifies to make a deposit by way of security for costs, which was required of those who maintained their exclusive title to the whole inheritance. Perhaps, however, the payment in this case was optional, and might be intended for the mere purpose of compelling the other parties to do the same. The deposit thus paid was a tenth.

part of the value of the property in dispute, and was returned to the party if successful.¹

If no other claimant appeared, the archon adjudged the estate to the first suitor (*ἐπιδίκασεν αὐτῷ τὸν κλῆρον*). If, however, there were adverse claims, he proceeded to prepare the cause for trial (*διαδικασία*). First came the *ἀνάκρισις*, in the usual way, except that no party was considered as plaintiff or defendant; and the bills, in which they set forth their respective titles, were called *ἀντιγραφαί*.² The dicasts were then to be summoned, and, whatever the number of parties, one court was held for the decision of all their claims. If any one neglected to attend on the appointed day, and had no good excuse to offer, his claim was struck out of the record (*διεγράφη ἡ ἀμφισβήτησις*), and the contest was carried on between the remaining parties, or if but one, the estate was awarded to him.³ The trial was thus managed. The dicasts had to give their verdict either for one person proving a title to the whole, or for several persons coming in under the same title, as (for instance) two brothers entitled each to a moiety. One balloting box, therefore, was provided for every party who appeared in a distinct interest. The speeches were measured by the clepsydra. Each party had an *ἀμφορέως* of water for his first speech, and half that, or three *χοεῖς*, for the second.⁴ That these arrangements gave rise to fraud and collusion, is clearly shown in the cases above cited.

The verdict, if fairly obtained, was final against the parties to the cause. But any other person, who by absence or unavoidable accident was prevented from being a party, might afterward bring an action against the successful candidate, to recover the estate. He was then obliged to pay his deposit (*παρακαταβολή*), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death.⁵

It has hitherto been supposed that a simple issue was raised between the litigant parties, viz., who was entitled to possess the estate; and that they proceeded at once to the trial of such issue. This was called *εὐθυδικία εἰσέναι*. The cause, however, might become more complicated, if one of the parties chose to make exception to the right of any other to dispute his title: this was done by tendering an affidavit (*διαμαρτυρία*) (*vid.* DIAMARTYRIA), sworn either by himself or by another, wherein he declared that the estate was not the subject of litigation (*μὴ ἐπίδικος*), and alleged some matter of fact or law to support his assertion. Sons, adopted sons, and persons in legal possession were allowed this advantage. For example, a witness might depose that the last occupier had left male issue surviving him, and therefore the property could not be claimed by any collateral relative or devisee: or that the title had already been legally determined, and that the new claimants were not at liberty to reopen the question. This had the effect of a dilatory plea, and stayed farther proceedings in the cause.⁶ If then the suitor was resolved to prosecute his claim, he had no other course but to procure a conviction of the witness (who had sworn the affidavit) in an action for false testimony (*δίκη ψευδομαρτυρίων*). Examples of such actions are the causes in which Demosthenes was engaged against Leochares, and

Isæus for the estate of Philoctemon. On the trial of the witness, the questions were, first, the truth of the facts deposed to; secondly, their legal effect, if true. With respect to the witness, the consequences were the same as in any other action for false testimony. (*Vid.* MARTYRIA.) With respect to the original cause, nothing farther was determined than that it could or could not be entertained; the *διαμαρτυρία* in this particular resembling the *παράγραφη*. If the court decided that the suit could be entertained, the parties proceeded to trial in the manner before explained.

As to the farther remedies to be pursued by the successful party in order to obtain the fruits of his judgment, *vid.* ΕΜΒΑΤΕΙΑ, ΕΝΟΙΚΙΟΤ, and ΕΞΟΥΔΗΣ ΔΙΚΑΙ. And on this part of the subject, *vid.* Meier, *Att. Proc.*, p. 459, 616, 638; Platner, *Att. Proc.*, i., 163; ii., 309.

V. *Of the Obligations to which the Heir succeeded.*—The first duty of an heir, as with us of an executor, was to bury the dead and perform the customary funeral rites (*τὰ νομιζόμενα ποιεῖν*). It is well known what importance was attached to this by the ancients. The Athenian law regulated the time of burial, and the order in which the female relatives should attend. If no money was left to pay the expenses of burial, still the nearest relatives were bound to defray them; and if they neglected to perform their duty, the chief magistrate (*δήμαρχος*) of the demus in which the death took place, after warning them by public notice (*ἀνακοινεῖν καὶ θάπτειν, καὶ καθαίρειν τὸν δῆμον*), got the work done by contract, paid for it himself, and was then empowered to sue them for double the amount. When a rich man died, there was no backwardness about his funeral. It is rather amusing to see how eagerly the relatives hastened to show respect to his memory, as if to raise a presumption of their being the heirs.¹

Children who neglected to bury their parents were liable to a criminal prosecution (*γραφὴ κακώσεως γονέων*), just as they were for refusing to support or assist them in their lifetime. The word *γονεῖς*, in this case, includes all ancestors.²

Among heritable obligations may be reckoned that of marrying a poor heiress (*θήσσα*), or giving her in marriage with a suitable portion. (*Vid.* EPICLERUS, and Meurs., *Them. Att.*, i., 13.)

That the heir was bound to pay the debts of the deceased, as far as the assets would extend, cannot be doubted. Five years seems to have been the period for the limitation of actions against him (*προθεσμία*). In case of a mortgage, he was entitled only to the surplus of the mortgaged property, remaining after payment of the debt charged thereon.³

State debtors, such as farmers of the public revenue who had made default, or persons condemned to pay a fine or penalty, were disfranchised (*ἀτάτοι*) until they had settled the debt, and the disgrace extended to their posterity. Thus Cimon, son of Miltiades, was compelled to pay a fine of fifty talents which had been imposed on his father; and the story is, that Callias advanced him the money in return for the hand of his sister Elpinice.⁴ When the whole of a man's property was confiscated, of course nothing could descend to his heir. It seems to have been a common practice, in such a case, for the relatives of the deceased to conceal his effects, or to lay claim to them by pretended mortgages. Against these frauds there were severe penalties, as

may be seen from the speeches of Lysias, c. *Pylor.*, and *de bon. Arist.*¹

The posterity of those who were put to death by the people, or were convicted of certain infamous crimes, such as theft, inherited the *drupla* of their ancestors, a *damnosa hereditas*, which they could not decline or escape from. It may be compared to the corruption of blood following upon attainder in the feudal law. The legislator seems to have thought that such children must be the natural enemies of their country, and ought to be disarmed of all power to do mischief. We cannot wonder at this, when we consider that, with respect to private feuds, it was deemed honourable and meritorious in the child to preserve the enmity of the father; and we find public prosecutors (as in the opening of the speech of Lysias against Agoratus, of Demosthenes against Theocritus) telling the dicasts that they had been induced to come forward by a desire to avenge the wrongs of their family. In the same spirit, the Athenian law required that men guilty of unintentional homicide should remain in exile until they had appeased the nearest relatives of the deceased, to whom it more especially belonged to resent and forgive the injury.²

Isæus tells us that parents who apprehended their own insolvency used to get their children adopted into other families, that they might escape the consequences.³ This, however, could not be done after the infamy had once attached.⁴

We find no mention of property escheating to the state of Athens for want of heirs. This probably arose from a principle of Athenian law, according to which no civic family was suffered to expire; and, therefore, the property of an intestate was always assigned to such person as was most fit to be its successor and representative. With aliens, and those illegitimate children who were regarded as aliens, it was, no doubt, otherwise.⁵

HERES (ROMAN). When a man died, a certain person or certain persons succeeded to all his property, under the name of *heres* or *heredes*: this was a universal succession, the whole property being considered a unity. Such a succession comprehended all the rights and liabilities of the person deceased, and was expressed by the term *hereditas*. The word *hereditas* is accordingly defined to be a succession to all the rights of the deceased.⁶ The term *pecunia* is sometimes used to express the whole property of a testator or intestate;⁷ but it only expresses it as property, and therefore the definition of *hereditas* by *pecunia* would be incomplete. Cicero⁸ completes the definition thus: "*Hereditas est pecunia quæ morte alicujus ad quempiam pervenit jure, nec ea aut legata testamento aut possessione retenta.*" The negative part of the definition excludes legacies and property of the deceased, the ownership of which is acquired by a sufficient possession. The word "jure" excludes the "bonorum possessio," in opposition to which the *hereditas* is appropriately called "justa." The *heres* was the owner who had acquired all that had belonged to another, morte and jure; the etymological relation of the word to *herus* seems probable.

A person might become a *heres* by being named as such (*institutus, scriptus, factus*) in a will, executed by a competent person, according to the forms required by law. (*Vid. TESTAMENTUM*.) If a person died intestate (*intestatus*), or having made a will which was not valid, the inheritance came to those

to whom the law gave it in such cases, and was called *hereditas legitima* or *ab intestato*. But a man could not die testate as to part of his property and intestate as to another part, except he were a soldier, whose testamentary dispositions were considered with great indulgence. The reason of this appears to be the legal unity of the *hereditas*: a testamentary disposition of a part was not a disposition of the whole, and, consequently, it was no disposition at all.

In order that a testamentary succession should take place, the person dying must have such property or such rights as are capable of being transmitted to another; consequently, neither a slave nor a *filius-familias*, according to the old Roman law, could make a *heres*. Also, the person who is made *heres* must have a legal capacity to be *heres*. Generally, all persons who had the *commercium* could be made *heredes*, and, consequently, all Roman citizens, and even slaves. (*Vid. TESTAMENTUM*.)

The institution of a *heres* was that formality which could not be dispensed with in a will. If the testator named no *heres* or *heredes*, and complied with all the other legal forms, still his disposition of his property was not a will. The *heres* called *heres directus*, or simply *heres*, represented the testator, and was thus opposed to the *heres fideicommissarius*. (*Vid. FIDEICOMMISSUM*.) The testator might either name one person as *heres*, or he might name several *heredes* (*coheredes*), and he might divide the *hereditas* among them as he pleased. The shares of the *heredes* were generally expressed by reference to the division of the *As*: thus "*heres ex asse*" is *heres* to the whole property, "*heres ex dodrante*," *heres* to three fourths; "*heres ex semuncia*," *heres* to one twenty-fourth.¹ If there were several *heredes* named, without any definite shares being given to them, the property belonged to them in equal shares.

If the testator had a legal capacity to dispose, and if his will was made in due form, the first inquiry as to the *heres* was, whether he had a legal capacity to take what was given to him. He must have this capacity at the time of the institution, at the time of the testator's death, and at the time of accepting the inheritance. This capacity might be expressed by the words "*testamenti factio*," an expression which had reference not only to the legal capacity of the testator, but also to the legal capacity of the person named *heres*. As a general rule, only Roman citizens could be named as *heredes* in the will of a Roman citizen; but a slave could also be named *heres*, though he had no power to make a will, and a *filius-familias* could also be named *heres*, though he was under the same incapacity; for the slave, if he belonged to the testator, could, by testament, receive his freedom and become *heres*; and if he belonged to another person, he took the inheritance for the benefit of his master: the *filius-familias*, in like manner, acquired it for his father. Persons, not Roman citizens, who had received the *commercium*, could take *hereditates* by testament.²

Heredes were either *necessarii*, *sui et necessarii*, or extranei. The *heres necessarius* was a slave of the testator, who was made a *heres* and *liber* at the same time; and he was called a *necessarius*, because of the necessity that he was under of accepting the *hereditas*. A slave was sometimes appointed *heres*, if the testator thought that he was not solvent, for the purpose of evading the *ignominia* which was a consequence of a person's property being sold to pay his debts, as explained by Gaius.³ The *heredes sui et necessarii* were sons and daugh-

ters, and the sons and daughters of a son who were in the power of a testator; but a grandson or granddaughter could not be a *suus heres* unless the testator's son had ceased to be a *suus heres* in the testator's lifetime, either by death or being released from his power. These *heredes sui* were called *necessarii*, because of the necessity that they were under, according to the civil law, of taking the *hereditas* with its encumbrances. But the *prætor* allowed such persons to refuse the *hereditas* (*abstinere se ab hereditate*), and to allow the property to be sold to pay the testator's debts (an instance is mentioned by Cicero¹); and he gave the same privilege to a mancipated son (*qui in causa mancipii est*). All other *heredes* are called *extranei*, and comprehend all persons who are not in the power of a testator, such as emancipated children. As a mother had no potestas over her children, they were *extranei heredes* when named *heredes* in her will. *Extranei heredes* had the potestas or *jus deliberandi*, or privilege of considering whether they would accept the *hereditas* or not; but if either *extranei heredes*, or those who had the *abstinendi potestas*, meddled with the testator's property, they could not afterward disclaim the inheritance, unless the person who had so meddled was under twenty-five years of age, and so belonged to a class who were relieved by the *prætor* in all cases where they were overreached (*vid. CURATOR*), and also in cases where they had accepted an insolvent *hereditas* (*damnosa hereditas*). The Emperor Hadrian gave this relief to a person above twenty-five years of age who had accepted an *hereditas*, and afterward discovered that it was encumbered with a heavy debt.²

A certain time was allowed to *extranei* for the *cretio hereditatis*, that is, for them to determine whether they would take the *hereditas* or not: hence the phrase *cernere hereditatem*. Thus, if the testator had written in his will "*Heres Titius esto*," he ought to add, "*Cernitoque in centum diebus proximis quibus scies poterisque: quod si ita creveris exheres esto*."³ If the *extraneus* wished to take the *hereditas*, he was required to make a formal declaration of his intention within the time named (*intra diem cretionis*). The formal words of *cretio* were "*eam hereditatem adeo cernoque*." Unless he did this, he lost the *hereditas*, and he could not obtain it merely by acting as *heres* (*pro herede gerendo*). If a person was named *heres* without any time of *cretio* being fixed, or if he succeeded (*legitimo jure*) to the property of an intestate, he might become *heres* without any formal declaration of his intention, and might take possession of the *hereditas* when he pleased: but the *prætor* was accustomed, upon the demand of the creditors of the testator or intestate, to name a time within which the *heres* should take possession, and in default of his doing so, he gave the creditors permission to sell the property. The common form of *cretio* in the will (*vulgaris cretio*) has been already mentioned. Sometimes the words "*quibus sciet poterique*" were omitted, and it was then specially called "*cretio certorum dierum*," which was the more disadvantageous to the *heres*, as the days began to be reckoned, or, as we say, the time began to run immediately, and it was not reckoned from the time when the *heres* knew that he was named *heres*, and had no impediment to his *cretio*.

It was not unusual to make several degrees of *heredes* in a will, which was called *substitutio*. Thus, in the formula beginning "*Heres Titius*," &c., after the words "*exheres esto*," the testator might add, "*Tum Mavius heres esto cernitoque in diebus cen-*

sum," &c.; and he might go on substituting as far as he pleased. The person first named as *heres* (*primo gradu*) became *heres* by the act of *cretio*; and the *substitutus* (*secundus heres*¹) was then entirely excluded. If the words "*si non creveris*" were not followed by words of *exheredation*, this gave some advantage to the first *heres*: for instance, if he neglected the formality of *cretio*, and only acted as *heres*, he did not lose all, but shared the *hereditas* equally with the substituted person. This was the old rule; but a constitution of *Aurelius* made the acting as *heres* equivalent to *cretio*, provided such action took place within the time of *cretio*.²

In the case of *liberi impuberes*, who were in the power of a testator, there might be not only the kind of substitution just mentioned (*vulgaris substitutio*), but the testator might declare that if such children should live to become his *heredes*, and should die *impuberes*, some other person, whom he named, should be his *heres*. This was expressed thus: "*si prius moriatur quam in suam tutelam venerit*;"³ for the termination of *impuberty* and of the *tutela* were coincident. (*Vid. CURATOR*.) Thus, as *Gaius* remarks, one testamentary disposition comprised two *hereditates*. This was called *pupillaris substitutio*. This kind of substitution was contained in a clause by itself, and in a separate part of the will, which was secured by the testator's own thread and seal, with a provision in the first part of the will that this second part should not be opened so long as the son lived and was *impubes*. A substitution could also be made in the case of children being *exheredated* (*disinherited*) by the parent's will, and the substituted person then took all that the *pupillus* acquired by *hereditas*, *legatum* (legacy), or gift. *Gaius* observes⁴ that all his remarks with reference to substitution for children *impuberes*, which made *heredes* or *exheredated*, apply to *posthumous* (*postumi*) children, of which there is an example cited by Cicero:⁵ "*Si filius natus esset in decem mensibus*," &c.

If an *extraneus* was made *heres*, there could be no substitution to the effect that, if he died within a certain time, another person should be *heres*; for though a testator could attach a condition to be performed before a person could take the *hereditas*, a person, when he had once become *heres*, continued such. The case of a *pupillaris substitutio*, which was an exception to this general rule, was probably founded on the *patria potestas*. The *heres* might, however, be charged with a *fideicommissum*, in which case he was *heres fiduciarius*. (*Vid. FIDEICOMMISSUM*.)

As to conditions which the *heres* was bound to perform, they might be any that were not contrary to positive law or positive morality; such as the setting up of statues,⁶ &c., or changing the name.⁷

If a man's own slave was made *heres* by his will, it was necessary that he should be made free also by the will: the words were, "*Stichus servus meus liber heresque esto*." If the slave were not made free by the testament, he could not take under it, even if he were manumitted by his master, and, of course, he could not if he were sold; and the reason is, that the institution was not valid. If he was instituted free as well as *heres*, he became both a *freeman* and *heres necessarius* by the death of his master: if he was manumitted by his master in his lifetime, he might accept the inheritance or refuse it. If he was sold by his master in his life-

1. (Cic., *Phil.*, ii., 16.)—2. (Gaius, ii., 163.)—3. (Gaius, ii., 163—Cic., *De Orat.*, i., 22.)

1. (Cic., *Top.*, 10.—*Hor.*, *Sat.*, ii., 5, 48.)—2. (Compare *Gaius*, ii., 177, &c., with *Ulpian*, *Frag.*, xlii., 34.)—3. (Cic., *De Invent.*, ii., 42.—*Id.*, *Top.*, 10.—*Gaius*, ii., 179.)—4. (ii., 163.)—5. (*Top.*, 10.)—6. (Cic. in *Verr.*, ii., 8, 9, 14.)—7. (Cic. ad *Att.*, vii., 8.)

time, he could take possession of the inheritance with the permission of his new master, who thus became heres through the medium of his slave. If the slave who was made heres was then the property of another person, and not of the testator, he could not take the inheritance without the consent of his master, for if he took it his master became heres: if such slave was manumitted before taking possession of the inheritance, he might accept it or refuse it, as he pleased.

If an ingenuus died intestate, either from not having made a will, or having made a will, but not in due form, or having made a will in due form, which afterward became invalid (*ruptum, irritum*), the hereditas, according to the law of the Twelve Tables, came to the heredes sui, and was then called *legitima hereditas*. The heredes sui were "liberi" in the power of the testator at the time of his death; the term liberi comprehended not only children, but the children of the testator's male children, and the children of a male grandchild. Adopted children were considered the same as other children. But grandchildren could not be heredes sui, unless their father had ceased to be in the power of the intestate, either by death or in any other way, as by emancipation. A wife in manu being considered as a daughter, and a daughter-in-law (*nurus*) being considered a granddaughter, were sui heredes; but the latter only when her husband was not in the power of the intestate at the time of his death, which was consistent with the law in the case of grandchildren. Posthumous children, who would have been in the power of the intestate if he were living, were also sui heredes. The sui heredes took the hereditas in equal shares. If there was a son or daughter, and children of a son deceased, the children of the deceased son took the portion which their parent would have taken. But the distribution was *in stirpes*, that is, among the stocks or stems sprung from the ancestor, and not *in capita*, or among the individuals: thus, if there were a son, and the sons of a deceased son, the son would take half of the hereditas, and the sons of the deceased son would take the other half, in equal shares.

If an intestate had no sui heredes, the Twelve Tables gave the hereditas to the agnati. It is stated under COGNATI who are agnati. The hereditas did not belong to all the agnati, but only to those who were nearest at the time when it was ascertained that a person had died intestate. If the nearest agnatus either neglected to take the inheritance, or died before he had taken possession of it, in neither case did the next in succession, as agnatus, take the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate, and not he who was nearest at the time of the death; the reason of which appears to be, that the hereditas was in a sense the property of the intestate until his heir was ascertained, and his heir could not be ascertained until it was certain that he had left no will; and, as Gaius observes, if he had left a will, still it might happen that no person would be heres under that will; and, accordingly, it seemed better, as he observes, to look out for the nearest agnatus at the time when it is ascertained that there is no heres under the will. If there were several agnati in the same degree, and any one refused to take his share, or died before he had assented to take it, such share accrued (*adcrevit*) to those who consented to take the hereditas.

In the case of women, there were some peculiarities which arose from their legal status. The hereditates of women intestate came to their agnati just as the inheritances of males; but women who

were beyond the degree of consanguinei (a term which legally means brothers and sisters) could not take hereditates ab intestato. Thus a sister might take from a brother or sister as legitima heres, but an aunt or a brother's daughter could not be a legitima heres. The principle of Roman law which gave to those who came into the potestas or manus the quality of children of the blood, was followed out in this case also: a mother or a stepmother who had come in *manu viri* thereby obtained the status of a daughter; and, consequently, as to legitimate succession, there were the same relations between such mother or stepmother and the husband's children as there were among the husband's children themselves. But, by senatus consulta of Antoninus and Commodus, the sons of a wife not in manu might take as her legitimi heredes, to the exclusion of consanguinei and other agnati.

If a person died leaving no sui heredes, but only a brother and another brother's children, the brother took all as the nearest agnatus. If there was no brother surviving, and only children of brethren, the hereditas was divided among all the children *in capita*, that is, the whole was equally divided among all the children.

If there were no agnati, the Twelve Tables gave the hereditas to the gentiles. (*Vid. GENS*, p. 469.)

Gaius¹ briefly recapitulates the strict law of the Twelve Tables as to the hereditates of intestates: emancipated children could claim nothing, as they had ceased to be sui heredes: the same was the case if a man and his children were at the same time made Roman citizens, unless the emperor reduced the children into the power of the father: agnati who had sustained a capitis diminutio were excluded, and, consequently, a son who had been given in adoption, and a daughter who was married and in manu viri: if the next agnatus did not take possession, he who was next in order could not, for that reason, make any claim: cognati, whose kinship depended on a female, had no mutual rights as to their hereditates, and, consequently, there were no such mutual rights between a mother and her children, unless the mother had come in manu viri, and so the rights of consanguinity had been established between them.

If a man had his son in his power, he was bound either to make him heres, or to exheredate (*exheredare*) him expressly (*nominatim*). If he passed him over in silence (*silentio praterierit*), the will was altogether void (*inutile, non jure factum*). Some jurists were of opinion, that even if the son, so passed over, died in the father's lifetime, there could be no heres under that will.² Other liberi could be passed over, and the will would still be a valid will; but the liberi so passed over took a certain portion of the hereditas *ad crescendo*, as it was termed, or *jure ad crescendo*. For instance, if the heredes instituti were sui, the person or persons passed over took an equal share with them. If the heredes instituti were extranei, the person or persons passed over took a half of the whole hereditas; and as the prætor gave the contra tabulas bonorum possessio to the person so passed over, the extranei were deprived of all the hereditas. A rescript of the Emperor Antoninus limited the amount which women could take by the bonorum possessio to that which they could take jure ad crescendo; and the same was the law in the case of emancipated females.

It was necessary to exheredate posthumous children *nominatim*, otherwise the will, which was originally valid, became invalid (*ruptum*); and the will became invalid by the birth either of a posthumous son or daughter, or, as the phrase was, *adgrosso rumpitur testamentum*.³ Postumi were not only

1. (iii., 12.)—2. (Gaius, ii., 123, &c.)—3. (Cic., De Or., i., 57.)

those who were born after the testator's death, but also those who might become the sui heredes of the testator by the death of some other person in the testator's lifetime. Thus, if a testator's son, who was in his power, had children, and the son died in the testator's lifetime, the grandchildren became sui heredes, and the testament became ruptum by this quasi agnatio: it was therefore a necessary precaution to institute as heredes or to exheredate such grandchildren. It follows that, if the testament could be made invalid by this quasi agnatio, it must have become invalid by a son being born in the lifetime of the testator, unless the will had provided for the case; for it became invalid if the testator adopted a son or a daughter,¹ either by adrogation or adoption properly so called, after the date of his will. The case was the same if he took a wife in manum after the date of the will.

The word *postumus* has clearly the same signification as *postremus*, and literally means a child born last. The passage of Gaius is defective where he treats of *postumi*; but the definition of *postumi*, as preserved in the *Breviarium*, appears to be exact: "*Postumorum duo genera sunt: quia postumi appellantur hi, qui post mortem patris de uxore nati fuerint, et illi qui post testamentum factum nascuntur.*" Sometimes the word *postumus* is defined only as a child born after a father's death, as we see in some of the Glossæ; but there is no proof that the meaning was limited to such children; and the passages sometimes cited as being to that effect² have merely been misunderstood.

Other cases, in which a valid testamentum became ruptum or irritum, are more properly considered under *TESTAMENTUM*.

The strictness of the old civil law was modified by the prætorian law, which gave the *bonorum possessio* to those who could not take the hereditas by the rules of the civil law. (*Vid. BONORUM POSSESSIO.*)

The heres represented the testator and intestate,³ and had not only a claim to all his property, but was bound by all his obligations. He succeeded to the *sacra privata*, and was bound to maintain them, but only in respect of the property, for the obligation of the *sacra privata* was attached to property and to the heres only as the owner of it. Hence the expression "*sine sacris hereditas*" meant an hereditas unencumbered with *sacra*.⁴

The legislation of Justinian released the heres who accepted an hereditas from all debts and obligations of the testator or intestate beyond what the property would satisfy, provided he made out an inventory (*inventarium*) of the property in a certain form and within a given time.⁵

The heres could claim any property which belonged to his testator or intestate by the hereditatis petitio, which was an actio in rem, and properly belonged to a heres only, though it was afterward given to the bonorum possessor. Each heres claimed only his share.⁶

The cohæredes shared among themselves the property, and bore their share of the debts in the same proportions. For the purpose of division and settling the affairs of the testator, a sale was often necessary.⁷ If the parties could not agree about the division of the property, any of them might have an actio familiæ eriscundæ. (*Vid. FAMILIÆ ERCA.*)

The hereditas might be alienated by the form of in jure cessio. The heres legitimus might alienate the hereditas before he took possession of it, and

the purchaser then became heres, just as if he had been the legitimus heres. The scriptus heres could only alienate it after the aditio: after such alienation by him, or by the heres legitimus after aditio, both of them still remained heredes, and, consequently, answerable to creditors, but all debts due to them as heredes were extinguished.

The hereditates of freedmen are more properly considered under *LIBERTI* and *PATRONI*.

Before it was determined who was heres, the hereditas was without an owner, and was said "*jacere.*" When a heres was ascertained, such person was considered to possess all the rights incident to the hereditas from the time of the death of the testator or intestate. But this does not explain how we are to view the hereditas in the interval between the death of the former owner and the time when the heres is ascertained. During such interval, according to one form of expression used by the Roman jurists, the hereditas is a juridical person (*vice persona fungitur*), and is the domina, that is, the domina of itself; according to another form of expression, it represents the defunct, and not the person of the future heres. These two forms are the same in meaning, and they express a fiction which has relation to the legal capacity of the defunct, and not to that of the future heres, and which does not involve the notion of any juridical personality of the hereditas. The relation to the legal capacity of the defunct is this: Slaves generally belonged to an hereditas. A slave, as is well known, could acquire property for his living master, even without his knowledge; but the validity of the act of acquisition, in some cases, depended on the legal capacity of his master to acquire. Now while the hereditas was without an ascertained owner, many acts of a slave, by which the hereditas might receive additions, were strictly void, and such acts could only have their legal effect on the supposition that the slave had an owner of a sufficient legal capacity; and, accordingly, the fiction of law gave validity to the act of the slave by relation to the known legal capacity of the late owner, and not by relation to the yet unascertained owner, who might not have such legal capacity. The following are examples: "When a Roman, who had a legal capacity to make a will, died intestate, and another person appointed as his heres a slave who belonged to this hereditas, which was still without an owner, such institution of a heres would be valid by virtue of this fiction, because it had reference to the legal capacity of the defunct. If there had been no such fiction, the validity of the institution would have been doubtful, for the unascertained legitimus heres might be an intestabilis, who (at least according to the old law) could not be instituted heres. If a soldier died and left a will, which was not yet opened, another testator might institute as heres a slave belonging to the soldier's hereditas, because the institution, according to this fiction, had reference to the deceased; but if there were not this fiction, the institution might be void, inasmuch as the unascertained heres might be a peregrinus who had no testamentifactio with this other testator. It was to provide for such cases as these only, that this fiction was introduced; and it had no other object than to facilitate certain acquisitions by means of the slaves who belonged to an hereditas."

This masterly exposition is by Savigny.¹

HERMÆ, *dimin.* HERMULÆ (*Epulæ*). The Greeks originally made use of unhewn stones (*ἀγροὶ λίθοι*) to represent their divinities.² Their first improvement was to cut these stones into square

blocks, thirty of which were exhibited to Pausanias in the city of Pharæ.¹ In the course of time, the square block was surmounted by the head of the deity it represented. Many images of this kind are described by Pausanias; one of Poseidon at Tricoloni in Arcadia,² another of Zeus *τέλειος* at Tegea,³ and another of Aphrodite Urania at Athens.⁴ It is probable that the first statues of this improved nature were those of Hermes or Mercury, from whom they received their name; but the term was applied generally to that particular class of statues termed *ἐργασίαι τεράγωνοι* or *σχήματα τετράγωνα*,⁵ even though the busts of other divinities, or persons of either sex, surmounted the pedestal.

In these works, the invention of which is ascribed to the Athenians by Pausanias, the only parts of the human body developed were the head and sexual organs. But when the sculptor's art was still farther perfected, the whole torso was placed upon a pedestal; and, finally, the pedestal itself was sometimes chiselled to indicate the separation of the legs, as may be seen in a tetragonal female statue in the Villa Albani.⁶ Two other forms of the Hermæ may be seen in the British Museum.⁷

Houses in Athens had one of these statues placed at the door,⁸ which were worshipped by the women as instrumental to fecundity, though not in the most delicate manner;⁹ and the great superstition attached to them is shown by the alarm and indignation which were felt at Athens in consequence of the mutilation of the whole number in a single night, just before the sailing of the Sicilian expedition.¹⁰

They were likewise placed in front of temples, near to tombs, in the gymnasia, libraries, and public places, at the corners of streets and high roads as *sigposts*, and some are still to be seen at Athens with the names of victors in the gymnastic contests inscribed upon them.¹¹ Among the Romans particularly they were used for boundary landmarks, either in their primitive form of large stones or with busts upon them, whence they were styled *termini* and *lapides terminales*,¹² and as posts for ornamental railings to a garden, in which case they were commonly decorated with the busts of philosophers and eminent men, some of which may be seen at the Vatican, with the square holes in their shoulders into which the transverse rail was inserted.

As the square part of the statue represented Mercury,¹³ his name is often compounded with that of the deity whose bust it supports. Thus the *Hermathena* which Atticus sent from Athens to Cicero¹⁴ bore the bust of Minerva; the *Hermacrææ*¹⁵ those of Hercules. The story of Hermaphroditus had probably its origin in some ancient statue of this description, where the square Mercury was surmounted by a female torso, like the one in the British Museum.¹⁶

For the application of the *Hermæ* and *Hermulæ* in the circus, *vid.* p. 254, 255.

HERMÆA (*Ἑρμαία*, festivals of Hermes, celebrated in various parts of Greece. As Hermes was the tutelary deity of the gymnasia and palæstræ, the boys at Athens celebrated the Hermæa in the gymnasia. They were on this occasion dressed in their best, offered sacrifices to the god, and amused themselves with various games and sports, which were probably of a more free and unrestrained character than usual. Hence the gymnasiarch was

prohibited by a law of Solon¹ from admitting any adults on the occasion. This law, however, was afterward neglected, and in the time of Plato² we find the boys celebrating the Hermæa in a palæstra, and in the presence of persons of all ages.³ (Compare GYMNASIUM, p. 482.)

Hermæa were also celebrated in Crete, where, on this occasion, the same custom prevailed which was observed at Rome during the Saturnalia; for the day was a season of freedom and enjoyment for the slaves, and their masters waited upon them at their repasts.⁴

The town of Pheneos, in Arcadia, of which Hērtaes was the principal divinity, likewise celebrated Hermæa with games and contests.⁵ A festival of the same kind was celebrated at Pellene.⁶ Tanagra in Boeotia,⁷ and some other places, likewise celebrated festivals of Hermes, but particulars are not known.

HERMATHE'NA. (*Vid.* HERMÆ.)

HERMERACLÆ. (*Vid.* HERMÆ.)

*HERMODACTYLUS (*ἑρμοδάκτυλος*), the same with the *Colchicum autumnale*, or Meadow Saffron. "My limits," observes Adams, "will not afford room to discuss fully the much-agitated question respecting the *Hermodactylus* of the ancients. It is to be remarked, however, in the first place, that Paulus Ægineta entirely omits treating of the *κόλχικόν* of Dioscorides by name, and in place of it has the *ἑρμοδάκτυλος*. This circumstance forms a strong presumption that the two substances were identical. And again, Serapion, in his chapter on *Hermodactylus*, gives the words of Paulus Ægineta along with Dioscorides' chapter on *Colchicum*. It seems undeniable, then, that the Arabians held the *Hermodactylus* to be the same as the *Colchicum*; and, accordingly, the highest authorities in modern times on the *Res Herbaria* of the ancients, such as Bergius, Tournefort, Humelbergius, Geoffroy, Prosper Alpinus, Dr. Paris, and many others, recognise the *Hermodactylus* as the *Colchicum autumnale*, or Meadow Saffron. Still, however, Sprengel joins Matthioli and Dr. Murray in referring it to the *Iris tuberosa*. After impartially examining the evidence on both sides, I continue to be of the opinion expressed by me formerly, that the ancient *ἑρμοδάκτυλος* was the Meadow Saffron."⁸

*HERPYLLUS (*ἑρπύλλος*), according to most authorities, the Wild Thyme, or *Thymus serpyllum*, L. Sibthorp, however, inclines to refer it to a species which he found in great abundance near the Iliissus, called by him *Thymus incanus*. The wild kind, which Dioscorides calls ζῳγίς, is the *Thymus zygis*.⁹

*HESPERIS (*ἑσπερίς*), a plant, the same with the *Hesperis matronalis*, or Dame's Violet. Sprengel, however, prefers the *Hesperis tristis*.¹⁰

HERO'A. (*Vid.* FUNUS, p. 457.)

HESTIA. (*Vid.* FOCUS.)

HESTIASIS (*ἑστίασις*) was a species of liturgy, and consisted in giving a feast to one of the tribes at Athens (*τὴν φυλὴν ἐστίην*).¹¹ It was provided for each tribe at the expense of a person belonging to that tribe, who was called *ἐστιάτωρ*.¹² Harpocration¹³ states, on the authority of the speech of Demosthenes against Meidias, that this feast was sometimes provided by persons voluntarily, and at other times by persons appointed by lot; but, as Böekh remarks, nothing of this kind occurs in the speech, and no burden of this description could have

been imposed upon a citizen by lot. The *ἐστιάτορες* were doubtless appointed, like all persons serving liturgies, according to the amount of their property in some regular succession. These banquets of the tribes, called *φυλετικὰ δειπνα* by Athenæus,¹ were introduced for sacred purposes, and for keeping up a friendly intercourse between persons of the same tribe, and must be distinguished from the great feasts of the people, which were defrayed from the Theoria.²

HETÆRÆ (*ἑταῖραι*). The word *ἑταῖρα* originally only signified a friend or companion, but at Athens and other towns of Greece it was afterward used as a euphemistic name for πόρνη, that is, a prostitute or mistress.³ As persons of this class acted a much more prominent and influential part in some of the Greek states than in any of the most demoralized capitals of modern times, we cannot avoid, in this work, to state their position and their relations to other classes of society. But as their conduct, manners, ensnaring artifices, and impositions have at all times and in all countries been the same, we shall confine ourselves to those points which were peculiar to the hetæræ in Greece.

First we may mention that the young men at Athens, previous to their marriage, spent a great part of their time in the company of hetæræ without its being thought blamable in any respect whatever. Marriage, indeed, produced, on the whole, a change in this mode of living of young men, but in innumerable instances even married men continued their intercourse with hetæræ, without drawing upon themselves the censure of public opinion; it seems, on the contrary, evident, from the manner in which Demosthenes⁴ relates the history of Lysias the sophist, that such connexions after marriage were not looked upon as anything extraordinary or inconsistent, provided a man did not offend against public decency, or altogether neglect his legitimate wife and the affairs of his household, as was the case with Alcibiades.⁵ This irregular condition of private life among the Greeks seems to have arisen chiefly from two causes: first, from the great love of sensual pleasures, which the Greeks appear to have possessed even in a much higher degree than most other southern nations; and, secondly, from the generally prevailing indifference between husbands and wives. As regards the latter point, matrimonial life, in the historical times of Greece, was very different from that which we find described in the heroic age. How this change was brought about is not clear; but it can scarcely be doubted that, generally speaking, the Greeks looked upon marriage merely as a means of producing citizens for the state.⁶ The education of women was almost entirely neglected; they were thought a kind of inferior beings, less endowed by nature, and incapable of taking any part in public affairs, and of sympathizing with their husbands. In an intellectual point of view, therefore, they were not fit to be agreeable companions to their husbands, who consequently sought elsewhere that which they did not find at home. It is true, the history of Greece furnishes many pleasing examples of domestic happiness and well-educated women, but these are exceptions, and only confirm the general rule. A consequence of all this was, that women were bound down by rules which men might violate with impunity; and a wife appears to have had no right to proceed against her husband, even if she could prove that he was unfaithful,⁷ although she herself

was subject to severe punishment if she was detected. The isolated testimony of a late writer like Alciphron,¹ who represents a wife threatening her husband that, unless he would give up his dissolute mode of living, she would induce her father to bring a charge against him, can, as Becker² observes, prove nothing, inasmuch as a neglect of family affairs might, in this case, have been the ground for accusation.

But to return to the hetæræ: the state not only tolerated, but protected them, and obtained profit from them. Solon is said to have established a *πορνεῖον* (also called *παιδισκεῖον*, *ἐργαστήριον*, or *οἶκημα*), in which prostitutes were kept,³ and to have built the temple of Aphrodite Pandemus with the profit which had been obtained from them. At a later period the number of such houses at Athens was increased, and the persons who kept them were called *πορνοδοσκοί*, *τενοῖτες*. The conduct of the hetæræ in these houses is described in Athenæus.⁴ All the hetæræ of these houses, as well as individuals who lived by themselves and gained their livelihood by prostitution, had to pay to the state a tax (*πορνικὸν τέλος*),⁵ and the collecting of this tax was every year let by the senate to such persons (*τελῶναι* or *πορνοτελῶναι*)⁶ as were best acquainted with those who had to pay it. The hetæræ were under the superintendence of the *ἀγορανόμοι*,⁷ and their places of abode were chiefly in the Ceramicus.⁸

The number of private hetæræ, or such as did not live in a *πορνεῖον*, was very great at Athens. They were, however, generally not mere prostitutes but acted at the same time as flute or cithara players, and as dancers, and were, as such, frequently engaged to add to the splendour of family sacrifices,⁹ or to enliven and heighten the pleasures of men at their symposia. Their private abodes, where often two, three, and more lived together, were also frequently places of resort for young men.¹⁰ Most of these hetæræ not only took the greatest care to preserve their physical beauties, and to acquire such accomplishments as we just mentioned, but paid considerable attention to the cultivation of their minds. Thus the Arcadian Lasthæaia was a disciple of Plato,¹¹ and Leontion a disciple of Epicurus;¹² Aspasia is even said to have instructed Socrates and Pericles. Whatever we may think of the historical truth of these and similar reports, they are of importance to the historian, inasmuch as they show in what light these hetæræ were looked upon by the ancients. It seems to have been owing especially to their superiority in intellectual cultivation over the female citizens, that men preferred their society and conversation to those of citizens and wives, and that some hetæræ, such as Aspasia, Lais, Phryne, and others, formed connexions with the most eminent men of their age, and acquired considerable influence over their contemporaries. The free and unrestrained conduct and conversation, which were not subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded, were well calculated to ensnare young men, and to draw the attention of husbands away from their wives. Women, however, of the intellect and character of Aspasia, were exceptions; and even Athenian citizens did not scruple to introduce their wives and daughters to her circles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. The disorderly life of the majority of Greek hetæræ

is nowhere set forth in better colours than in the works of the writers who belong to the so-called school of the middle comedy, and in the plays of Plautus and Terence; with which may be compared Demosth., *c. Neær.*, p. 1355, &c., and Athen., book xiii. It was formerly supposed that at Athens a peculiar dress was by law prescribed to the hetærae, but this opinion is without any foundation.¹

The town most notorious in Greece for the number of its hetærae, as well as for their refined manners and beauty, was Corinth.² Strabo³ states that the temple of Aphrodite in this town possessed more than one thousand hetærae, who were called *λεπόδουλοι*, and who were the ruin of many a stranger who visited Corinth.⁴ Hence the name *Κορινθία κόρη* was used as synonymous with *εταίρα*, and *κορινθιάζεσθαι* was equivalent to *εταίρειν*.⁵ At Sparta, and in most other Doric states, the hetærae seem never to have acquired that importance which they had in other parts of Greece, and among the Greeks of Asia Minor.

An important question is who the hetærae generally were. The *λεπόδουλοι* of Corinth were, as their name indicates, slaves belonging to Aphrodite; and their prostitution was a kind of service to the goddess. Those *πόρναι* who were kept at Athens in public houses by the *πορνοδοσκοί*, were generally slaves belonging to these *πορνοδοσκοί*, who compelled them to prostitution for the sake of enriching themselves thereby. The owners of these *πόρναι* were justly held in greater contempt than the unhappy victims themselves. Sometimes, however, they were real prostitutes, who voluntarily entered into a contract with a *πορνοδοσκός*: others, again, were females who had been educated in better circumstances and for a better fate, but had, by misfortunes, lost their liberty, and were compelled by want to take to this mode of living. Among this last class we may also reckon those girls who had been picked up as young children, and brought up by *πορνοδοσκοί* for the purpose of prostitution. An instance of this kind is Nicarete, a freed-woman, who had contrived to procure seven young children, and afterward compelled them to prostitution, or sold them to men who wished to have the exclusive possession of them.⁶ Other instances of the same kind are mentioned in the comedies of Plautus.⁷ Thus all prostitutes kept in public or private houses were either real slaves, or, at least, looked upon and treated as such. Those hetærae, on the other hand, who lived alone, either as mistresses of certain individuals or as common hetærae, were almost invariably strangers or aliens, or freed-women. The cases in which daughters of Athenian citizens adopted the life of an hetæra, as Lamia, the daughter of Cleanor, did,⁸ seem to have occurred very seldom; and whenever such a case happened, the woman was by law excluded from all public sacrifices and offices, sank down to the rank of an alien, and as such, became subject to the *πορνικὸν τέλος*: she generally, also, changed her name. The same degradation took place when an Athenian citizen kept a *πορνείον*, which seems to have occurred very seldom.⁹

ΕΤΑΙΡΗΣΕΩΣ ΓΡΑΦΗ (*εταίρησεως γραφή*). This

action was maintainable against such Athenian citizens as had administered to the unnatural clits of another; but only if after such degradation they ventured to exercise their political franchise, and aspired to bear office in the state. From the law, which is recited by Æschines,¹ we learn that such offenders were capitally punished. The cause was tried by the court of the thesmothetæ.²

ΗΕΤΑΙΡΙΑΙ. (*Vid. ERANOL.*)

HEXAPHORUM. (*Vid. LECTICA.*)

*HIERACION (*λεράκιον*) a plant, of which Dioscorides mentions two kinds, the *τὸ μέγα* and the *τὸ μικρόν*. The former of these Sibthorp makes the same with the *Arnopogon picroides*, Willd., and the latter with the *Scorzonera elongata*, Willd.³

*HIERAX (*λέραξ*), a term applied to various species of *Accipitrina*, or the Hawk tribe. "The scholiast on Apollonius Rhodius says," remarks Adams, "that Callimachus described six species of Hawk; and Aristotle mentions that some had described ten species." Linnæus applies the term rather loosely to three genera, namely, the *Strix*, the *Falco*, and the *Psittacus*. The *λέρακες* of the Greeks belong principally to the second of these. 1. The *φασσoφόνος* is the *Falco palumbarius*, or Goshawk: it is the largest of the genus.⁴ 2. The *αἰσάλλων* of Aristotle was the Merlin, or *Falco aesalon*: it is the smallest of the genus. 3. The *τρυόρχης* of Aristotle, recorded Buteo by Gaza, is the species of Buzzard called Ring-tail in English, namely, the *Circus pygargus*, L. 4. The *υποτρυόρχης*, or *Sub-buteo*, is probably only a variety of the last. 5. The *κίρκος*, or third species of Aristotle, is not satisfactorily determined: Buffon supposes it the Moor Buzzard, or *Falco æruginosus*, L.; but Schneider thinks this point uncertain.⁶ Homer calls it *ἐλαφρότατος πετεηνών*, 'the swiftest of birds.'⁷ 6. The *πέρκος*, or *σπιζας* of Aristotle, in Latin *Accipiter fringillarius*, was most probably the Sparrow-hawk, or *Falco nisus*, L. It is deserving of remark, that the *Nisus* of Ovid⁸ was the Sea Eagle, that of the later classics the Sparrow-hawk. 7. The *χαλκίς*, or *κυμινδής* of Homer, was most probably identical with the *πτύνγξ*, but cannot be otherwise satisfactorily determined.⁹ 8. The *κεγχρίς*, or *κεγχρίνη*, or *κεγχρήν*, or (as we read it in the Aves of Aristophanes) the *κέρχη*, was the same as the *timunculus* of Pliny, namely, the *Falco timunculus*, or Kestrel. 9. The two species named *ἀστερίας* and *πετρύς* by Aristotle¹⁰ cannot be satisfactorily ascertained. 10. The *ἰκτίς* or *ἰκτινός* is the Kite or Gled, namely, the *Milvus iclinus*, Savigny.¹¹

*II. A flying fish mentioned by Oppian and Ælian. None of the commentators can determine exactly what it is.¹²

HIEREION. (*Vid. SACRIFICIUM.*)

*HIEROBOT'ANE (*ιεροβοτάνη*), a name given by Dioscorides and others to the Vervain, as being a plant much used in religious rites (*ιερός*, "sacred," and *βοτάνη*, "plant"). (*Vid. VERBENA.*)¹³

HIERODULOI. (*Vid. HETÆRÆ.*)

HIEROMANTEIA. (*Vid. DIVINATIO*, p. 369.)

HIEROMNEMONES (*ιερομνήμονες*) were the more honourable of the two classes of representatives who composed the Amphictyonic council. An account of them is given under *ΑΜΦΙΚΤΥΟΝΕΣ*, p. 49. We also read of hieromnemones in Grecian states, distinct from the Amphictyonic representatives of this name. Thus the priests of Poseidon, at Megara, were called hieromnemones;¹⁴ and at

Byzantium, which was a colony of Megara, the chief magistrate in the state appears to have been called by this name. In a decree of Byzantium, quoted by Demosthenes,¹ a hieromnemon is mentioned who gives his name to the year; and we also find the same word on the coins of this city.² At Chalcedon, another colony of Megara, a hieromnemon also existed, as is proved by a decree which is still extant.³ An inscription found in Thasos also mentions a hieromnemon who presided over the treasury.⁴

HIERONI/CÆ. (Vid. ATHLETÆ, p. 120.)

HIEROPHANTES. (Vid. ELEUSINIA.)

HIEROPOIOI (*ιεροποιοί*) were sacrificers at Athens, of whom ten were appointed every year, and conducted all the usual sacrifices, as well as those belonging to the quinquennial festivals, with the exception of those of the Panathenæa.⁵ They are frequently mentioned in inscriptions.⁶ The most honourable of these officers were the sacrificers for the revered goddesses or Eumenides (*ιεροποιοί ταῖς σεμναῖς θεαῖς*), who were chosen by open vote, and probably only performed the commencement of the sacrifice, and did not kill the victim themselves.⁷

ἹΕΡΟΣΥΛΙΑΣ ΓΡΑΦΗ (*ιεροσυλίας γραφή*). The action for sacrilege is distinguished from the *κλοπῆς ἱερῶν χρημάτων γραφή*, in that it was directed against the offence of robbery, aggravated by violence and desecration, to which the penalty of death was awarded. In the latter action, on the contrary, the theft and embezzlement, and its subject matter, only were taken into consideration, and the dicasts had a power of assessing the penalty upon the conviction of the offender. With respect to the tribunal before which a case of sacrilege might have been tried, some circumstances seem to have produced considerable differences. The *γραφή* might be preferred to the king archon, who would thereupon assemble the areopagus and preside at the trial, or to one of the thesmothetæ in his character of chief of an ordinary heliastic body; or, if the prosecution assumed the form of an apagoge or ephegesis, would fall within the jurisdiction of the Eleven. Before the first-mentioned court it is conjectured⁸ that the sacrilege of the alleged spoliation, as well as the fact itself, came in question; that the thesmothetæ took cognizance of those cases in which the sacrilege was obvious if the fact were established; and that the Eleven had jurisdiction when the criminal appeared in the character of a common robber or burglar, surprised in the commission of the offence. In all these cases the convict was put to death, his property confiscated, and his body denied burial within the Attic territory. There is a speech of Lysias⁹ extant upon this subject, but it adds little to our knowledge, except that slaves were allowed upon that occasion to appear as informers against their master—a resident alien—and anticipated their emancipation in the event of his conviction.

HILARIA (*ἡλάρια*) seems originally to have been a name which was given to any day or season of rejoicing. The hilaria were, therefore, according to Maximus Monachus,¹⁰ either private or public. Among the former he reckons the day on which a person married, and on which a son was born; among the latter, those days of public rejoicings appointed by a new emperor. Such days were devoted to general rejoicings and public sacrifices,

and no one was allowed to show any traces of grief or sorrow.

But the Romans also celebrated hilaria, as a feria stativa, on the 25th of March, in honour of Cybele, the mother of the gods;¹ and it is probably to distinguish these hilaria from those mentioned above, that Lampridius² calls them *Hilaria Matris Deum*. The day of its celebration was the first after the vernal equinox, or the first day of the year which was longer than the night. The winter, with its gloom, had passed away, and the first day of a better season was spent in rejoicings.³ The manner of its celebration during the time of the Republic is unknown, except that Valerius Maximus⁴ mentions games in honour of the mother of the gods. Respecting its celebration at the time of the Empire we learn from Herodian⁵ that, among other things there was a solemn procession, in which the statue of the goddess was carried, and before this statue were carried the most costly specimens of plate and works of art belonging either to wealthy Romans or to the emperors themselves. All kinds of games and amusements were allowed on this day: masquerades were the most prominent among them, and every one might, in his disguise, imitate whomsoever he liked, and even magistrates.

The hilaria were in reality only the last day of a festival of Cybele, which commenced on the 22d of March, and was solemnized by the Galli with various mysterious rites.⁶ It may also be observed that the hilaria are neither mentioned in the Roman calendar nor in Ovid's Fasti.

*HIMANTOPOUS (*ἡμαντόπους*), a species of bird, which Turner conjectures to be the Red-shank. Gesner, however, prefers the Sea-pie, or Oystercatcher, the *Hemantopus ostralegus*, L.⁷

HIMATION. (Vid. PALLIUM.)

*HINNUS. (Vid. GINNUS.)

*HIPPARCHUS (*ἵππαρχος*), an animal described by Oppian. Probably the same with the *ἱππέλαιος*.⁸

HIPPARMOSTES. (Vid. ARMY, GREEK, p. 98.)

*HIPPELAPHUS (*ἱππέλαφος*), a large animal of the deer, or, rather, antelope kind, mentioned by Aristotle. Cuvier takes it to be the *Capra agagrus* of Pallas, the same as the *Tragelaphus* of Pliny. Buffon makes it to be the *Cerv des Ardennes*. The Greek name means literally "horse-stag."⁹

*HIPPOCAMPUS (*ἱππόκαμπος*), a fabulous animal, described by the ancient poets as a species of Seahorse, having a tail like a fish, on which the seagods ride.—Modern naturalists, however, apply the term to a species of fish, the *Syngnathus Hippocampus*, called in Italian *Cavillo marino*, and in English Seahorse, because its head has some resemblance to that of a horse. It grows to the length of eight or twelve inches.¹⁰

*HIPPOLAPATHUM (*ἱππολάπαθρον*), a plant, a kind of Dock; *Lapathum hortense*. (Vid. LARATHUM.)¹¹

*HIPPOMANES (*ἵππομανές*), a plant, said to grow especially in Arcadia, sought for and eagerly devoured by horses; or, as others say, producing in them raging desire or madness.¹²

*II. A preparation from the *Spurge* or *Euphorbia*, as far, at least, as we can infer from what Theophrastus says of it.¹³

*HIPPOMARATHRUM (*ἵππομάραθρον*). Adams observes that Stackhouse "makes the *ἵππομάραθρον*

1. (Pro Corona, p. 255, 20.—Compare Polyb., iv., 52, § 4.)—2. (Eckhel, Doctr. Num., vol. ii., p. 31, &c.)—3. (Müller, Dor., iii., 9, § 10.)—4. (Büchch, Corp. Inscr., vol. ii., p. 183, 184.)—5. (Pollux, Onom., viii., 107.—Photus, s. v. *ιεροποιοί*.)—6. (Büchch, Corp. Inscr., vol. i., p. 250.)—7. (Demosth., c. Meid., p. 552, 6.—Büchch, Publ. Econ. of Athens, i., p. 288.)—8. (Meier, Att. Proc., 307.)—9. (Pro Callia.)—10. (Schol. ad Dionys. Areopag., Epist., 8.)

1. (Macrob., Sat., i., 21.)—2. (Alexand. Sev., c. 37.)—3. (Flav. Vopisc., Aurelian, c. 1.)—4. (ii., 4, 3.)—5. (i., 10, 11.)—6. (Ovid, Fast., iv., 337, &c.)—7. (Oppian, iii., 251.)—8. (Adams, Append., s. v.)—9. (Donnegan, s. v.—Adams, Append., s. v.)—10. (Elian, N. A., iv., 14.—Adams, Append., s. v.)—11. (Dioscor., ii., 141.)—12. (Theophr., Id., ii., 48.—Schol. ad loc.)—13. (Theophrast., H. P. ix. 15.)

of Theophrastus to be the *Ferula communis*; but Sprengel, in his History of Botany, holds the *l.* of Theophrastus and Hippocrates to be the *Cachrys vicala*. In his edition of Dioscorides, he refers the first species of this author to the *Cachrys Morrisonii*, Vahl. Dierbach agrees with Sprengel respecting the *l.* of Hippocrates.¹¹

HIPPOPE'PÆ (*ἵπποπῆραι*), Saddle-bags. This appendage to the saddle (*vid.* *ΕΠΙΡΙΠΤΗ*) was made of leather (*sacculi scortei*?), and does not appear ever to have changed its form and appearance. Its proper Latin name was *bisaccium*,² which gave origin to *bisaccia* in Italian, and *besace* in French. By the Gauls, saddle-bags were called *bulgæ*,³ because they bulge or swell outward; this significant appellation is still retained in the Welsh *bolgan* or *bulgan*. The more elegant term *hippopera* is adopted by Seneca,⁴ when, in commendation of the habits of frugality, he cites the example of Cato the censor, who rode with saddle-bags for the conveyance of whatever was necessary to him in travelling.

***HIPPOPHÆS** (*ἵπποφάης*), a species of plant. Stackhouse suggests that it is the *Dipsacus fullonum*, but admits that he entertains doubts respecting it. Sprengel, in his History of Botany, holds it to be the *Hippophæis rhamnoides*; but in his edition of Dioscorides he advances what Adams considers the very probable opinion that it is the *Euphorbia spinosa*, or Thorny Spurge.⁵

***HIPPOPHÆSTUM** (*ἵπποφαιστον*), a plant. "Sprengel, in his History of Botany, calls it the *Cnicus stellatus*, but in his edition of Dioscorides he follows Columna in referring it to the *Cirsium stellatum*, or Allion. I am at a loss to say whether or not the latter be a synonyme of the other."⁷

***HIPPOPOTAMOS** (*ἵππος ὁ ποτάμιος*), the River-horse, or *Hippopotamus amphibius*. An accurate description is given by Herodotus, Aristotle, Dioscorides, and other ancient writers.⁸

***HIPPOS**, the Horse. (*Vid.* *Εἶπος*.)

***HIPPOSEL'NON** (*ἵπποσέλινον*), a plant, which all the authorities agree in making the same with the *Smyrniolus olus atrum*, called in English *Alesanders*.⁹

***HIPPOURIS** (*ἵππουρις*), an aquatic plant, the Horse-tail. According to Adams, the first species of Dioscorides would seem to be the *Equisetum fluviatile*, and the other the *E. limosum*, two species of Horse-tail well known in Great Britain. The *ἵππων* of Theophrastus, according to the same authority, is most probably the *Hippuris vulgaris*, or Mare's tail, as Sprengel suggests.¹⁰

***HIPPURUS** (*ἵππουρος*), a species of Fish, the *Coryphæna Hippurus*, L. "Artdi says it is called the Dolphin in England, but this is merely the trivial name given to it by seamen. Dorian, an author quoted by Athenæus, states that it was sometimes called *κορυφαῖνα*, and hence the Linnæan name of it is formed. Coray says it grows to the length of four or five feet."¹¹

***HIRUDO**, the Leech. (*Vid.* *ΒΔΕΛΛΑ*.)

***HIRUNDO** (*χελιδόν*), the Swallow. "Three birds of the Swallow tribe," observes Adams, "are briefly noticed by Aristotle.¹² The first is either the *Hirundo urbica*, the Martin, or *H. rustica*, the Chimney Swallow. *Ælian*¹³ seems to point to the latter.

1. (Hippocrat., Nat. Muller.—Theophrast., H. P., vi., 3.—Dioscor., iii., 75.—Adams, Append., s. v.)—2. (Festus, s. v. *Bulgæ*.)—3. (Petron., Sat., 31.)—4. (Festus, l. c.—Onomast. Gr. Lat.)—5. (Epist., 88.)—6. (Dioscor., iv., 159.—Theophrast., ix., 15.—Adams, Append., s. v.)—7. (Dioscor., iv., 170.—Adams, Append., s. v.)—8. (Herod., ii., 71.—Aristot., H. A., ii., 4.—Dioscor., M. M., ii., 25.—Nicand., Ther., 565.)—9. (Theophrast., H. P., ii., 2.—Id., C. P., vi., 12.—Dioscor., iii., 71.)—10. (Dioscor., iv., 46.—Geopon., ii., 6.—Theophrast., H. P., iv., 10.—Adams, Append., s. v.)—11. (Aristot., H. A., viii., 13.—Plin., H. N., ix., 16.—Id. ib., xxxii., 9.—Adams, Append., s. v.)—12. (H. A., ix., 2.)—13. (N. A., i., 52.)

The second is probably the Swift; and the third the *H. riparia*, or Bank Swallow. Aristotle favours the opinion which received the countenance of Linnæus, but has since been exploded, that swallows hide themselves in holes during the winter, and do not migrate to distant countries. Herodotus states¹ that the swallows do not migrate from Egypt. This would imply that he held that they migrate from other countries. Some have conjectured that Homer meant the Swallow by the bird which he names *ἀνόπαια*, or *πανόπαια*, as some read it.²

HISTOS (*ἱστός*). (*Vid.* *ΜΑΛΥΣ*.)

HYSTRIO, an Actor.

I. GREEK ACTORS (*ὑποκριταί*). It is shown in the articles *CHORUS* and *DIONYSIA* that the Greek drama originated in the chorus which at the festivals of Dionysus danced around his altar, and that at first one person detached himself from the chorus, and, with mimic gesticulation, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person, they were all represented in succession by the same actor, and there was never more than one person on the stage at a time. This custom was retained by Thespis and Phrynichus. But it was clear that if the chorus took an active and independent part in such a play, it would have been obliged to leave its original and characteristic sphere. Æschylus therefore added a second actor, so that the action and the dialogue became independent of the chorus, and the dramatist, at the same time, had an opportunity of showing two persons in contrast with each other on the stage.³ Towards the close of his career, Æschylus found it necessary to introduce a third actor, as is the case in the Agamemnon, Choëphori, and Eumenides.⁴ This number of three actors was also adopted by Sophocles and Euripides, and was but seldom exceeded in any Greek drama. In the *Cedipus in Colonus*, however, which was performed after the death of Sophocles, four actors appeared on the stage at once, and this deviation from the general rule was called *παρὰχορήγημα*.⁵ The three regular actors were distinguished by the technical names of *πρωταγωνιστής*, *δευτεραγωνιστής*, and *τριταγωνιστής*,⁶ which indicated the more or less prominent part which an actor had to perform in the drama. Certain conventional means were also devised, by which the spectators, at the moment an actor appeared on the stage, were enabled to judge which part he was going to perform; thus the protagonists always came on the stage from a door in the centre, the deuteragonistes from one on the right, and the tritagonistes from a door on the left hand side.⁷ The protagonists were the principal hero or heroine of a play, in whom all the power and energy of the drama were concentrated; and whenever a Greek drama is called after the name of one of its personæ, it is always the name of the character which was performed by the protagonistes. The deuteragonistes, in the pieces of Æschylus for two actors, calls forth the various emotions of the protagonists, either by friendly sympathy or by painful tidings, &c. The part of a tritagonistes is represented by some external and invisible power, by which the hero is actuated or caused to suffer. When a tritagonistes was added, the part assigned to him was generally that of an instigator, who was the cause of the sufferings of the protagonistes, while he himself was the least capable of depth of feeling or sympathy. The deuteragonistes, in the dramas for three actors, is generally distinguished by loftiness and warmth of feeling, but has

1. (ii., 48.)—2. (Adams, Append., s. v.)—3. (Aristot., Poet., i., 14.)—4. (Pollux, Onom., iv., 110.)—5. (Pollux, l. c.)—6. (Suidas, s. v. *Τριταγωνιστής*.—Demosth., De Coron., p. 315.—Id., De Fals. Leg., p. 344 and 403.)—7. (Pollux, Onom., iv., 124.)

not its depth and vehemence peculiar to the protagonistes, and thus serves as a foil to set forth the character of the chief hero in its most striking and vivid colours.¹

The female characters of a play were always performed by young men. A distinct class of persons, who made acting on the stage their profession, was unknown to the Greeks during the period of their great dramatists. The earliest and greatest dramatic poets, Thespis, Melanthius, Sophocles, and probably Æschylus also, acted in their own plays, and in all probability as protagonistæ. We also know of several instances in which distinguished Athenian citizens appeared on the stage, and Æschines, the orator, did not scruple to act the part of protagonistes.² These circumstances show that it was by no means thought degrading in Greece to perform on the stage, and that no stigma whatever was attached to the name of a man for his appearing on the stage. Bad actors, however, to whatever station in life they belonged, were not, on that account, spared; and the general mode of showing displeasure on the part of the spectators seems to have been by whistling.³ It appears that when the spectators showed their displeasure in too offensive or insulting a manner, the actors would sometimes attack the most forward of the audience, and quarrels of this kind ended not unfrequently in blows and wounds.⁴ At a later period, however, persons began to devote themselves exclusively to the profession of actors, and distinguished individuals received, even as early as the time of Demosthenes, exorbitant sums for their performances. Various instances are mentioned in Böckh's *Publ. Econ. of Athens*, i., p. 161, &c. At the time when Greece had lost her independence, we find regular troops of actors, who were either stationary in particular towns of Greece, or wandered from place to place, and engaged themselves wherever they found it most profitable. They formed regular companies or guilds, with their own internal organization, with their common officers, property, and sacra. We possess a number of inscriptions belonging to such companies, with decrees to honour their superiors, or to declare their gratitude to some king to whom they had been engaged. But these actors are generally spoken of in very contemptuous terms; they were, perhaps, in some cases slaves or freedmen, and their ordinary pay seems to have been seven drachmæ for every performance.⁵

II. ROMAN ACTORS. The word *histriones*, by which the Roman actors were called, is said to have been formed from the Etruscan *hister*, which signified a ludio or dancer.⁶ In the year 364 B.C. Rome was visited by a plague, and as no human means could stop it, the Romans are said to have tried to avert the anger of the gods by scenic plays (*ludi scenici*), which until then had been unknown to them; and as there were no persons at Rome prepared for such performances, the Romans sent to Etruria for them. The first *histriones* who were thus introduced from Etruria were dancers, and performed their movements to the accompaniment of a flute. That the art of dancing to this accompaniment should have been altogether unknown to the Romans is hardly credible; the real secret must have been in the mode of dancing, that is, in the mimic representations of the dancers, such as they

are described by Dionysius¹ and Appian.² That the Etruscans far excelled the Romans in these mimic dances is more than probable; and we find that in subsequent times, also, a fresh supply of Etruscan dancers (*histriones*) came to Rome.³ Roman youths afterward not only imitated these dancers, but also recited rude and jocose verses adapted to the movements of the dance and the melody of the flute. This kind of amusement, which was the basis of the Roman drama, remained unaltered until the time of Livius Andronicus, who introduced a slave upon the stage for the purpose of singing or reciting the recitative, while he himself performed the appropriate dance and gesticulation. (*Vid. CANTICUM.*) A farther step in the development of the drama, which is likewise ascribed to Livius, was, that the dancer and reciter carried on a dialogue, and acted a story with the accompaniment of the flute.⁴ The name *histrion*, which originally signified a dancer, was now applied to the actors in the drama. The *atellane* were played by freeborn Romans, while the regular drama was left to the *histriones*, who formed a distinct class of persons. It is clear, from the words of Livy, that the *histriones* were not citizens; that they were not contained in the tribes, nor allowed to be enlisted as soldiers in the Roman legions; and that, if any citizen entered the profession of *histrion*, he on this account was excluded from his tribe. Niebuhr⁵ thinks differently, but does not assign any reason for his opinion. The *histriones* were therefore always either freedmen, strangers, or slaves, and many passages of Roman writers show that they were generally held in great contempt.⁶ Towards the close of the Republic, it was only such men as Cicero, who, by their Greek education, raised themselves above the prejudices of their countrymen, and valued the person no less than the talents of an Æsop and Roscius.⁷ But, notwithstanding this low estimation in which actors were generally held, distinguished individuals among them attracted immense crowds to the theatres, and were exorbitantly paid.⁸ Roscius alone received every day that he performed one thousand denarii, and Æsopus left his son a fortune of 200,000 sesterces, which he had acquired solely by his profession.⁹ The position of the *histriones* was in some respects altered during the Empire. By an ancient law the Roman magistrates were empowered to coerce the *histriones* at any time and in any place, and the prætor had the right to scourge them (*jus virgarum in histriones*). This law was partly abolished by Augustus, in as far as he did entirely away with the *jus virgarum*, and confined the interference of the magistrates to the time when, and the place where (*ludi et scena*) the actors performed.¹⁰ But he nevertheless inflicted very severe punishments upon those actors who, either in their private life or in their conduct on the stage, committed any impropriety.¹¹ After these regulations of Augustus, the only legal punishments that could be inflicted upon actors for improper conduct seem to have been imprisonment and exile.¹² The *jus virgarum* is indeed said to have been restored to the prætor by a law of Augustus himself,¹³ not expressly, but by the interpretation put upon this law by the jurists. But this interpretation can not have become valid till after the reign of Tiberius, of whom it is clearly stated that he refused to restore the *jus virgarum*, because it had been abolished by his predecessor.¹⁴ These circumstances,

1. (Müller, *Hist. of Gr. Lit.*, i., p. 305, &c.—Compare Böttiger, “De Actoribus Primarum, Secundæ et Tert. Partium.”)—2. (Demosth., i. c.)—3. (Demosth., De Coron., p. 315.)—4. (Demosth., De Coron., p. 314.—Id., De Fals. Leg., p. 449.—Andocid., c. Alcib., p. 121.—Athen., ix., p. 406.)—5. (Lucian, *Icaromen.*, 29.—Id., De Merced. Cond., 5.—Theophrast., *Charact.*, 6.—Compare Müller, *Hist. of Greek Lit.*, i., p. 304, &c.—Becker, *Charikles*, ii., p. 274.—Bode, *Geschichte der dram. Dichtkunst der Hellenen*, 2 vols., 1839, 1840.)—6. (Liv., vii., 2.—Val. Max., 4, 4.—Compare Plut., *Quest. Rom.*, p. 289, C.)

Nep., *Præf.*, 5.—Sueton., *Tib.*, 35.)—7. (Macrob., *Sat.*, ii., 10.)—8. (Cic. in *Verr.*, iv., 16.)—9. (Macrob., i. c.)—10. (Tacit., *Ann.*, i., 77.)—11. (Suet., *Octav.*, 45.)—12. (Tacit., *Ann.*, iv., 14.—Id. ib., xii., 28.)—13. (Paull., *Sent.*, v., tit. 25.)—14. (Tacit., *Ann.*, i., 77.)

and the favour of the emperors, increased the arrogance and the loose conduct of the histriones, and the theatres were not seldom the scenes of bloody fights. Hence Tiberius, on one occasion, found himself obliged to expel all histriones from Italy;¹ but they were recalled and patronised by his successor.² Some of the later emperors were exceedingly fond of histriones, and kept them for their private amusement (*histriones aulici*).³ They performed at the repasts of the emperors,⁴ and were occasionally allowed, also, to play in the theatres before the people (*publicabantur*). In the Digest⁵ we read that all actors were infamous. From the time of Tacitus the word *histrion* was used as synonymous with *pantomimus*.⁶

Respecting the ordinary pay which common actors received during the time of the Republic, nothing is known. The pay itself was called *lucar*,⁷ which word was perhaps confined originally to the payment made to those who took part in the religious services celebrated in groves. In the times of the Empire it seems that five denarii,⁸ or, according to others,⁹ seven drachmæ, were the common pay for a *histrion* for one performance. Several emperors found it necessary to restrict the practice of giving immoderate sums to actors.¹⁰ The Emperor M. Antoninus, who was fond of all histrionic arts, ordained that every actor should receive five aurei, and that no one who gave or conducted theatrical representations should exceed the sum of ten aurei.¹¹ But it is not clear whether in this regulation the payment for one or more performances is to be understood. These sums were either paid by those who engaged the actors to play for the amusement of the people, or from the *fiscus*.¹² Besides their regular pay, however, skilful *histriones* received from the people gold and silver crowns, which were given or thrown to them upon the stage.¹³

HOLOSPHYRATON. (*Vid. BRONZE*, p. 77.)

HOMOIOI. (*Vid. CIVITAS*, GREEK, p. 260.)

HONORARIA ACTIO. (*Vid. ACTIO*, p. 17.)

HONORARIUM. (*Vid. ADVOCATUS*, CINCIA LEX.)

HONORARIUM JUS. (*Vid. EDICTUM*.)

HONORES. Cicero¹⁴ speaks of the "*honores populi*," and Horace¹⁵ of the *populus*

"*qui stultus honores*

Sepe dat indignis."

In both passages the word "*honores*" means the high offices of the state to which qualified individuals were called by the votes of the Roman citizens. Cicero calls the quaestorship "*honor*,"¹⁶ and the words "*magistratus*" and "*honores*" are sometimes coupled together. The capacity of enjoying the honores was one of the distinguishing marks of citizenship. (*Vid. CIVITAS*.)

There appears to be no exact definition of honor earlier than in the jurists whose writings are excerpted in the Digest. "*Honor municipalis*" is defined to be "*administratio reipublicæ cum dignitatis gradu, sive cum sumptu, sive sine erogatione contingens*." Munus was either publicum or privatum. A publicum munus was concerned about administration (*in administranda republica*), and was attended with cost (*sumptus*), but not with rank (*dignitas*). "*Honor*" was properly said "*deferri*," "*dari*;" munus was said "*imponi*." Cicero¹⁷ uses the phrase

"*honoribus et reipublicæ muneribus perfunctum*" to signify one who has attained all the honours that his state can give, and discharged all the duties which are owed by a citizen. A person who held a magistratus might be said to discharge munera, but only as incident to the office (*magnificentissimo munere adilitatis perfunctus*),¹ for the office itself was the honor. Such munera as these were public games and other things of the kind.²

HOPLI'TAI. (*Vid. ARMA*, p. 94; *ARMV*, GREEK, p. 99.)

HOPLOMACHI. (*Vid. GLADIATORES*, p. 476.)

HORA (*ώρα*), in the signification of hour, that is, the 12th part of the natural day, did not come into general use among the ancients until about the middle of the second century B.C. The equinoctial hours, though known to astronomers and philosophers, were not used in the affairs of common life till towards the end of the fourth century A.D. As the division of the natural day into twelve equal parts, both in summer and winter, rendered the duration of the hours longer or shorter according to the different seasons of the year, it is not easy, with accuracy, to compare or reduce the hours of the ancients to our equinoctial hours. The hours of an ancient day would only coincide with the hours of our day at the two equinoxes. (*Vid. DIES* and *HOLOGIUM*.) As the duration of the natural day, moreover, depends on the polar altitude of a place, our natural days would not coincide with the natural days in Italy or Greece. Ideler, in his *Handbuch der Chronologie*, has given the following approximate duration of the natural days at Rome in the year 45 B.C., which was the first after the new regulation of the calendar by J. Cæsar; the length of the days is only marked at the eight principal points in the apparent course of the sun.

Days of the year. 45 B.C.	Their duration in equinoctial hours.
Dec. 23	8 hours 54 minutes
Feb. 6	9 " 50 "
March 23	12 " 0 "
May 9	14 " 10 "
June 25	15 " 6 "
August 10	14 " 10 "
Sept. 25	12 " 0 "
Nov. 9	9 " 50 "

The following table contains a comparison of the hours of a Roman natural day, at the summer and winter solstice, with the hours of our day.

SUMMER SOLSTICE.			
Roman Hours.		Modern Hours.	
1st hour	4 o'clock, 27 minutes, 0 seconds.		
2d "	5 " 42 " 30 "		
3d "	6 " 58 " 0 "		
4th "	8 " 13 " 30 "		
5th "	9 " 29 " 0 "		
6th "	10 " 44 " 30 "		
7th "	12 " 0 " 0 "		
8th "	1 " 15 " 30 "		
9th "	2 " 31 " 0 "		
10th "	3 " 46 " 30 "		
11th "	5 " 2 " 0 "		
12th "	6 " 17 " 30 "		
End of the day	7 " 33 " 0 "		

WINTER SOLSTICE.

Roman Hours.		Modern Hours.	
9th hour	1 o'clock,	29 minutes,	0 seconds.
10th "	2 "	13 "	30 "
11th "	2 "	58 "	0 "
12th "	3 "	42 "	30 "
End of the day	4 "	27 "	0 "

The custom of dividing the natural day into twelve equal parts or hours lasted, as we have observed, till a very late period. The first calendarium in which we find the duration of day and night marked according to equinoctial hours, is the Calendarium rusticum Farnesianum.¹

Another question which has often been discussed is whether, in such expressions as *prima, altera, tertia hora*, &c., we have to understand the hour which is passing, or that which has already elapsed. From the construction of ancient sundials, on which the hours are marked by eleven lines, so that the first hour had elapsed when the shadow of the gnomon fell upon the first line, it might seem as if *hora prima* meant after the lapse of the first hour. But the manner in which Martial,² when describing the various purposes to which the hours of the day were devoted by the Romans, speaks of the hours, leaves no doubt that the expressions *prima, altera, tertia hora*, &c., mean the hour which is passing, and not that which has already elapsed.³

HORDEARIUM ÆS. (*Vid. ÆS HORDEARIUM.*) HOPOI (*ῥοποι*) were stone tablets or pillars put up on mortgaged houses and lands at Athens, upon which the debt and the creditor's name were inscribed, and also the name of the archon eponymus in whose year the mortgage had been made.⁴ The following inscription upon an *ῥος* found at Acharnæ is taken from Böckh:⁵ *Ἐπὶ Θεοφράστου ἀρχοντος, ῥος χωρίου τιμῆς ἐνοφελειμένης Φανοστράτῳ Παιανί (ἐστὶ) xx, that is, διαχιλίων δραχμῶν.* It appears that he estate had been bought of Phanostratus, but that the purchase-money, instead of being paid, was allowed to remain on mortgage.

When the estate of an orphan was let by the archon and his guardian (*vid. ΕΠΙΤΡΟΠΟΣ*), the person to whom it was let was obliged to hypothecate a sufficient piece of ground or other real property, which was called *ἀποτίμημα*: and upon this an *ῥος* was placed, bearing an inscription to that effect, as in the following example, which is taken from an *ῥος* found upon the plain of Marathon: *Ῥος χωρίου καὶ οἰκίας ἀποτίμημα παιδὶ ὀρφανῷ Διογείτονος Προβαλίστου.* *Ῥοι* were also placed upon houses and lands on account of money due to a husband for the dowry of his wife,⁷ and also upon the property which a husband was obliged to give as a security for the dowry which he received with his wife.⁸ (*Vid. DOS, GREEK, p. 379.*)

The practice of placing these *ῥοι* upon property was of great antiquity at Athens; it existed before the time of Solon, who removed all stones standing upon estates when he released or relieved the debtors.⁹

HOROLOGIUM (*ὥρολόγιον*) was the name of the various instruments by means of which the ancients measured the time of the day and night. The earliest and simplest horologia of which mention is made, were called *πῶλος* and *γνώμων*. Herodotus¹⁰ ascribes their invention to the Babylonians; Phavorinus¹¹ to Anaximander; and Pli-

ny¹ to his disciple Anaximenes. Herodotus mentions the *πῶλος* and *γνώμων* as two distinct instruments. Both, however, divided the day into twelve equal parts, and were a kind of sundial. The *γνώμων*, which was also called *στοιχείον*, was the more simple of the two, and probably the more ancient. It consisted of a staff or pillar standing perpendicularly, in a place exposed to the sun (*σκιῶθρον*), so that the length of its shadow might be easily ascertained. The shadow of the gnomon was measured by feet, which were probably marked on the place where the shadow fell.² The gnomon is almost without exception mentioned in connexion with the *δεῖπνον* or the bath; and the time for the former was towards sunset, or at the time when the shadow of the gnomon measured ten or twelve feet.³ The longest shadow of the gnomon, at sunrise and sunset, was generally 12 feet, but in some cases 24 feet, so that at the time of the *δεῖπνον* it was 20 feet.⁴ The time for bathing was when the gnomon threw a shadow of six feet.⁵ In later times the name gnomon was applied to any kind of sundial, especially its finger which threw the shadow, and thus pointed to the hour. Even the clepsydra is sometimes called gnomon.⁶

The gnomon was evidently a very imperfect instrument, and it was impossible to divide the day into twelve equal spaces by it. This may be the reason that we find it only used for such purposes as are mentioned above. The *πῶλος* or *ἡλιότροπον*, on the other hand, seems to have been a more perfect kind of sundial; but it appears, nevertheless, not to have been much used, as it is but seldom mentioned.⁷ It consisted of a basin (*λεκάνη*), in the middle of which the perpendicular staff or finger (*γνώμων*) was erected, and in it the twelve parts of the day were marked by lines.⁸

Another kind of horologium was the *clepsydra* (*κλεψύδρα*). It derived its name from *κλέπτειν* and *ὕδωρ*, as in its original and simple form it consisted of a vessel with several little openings (*τρύπηματα*) at the bottom, through which the water contained in it escaped, as it were, by stealth. This instrument seems at first to have been used only for the purpose of measuring the time during which persons were allowed to speak in the courts of justice at Athens. The time of its invention or introduction is not known, but at the time of Aristophanes⁹ it appears to have been in common use. Its form and construction may be seen very clearly from a passage of Aristotle.¹⁰ The clepsydra was a hollow globe, probably somewhat flat at the top part, where it had a short neck (*αὐλός*), like that of a bottle, through which the water was poured into it. This opening might be closed by a lid or stopper (*πίσω*), to prevent the water running out at the bottom. The clepsydra which Aristotle had in view was probably not of glass or of any transparent material, but of bronze or brass, so that it could not be seen in the clepsydra itself what quantity of water had escaped. As the time for speaking in the Athenian courts was thus measured by water, the orators frequently use the term *ὕδωρ* instead of the time allowed to them (*ἐν τῷ ὕδωρ* *ὑδάτι*).¹¹ Æschines,¹² when describing the order in which the several parties were allowed to speak, says that the first water was given to the accuser, the second to the accused, and the third to the judges. An especial

where (ὁ ἐφ' ὕδαρ) was appointed in the courts for the purpose of watching the clepsydra, and stopping it when any documents were read, whereby the speaker was interrupted; and it is to this officer that Demosthenes¹ calls out, *ὅτι ἐπιλαβε τὸ ὕδαρ*. The time, and, consequently, the quantity of water allowed to a speaker, depended upon the importance of the case; and we are informed that in a *γραφὴ παραπροσβείας* the water allowed to each party amounted to eleven amphoræ,² whereas in trials concerning the right of inheritance only one amphora was allowed.³ Those actions in which the time was thus measured to the speakers are called by Pollux⁴ *δίκαι πρὸς ὕδαρ*: others are termed *δίκαι ἄνευ ὕδατος*, and in these the speakers were not tied down to a certain space of time. The only instance of this kind of actions of which we know is the *γραφὴ κακώσεως*.⁵

The clepsydra used in the courts of justice was, properly speaking, no horologium; but smaller ones, made of glass, and of the same simple structure, were undoubtedly used very early in families for the purposes of ordinary life, and for dividing the day into twelve equal parts. In these glass clepsydra the division into twelve equal parts must have been visible, either on the glass globe itself, or in the basin into which the water flowed. These instruments, however, did not show the time quite correctly all the year round; first, because the water ran out of the clepsydra sometimes quicker and sometimes slower, according to the different temperature of the water;⁶ and, secondly, because the length of the hours varied in the different seasons of the year. To remove the second of these defects, the inside of the clepsydra was covered with a coat of wax during the shorter days, and when they became longer the wax was gradually taken away again.⁷ Plato is said to have used a *νυκτερινὸν ὁρολόγιον* in the shape of a large clepsydra, which indicated the hours of the night, and seems to have been of a complicated structure.⁸ This instance shows that at an early period improvements were made on the old and simple clepsydra. But all these improvements were excelled by the ingenious invention of Ctesibius, a celebrated mathematician of Alexandria (about 135 B.C.). It is called *ὁρολόγιον ὑδραυλικόν*, and is described by Vitruvius.⁹ Water was made to drop upon wheels, which were thereby turned. The regular movement of these wheels was communicated to a small statue, which, gradually rising, pointed with a little stick to the hours marked on a pillar which was attached to the mechanism. It indicated the hours regularly throughout the year, but still required to be often attended to and regulated. This complicated clepsydra seems never to have come into general use, and was probably only found in the houses of very wealthy persons. The sundial or gnomon, and a simpler kind of clepsydra, on the other hand, were much used down to a very late period. The twelve parts of the day were not designated by the name *ὥρα* until the time of the Alexandrian astronomers, and even then the old and vague divisions, described in the article *DIES*, were preferred in the affairs of common life. At the time of the geographer Hipparchus, however (about 150 B.C.), it seems to have been very common to reckon by hours.¹⁰

The first horologium with which the Romans became acquainted was a sundial (*solarium*, or *horologium sciothericum*, and was, according to some writers, brought to Rome by Papirius Cursor twelve

years before the war with Pyrrhus, and placed before the temple of Quirinus; others stated that it was brought to Rome at the time of the first Punic war, by the consul M. Valerius Messala, and erected on a column behind the Rostra. But this solarium, being made for a different meridian, did not show the time at Rome correctly. Ninety-nine years afterward, the censor Q. Marcius Philippus erected by the side of the old solarium a new one, which was more carefully regulated according to the meridian of Rome. But as sundials, however perfect they might be, were useless when the sky was cloudy, P. Scipio Nasica, in his censorship, 159 B.C., established a public clepsydra, which indicated the hours both of day and night. This clepsydra was in after times generally called solarium.¹ The word *hora* for hour was introduced at Rome at the time when the Romans became acquainted with the Greek horologia, and was, in this signification, well known at the time of Plautus.² After the time of Scipio Nasica, several horologia, chiefly solaria, seem to have been erected in various public places at Rome. A magnificent horologium was erected by Augustus in the Campus Martius. It was a gnomon in the shape of an obelisk; but Pliny³ complains that in the course of time it had become incorrect. Another horologium stood in the Circus Flaminius.⁴ Sometimes solaria were attached to the front side of temples and basilicae.⁵ The old solarium which had been erected behind the Rostra seems to have existed on that spot till a very late period, and it would seem that the place was called *ad Solarium*, so that Cicero uses this expression as synonymous with Rostra or Forum.⁶ Horologia of various descriptions seem also to have been commonly kept by private individuals;⁷ and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty was to announce the hours of the day to their masters.⁸

From the number of solaria which have been discovered in modern times in Italy, we must infer that they were very generally used among the ancients. The following woodcut represents one of the simplest horologia which have been discovered; it seems to bear great similarity to that, the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, among the ruins of an ancient villa, and is described by Gio. Luca Zuzzeri, in a work entitled *D'una antica villa scoperta sul dosso del Tuscolo, e d'un antico orologio a sole*, Venezia, 1746; and by G. H. Martini, in his *Abhandlung von den Sonnenuhren der Alten* Leipzig, 1777, p. 49, &c.

The following woodcut shows the same solarium as restored by Zuzzeri.

1. (c. Steph., 1, p. 1103.)—2. (Æschin., De Fals. Leg., § 126.)—3. (Demosth., c. Macart., p. 1052.)—4. (viii., 113.)—5. (Harpocreat., s. v. *Κακώσις*.)—6. (Athen., ii., p. 42.—Plut., Quæst. Nat., c. 7.)—7. (Æn. Tact., c. 22.)—8. (Athen., iv., p. 174.)—9. (ix., 9.—Compare Athen., i. c.)—10. (Compare Becker, *Charikles*, ii., p. 490, &c.)

1. (Plin. H. N., vii., 60.—Censorin., De Die Nat., c. 23.)—2. (Pseudol., V., ii., 10.)—3. (H. N., xxxvi., 10.)—4. (Vitruv., ix., 9.)—5. (Varro, De Ling. Lat., v., 2.—Gruter, Inscr., vi., 6.)—6. (Pro Quint., 18.—ad Herenn., iv., 10.)—7. (Cic. ad Fam., xvi., 18.)—8. (Juv., x., 215.—Mart. vi., 67.—Petron., 26.)

The breadth as well as the height (A O and P A) are somewhat more than eight inches, and the length (A B) a little more than sixteen inches. The surface (A O R B) is horizontal. S P Q T is the basis of the solarium, which originally was probably erected upon a pillar. Its side, A S T B, inclines somewhat towards the basis. This inclination was called *ἐγκλίμα*, or *inclinatio solarii* and *enclima succisum*,¹ and shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about 40° 43', which coincides with the latitude of Tuscolum. In the body of the solarium is the almost spherical excavation H K D M I F N, which forms a double hemicyclicum (*hemicyclicum excavatum ex quadrato*).² Within this excavation the eleven hour-lines are marked, which pass through three semicircles, H L N, K E F, and D M I. The middle one, K E F, represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the two other curves somewhat smaller. The ten middle parts, or hours in each of the three curves, are all equal to one another; but the two extreme ones, though equal to each other, are by one fourth smaller than the rest. In the middle, G, of the curve D K H N I J, there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible. In the lead by means of which it was fixed. It must have stood in a perpendicular position upon the surface A B R O, and at a certain distance from the surface it must have turned in a right angle above the spheric excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the above woodcut. *Vid.* the description of another solarium in G. H. Martini's *Antiquorum Monumentorum Sylloge*, p. 95, &c.

Clepsydræ were used by the Romans in their camps, chiefly for the purpose of measuring accurately the four vigiliæ into which the night was divided.³

The custom of using clepsydræ as a check upon the speakers in the courts of justice at Rome, was introduced by a law of Cn. Pompeius, in his third consulship.⁴ Before that time the speakers had been under no restrictions, but spoke as long as they deemed proper. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny⁵ states that on one important occasion he spoke for nearly five hours; ten large clepsydræ had been granted to him by the judges, but the case was so important that four others were added.⁶ Pompeius, in his law, is said to have limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours.⁷ This, however, as is

clear from the case of Pliny and others, was not observed on all occasions, and we must suppose that it was merely the intention of Pompeius to fix the proportions of the time to be allowed to each party, that is, that in all cases the accuser should only have two thirds of the time allowed to the accused. This supposition is supported by a case mentioned by Pliny,⁸ where, according to law (*e lege*), the accuser had six hours, while the accused had nine. An especial officer was at Rome, as well as at Athens, appointed to stop the clepsydra during the time when documents were read.⁹

HORREA'RIL. (*Vid.* HORREUM.)

HORREUM (*ὄρειον, σιτοφυλάκειον, ἀποθήκη*) was, according to its etymological signification, a place in which ripe fruits, and especially corn, were kept, and thus answered to our granary.³ During the Empire, the name horreum was given to any place destined for the safe preservation of things of any kind. Thus we find it applied to a place in which beautiful works of art were kept;⁴ to cellars (*horrea subterranea, horrea vinaria*); to depôts for merchandise, and all sorts of provisions (*horreum penarium*).⁵ Seneca⁶ even calls his library a horreum. But the more general application of the word horreum was to places for keeping fruit and corn; and, as some kinds of fruit required to be kept more dry than others, the ancients had, besides the horrea subterranea, or cellars, two other kinds, one of which was built, like every other house, upon the ground; but others (*horrea pensilia* or *sublimia*) were erected above the ground, and rested upon posts or stone pillars, that the fruits kept in them might remain dry.⁸

From about the year 140 A.D., Rome possessed two kinds of public horrea. The one class consisted of buildings in which the Romans might deposit their goods, and even their money, securities, and other valuables,⁹ for which they had no safe place in their own houses. This kind of public horrea is mentioned as early as the time of Antoninus Pius,¹⁰ though Lampridius¹¹ assigns their institution to Alexander Severus.¹² The officers who had the superintendence of these establishments were called *horrearii*. The second and more important class of horrea, which may be termed public granaries, were buildings in which a plentiful supply of corn was constantly kept at the expense of the state, and from which, in seasons of scarcity, the corn was distributed among the poor, or sold at a moderate price. The first idea of building such a public granary arose with C. Sempronius Gracchus (*lex Sempronia frumentaria*); and the ruins of the great granary (*horrea populi Romani*) which he built were seen down to the sixteenth century between the Aventine and the Monte Testaceo.¹³

The plan of C. Gracchus was followed out and carried farther by Clodius Pompey, and several of the emperors; and during the Empire we thus find a great number of public horrea which were called after the names of their founders, *e. g.*, horrea Aniceti, Vargunteii, Seiani, Augusti, Domitiani, &c. The manner in which corn from these granaries was given to the people differed at different times.¹⁴

ture of the Greeks is very limited. We must not look for information respecting their gardens to the accounts which we find in Greek writers of the gardens of Alcinoüs, filled with all manner of trees, and fruit, and flowers, and adorned with fountains,¹ or of those of the Hesperides,² or of the paradises of the Persian satraps, which resembled our parks;³ for the former gardens are only imaginary, and the manner in which the paradises are spoken of by Greek writers shows that they were not familiar with anything of the kind in their own country. In fact, the Greeks seem to have had no great taste for landscape beauty, and the small number of flowers with which they were acquainted afforded but little inducement to ornamental horticulture.

The sacred groves were cultivated with special care. They contained ornamental and odoriferous plants and fruit-trees, particularly olives and vines.⁴ Sometimes they were without fruit-trees.⁵

The only passage in the earlier Greek writers, in which flower-gardens appear to be mentioned, is one in Aristophanes, who speaks of *κῆποις ἐνδοτεῖς*.⁶ At Athens the flowers most cultivated were probably those used for making garlands, such as violets and roses. In the time of the Ptolemies the art of gardening seems to have advanced in the favourable climate of Egypt, so far that a succession of flowers was obtained all the year round.⁷ Longus⁸ describes a garden containing every production of each season; "in spring, roses, lilies, hyacinths, and violets; in summer, poppies, wild pears (*ἀχράδες*), and all fruit; in autumn, vines and figs, and pomegranates and myrtles." That the Greek idea of horticultural beauty was not quite the same as ours, may be inferred from a passage in Plutarch, where he speaks of the practice of setting off the beauties of roses and violets by planting them side by side with leeks and onions.⁹ Becker considers this passage a proof that flowers were cultivated more to be used for garlands than to beautify the garden.¹⁰

II. ROMAN GARDENS.—The Romans, like the Greeks, laboured under the disadvantage of a very limited flora. This disadvantage they endeavoured to overcome, by arranging the materials they did possess in such a way as to produce a striking effect. We have a very full description of a Roman garden in a letter of the younger Pliny, in which he describes his Tuscan villa.¹¹ In front of the *porticus* there was generally a *xystrus*, or flat piece of ground, divided into flower-beds of different shapes by borders of box. There were also such flower-beds in other parts of the garden. Sometimes they were raised so as to form terraces, and their sloping sides planted with evergreens or creepers. The most striking features of a Roman garden were lines of large trees, among which the plane appears to have been a great favourite, planted in regular order; alleys or walks (*ambulationes*) formed by closely-clipped hedges of box, yew, cypress, and other evergreens; beds of acanthus, rows of fruit-trees, especially of vines, with statues, pyramids, fountains, and summer-houses (*diæta*). The trunks of the trees and the parts of the house, or any other buildings which were visible from the garden, were often covered with ivy.¹² In one respect the Roman taste differed most materially from that of the present day, namely, in their fondness for the *ars topiaria*, which consisted in tying,

twisting, or cutting trees and shrubs (especially the box) into the figures of animals, ships, letters, &c. The importance attached to this part of horticulture is proved, not only by the description of Pliny, and the notices of other writers,¹ but also by the fact that *topiarius* is the only name used in good Latin writers for the ornamental gardener. Cicero² mentions the *topiarius* among the higher class of slaves.

Attached to the garden were places for exercise, the *gestatio* and *hippodromus*. The *gestatio* was a sort of avenue, shaded by trees, for the purpose of taking gentle exercise, such as riding in a litter.³ The *hippodromus* (not, as one reading gives the word in Pliny, *hypodromus*) was a place for running or horse exercise, in the form of a circus, consisting of several paths divided by hedges of box, ornamented with topiarian work, and surrounded by large trees.⁴

The flowers which the Romans possessed, though few in comparison with the species known to us, were more numerous than some writers have represented; but the subject still requires investigation. Their principal garden-flowers seem to have been violets and roses, and they also had the crocus, narcissus, lily, gladiolus, iris, poppy, amaranth, and others.

Conservatories and hot-houses are not mentioned by any writer earlier than the first century of our æra. They are frequently referred to by Martial.⁵ They were used both to preserve foreign plants, and to produce flowers and fruit out of season. Columella⁶ and Pliny⁷ speak of forcing-houses for grapes, melons, &c. In every garden there was a space set apart for vegetables (*olera*).

Flowers and plants were also kept in the central space of the peristyle (*vid.* HOUSE), on the roofs, and in the windows of the houses. Sometimes, in a town, where the garden was very small, its walls were painted in imitation of a real garden, with trees, fountains, birds, &c., and the small area was ornamented with flowers in vases. A beautiful example of such a garden was found at Pompeii.⁸

An ornamental garden was also called *viridarium*,⁹ and the gardener *topiarius* or *viridarius*. The common name for a gardener is *villicus* or *cultor hortorum*. We find, also, the special names *vinitor*, *olitor*. The word *hortulanus* is only of late formation. The *aquarius* had charge of the fountains both in the garden and in the house.¹⁰

HOSFES. (*Vid.* HOSPITIUM.)

HOSPITIUM (*ξενία, ποσξενία*). Hospitality is one of the characteristic features of almost all nations previous to their attaining a certain degree of civilization. In civilized countries the necessity of general hospitality is not so much felt; but at a time when the state or the laws of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was hallowed by religion, it was, to some degree, observed to the latest period of their existence, and acquired a political importance which it has never had in any other state. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals or between two states (*Hospitalium privatum* and *hospitium publicum*, *ξενία* and *ποσξενία*).

In ancient Greece, the stranger, as such (*ξένος* and *hostis*), was looked upon as an enemy;¹ but whenever he appeared among another tribe or nation without any sign of hostile intentions, he was considered not only as one who required aid, but as a suppliant, and Zeus was the protecting deity of strangers and suppliants (*Ζεὺς ξένιος* and *ἱερέσιος*²). This religious feeling was strengthened by the belief that the stranger might possibly be a god in disguise.³ On his arrival, therefore, the stranger, of whatever station in life he might be, was kindly received, and provided with everything necessary to make him comfortable, and to satisfy his immediate wants. The host did not inquire who the stranger was, or what had led him to his house, until the duties of hospitality were fulfilled. During his stay, it was a sacred duty of his host to protect him against any persecution, even if he belonged to a politically hostile race, so that the host's house was a perfect asylum to him. On his departure he was dismissed with presents and good wishes.⁴ It seems to have been customary for the host, on the departure of the stranger, to break a die (*ἀσπράγαν*) in two, one half of which he himself retained, while the other half was given to the stranger; and when at any future time they or their descendants met, they had a means of recognising each other, and the hospitable connexion was renewed.⁵ Hospitality thus not only existed between the persons who had originally formed it, but was transferred as an inheritance from father to son. To violate the laws of hospitality was a great crime and an impiety, and was punished by men as well as gods (*δίκαι κακοξενίας*⁶). Instances of such hereditary connexions of hospitality are mentioned down to a very late period of Greek history; and many towns, such as Athens, Corinth, Byzantium, Phasis, and others, were celebrated for the hospitable character of their citizens.⁷ But, when a more regular and frequent intercourse among the Greeks began to be established, it was impossible to receive all these strangers in private houses. This naturally led to the establishment of inns (*πανδοκτεῖον, καταλύμιον, κατάλυσος*), in which such strangers as had no hospitable connexions found accommodation. For those occasions, on which numerous visitors flocked to a particular place for the purpose of celebrating one of the great or national festivals, the state or the temple provided for the accommodation of the visitors, either in tents or temporary inns erected about the temple.⁸ The kind of hospitality which was exercised by private individuals on such festive occasions probably differed very little from that which is customary among ourselves, and was chiefly shown towards friends or persons of distinction and merit, whose presence was an honour to the house wherein they stayed.⁹ In the houses of the wealthier Greeks a separate part (*hospitium* or *hospitalia*, and *ξενώνας*), with a separate entrance, was destined for the reception and habitation of strangers, and was provided with all the necessary comforts for the temporary occupants. On the first day after their arrival they were generally invited to the table of their host; but afterward their provisions (*ξένα*), consisting of fowl, eggs, and fruit, were either sent to them, or they had to purchase them themselves.¹⁰

What has been said hitherto only refers to *hospitium privatum*, that is, the hospitality existing between two individuals or families of different states. Of far greater importance, however, was the *hospitium publicum* (*προξενία*, sometimes simply *ξενία*), or public hospitality which existed between two states, or between an individual or a family on the one hand, and a whole state on the other. Of the latter kind of public hospitality many instances are recorded, such as that between the Pisistratids and Sparta, in which the people of Athens had no share. The *hospitium publicum* among the Greeks arose undoubtedly from the *hospitium privatum*, and it may have originated in two ways. When the Greek tribes were governed by chieftains or kings, the private hospitality existing between the ruling families of two tribes may have produced similar relations between their subjects, which, after the abolition of the kingly power, continued to exist between the new republics as a kind of political inheritance of former times. Or a person belonging to one state might have either extensive connexions with the citizens of another state, or entertain great partiality for the other state itself, and thus offer to receive all those who came from that state either on private or public business, and act as their patron in his own city. This he at first did merely as a private individual, but the state to which he offered this kind service would naturally soon recognise and reward him for it. When two states established public hospitality, and no individuals came forward to act as the representatives of their state, it was necessary that in each state persons should be appointed to show hospitality to, and watch over the interests of, all persons who came from the state connected by hospitality. The persons who were appointed to this office as the recognised agents of the state for which they acted were called *προξένοι*, but those who undertook it voluntarily *ἱθελτοπροξένοι*.¹

The office of *proxenus*, which bears great resemblance to that of a modern consul or minister-resident, was in some cases hereditary in a particular family. When a state appointed a *proxenus*, it either sent out one of its own citizens to reside in the other state, or it selected one of the citizens of this state, and conferred upon him the honour of *proxenus*. The former was, in early times the custom of Sparta, where the kings had the right to select from among the Spartan citizens those whom they wished to send out as *proxeni* to other states.² But in subsequent times this custom seems to have been given up, for we find that at Athens the family of Callias were the *proxeni* of Sparta;³ at Elis, the Elean Xenias;⁴ and at Argos, the Argive Alciphron.⁵ A Spartan sent out as *proxenus* was sometimes also intrusted with the power of *harmostes*, as Clearchus at Byzantium.⁶

The custom of conferring the honour of *proxenus* upon a citizen of the state with which public hospitality existed, seems in later times to have been universally adopted by the Greeks. Thus we find, besides the instances of Spartan *proxeni* mentioned above, Nicias the Athenian as *proxenus* of Syracuse at Athens,⁷ and Arthmius of Zeleia as the *proxenus* of Athens at Zeleia.⁸ The common mode of appointing a *proxenus* was, with the exception of Sparta, by show of hands.⁹ The principal duties of a *proxenus* were to receive those persons, especially ambassadors, who came from the state which

he represented; to procure for them admission to the assembly, and seats in the theatre;¹ to act as the patron of the strangers, and to mediate between the two states if any disputes arose.² If a stranger died in the state, the proxenus of his country had to take care of the property of the deceased.³

Regarding the honours and privileges which a proxenus enjoyed from the state which he represented, the various Greek states followed different principles: some honoured their proxenus with the full civic franchise, and other distinctions besides.⁴ But the right of acquiring property in the state of which he thus became a citizen seems not to have been included in his privileges, for we find that where this right was granted it was done by an especial document.⁵ A foreigner who was appointed in his own country as proxenus of Athens, enjoyed for his own person the right of hospitality at Athens whenever he visited this city, and all the other privileges that a foreigner could possess without becoming a real Athenian citizen. Among these privileges, though they were not necessarily included in the proxeny, but were granted by special decrees, we may mention the, 1. *Ἐπιγαμία*, which, in cases when it was granted by the more powerful state, generally became mutual;⁶ 2. The right to acquire property at Athens (*ἐγκτήσις, ἐμποσίς, ἐπισσις*); 3. The exemption from paying taxes (*ἀτέλεια* or *ἀτέλεια ἀπάντων*);⁷ and, 4. Inviolability in times of peace and war, both by sea and by land.⁸ Some of these privileges were granted to individuals as well as to whole states; but we have no instance of a whole state having received all of them, with the exception of those cases where the civic franchise or isopolity was granted to a whole state; and in this case the practical consequences could not become manifest, unless a citizen of the privileged state actually took up his residence at Athens.⁹

The hospitality of the Romans was, as in Greece, either *hospitium privatum* or *publicum*. Private hospitality with the Romans, however, seems to have been more accurately and legally defined than in Greece. The character of a *hospes*, i. e., a person connected with a Roman by ties of hospitality, was deemed even more sacred, and to have greater claims upon the host, than that of a person connected by blood or affinity. The relation of a *hospes* to his Roman friend was next in importance to that of a *cliens*.¹⁰ According to Massurius Sabinus,¹¹ a *hospes* has even higher claims than a *cliens*. The obligations which the connexion of hospitality with a foreigner imposed upon a Roman were, to receive in his house his *hospes* when travelling,¹² and to protect, and, in case of need, to represent him as his patron in the courts of justice.¹³ Private hospitality thus gave to the *hospes* the claims upon his host which the client had on his patron, but without any degree of the dependance implied in the *clientela*. Private hospitality was established between individuals by mutual presents, or by the mediation of a third person,¹⁴ and hallowed by religion; for Jupiter *hospitalis* was thought to watch over the *ius hospitii*, as Zeus *xenios* did with the Greeks;¹⁵ and the violation of it was as great a crime and impiety at Rome as in Greece. When

hospitality was formed, the two friends used to divide between themselves a *tessera hospitalis*,¹ by which, afterward, they themselves or their descendants—for the connexion was hereditary, as in Greece—might recognise one another. From an expression in Plautus (*deum hospitalem ac tesseram mecum fero*), it has been concluded that this *tessera* bore the image of Jupiter *hospitalis*. Hospitality, when thus once established, could not be dissolved except by a formal declaration (*renuntiatio*),² and in this case the *tessera hospitalis* was broken to pieces.³ Hospitality was at Rome never exercised in that indiscriminate manner as in the heroic age of Greece, but the custom of observing the laws of hospitality was probably common to all the nations of Italy.⁴ In many cases it was exercised without any formal agreement between the parties, and it was deemed an honourable duty to receive distinguished guests into the house.⁵

Public hospitality seems likewise to have existed at a very early period among the nations of Italy, and the *foedus hospitii* mentioned in Livy⁶ can scarcely be looked upon in any other light than that of *hospitium publicum*. But the first direct mention of public hospitality being established between Rome and another city, is after the Gauls had departed from Rome, when it was decreed that Cære should be rewarded for its good services by the establishment of public hospitality between the two cities.⁷ The public hospitality after the war with the Gauls gave to the Cærtes the right of isopolity with Rome, that is, the *civitas* without the *suffragium* and the honores. (*Vid. COLONIA*, p. 283.) In the later times of the Republic, we no longer find public hospitality established between Rome and a foreign state; but a relation which amounted to the same thing was introduced in its stead, that is, towns were raised to the rank of *municipia*,⁸ and thus obtained the *civitas* without the *suffragium* and the honores; and when a town was desirous of forming a similar relation with Rome, it entered into *clientela* to some distinguished Roman, who then acted as patron of the client town. But the custom of granting the honour of *hospes publicus* to a distinguished foreigner by a decree of the senate seems to have existed down to the end of the Republic.¹⁰ Whether such a public *hospes* undertook the same duties towards Roman citizens, as the Greek *proxenus*, is uncertain; but his privileges were the same as those of a *municipes*, that is, he had the *civitas*, but not the *suffragium* or the honores. Public hospitality was, like the *hospitium privatum*, hereditary in the family of the person to whom it had been granted.¹¹ The honour of public *hospes* was sometimes also conferred upon a distinguished Roman by a foreign state.¹²

HOSTIA. (*Vid. SACRIFICIUM*.)

HOSTIS. (*Vid. HOSPITIUM*.)

HOUSE (GREEK, *οἶκος*). The scanty notices of the domestic, or, rather, the palatial architecture of the early Greeks, which we find in Homer, are insufficient to give an accurate notion of the names, uses, and arrangement of the apartments, which appear, however, to have differed considerably from the usages of later ages. We first gain precise information on the subject about the time of the Peloponnesian war; and from the allusions made by Greek writers to the houses of this and the immediately subsequent periods, till the time of Alexan-

Rechts*, p. 54, &c.—Götting, *Gesch. der Röm. Staatsv.*, p. 216, &c.)

der, we may conclude that their general arrangement corresponded with that described by Vitruvius.¹ In this description, however, there is one considerable difficulty, among others of less importance. In a Greek family the women lived in private apartments allotted to their exclusive use. Hence the house was always divided into two distinct portions, namely, the Andronitis, or men's apartments (*ἀνδρωνίτις*), and the Gynaecitis, or women's apartments (*γυναικωνίτις*). Now Vitruvius, after describing the entrance to the house, goes on to the Gynaecitis, and then speaks of the Andronitis, as if the latter lay behind the former, an arrangement which is highly improbable from all we know of the careful seclusion in which the Greek women were kept, and which is also directly opposed to the accounts of the writers of the period we have referred to.

In the earliest times, as in the houses referred to by Homer, the women's apartments were in the upper story (*ὑπερώϊον*). The same arrangement is found in the house spoken of by Lysias.² But it does not follow that that was the usual custom at this period. On the contrary, we have the express testimony of several writers, and Lysias himself among the rest, that the Gynaecitis was on the same story with the Andronitis, and behind it;³ and even the tragic poets transfer to the heroic ages the practice of their own, and describe both sets of apartments as on the same floor.⁴

Becker⁵ notices the different explanations which have been given of the inconsistency between these statements and the description of Vitruvius, the most plausible of which is that of Galiani, namely, that in the time of Vitruvius a slight change had taken place in the disposition of the apartments, by which the Andronitis and Gynaecitis were placed side by side, each of them having its own front towards the street, and its own entrance.

The front of the house towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns, the houses were often built side by side, with party walls between.⁶ The exterior wall was plain, being composed generally of stone, brick, and timber,⁷ and often covered with stucco.⁸ Plutarch speaks of Phocion's house as being ornamented with plates of iron.⁹

That there was no open space between the street and the house door, like the Roman *vestibulum*, is plain from the law of Hippias, which laid a tax on house-doors opening outward, because they encroached upon the street.¹⁰ The *πρόθυρα*, which is sometimes mentioned,¹¹ seems to be merely the space in front of the house. We learn, however, from the same law of Hippias, that houses sometimes stood back from the street, within enclosures of their own (*προφράγματα* or *δρύφακτα*).¹² In front of the house was generally an altar of Apollo Agyieus, or a rude obelisk emblematical of the god. Sometimes there was a bay-tree in the same position, and sometimes a head of the god Hermes.¹³

A few steps (*ἀναβαθμοί*) led up to the house-door, which generally bore some inscription, for the sake of a good omen or as a charm, such as *Εἰσοδος Κράτητι Ἀγαθῷ Δαίμονι*.¹⁴ The form and fastenings of the door are described under JANUA. This door, as we have seen, sometimes opened outward; but

this seems to have been an exception to the general rule, as is proved by the expressions used for opening, *ἐνδύσθαι*, and shutting it, *ἐπισπάσθαι* and *ἐφελκύσασθαι*.¹ The handles were called *ἐπισπαστήρες*.

The house-door was called *αὔλειος* or *αὔλεια θύρα*,² because it led to the *αὔλη*. It gave admittance to a narrow passage (*θυρωρεῖον*, *πυλῶν*, *θυρῶν*), on one side of which, in a large house, were the stables, on the other the porter's lodge. The duty of the porter (*θυρωρός*) was to admit visitors, and to prevent anything improper from being carried into or out of the house.³ Plato⁴ gives a lively picture of an officious porter. The porter was attended by a dog.⁵ Hence the phrase *εὐλαβεῖσθαι τὴν κύνα*,⁶ corresponding to the Latin *Cave canem*.

At the farther end of the passage Vitruvius places another door, which, however, does not seem generally to have existed. Plutarch⁷ mentions the house-door as being visible from the peristyle.

From the *θυρωρεῖον* we pass into the peristyle or court (*περιστύλιον*, *αὔλη*) of the Andronitis, which was a space open to the sky in the centre (*ἑπαύθρον*), and surrounded on all four sides by porticoes (*στοαί*), of which one, probably that nearest the entrance, was called *πρόστον*.⁸ These porticoes were used for exercise, and sometimes for dining in.⁹ Here was commonly the altar on which sacrifices were offered to the household gods, but frequently portable altars were used for this purpose.¹⁰ Vitruvius¹¹ says that the porticoes of the peristyle were of equal height, or else the one facing the south was built with loftier columns. This he calls a Rhodian peristyle. The object sought was to obtain as much sun in winter, and as much shade and air in summer, as possible.¹²

Round the peristyle were arranged the chambers used by the men, such as banqueting-rooms (*οἶκοι*, *ἀνδρώνες*), which were large enough to contain several sets of couches (*τρίκλινοι*, *ἐπτάκλινοι*, *τριακοντάκλινοι*), and at the same time to allow abundant room for attendants, musicians, and performers of games;¹³ parlours or sitting-rooms (*ἐξέδραι*), and smaller chambers and sleeping-rooms (*δωμάτια*, *κοιτῶνες*, *οἰκήματα*); picture-galleries and libraries, and sometimes store-rooms; and in the arrangement of these apartments, attention was paid to their aspect.¹⁴

The peristyle of the Andronitis was connected with that of the Gynaecitis by a door called *μέσανλος*, *μέσανλος*, or *μεσαύλιος*, which was in the middle of the portico of the peristyle opposite to the entrance. Vitruvius applies the name *μέσανλος* to a passage between the two peristyles, in which was the *μέσανλος θύρα*. By means of this door, all communication between the Andronitis and Gynaecitis could be shut off. Its uses are mentioned by Xenophon, who calls it *θύρα βαλαντωτός*.¹⁵ Its name, *μέσανλος*, is evidently derived from *μέσος*, and means the door between the two *αὔλαι* or peristyles.¹⁶ The other name, *μέσανλος*, is taken by some writers as merely the Attic form of *μέσανλος*.¹⁷ But it should rather be derived from *μετά*, as being the door be-

kind or beyond the αὐλή, with respect to the αὐλειος θύρα.¹ It should be observed, that in the house described by Vitruvius, if the Andronitis and Gynaecitis lay side by side, the μέσανλος θύρα would not be opposite to the entrance, but in one of the other sides of the peristyle.

This door gave admittance to the peristyle of the Gynaecitis, which differed from that of the Andronitis in having porticoes round only three of its sides. On the fourth side (the side facing the south, according to Vitruvius) were placed two antæ (vid. ANTÆ), at a considerable distance from each other. A third of the distance between these antæ was set off inward² (*Quantum inter antas distat, ex eo tertia dempta spatium introrsus*), thus forming a chamber or vestibule, which was called προστάς, παραστάς, and perhaps παστάς, and also πρόδρομος.³ On the right and left of this προστάς were two bed-chambers, the θάλαμος and ἀμφιθάλαμος, of which the former was the bedchamber of the house, and here also seem to have been kept the vases and other valuable articles of ornament.⁴ Beyond these rooms (for this seems to be what Vitruvius means by *in his locis introrsus*) were large apartments (ιστῶνες), used for working in wool (*aci magni, in quibus matres familiarum cum lanificis habent sessionem*).⁵ Round the peristyle were the eating-rooms, bed-chambers, store-rooms, and other apartments in common use (*triclinia quotidiana, cubicula, et cellae familiariae*).

Besides the αὐλειος θύρα and the μέσανλος θύρα, there was a third door (κηπαία θύρα) leading to the garden.⁶ Lysias⁷ speaks of another door, which probably led from the garden into the street.

The following plan of the ground-floor of a Greek house of the larger size is taken from Becker's *Charikles*. It is, of course, conjectural, as there are now no Greek houses in existence.

α, House-door, αὐλειος θύρα: θυρῶν, passage, θυρῶν or θυρῶν: Α, peristyle or αὐλή of the Andronitis; Γ, ο, the halls and chambers of the Andronitis; Π, μέσανλος or μέσανλος θύρα: Γ, peristyle of the Gynaecitis; γ, chambers of the Gynaecitis; π, προστάς or παραστάς: θ, θάλαμος and ἀμφιθάλαμος:

1. (Lysias, De Cæd. Erat., p. 20.—Plut., Symp., vii., 1.—Æl. Dion. ap. Eustath., 1. c.)—2. (Vitruv., 1. c., § 1.)—3. (Pollux.—Suid.—Hesych.—Etymol. Mag.—Vitruv., 1. c.)—4. (Xen., Œcon., ix., 3.)—5. (Vitruv.)—6. (Pollux, Onom., i., 76.—Demosth., c. Euerg, p. 1155.—Lysias, c. Eratosth., p. 393.)—7. (1. c., p. 394.)

Ι, rooms for working in wool (ιστῶνες); Κ, garden door, κηπαία θύρα.

There was usually, though not always, an upper story (ὑπερῶν, δῆρες), which seldom extended over the whole space occupied by the lower story. The principal use of the upper story was for the lodging of the slaves, as appears from a passage in Demosthenes,¹ where the words ἐν τῷ πύργῳ seem to imply a building several stories high. The access to the upper floor seems to have been sometimes by stairs on the outside of the house, leading up from the street. Guests were also lodged in the upper story.² But in some large houses there were rooms set apart for their reception (ξενῶνες) on the ground-floor.³ In cases of emergency, store-rooms were fitted up for the accommodation of guests.⁴

Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandahs (προβολαί, γεισποδίσματα).⁵

The roofs were generally flat, and it was customary to walk about upon them.⁶ But pointed roofs were also used.⁷

In the interior of the house, the place of doors was sometimes supplied by curtains (παραπετάσματα), which were either plain, or dyed, or embroidered.⁸

The principal openings for the admission of light and air were in the roofs of the peristyles; but it is incorrect to suppose that the houses had no windows (θυρίδες), or, at least, none overlooking the street. They were not at all uncommon.⁹

Artificial warmth was procured partly by means of fireplaces. It is supposed that chimneys were altogether unknown, and that the smoke escaped through an opening in the roof (καπνοδόκη¹⁰). It is not easy to understand how this could be the case when there was an upper story. Little portable stoves (ἐσχάραι, ἐσχαρίδες) or chafing-dishes (ἀνθράκια) were frequently used.¹¹ (Vid. Focus.)

The houses of the wealthy in the country, at least in Attica, were much larger and more magnificent than those in the towns. The latter seem to have been generally small and plain, especially in earlier times, when the Greeks preferred expending the resources of art and wealth on their temples and public buildings;¹² but the private houses became more magnificent as the public buildings began to be neglected.¹³

The decorations of the interior were very plain at the period to which our description refers. The floors were of stone. At a late period coloured stones were used.¹⁴ Mosaics are first mentioned under the kings of Pergamus.

The walls, up to the fourth century B.C., seem to have been only whitened. The first instance of painting them is that of Alcibiades.¹⁵ This innovation met with considerable opposition.¹⁶ Plato mentions the painting of the walls of houses as a mark of a τρυφῶσα πόλις.¹⁷ These allusions prove that the practice was not uncommon in the time of Plato and Xenophon. We have also mention of painted ceilings at the same period.¹⁸ At a later period this mode of decoration became general.¹⁹

HOUSE (ROMAN) (*Domus*; *Ædes privatae*). The

houses of the Romans were poor and mean for many centuries after the foundation of the city. Till the war with Pyrrhus, the houses were covered only with thatch or shingles,¹ and were usually built of wood or unbaked bricks. It was not till the later times of the Republic, when wealth had been acquired by conquests in the East, that houses of any splendour began to be built; but it then became the fashion not only to build houses of an immense size, but also to adorn them with columns, paintings, statues, and costly works of art.

M. Lepidus, who was consul B.C. 78, was the first who introduced Numidian marble into Rome for the purpose of paving the threshold of his house; but the fashion of building magnificent houses increased so rapidly, that the house of Lepidus, which in his consulship was the first in Rome, was, thirty-five years later, not the hundredth.² Lucullus especially surpassed all his contemporaries in the magnificence of his houses and the splendour of their decorations. Marble columns were first introduced into private houses by the orator L. Crassus, but they did not exceed twelve feet in height, and were only six in number.³ He was, however, soon surpassed by M. Scæurus, who placed in his atrium columns of black marble, called Lucullan, thirty-eight feet high, and of such immense weight that the contractor of the sewers took security for any injury that might be done to the sewers in consequence of the columns being carried along the streets.⁴

The Romans were exceedingly partial to marble for the decoration of their houses. Mamurra, who was Cæsar's præfectus fabrum in Gaul, set the example of lining his room with slabs of marble.⁵ Some idea may be formed of the size and magnificence of the houses of the Roman nobles during the later times of the Republic by the price which they fetched. The consul Messalla bought the house of Autronius for 3700 sestertia (nearly 33,000*l.*), and Cicero the house of Crassus, on the Palatine, for 3500 sestertia (nearly 31,000*l.*).⁶ The house of Publius Clodius, whom Milo killed, cost 14,800 sestertia (about 131,000*l.*); and the Tusculan villa of Scæurus was fitted up with such magnificence, that when it was burned by his slaves, he lost 100,000 sestertia, upward of 885,000*l.*⁷ The house-rent which persons in poor circumstances usually paid at Rome was about 2000 sesterces, between 17*l.* and 18*l.*⁸ It was brought as a charge of extravagance against Cælius that he paid 30 sestertia (about 266*l.*) for the rent of his house.⁹

Houses were originally only one story high; but as the value of ground increased in the city, they were built several stories in height, and the highest floors were usually inhabited by the poor.¹⁰ To guard against danger from the extreme height of houses, Augustus restricted the height of all new houses which were built by the side of the public roads to seventy feet.¹¹ Till the time of Nero, the streets in Rome were narrow and irregular, and bore traces of the haste and confusion with which the city was built after it had been burned by the Gauls; but after the great fire in the time of that emperor, by which two thirds of Rome were burned to the ground, the city was built with great regularity. The streets were made straight and broad; the height of the houses was restricted, and a certain part of each was required to be built of Gabian or Alban stone, which was proof against fire.¹²

Our information respecting the form and arrangement of a Roman house is principally derived from the description of Vitruvius, and the remains of the houses which have been found at Pompeii. Many points, however, are still doubtful; but, without entering into architectural details, we shall confine ourselves to those topics which serve to illustrate the classical writers. The chief rooms in the house of a respectable Roman, though differing, of course, in size and splendour according to the circumstances of the owner, appear to have been usually arranged in the same manner, while the others varied according to the taste and circumstances of the master.

The principal parts of a Roman house were the, 1. *Vestibulum*; 2. *Ostium*; 3. *Atrium* or *Cavum Ædium*; 4. *Alæ*; 5. *Tablinum*; 6. *Fauces*; 7. *Peristylum*. The parts of a house which were considered of less importance, and of which the arrangement differed in different houses, were the, 1. *Cubicula*; 2. *Triclinia*; 3. *Ceci*; 4. *Exedra*; 5. *Pinacotheca*; 6. *Bibliotheca*; 7. *Balineum*; 8. *Culina*; 9. *Canacula*; 10. *Diata*; 11. *Solaria*. We shall speak of each in order.

1. *VESTIBULUM*. The vestibulum did not properly form part of the house, but was a vacant space before the door, forming a court, which was surrounded on three sides by the house, and was open on the fourth to the street. The two sides of the house joined the street, but the middle part of it, where the door was placed, was at some little distance from the street.¹ Hence Plautus² says, '*Viden' vestibulum ante aëdes hoc et ambulacrum quovis modi?*'

2. *OSTIUM*. The ostium, which is also called *janua* and *fores*, was the entrance to the house. The street-door admitted into a hall, to which the name of ostium was also given, and in which there was frequently a small room (*cella*) for the porter (*janitor* or *ostiarus*), and also for a dog, which was usually kept in the hall to guard the house. A full account of this part of the house is given under *JANUA*. Another door (*janua interior*) opposite the street-door led into the atrium.

3. *ATRIUM* or *CAVUM ÆDIUM*, as it is written by Varro and Vitruvius; Pliny writes it *Cavedium*. Hirt, Müller,³ Marini, and most modern writers, consider the Atrium and Cavum Ædium to be the same; but Newton, Stratico, and, more recently, Becker,⁴ maintain that they were distinct rooms. It is impossible to pronounce a decisive opinion on the subject; but from the statements of Varro⁵ and Vitruvius,⁶ taken in connexion with the fact that no houses in Pompeii have been yet discovered which contain both an Atrium and Cavum Ædium, it is most probable that they were the same. The etymology of Atrium is mentioned under that head.

The Atrium or Cavum Ædium was a large apartment, roofed over with the exception of an opening in the centre, called *compluvium*, towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed *impluvium*,⁷ which was frequently ornamented with statues, columns, and other works of art.⁸ The word *impluvium*, however, is also employed to denote the aperture in the roof.⁹ Schneider, in his commentary on Vitruvius, supposes *cavum ædium* to mean the whole of this apartment, including the impluvium, while atrium signified only the covered part, exclusive of the impluvium. Mazois, on the contrary, maintains that atrium is applied to the whole apartment, and *cavum ædium* only to the uncovered part. The breadth of

N., xxxvi., 24.)—8. (Suet., Jul., 38.)—9. (Cic., Pro Cæl., 7.)—10. (Cic., Agr., ii., 35.—Hor., Ep., i., 1, 91.—Juv., Sat., iii., 208, &c.—Id., x., 17.)—11. (Strab., v., p. 235.)—12. (Tacit., Ann., xv., 43.—Suet., Ner., 38.)

the impluvium, according to Vitruvius,¹ was not less than a quarter, nor greater than a third of the breadth of the atrium; its length was in the same proportion according to the length of the atrium.

Vitruvius² distinguishes five kinds of atria or cava aedium, which were called by the following names:

(1.) *Tuscanicum*. In this the roof was supported by four beams, crossing each other at right angles, the included space forming the compluvium. This kind of atrium was probably the most ancient of all, as it is more simple than the others, and is not adapted for a very large building.

(2.) *Tetrastylum*. This was of the same form as the preceding, except that the main beams of the roof were supported by pillars placed at the four angles of the impluvium.

(3.) *Corinthium* was on the same principle as the tetrastyle, only that there was a greater number of pillars around the impluvium, on which the beams of the roof rested.

(4.) *Displuviatum* had its roof sloping the contrary way to the impluvium, so that the water fell outside the house instead of being carried into the impluvium.

(5.) *Testudinatum* was roofed all over, and had no compluvium.

The atrium was the most important room in the house, and among the wealthy was usually fitted up with much splendour and magnificence.³ The marble columns of Scæurus already spoken of were placed in the atrium. The atrium appears originally to have been the only sitting-room in the house, and to have served also as a kitchen;⁴ and it probably continued to do so among the lower and middle classes. In the houses of the wealthy, however, it was distinct from the private apartments, and was used as a reception room, where the patron received his clients, and the great and noble the numerous visitors who were accustomed to call every morning to pay their respects or solicit favours.⁵ Cicero frequently complains that he was not exempt from this annoyance when he retired to his country houses.⁶ But, though the atrium does not appear to have been used by the wealthy as a sitting-room for the family, it still continued to be employed for many purposes which it had originally served. Thus the nuptial couch was placed in the atrium opposite the door (*in aula*), and also the instruments and materials for spinning and weaving, which were formerly carried on by the women of the family in this room.⁷ Here, also, the images of their ancestors were placed,⁸ and the focus or fireplace, which possessed a sacred character, being dedicated to the Lares of each family. (*Vid. Focus*.)

4. *ALÆ*, wings, were small apartments or recesses on the left and right sides of the atrium.¹⁰

5. *TABLINUM* was, in all probability, a recess or room at the farther end of the atrium, opposite the door leading into the hall, and was regarded as part of the atrium. It contained the family records and archives.¹¹

With the tablinum, the Roman house appears to have originally ceased; and the sleeping-rooms were probably arranged on each side of the atrium. But when the atrium and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house, and the following rooms were accordingly added:

6. *FAUCES* appear to have been passages, which passed from the atrium to the peristylum or interior of the house.¹

7. *PERISTYLIUM* was in its general form like the atrium, but it was one third greater in breadth, measured transversely, than in length.² It was a court open to the sky in the middle; the open part, which was surrounded by columns, was larger than the impluvium in the atrium, and was frequently decorated with flowers and shrubs.

The arrangement of the rooms which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is, therefore, impossible to assign to them any regular place in the house.

1. *CUBICULA*, bed-chambers, appear to have been usually small. There were separate cubicles for the day and night (*cubicula diurna et nocturna*); the latter were also called *dormitoria*.⁴ Vitruvius⁵ recommends that they should face the east, for the benefit of the rising sun. They sometimes had a small anteroom, which was called by the Greek name of *προκοιτών*.⁶

2. *TRICLINIA* are treated of in a separate article.

3. *ŒCI*, from the Greek *οἶκος*, were spacious halls or saloons borrowed from the Greeks, and were frequently used as triclinia. They were to have the same proportions as triclinia, but were to be more spacious, on account of having columns, which triclinia had not.⁷ Vitruvius mentions four kinds of *œci*:

(1.) The *Tetrastyle*, which needs no farther description. Four columns supported the roof.

(2.) The *Corinthian*, which possessed only one row of columns, supporting the architrave (*epistylium*), cornice (*corona*), and a vaulted roof.

(3.) The *Ægyptian*, which was more splendid and more like a basilica than a Corinthian triclinium. In the *Ægyptian* *œcus*, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.

(4.) The *Cyzicene* (*Κυζικηνή*) appears in the time of Vitruvius to have been seldom used in Italy. These *œci* were meant for summer use, looking to the north, and, if possible, facing gardens, to which they opened by folding doors. Pliny had *œci* of this kind in his villa.

4. *EXEDRÆ*, which appear to have been in form much the same as the *œci*, for Vitruvius⁸ speaks of the *exedræ* in connexion with *œci* quadrati, were rooms for conversation and the other purposes of society.⁹ They served the same purposes as the *exedræ* in the *Thermæ* and *Gymnasia*, which were semicircular rooms with seats for philosophers and others to converse in.¹⁰ (*Vid. BATHS*, p. 152.)

5, 6, 7. *PINACOTHECA*, *BIBLIOTHECA*, and *BALNEUM* (*vid. BATHS*), are treated of in separate articles.

8. *CULINA*, the kitchen. The food was originally cooked in the atrium, as has been already stated; but the progress of refinement afterward led to the use of another part of the house for this purpose. In the kitchen of Pansa's house, of which a ground-plan is given below, a stove for stews and similar preparations was found, very much like the charcoal stoves used in the present day. (See woodcut.) Before it lie a knife, a strainer, and a kind of frying-pan with four spherical cavities, as if it were meant to cook eggs.

In this kitchen, as well as in many others at Pom-

1. (vi., 4.)—2. (vi., 3.)—3. (Compare Horat., Carm., III., i., 46.)—4. (Sery, ad Virg., Æn., i., 726; iii., 353.)—5. (Horat., Epist., i., v., 30.—Juv., vii., 91.)—6. (ad Att., ii., 14; v., 2, &c.)—7. peii, there are paintings of the Lares or domestic gods, under whose care the provisions and all the cooking utensils were placed.

9. *CENACULA* properly signified rooms to dine in; but after it became the fashion to dine in the upper part of the house, the whole of the rooms above the ground-floor were called *cenacula*,¹ and hence Festus says, "*Cenacula dicuntur, ad quæ scalis ascenditur.*"² As the rooms on the ground-floor were of different heights, and sometimes reached to the roof, all the rooms on the upper story could not be united with one another, and, consequently, different sets of stairs would be needed to connect them

The next woodcut represents the atrium of what is usually called the house of Ceres. In the centre is the impluvium, and the passage at the farther end is the ostium or entrance hall. As there are no pillars around the impluvium, this atrium must belong to the kind called by Vitruvius the Tuscan.

The preceding account of the different rooms, and especially of the arrangement of the atrium, tablinum, peristyle, &c., is best illustrated by the houses

1. (Varro, *De Ling. Lat.*, v., 162, ed. Müller.)—2. (Compare Dig. 0, tit. 3, s. 1.)

with the lower part of the house, as we find to be the case in houses at Pompeii. Sometimes the stairs had no connexion with the lower part of the house, but ascended at once from the street.¹ At Rome the highest floors, as already remarked (p. 516), were usually inhabited by the poor.²

10. *DILETA* was an apartment used for dining in, and for the other purposes of life.³ It appears to have been smaller than the triclinium. *Diæta* is also the name given by Pliny⁴ to rooms containing three or four bed-chambers (*cubicula*). Pleasure houses or summer-houses are also called *diæta*.⁵

11. *SOLARIA*, properly places for basking in the sun, were terraces on the tops of houses.⁶ In the time of Seneca the Romans formed artificial gardens on the tops of their houses, which contained even fruit-trees and fish-ponds.⁷

The two woodcuts annexed represent two atria of houses at Pompeii. The first is the atrium of what is usually called the house of the Quæstor. The view is taken near the entrance-hall facing the tablinum, through which the columns of the peristyle and the garden are seen. This atrium, which is a specimen of what Vitruvius calls the Corinthian, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

which have been disinterred at Pompeii. The ground-plan of two is accordingly subjoined. The first is the plan of a house, usually called the house of the tragic poet.

Like most of the other houses at Pompeii, it had no vestibulum, according to the meaning which we have attached to the word. 1. The ostium or entrance hall, which is six feet wide and nearly thirty long. Near the street-door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written *Cave Canem*. The two large rooms on each side of the vestibule appear, from the large openings in front of them, to have been shops; they communicate with the entrance hall, and were, therefore, probably occupied by the master of the house. 2. The atrium, which is about twenty-eight feet in length and twenty in breadth; its impluvium is near the centre of the room, and its floor is paved with white tesserae, spotted with black. 3. Chambers for the use of the family, or intended for the reception of guests who were entitled to claim hospitality. When a house did not

1. (Liv., xxxix., 14.)—2. (Compare Suet., Vitell., 7.)—3. (Plin., Ep., ii., 17.—Suet., Claud., 10.)—4. (Ep., vi., 5.)—5. (Dig. 30, tit. 1, s. 43; 7, tit. 1, s. 13, § 8.)—6. (Plaut., Mil., II., iii., 69.—Id. ib., iv., 25.—Suet., Ner., 1.)—7. (Sen., Ep., 123.—Contr. Exo., v., 5.—Suet., Claud., 10.)

possess an hospitium, or rooms expressly for the reception of guests, they appear to have been lodged in rooms attached to the atrium. (*Vid. Hospitium.*)

4. A small room with a staircase leading up to the upper rooms. 5. Alæ. 6. The tablinum. 7. The fauces. 8. Peristyle, with Doric columns and garden in the centre. The large room on the right of the peristyle is the triclinium; beside it is the kitchen; and the smaller apartments are cubicula and other rooms for the use of the family.

The next woodcut contains the ground-plan of an *insula*, which was properly a house not joined to the neighbouring houses by a common wall.¹ An *insula*, however, generally contained several separate houses, or, at least, separate apartments or shops, which were let to different families; and hence the term *domus* under the emperors appears to be applied to the house where one family lived, whether it were an *insula* or not, and *insula* to any hired lodgings. This *insula* contains a house, surrounded by shops, which belonged to the owner, and were let out by him. The house itself, which is usually called the house of Pansa, evidently belonged to one of the principal men of Pompeii. Including the garden, which is a third of the whole length, it is about 300 feet long and 100 wide.

A. Ostium, or entrance-hall, paved with mosaic. B. Tuscan atrium. I. Impluvium. C. Chambers on each side of the atrium, probably for the reception of guests. D. Alæ. E. Tablinum, which is open to the peristyle, so that the whole length of the house could be seen at once; but as there is a passage (fauces), F, beside it, the tablinum might probably be closed at the pleasure of the owner. C. Chambers by the fauces and tablinum, of which the use is uncertain. G. Peristyle. D. Alæ to the peristyle. C. Cubicula by the side of the peristyle. K. Triclinium. L. Cœcus, and by its side there is a passage leading from the peristyle to the garden. M. Back door (*posticum ostium*) to the street. N. Culina. H. Servants' hall, with a back door to the street. P. Portico of two stories, which proves that the house had an upper floor. The site of the staircase, however, is unknown, though it is thought there is some indication of one in the passage, M. Q. The garden. R. Reservoir for supplying a tank, S.

The preceding rooms belonged exclusively to Pansa's house, but there were a good many apart-

ments besides in the *insula* which were not in his occupation. *a.* Six shops let out to tenants. Those on the right and left hand corners were bakers' shops, which contained mills, ovens, &c., at *b.* The one on the right appears to have been a large establishment, as it contains many rooms. *c.* Two houses of a very mean class, having formerly an upper story. On the other side are two houses much larger, *d.*

Having given a general description of the rooms of a Roman house, it remains to speak of the (1) floors, (2) walls, (3) ceilings, (4) windows, and (5) the mode of warming the rooms. For the doors, *vid. JANUA.*

(1.) The floor (*solum*) of a room was seldom boarded, though this appears to have been sometimes done (*strata solo tabulata*).¹ It was generally covered with stone or marble, or mosaics. The common floors were paved with pieces of bricks, tiles, stones, &c., forming a kind of composition called *ruderalio*.² Another kind of pavement was that called *opus Signinum*, which was a kind of plaster made of tiles beaten to powder and tempered with mortar. It derived its name from Signia, a town of Italy, celebrated for its tiles.³ Sometimes pieces of marble were imbedded in a composition ground, which appear to have formed the floors called by Pliny *barbarica* or *subtegulanea*, and which probably gave the idea of mosaics. As these floors were beaten down (*pavita*) with rammers (*fistuca*), the word *pavimentum* became the general name for a floor. The kind of pavement called *scalpturatum* was first introduced in the Temple of Jupiter Capit-

1. (Festus, s. v.)

1. (Stat., *Sylv.*, I., v., 57.)—2. (Vitruv., *vi.*, I., 1.)—3. (Plin., H. N., xxxv., 46.)

olinnos after the beginning of the third Punic war, but became quite common in Rome before the beginning of the Cimbric war.¹ Mosaics, called by Pliny *lithostrota* (λιθόστρωτα), though this word has a

or more extensive meaning, first came into use in Sulla's time, who made one in the Temple of Fortune at Praeneste.² Mosaic work was afterward called *Musivum opus*.³ The floors of the houses at Pom-

peii are frequently composed of mosaics, which are usually formed of black frets on a white ground, or white ones on a black ground, though some of them are in coloured marbles. The materials of which they are generally formed are small pieces of red and white marble and red tile, set in a very fine cement, and laid upon a deep bed of mortar, which served as a base. The three examples here given, which are taken from houses at Pompeii, will convey a general idea of their form and appearance.

Mosaic pavements, however, have been discovered at Pompeii, which represent figures and scenes of actual life, and are, in reality, pictures in mosaic. One of the most beautiful of these is given in its

original colours in Gell's *Pompeiana*, 2d series, plate xlv. It is composed of very fine pieces of glass, and represents the choragus, or master of the chorus, instructing the actors in their parts. A still more extraordinary mosaic painting was discovered in Pompeii in 1831: it is supposed to represent the battle of Issus.¹

(2.) The inner walls (*parietes*) of private rooms were frequently lined with slabs of marble,² but were more usually covered by paintings, which in the time of Augustus were made upon the walls themselves. The prevalence of this practice is attested not only by Pliny,³ but also by the circumstance that even the small houses in Pompeii have paintings upon their walls. The following woodcut, which represents the side of a wall at Pompeii, is one of the simplest but most common kind. The compartments are usually filled with figures.

The general appearance of the walls may be seen from the woodcuts at p. 462, 518. Subjects of all kinds were chosen for painting on the walls, as may be seen by a reference to the Museo Borbonico, Gell, Mazois, &c.⁴ The colours seem usually to have been laid upon a dry ground, but were sometimes laid upon it wet, as in the modern fresco painting (*colores udo tectorio inducere*).⁵ The walls also appear to have been sometimes ornamented with raised figures, or a species of bas-relief (*typos in tectorio atrioli includere*), and sometimes with mosaics.⁷

(3.) The ceilings seem originally to have been left uncovered, the beams which supported the roof or the upper story being visible. Afterward planks were placed across these beams at certain intervals, leaving hollow spaces, called *lacunaria* or *laquearia*, which were frequently covered with gold and ivory, and sometimes with paintings.⁸ There was an arched ceiling in common use, called *CAMARA*, which is described in a separate article.

(4.) The Roman houses had few windows (*fenestæ*). The principal apartments, the atrium, peristyle, &c., were lighted, as we have seen, from above, and the cubicula and other small rooms generally derived their light from them, and not from windows looking into the street. The rooms only on the upper story seem to have been usually lighted by windows.⁹ Very few houses in Pompeii have windows on the ground-floor opening into the street, though there is an exception to this in the house of the tragic poet, which has six windows on the ground-floor. Even in this case, however, the windows are not near the ground as in a modern house, but are six feet six inches above the foot pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two; and at the side there is a wooden frame, in which the window or shutter might be moved backward or forward.

1. (Museo Borbonico, viii., t. 36-45.)—2. (Plin., H. N., xxxvi., 7.)—3. (H. N., xxxv., 37.)—4. (Compare Vitruv., vii., 5.)—5. (Vitruv., vii., 3.)—6. (Cic. ad Att., i., 10.)—7. (Plin., H. N., xxxvi., 64.)—8. (Hor., Carm., ii., 18.—Plin., H. N., xxxiii., 13.—Sen., Ep., 90.—Suet., Ner., 31.)—9. (Juv., iii., 270.)

1. (Plin., H. N., xxxvi., 61.)—2. (Id., xxxvi., 64.)—3. (Spartan., Pausan., Nigr., 6.—Trebell. Pollio, Trigint. Tyrann., 24.—Augustin., De Civ. Dei, xvi., 8.)

The lower part of the wall is occupied by a row of red panels four feet and a half high. The following woodcut represents part of the wall, with apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.

The windows appear originally to have been merely openings in the wall, closed by means of shutters, which frequently had two leaves (*bifores fenestræ*), whence Ovid¹ says,

"Pars adaperita fuit, pars altera clausa fenestræ."

They are, for this reason, said to be joined when they are shut.² Windows were also sometimes covered by a kind of lattice or trellis-work (*clathri*), and sometimes by network, to prevent serpents and other noxious reptiles from getting in.⁴

Afterward, however, windows were made of a transparent stone, called *lapis specularis* (mica), which was first found in Hispania Citerior, and afterward in Cyprus, Cappadocia, Sicily, and Africa; but the best came from Spain and Cappadocia. It was easily split into the thinnest laminae, but no pieces had been discovered, says Pliny, above five feet long.⁵ Windows made of this stone were called *specularia*.⁶ Windows made of glass (*vitrum*) are first mentioned by Lactantius,⁷ but the discoveries at Pompeii prove that glass was used for windows under the early emperors, as frames of glass and glass windows have been found in several of the houses.

(5.) The rooms were heated in winter in different ways; but the Romans had no stoves like ours. The cubicula, triclinia, and other rooms, which were intended for winter use, were built in that part of the house upon which the sun shone most; and in the mild climate of Italy this frequently enabled them to dispense with any artificial mode of warming the rooms. Rooms exposed to the sun in this way were sometimes called *heliocamini*.⁸ The rooms were sometimes heated by hot air, which was introduced by means of pipes from a furnace below,⁹ but more frequently by portable furnaces or braziers (*foculi*), in which coal or charcoal was burned. (Vid. woodcuts, p. 148, 447.) The *caminus* was also a kind of stove, in which wood appears to have been usually burned, and probably only differed from the *foculus* in being larger and fixed to one place.¹⁰ It has been a subject of much dispute among modern writers, whether the Romans had chimneys for carrying off the smoke. From many passages in ancient writers, it certainly appears that rooms usually had no chimneys, but that the smoke escaped through the windows, doors, and openings in the roof;¹¹ but chimneys do not appear to have been entirely unknown to the ancients,¹² as some are

said to have been found in the ruins of ancient buildings.¹

HYACINTHIA (*Ἰακινθία*), a great national festival, celebrated every year at Amyclæ by the Amyclæans and Spartans. The ancient writers who mention this festival do not agree in the name of the divinity in whose honour it was held: some say that it was the Amyclæan or the Carnean Apollo; others, that it was the Amyclæan hero Hyacinthus; a third and more probable statement assigns the festival to the Amyclæan Apollo and Hyacinthus together. This Amyclæan Apollo, however, with whom Hyacinthus was assimilated, in later times, must not be confounded with Apollo, the national divinity of the Dorians.² The festival was called after the youthful hero Hyacinthus, who evidently derived his name from the flower Hyacinth (the emblem of death among the ancient Greeks), and whom Apollo accidentally struck dead with a quoit. The Hyacinthia lasted for three days, and began on the longest day of the Spartan month Hecatombæus (the Attic Hecatombæon³), at the time when the tender flowers, oppressed by the heat of the sun, drooped their languid heads. On the first and last day of the Hyacinthia sacrifices were offered to the dead, and the death of Hyacinthus was lamented. During these two days nobody wore any garlands at the repasts, nor took bread, but only cakes and similar things, and no paans were sung in praise of Apollo; and when the solemn repasts were over, everybody went home in the greatest quiet and order. This serious and melancholy character was foreign to all the other festivals of Apollo. The second day, however, was wholly spent in public rejoicings and amusements. Amyclæ was visited by numbers of strangers (*πανήγυρις ἁγιόλογος καὶ μεγάλη*), and boys played the cithara or sang to the accompaniment of the flute, and celebrated in anapaestic metres the praise of Apollo, while others, in splendid attire, performed a horse-race in the theatre. This horse-race is probably the *ἄγών* mentioned by Strabo.⁴ After this race there followed a number of choruses of youths, conducted by a *χοροποῖός*,⁵ in which some of their national songs (*ἐπιχόρια ποιήματα*) were sung. During the songs of these choruses, dancers performed some of the ancient and simple movements with the accompaniment of the flute and the song. The Spartan and Amyclæan maidens, after this, riding in chariots made of wicker-work (*κάνοθρα*), and splendidly adorned, performed a beautiful procession. Numerous sacrifices were also offered on this day, and the citizens kept open house for their friends and relatives; and even slaves were allowed to enjoy themselves.⁶ One of the favourite meals on this occasion was called *κομία*, and is described by Molpis⁷ as consisting of cake, bread, meat, raw herbs, broth, figs, desert, and the seeds of lupine. Some ancient writers, when speaking of the Hyacinthia, apply to the whole festival such epithets as can only be used in regard to the second day; for instance, when they call it a merry or joyful solemnity. Macrobius⁸ states that the Amyclæans wore chaplets of ivy at the Hyacinthia, which can only be true if it be understood of the second day. The incorrectness of these writers is, however, in some degree, excused by the fact that the second day formed the principal part of the festive season, as appears from the description of Didymus, and as

1. (Ovid, Ep. ex Pont., III., iii., 5.)—2. (Amor., I., v., 2.)—3. (Hor., Carm., ii., 25.)—4. (Plaut., Mil., II., iv., 25.—Varro, De Re Rust., iii., 7.)—5. (Plin., H. N., xxxvi., 45.)—6. (Sen., Ep., 90.—Plin., Ep., ii., 17.—Mart., viii., 14.)—7. (De Opif. Dei, 8.)—8. (Plin., Ep., ii., 17.—Dig. 8, tit. 2, § 17.)—9. (Plin., Ep., ii., 17.—Sen., Ep., 90.)—10. 1. (Winckelmann, Schriften über die Herculianischen Entdeckungen.—Hirt, Geschichte der Baukunst.—Mazois, Les Ruines de Pompeii, part ii., Le Palais de Scæurus.—Gell, Pompeiana.—Pompeii, Lond., 12mo, 1832.—Becker, Gallus.—Schneider ad Vitruv.—2. (Müller, Orchom., p. 327.—Id., Dor., ii., 8, § 15.)—3. (Hesych., s. v. Ἐκαρπυεύς.—Manso, Sparta, iii., 2, p. 201.)—4. (vi., p. 278.)—5. (Xen., Agesil., ii., 17.)—6. (Didymus ap. Athen., iv., p. 139.)—7. (ap. Athen., iv., p. 140.—8. (Saturn., i., 18.)

may also be inferred from Xenophon,¹ who makes the pæan the principal part of the Hyacinthia. The great importance attached to this festival by the Amyclæans and Lacedæmonians is seen from the fact that the Amyclæans, even when they had taken the field against an enemy, always returned on the approach of the season of the Hyacinthia, that they might not be obliged to neglect its celebration,² and that the Lacedæmonians on occasion concluded a truce of forty days to the town of Eira, merely to be able to return and celebrate the national festival;³ and that, treaty with Sparta, B.C. 421, the Athenians, in order to show their good-will towards Sparta, promised every year to attend the celebration of the Hyacinthia.⁴

***HYACINTHUS** (ὑάκινθος), a plant. "The ὑάκινθος of the poets," observes Adams, "would seem in some places to be referable to the *Gladiolus communis*, and in others to the *Delphinium Ajacis*, or Larkspur. Matthiolus and Sprengel concur in holding the ὑάκινθος of Dioscorides to be the *Hyacinthus Orientalis*. The '*Vaccinia*' of Virgil was most probably the *Delphinium ajacis*. The γραπτὸ ὑάκινθος of Theocritus was no doubt the same."⁵

II. A precious stone, about which considerable doubt prevails. De Laet thinks it was some species of Amethyst.⁶ Salhaasius, on the other hand, supposes it to have been our Ruby, which the Persians and Arabians still call *Yacut*, a name derived from ὑάκινθος. "This name, however," observes Dr. Moore, "may have been used with as little discrimination as that of ruby is at present, to designate several very different minerals, and among them may be some that are still called Hyacinth; as several varieties of zircon, and the Hyacinth of Compostella, a red feruginous quartz. Jameson enumerates several different minerals besides zircon to which the name Hyacinth has been applied; and he appears to think that the ancient Hyacinth was either amethyst or sapphire."⁷

***HYALOEIDES** (ὑαλοειδής), a precious stone. Sir J. Hill remarks, that it had been supposed to be the *Asteria*, the *Iris*, the *Lapis specularis*, and the Diamond. All that he can determine respecting it is, that it is the *Astrios* of Pliny. (*Vid. ASTRIOS*.)⁸

***HYALUS** (ὑαλος) Glass. (*Vid. VITRUM*.)

***ΥΠΕΡΩΣ ΓΡΑΦΗ** (ὑπερωσ γραφή). This action was the principal remedy prescribed by the Attic law for wanton and contumelious injury to the person, whether in the nature of indecent (ὁλ αἰσχροπυγίας) or other assaults (διὰ πληγῶν). If the offence were of the former kind, it would always be available when the sufferer was a minor of either sex (for the consent of the infant was immaterial), or when an adult female was forcibly violated; and this protection was extended to all conditions of life, whether bond or free.⁹ The legal representative (κύριος), however, of such person might, if he pleased, consider the injury as a private rather than a public wrong, and sue for damages in a civil action. (*Vid. ΒΙΑΩΝ ΔΙΚΗ*.) With respect to common assaults, a prosecution of this kind seems to have been allowable only when the object of a wanton attack was a free person,¹⁰ as the essence of the offence lay in its contumely, and a slave could incur no degradation by receiving a blow, though the injury, if slight, might entitle the master to recover damages for the battery (αἰκία), or, if serious, for the loss of his services (*vid. ΒΑΒΗΣ ΔΙΚΗ*), in a pri-

vate lawsuit.¹ These two last-mentioned actions might also be resorted to by a free citizen when similarly outraged in his own person, if he were more desirous of obtaining compensation for the wrong, than the mere punishment of the wrongdoer, as the penalty incurred by the defendant in the public prosecution accrued to the state, and not to the plaintiff. A fine also of a thousand drachmæ, forfeited by the prosecutor upon his relinquishing his suit or failing to obtain the votes of a fifth of the dicasts, may have contributed to render causes of this kind less frequent, and partly account for the circumstance that there are no speeches extant upon this subject. If, however, the case for the prosecution was both strong and clear, the redress afforded by the public action was prompt and efficient. Besides the legitimate protectors of women and children, any Athenian citizen, in the enjoyment of his full franchise, might volunteer an accusation: the declaration was laid before the thesmothetæ, who, except it were hindered by extraordinary public business, were bound not to defer the trial before the Heliaea beyond a month. The severity of the sentence extended to confiscation or death; and if the latter were awarded, the criminal was executed on the same day: if a fine were imposed upon him, he was allowed but a period of eleven days for its payment, and if the object of his assault were a free person, he was imprisoned till the claim of the state was liquidated.²

***HYDRARGYRUS** (ὕδραργυρος). Quicksilver is first spoken of by Aristotle and Theophrastus under the name of fluid silver (ἄργυρος χυτός). Its nature, however, as Dr. Moore remarks, does not seem to have been much understood even four centuries later; for Pliny distinguishes between quicksilver, "*Argentum vivum*," and the liquid silver, *Hydrargyrum*, procured, by processes which he describes, from minium, or native cinnabar.

HYDRAULA (ὕδραυλις), an Organist. According to an author quoted by Athenæus,³ the first organist was Ctesibius of Alexandria, who lived about B.C. 200. He evidently took the idea of his organ from the *Syrinx* or *Pandean* pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adapting keys with levers (ἀγκυλίσκοι), and with perforated sliders (πώματα), to open and shut the mouths of the pipes (γλυσσόκομα), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight. On this account, the instrument invented by Ctesibius was called the water-organ (ὕδραυλις;⁴ ὕδραυλικὸν ὄργανον⁵). Its pipes were partly of bronze (χαλκεὴ ἄρουρα;⁶ *seges ænea*), and partly of reed. The number of its stops, and, consequently, of its rows of pipes, varied from one to eight,⁷ so that Tertullian⁸ describes it with reason as an exceedingly complicated instrument. It continued in use so late as the ninth century of our era: in the year 826, a water-organ was erected by a Venetian in the church of Aquis-granum, the modern Aix-la-Chapelle.¹⁰

The organ was well adapted to gratify the Roman people in the splendid entertainments provided for them by the emperors and other opulent persons.

Nero was very curious about organs, both in regard to their musical effect and their mechanism.¹ A contorniate coin of this emperor in the British Museum (see woodcut) shows an organ with a sprig of

laurel on one side, and a man standing on the other, who may have been victorious in the exhibitions of the circus or the amphitheatre. It is probable that these medals were bestowed upon such victors, and that the organ was impressed upon them on account of its introduction on such occasions.² The general form of the organ is also clearly exhibited in a poem by Publilius Optatianus, describing the instrument, and composed of verses so constructed as to show both the lower part which contained the bellows, the wind-chest which lay upon it, and over this, the row of 26 pipes. These are represented by 26 lines, which increase in length each by one letter, until the last line is twice as long as the first.³

HYDRIAPHORIA (ὕδριαφορία) was one of the services which aliens (μέτοικοι) residing at Athens had to perform to the Athenians at the Panathenæa, and by which it was probably only intended to impress upon them the recollection that they were mere aliens, and not citizens. The hydriaphoria was performed only by the wives of aliens,⁴ whereas their daughters had on the same occasion to perform the σκιάδηφορία (the carrying of parasols) to the Athenian maidens, and their husbands the σκαφήφορία (the carrying of vessels⁵). It is clear, from the words of Ælian, that these humiliating services were not demanded of the aliens by the laws of Solon, but that they were introduced at a later period.⁶ The hydriaphoria was the carrying of a vessel with water (ὕδρια), which service the married alien women had to perform to the married part of the female citizens of Athens, when they walked to the Temple of Athena in the great procession at the Panathenæa.⁷

*ΤΑΗΜΑ ΤΙ (ὀλημά τι, παθητικόν). Under this name, as Stackhouse remarks, Theophrastus describes the *Mimosa sensitiva*, L., or Sensitive Plant.⁸

HYLOROI or HYLEOROI (ὕλωροι or ὕληωροι) is explained by Hesychius⁹ as officers who had the superintendence of forests (ὕλην φυλάσσωσι¹⁰). Aristotle,¹¹ who divides all public officers into three classes (ἀρχαί, ἐπιμεληταί, and ὑπερέται), reckons the ὕλωροι among the ἐπιμεληταί, and says that by some they were called ἄγρονόμοι. They seem to have been a kind of police for the protection of the forests, similar to the German *förster*. But the exact nature of their office, or the particular Greek states where it existed, are unknown.

*HYOSCYAMUS (ὕοσκιᾶμος), a poisonous herb, Henbane. Three species are described by Dioscor-

ides, which Sprengel makes to be the *Hyoscyamus reticulatus*, *H. aureus*, and *H. albus*. "Upon what grounds he rejects the *H. niger*," observes Adams, "as applying to the first species, I am at a loss to comprehend. The *H. niger* now grows wild in Britain; but, considering the situations in which it is found, I am disposed to think that it was brought thither by the Romans."¹²

HYPERMEROS. (Vid. ENECHYRA.)

HYPERESIA. (Vid. HYPERETES.)

HYPERETES (ὕππερέτης). This word is derived from ἑρέσσω, ἑρέτης, and, therefore, originally signifies a rower; but in later times the word was, with the exception of the soldiers or marines, applied to the whole body of persons who performed any service in a vessel.¹³ In a still wider sense, ὕππερέτης was applied to any person who acted as the assistant of another, and performed manual labour for him, whether in sacred or profane things,¹⁴ whence the word is sometimes used as synonymous with slave.¹⁵ Hence, also, the name ὕππερέται was sometimes given to those men by whom the hoplitæ were accompanied when they took the field, and who carried the luggage, the provisions, and the shield of the hoplitæ.¹⁶ The more common name for this servant of the hoplitæ was σκευόφορος.

At Athens the name ὕππερέτης, or the abstract ὕππερσία, seems to have been applied to a whole class of officers. Aristotle¹⁷ divides all public offices into three classes: ἀρχαί or magistracies, ἐπιμέλειαι or administrations, and ὕππερσίαι or services. Now all public officers at Athens, in as far as they were the representatives of the people or the executors of its will, were appointed by the people itself or by the senate; and with the exception of some subaltern military officers, we never find that one public officer was appointed by another. A public officer, therefore, when he appointed another person to perform the lower or more mechanical parts of his office, could not raise him to the rank of a public officer, but merely engaged him as his servant (ὕππερέτης), and on his own responsibility. These ὕππερέται, therefore, were not public officers, properly speaking, but only in as far as they took a part in the functions of such officers. The original and characteristic difference between them and real public officers was, that the former received salaries, while the latter had none. Among the ὕππερέται were reckoned the lower classes of scribes (vid. GRAMMATEUS), heralds, messengers, the ministers of the Eleven, and others. This class of persons, as might be supposed, did not enjoy any high degree of estimation at Athens,¹⁸ and from Aristotle¹⁹ it is clear that they were not always Athenian citizens, but sometimes slaves.

*HYPERICUM (ὕπερικόν), a species of Saint John's Wort, but there is some difficulty in determining to what particular species it belongs. Sibthorp prefers the *H. crispum*; Sprengel the *barbatum*, Jacq.²⁰

HYPEROON. (Vid. HOUSE, GREEK, p. 515.)

HYPEUTHYNUS (ὕπευθύνος). (Vid. EUTHYNE.) ΤΗΠΟΒΑΗΣ ΓΡΑΦΗ (ὕποβολῆς γραφή). Of this action we learn from the Lex. Rhæ. that it was one of the many institutions calculated to preserve the purity of Attic descent, and preferred against persons suspected of having been supposititious children. If this fact was established at the trial, the pretended citizen was reduced to slavery, and his property confiscated.

HYPOCAUSTUM. (Vid. BATHS, p. 151.)

HYPODEMA. (Vid. CALCEUS.)

HYPOGÆUM. (Vid. CONDITORIUM.)

*HYPOGLOSSON (ὑπόγλωσσον), a plant, the *Ruscus hypoglossum*, according to Matthioli and Sprengel.¹

HYPOGRAMMATEUS. (Vid. GRAMMATEUS.)

*HYPOLA'IS (ὑπολαΐς), a bird mentioned by Aristotle, and the name of which Gaza translates into Latin by *Curuca*. Gesner inclines to the opinion that it is the Titlark, or *Anthus pratensis*, Bechstein.²

HYPOMOSIA. (Vid. DIAITETAI, p. 354; DICE, p. 358.)

HYPORCHE'MA (ὑπόρχημα) was a lively kind of mimic dance which accompanied the songs used in the worship of Apollo, especially among the Dorians. It was performed by men and women.³ A chorus of singers at the festivals of Apollo usually danced around the altar, while several other persons were appointed to accompany the action of the song with an appropriate mimic performance (ὑπορχεῖσθαι). The hyporchema was thus a lyric dance, and often passed into the playful and comic, whence Athenæus⁴ compares it with the cordax of comedy. It had, according to the supposition of Müller, like all the music and poetry of the Dorians, originated in Crete, but was at an early period introduced in the island of Delos, where it seems to have continued to be performed down to the time of Lucian.⁵ A similar kind of dance was the γέρανος, which Theophrastus, on his return from Crete, was said to have performed in Delos, and which was customary in this island as late as the time of Plutarch.⁶ The leader of this dance was called γερωνούκκος.⁷ It was performed with blows, and with various turnings and windings (ἐν ῥυθμῷ περιελίξεις καὶ ἀνελίξεις ἔχοντι), and was said to be an imitation of the windings of the Cretan labyrinth. When the chorus was at rest, it formed a semicircle, with leaders at the two wings.⁸

The poems or songs which were accompanied by the hyporchem were likewise called hyporchemata. The first poet to whom such poems are ascribed was Thaletas; their character must have been in accordance with the playfulness of the dance which bore the same name, and by which they were accompanied. The fragments of the hyporchemata of Pindar confirm this supposition, for their rhythms are peculiarly light, and have a very imitative and graphic character.⁹ These characteristics must have existed in a much higher degree in the hyporchematic songs of Thaletas.¹⁰

HYPOTHE'CA. (Vid. PIGNUS.)

HYPOTHECARIA ACTIO. (Vid. PIGNUS.)

HYPOTIME'SIS. (Vid. CENSUS.)

*HYS (ὑς). (Vid. SUS.)

*HYSSOPUS (ὑσωπος), the Hyssop. "Considerable doubts have been entertained," says Adams, "whether the ancient Hyssop was the same as the modern. Sprengel is disposed to hold the *Origanum Egyptiacum* as being the ὑσωπος of the Greeks. However, Matthioli, Cordus, Fuchs, and most of the older authorities, with the exception of Bauhin, refer it to the *H. officinalis*. It is worthy of remark, that the medicinal powers of the Hyssop, as given by Dr. Hill, agree exactly with those of the ὑσωπος as given by Dioscorides. This appears to me a strong presumption of their identity."¹¹

*HYSTRIX (ὑστρίξ), the Crested Porcupine, or

Hystrix cristata, L. The belief entertained in both ancient and modern times, that the Porcupine darts out its quills when irritated, would appear to be for the most part founded in mistake or imagination. The truth of the matter is, that, when frightened, many of its quills drop out. It is supposed to be the *Kephod* of Scripture.¹

I. J.

JA'CULUM. (Vid. HASTA, p. 489.)

JANITOR. (Vid. JANUA, p. 527.)

JANUA (θύρα), a Door. Besides being applicable to the doors of apartments in the interior of a house, which were properly called *ostia*,² this term more especially denoted the first entrance into the house, i. e., the front or street door, which was also called *antium*,³ and in Greek θύρα αἰθρίας, αἰθρία, αἴλιος, or αἰλία.⁴ The houses of the Romans commonly had a back door, called *posticum*, *postica*, or *posticula*,⁵ and in Greek παραθύρα, dim. παραθύριον. Cicero⁶ also calls it *pseudothyron*, "the false door," in contradistinction to *janua*, the front door; and because it often led into the garden of the house; it was called the garden-door (κηπαία⁷).

The doorway, when complete, consisted of four indispensable parts; the threshold or sill; the lintel; and the two jambs.

The threshold (*limen*, βηλός, οὐδας) was the object of superstitious reverence, and it was taught unfortunate to tread on it with the left foot. On this account, the steps leading into a temple were of an uneven number, because the worshipper, after placing his right foot on the bottom step, would then place the same foot on the threshold also.⁸ Of this an example is presented in the woodcut, p. 61.

The lintel (*jugumentum*,¹⁰ *supercilium*¹¹) was also called *limen*,¹² and more specifically *limen superum*, to distinguish it from the sill, which was called *limen inferum*.¹³ Being designed to support a superincumbent weight, it was generally a single piece, either of wood or stone. Hence those lintels which still remain in ancient buildings astonish us by their great length. In large and splendid edifices, the jambs or door-posts (*postes*, *σραθυαί*) were made to converge towards the top, according to certain rules which are given by Vitruvius.¹⁴ In describing the construction of temples, he calls them *antepagmenta*, the propriety of which term may be understood from the ground-plan of the door at p. 215, where the hinges are seen to be behind the jambs. This plan may also serve to show what Theocritus means by the *hollow* door-posts (*σραθυαὶ κοῖλα τὸν ὀφθαλμὸν*¹⁵). In the Augustan age it was fashionable to inlay the posts with tortoise-shell.¹⁶ Although the jamb was sometimes nearly twice the length of the lintel, it was made of a single stone, even in the largest edifices. A very striking effect was produced by the height of these doorways, as well as by their costly decorations, beautiful materials, and tasteful proportions.

The door in the front of a temple, as it reached nearly to the ceiling, allowed the worshippers to view from without the entire statue of the divinity, and to observe the rites performed before it. Also, the whole light of the building was commonly ad-

mitted through the same aperture. These circumstances are illustrated in the accompanying woodcut, showing the front of a small Temple of Jupiter,

taken from a bas-relief.¹ The term *antepagmentum*, which has been already explained, and which was applied to the lintel as well as the jambs (*antepagmentum superius*), implies that the doors opened inward. This is clearly seen in the same woodcut, and is found to be the construction of all ancient buildings at Pompeii and other places. In some of these buildings, as, for example, in that called "the house of the tragic poet," even the marble threshold rises about an inch higher than the bottom of the door,² so that the whole frame of the door was in every part behind the door-case. After the time of Hippia, the street-doors were not permitted to open outwardly at Athens,³ and hence *ἐνδοῦναι* meant to open the door on coming in, and *ἐκπορεύεσθαι* or *ἐξελκύσασθαι* to shut it on going out. In a single instance only were the doors allowed to open outwardly at Rome; an exception was made as a special privilege in honour of Marcus Valerius.⁴

The lintel of the oblong door-case was, in all large and splendid buildings, such as the great temples, surmounted either by an architrave and cornice, or by a cornice only. As this is not shown in the bas-relief above introduced, an actual doorway, viz., that of the Temple of Hercules at Cora, is here added. Above the lintel is an architrave, with a Latin inscription upon it, and above this a projecting cornice, supported on each side by a console, which reaches to a level with the bottom of the lintel. The top of the cornice (*corona summa*)⁵ coincided in height with the tops of the capitals of the columns of the pronaos, so that the doorway, with its superstructure, was exactly equal in height to the columns and the *ANTÆ*. This superstructure was the *hyperthyrum* of Vitruvius,⁶ and of the Greek architects whom he followed. The next woodcut shows one of the two consoles which support the cornice of a beautiful Ionic doorway in the Temple of Minerva Polias at Athens. In the inscription relating to the building of that temple, which is now in the Elgin collection of the British Museum, the object here delineated is called *οὗς τῷ ὑπερθύρῳ*. Other Greek names for it, used by Vitruvius,⁷ are

parotis and *ancon*, literally a "side-ear" and "an elbow." The use of consoles, or trusses, in this situation, was characteristic of the Ionic style of architecture, being never admitted in the Doric. It is to be observed that Homer,¹ Hesiod,² and Herodotus³ use the term *ὑπερθύρον*, or its diminutive *ὑπερθύριον*, to include the lintel. Upon some part of the *hyperthyrum* there was often an inscription, recording the date and occasion of the erection, as in the case of the Temple of Hercules above represented, or else merely expressing a moral sentiment, like the celebrated "Know thyself" upon the temple at Delphi.

The door itself was called *foris* or *valva*, and in Greek *σάις*, *κλισιάς*, or *θύρρον*. These words are commonly found in the plural, because the doorway of every building of the least importance contained two doors folding together, as in all the instances already referred to. When *foris* is used in the singular, we may observe that it denotes one of the folding doors only, as in the phrase *foris crepuit*, which occurs repeatedly in Plautus, and describes the creaking of a single valve, opened alone and turning on its pivots. Hence the internal doors of houses were bivalve; hence we read of "the folding-doors of a bedchamber" (*fores cubiculi*;⁴ *σάιτες ἐν ἀραγναίαι*;⁵ *πύλαι διπλαί*). But in every case each of the two valves was wide enough to allow persons to pass through without opening the other valve also. Even each valve was sometimes double, so as to fold like our window-shutters (*duplices complicabilesque*).⁶ The mode of attaching doors to the doorway is explained under the article *CARDO*.

The remaining specimens of ancient doors are all of marble or of bronze; those made of wood, which was by far the most common material, have perished. The door of a tomb at Pompeii⁷ is made of a single piece of marble, including the pivots, which were encased in bronze, and turned in sockets of the same metal. It is 3 feet high, 2 feet 9 inches wide, 4½ inches thick. It is cut in front to resemble panels, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully-wrought tombs of Asia Minor (see p. 457) and other Eastern countries have stone doors, made either to turn on pivots or to slide sideways

in grooves. Doors of bronze are often mentioned by ancient writers.¹ The doors of a supposed temple of Remus, still existing at Rome, and now occupied as a Christian church, are of this material. Mr. Donaldson² has represented them as filling up the lower part of the doorway of the temple at Cora, as shown in the last woodcut, which is taken from him. The four panels are surrounded by rows of small circles, marking the spots on which were fixed rosettes or bosses, similar to those which are described and figured in the article *BULLA*, and which served both to strengthen and to adorn the doors. The leaves of the doors were sometimes overlaid with gold, as in the Temple of Solomon at Jerusalem,³ at other times they were enriched with the most exquisite carving.⁴ Those in the Temple of Minerva at Syracuse are said by Cicero⁵ to have exceeded all others in the curious and beautiful workmanship executed upon them in gold and ivory. "It is incredible," says he, "how many Greeks have left writings descriptive of the elegance of these valves." One of the ornaments was "a most beautiful Gorgon's head, with tresses of snakes," probably occupying the centre of a panel. In addition to the sculptures upon the valves themselves, the finest statues were sometimes placed beside them, probably at the base of the antepagmenta, as in the magnificent Temple of Juno in Samos.⁶ In the fancied palace of Alcinoüs,⁷ the door-case, which was of silver, with a threshold of bronze, included folding-doors of gold; while dogs, wrought in gold and silver, guarded the approach, probably disposed like the avenue of sphinxes before an Egyptian temple. As luxury advanced among the Romans, metal took the place of wood, even in the doors of the interior of a house. Hence the quæstor Sp. Carvilius reproved Camillus for having his chamber doors covered with bronze (*arata ostia*).⁸

A lattice-work is to be observed above the bronze doors in the last woodcut, Mr. Donaldson having introduced it on the authority more especially of the Pantheon at Rome, where the upper part of the doorway is filled with a window such as that here represented. Vitruvius⁹ calls it the *hypætrum*, and his language implies that it was commonly used in temples.

The folding-doors exhibited in the last woodcut, instead of a rebate such as we employ, have an upright bronze pilastr standing in the middle of the doorway, so as to cover the joining of the valves. The fastenings of the door (*claustra*,¹⁰ *obices*) commonly consisted in a bolt (*pessulus*; *μάνδαλος*, *κατοχεύς*, *κλειθρον*, Att. *κλήθρον*)¹¹ placed at the base of each *foris*, so as to admit of being pushed into a socket made in the sill to receive it (*πυθμῖν*).¹² The Pompeian doorways show two holes corresponding to the bolts of the two foresh; and they agree with numerous passages which mention in the plural number "the bolts," or "both the bolts" of a door.¹³

The annexed woodcut shows an ancient bolt preserved in the Museum at Naples.¹⁴

By night the front door of the house was farther secured by means of a wooden and sometimes an iron bar (*sera*, *repagula*, *μοχλός*) placed across it, and inserted into sockets on each side of the doorway.¹⁵ Hence it was necessary to remove the door (*τὸν μοχλὸν παρήφαιρεν*) in order to open the door

(*reserare*).¹ Even chamber doors were secured in the same manner² (*cubiculi obseratis foribus*); and here also, in case of need, the bar was employed as a farther security, in addition to the two bolts (*κλήθρα συμπεραίνοντες μόχλοις*).³ To fasten the door with the bolt was *janua pessulum obdere*, with the bar *januam obserare*.⁴ At Athens a jealous husband sometimes even proceeded to seal the door of the women's apartment.⁵ The door of a bedchamber was sometimes covered with a curtain. (*Vid. VALU- LUM*.)

In the Odyssey,⁶ we find mention of a contrivance for bolting or unbolting a door from the outside, which consisted in a leathern thong (*ἡμάς*) inserted through a hole in the door, and by means of a loop, ring, or hook (*κλείς*, *κλήξ*), which was the origin of keys, capable of laying hold of the bolt so as to move it in the manner required. The bolt, by the progress of improvement, was transformed into a lock, and the keys found at Herculaneum and Pompeii (*vid. CLAVIS*), and those attached to rings,⁷ prove that among the polished Greeks and Romans the art of the locksmith (*κλειδοποιός*) approached very nearly to its present state.⁸

The door represented in the first woodcut to this article has a ring upon each valve, which was used to shut the door, and therefore called the *ἐπισπαστήρ*. Herodotus⁹ tells a story of a captive who, having escaped to a temple of Ceres, clung to the rings on the doors with both his hands. This appendage to the door, which was sometimes gilt and very handsome, was also called, on account of its form, *κρίκος* and *κορώνη*, i. e., a "circle" or "crown";¹⁰ and, because it was used sometimes as a knocker, it was called *ρόπτρον*.¹¹ The term *κόραξ*, "a crow,"¹² probably denoted a knocker more nearly approaching the form of that bird, or, perhaps, of its neck and head. The lowest figure in the last woodcut shows a richly-ornamented epispaster from the collection at Naples. That with a lion's head is taken from a bas-relief, representing the doors of a temple, in the collection at Ince-Blundell, near Liverpool. The third figure is from the Neapolitan Museum.

Before the door of a palace, or of any private

house of a superior description, there was a passage leading to the door from the public road, which was called *vestibulum*¹ and *πρόθυρον*.² It was provided with seats.³ It was sometimes covered by an arch (*vid. CAMERA*), which was supported by two pillars,⁴ and sometimes adorned with sculptures.⁵ Here persons waited who came in the morning to pay their respects to the occupier of the house.⁶ In the vestibule was placed the domestic altar. (*Vid. ARA*, p. 78.) The Athenians also planted a laurel in the same situation, beside a figure designed to represent Apollo;⁷ and statues of Mercury were still more frequent,⁸ being erected there on the principle of setting a thief to catch a thief.⁹

The DONARIA offered to the gods were suspended not only from the ANTÆ, but likewise from the door-posts and lintels of their temples,¹⁰ as well as of palaces, which in ancient times partook of the sanctity of temples.¹¹ Victors in the games suspended their crowns at the door of a temple.¹² In like manner, persons fixed to the jambs and lintels of their own doors the spoils which they had taken in battle.¹³ Stags' horns and boars' tusks were, on the same principle, used to decorate the doors of the temples of Diana, and of the private individuals who had taken these animals in the chase. Owls and other nocturnal birds were nailed upon the doors as in modern times.¹⁴ Also garlands and wreaths of flowers were suspended over the doors of temples, in connexion with the performance of religious rites or the expression of public thanksgiving, being composed in each case of productions suited to the particular divinity whom they were intended to honour. In this manner the *corona spica* was suspended in honour of Ceres.¹⁵ Bay was so used in token of victory, especially at Rome,¹⁶ where it sometimes overshadowed the CORONA CIVICA on the doors of the imperial palace¹⁷ (*laureatis foribus*).¹⁸ The doors of private houses were ornamented in a similar way, and with different plants, according to the occasion. More especially in celebration of a marriage, either bay or myrtle was placed about the door of the bridegroom.¹⁹ Catullus, in describing an imaginary marriage, supposes the whole vestibulum to have been tastefully overarched with the branches of trees.²⁰ The birth of a child was also announced by a chaplet upon the door,²¹ and a death was indicated by cypresses, probably in pots, placed in the vestibulum.²² In addition to trees, branches, garlands, and wreaths of flowers, the Romans sometimes displayed lamps and torches before the doors of their houses for the purpose of expressing gratitude and joy.²³ Music, both vocal and instrumental, was sometimes performed in the vestibulum, especially on occasions when it was intended to do honour to the master of the house or to one of his family.²⁴

It was considered improper for a stranger to enter without giving notice to its inmates. This notice the Spartans gave by shouting; the Athenians and all other nations by using the knocker already descri-

bed, but more commonly by rapping with the knuckles or with a stick (*κρούειν, κόπτειν*).¹ In the houses of the rich, a porter (*janitor, custos, θυρωρός*) was always in attendance to open the door.² He was commonly a eunuch or a slave,³ and was chained to his post.⁴ To assist him in guarding the entrance, a dog was universally kept near it, being also attached by a chain to the wall;⁵ and in reference to this practice, the warning *Cave Canem, εἰλαβὸν τὴν κύνα*, was sometimes written near the door. Of this a remarkable example occurs in "the house of the tragic poet" at Pompeii, where it is accompanied by the figure of a fierce dog, wrought in mosaic on the pavement.⁶ Instead of this harsh admonition, some walls or pavements exhibited the more gracious SALVE or ΧΑΙΡΕ.⁷ The appropriate name for the portion of the house immediately behind the door (*θύρῳ*), denotes that it was a kind of apartment; it corresponded to the hall or lobby of our houses. Immediately adjoining it, and close to the front door, there was in many houses a small room for the porter (*cella, or cellula janitoris, θύρω πειον*).⁸

*IASIONE (*ιασιώνη*), a plant, which Cæsalpinus and Bauhin suggest is the *Aquilegia* or Columbine. Stackhouse conjectures that it may be the *Convulvulus sepium*, but Adams doubts the authority on which he founds this opinion.¹¹

*IASPACHATES (*ιασπαχάτης*), the Jasper-agate of modern mineralogists, a stone in which jasper is associated with agate. (*Vid. ΑΣΧΑΤΕS*).¹²

*IASPIS (*ιασπίς*), Jasper, the *Iaspis* of Werner, *Quartz Jaspe* of Haüy, and *Jasper* of Jameson. Iaspis, says Pliny, is green, and often translucent: "What we call Jasper," observes Dr. Moore, "is of almost every colour, and is opaque. But still the ancient *Iaspis* may have comprehended certain varieties of green jasper; and since agate and jasper are closely connected, and pass into each other, it is probable that there were varieties of agate also classed under the same head. Jameson may say with truth that we are ignorant of the particular stone denominated jasper by the ancients, for certainly there is no one stone to which the description of jasper could be applied; but in this case, as in others, it is evident that several different minerals were comprehended under a single name." "The Jasper," says Sir John Hill, "is a semi-pellucid stone; it is much of the same grain and texture with the agates, but not so hard, nor capable of so elegant a polish, nor does it approach so near to transparency. Its general colour is green, but it is spotted or clouded with several others, as yellow; blue, brown, red, and white. The Heliotrope, or common Bloodstone, is of this kind, and very little, if at all, different from the Oriental Jasper."¹³

IATRALIPTA, IATRALIPTES, or IATROLIPTES (*ἱατραλειπτής*), the name given by the ancients to a physician who paid particular attention to that part of medical science called *Iatraliptice*. The name is compounded of *ιατρῆς* and *ἄλειψω*, and signifies literally a physician that cures by anointing. According to Pliny,¹⁴ they were at first only the slaves of physicians, but afterward rose to the rank of physicians themselves, and were, therefore, superior to the aliptæ. (*Vid. ΑΛΙΠΤÆ*.) The word

occurs in Paulus Ægineta,¹ Celsus,² and other medical writers.

IATRALIPTICE (*ἱατραλειπτική*) was that part of the art and science of medicine which had for its object the preservation or restoration of health by gymnastics and different kinds of bodily exercises, including unctions and frictions. It was, according to Pliny,³ first practised by Prodicus. (*Vid. GYMNASIUM*, p. 484.)

IATROS. (*Vid. MEDICUS*.)

IATROSOPHISTA (*ἱατροσοφιστής*), an ancient medical title, signifying apparently (according to Du Cange⁴) one who both taught medicine and also practised it himself; as the ancients made a distinction between *διδασκαλική* and *ἐργατική*, the art and the science of medicine, the theory and the practice.⁵ Eunapius Sardiannus⁶ calls them *ἐξασκημένους λέγειν τε καὶ ποιεῖν ἱατρικῇ*. The word is somewhat varied in different authors. Socrates⁷ calls Adamantius *ιατρικῶν λόγων σοφιστής*. Stephanus Byzantinus⁸ mentions *τῶν ἱατρῶν σοφιστής*: Callisthenes (quoted in Du Cange), *ιατρὸς σοφιστής*: and Theophanes⁹ *σοφιστής τῆς ἱατρικῆς ἐπιστημῆς*. Several ancient physicians are called by this title, *e. g.*, Magnes,¹⁰ Cassius, the author of "Quæstiones Medicæ et Naturales," and others.

*IBERIS (*ἰβηρίς*), a species of Pepperwort, now called *Lepidium Iberis*. The chapter of Dioscorides on the *Iberis* is most probably spurious.¹¹

*IBIS (*ἰβίς*), the Ibis, a bird held sacred by the Egyptians. Two species of it are described by Herodotus and Aristotle, but there has been considerable difficulty in identifying these two. "Dr. Trail informs me," says Adams, "that, having compared the skeletons of the mummy-bird and of the *Ibis religiosa*, he found them identical. It is the *Fantalus Ethiopicus* of Latham. The other Ibis of Herodotus would appear to be the stork."¹² The Ibis is as large as a hen, with white plumage, except the end of the wing-quills, which are black. The last wing-coverts have elongated and slender harbs, of a black colour, with violet reflections, and thus cover the end of the wing and tail. The bill and feet are black, as well as the naked part of the head and neck. In the young subject, however, this part is covered, at least on its upper face, with small blackish plumes. "It is only since the publication of Bruce's Travels," observes Griffith, "that positive notions have been gained respecting the genus to which we would refer the bird which was so venerated by the ancient Egyptians, and which they used to embalm after its death. The Ibis of Perault and Buffon has since been recognised for a *tantalus*; that of Hasselquist for a heron, perhaps the same as the ox-bird of Shaw; and that of Maillet (*Pharaoh's chicken*; *Rachamah* of the Arabs) for a vulture, *Vultur Perenopterus*, L. But Bruce found in Lower Ethiopia a bird which is there named *Abou-hannés* (Father John), and, on comparing it with the embalmed individuals, he recognised it to be the true black and white Ibis, with reflections on several parts of the body, and the same as the *Mengel* or *Abou-mengel* (Father of the Sicke) of the Arabs. This fact has been fully confirmed by M. Cuvier, by an examination of mummies brought from Egypt by Colonel Grobert and M. Geoffroy, and from other mummies by M. Savigny, who also found in Egypt the very bird itself, and had an opportunity of examining it in the living state. M. Cuvier's memoir on the subject was first inserted

in the Annals of the French Museum; and in the 'Ossements Fossiles,' M. Savigny has published a natural and mythological history of the same bird. M. Cuvier having found in the mummy of an Ibis the undigested remains of the skin and scales of serpents, concluded that these birds in reality fed upon those reptiles. M. Savigny having never found any in the stomach of such individuals of the present time as he dissected, came to a contrary conclusion, which seemed to him to be substantiated by the natural habits and organization of the Ibis, confirmed by analogy, and farther corroborated by the testimony of the modern Egyptians. He does not, indeed, attempt to deny the fact stated by the baron, but he observes that it is an isolated one, and that the learned professor does not specify the exact position of the debris of serpents of which he speaks. M. Savigny adds, first, that, according to Herodotus, before the Egyptians proceeded to embalm an Ibis, they removed the intestines, which were reputed to be excessively long; secondly, that he has himself found in the interior of one of these mummies no remains of viscera and soft parts, but a multitude of the larvæ or nymphæ of insects of different species; thirdly, that, moreover, certain species of serpents were reckoned among the sacred animals, and that mummies of such serpents have been discovered in the grottoes of Thebes; fourthly, that many of the mummies of the Ibis, which were taken from the repositories in the plains of Saccara, contained, under a general envelope, aggregations of different animals, whose debris alone were collected. We may remark, also, that the remains of serpents mentioned by M. Cuvier were not yet digested, which would naturally be the case under the supposition that they had not even been introduced into the alimentary canal.

"When we consider the assertions of Herodotus respecting the supposed service rendered to Egypt by these birds, in delivering it from serpents, we shall find that the chief stress is laid upon their antipathy for these reptiles, which they were said to combat and destroy; but their organization seems but little calculated to enable them to succeed in enterprises of this kind. Besides, the animals which are wont to rid us of pernicious species, do so, not from a hatred and antipathy which they bear to such species, but rather from the pleasure which they experience in devouring and feasting on them. This, assuredly, is a distinction of some weight. It may also be remarked, that the food of animals is always the same, except in cases of dearth, which dearth is never wantonly created by the animals themselves. If serpents of any kind were the natural aliment of the Ibis, instead of preventing them from penetrating into the country where these birds were destined to pass a portion of the year, the latter would rather follow them into the places of their retreat. If we add to these considerations the recollection that sandy countries are the suitable habitats of serpents, while humid situations are best adapted to the Ibis, we shall find fresh cause to reject the opinion of Herodotus as fabulous. It could not, indeed, have been received with any great degree of confidence by his countrymen, since the first naturalist of Greece has passed over in silence the antipathy of the Ibis to the serpent, and their supposed combats. If Herodotus, who tells us that he had himself seen, on the confines of Arabia, and at the place where the mountains open on the plains of Egypt, the fields covered with an incredible number of accumulated bones, and instances these bones as the remains of reptiles destroyed by the Ibis, when they were on the point of entering Egypt, it is merely a simple opinion which he gives upon a fact which could not have originated from any such

cause These immense debris of fishes and other vertebrated animals, which in the course of time have been heaped up in some narrow place, afterward abandoned by the waters, cannot possibly admit of such an explication of their origin, which is truly ludicrous, and could only have been adopted by this author in consequence of the excessive credulity with which he was prone to swallow popular report. Such masses, moreover, would not have been preserved for any great length of time, had they consisted merely of the small bones of reptiles, incapable of making resistance against the attacks of birds so weak as the Ibis.

"We must, then, look for other reasons than the destruction of serpents for the veneration paid to the Ibis by the ancient Egyptians, who admitted it even into their temples, and prohibited the killing of it under pain of death. In a country where the people, very ignorant, were governed only by superstitious ideas, it was natural that fictions should have been imagined to express with energy the happy influences of that phenomenon which every year attracts the Ibis into Egypt, and retains it there. Its constant presence at the epoch of that inundation which annually triumphs over all the sources of decay, and assures the fertility of the soil, must have appeared to the priests, and to those at the head of government, admirably calculated to make a lively impression on the minds of the people, to lead them to suppose supernatural and secret relations between the movements of the Nile and the sojourn of these inoffensive birds, and to consider the latter as the cause of effects exclusively owing to the overflow of the river."¹ "The Ibis was sacred to Thoth, who was fabulously reported to have eluded the pursuit of Typhon under the form of this bird. It was greatly revered in every part of Egypt; and at Hermopolis, the city of Thoth, it was worshipped with peculiar honours, as the emblem of the deity of the place. Its Egyptian name was *Hip*, from which Champollion supposes the town of *Nibis* to have been called, being a corruption of *Ma-n-hip* or *'n-hip*, 'the place of the Ibis.' Such was the veneration felt by the Egyptians for the Ibis, that to have killed one of them, even involuntarily, subjected the offender to the pain of death. So pure, in fact, did they consider it, that those priests who were most scrupulous in the performance of their sacred rites, fetched the water they used in their purifications from some place where the Ibis had been seen to drink; it being observed of that bird that it never goes near any unwholesome and corrupted water. Plutarch and Cicero pretend, that the use which the Ibis made of its bill taught mankind an important secret in medical treatment; but the bill of the bird is not a tube, and the *κλωζόμενῃ ὑφ' αὐτῆς* is a mistake. The form of the Ibis, when crouched in a sitting position, with its head under its feathers, or when in a mummified state, was supposed to resemble the human heart; the space between its legs, when parted asunder as it walks, was observed to make an equilateral triangle; and numerous fanciful peculiarities were discovered in this revered emblem of Thoth."²

*ICHNEUMON (*ἰχνεύμων*), a well-known quadruped of the Weasel kind, the *Vierra Ichneumon* of naturalists. It has been long famous in Egypt, where it goes by the name of Pharaoh's Rat. "If, in the mythological system of the ancient Egyptians," observes Lieut. Col. Smith, "the various living beings which people the surface of the earth were each entitled to particular reverence on account of the influence which they exercise over the

economy of nature, and the part which they contribute to the general harmony of the universe, the Ichneumon unquestionably possessed more claims than any other animal to the homage of that singular people. It presented a lively image of a beneficent power perpetually engaged in the destruction of those noisome and dangerous reptiles which propagate with such terrible rapidity in hot and humid climates. The Ichneumon is led by its instinct, and obviously destined by its peculiar powers, to the destruction of animals of this kind. Not that it dares to attack crocodiles, serpents, and the larger animals of the lizard tribe, by open force, or when these creatures have arrived at their complete development. It is by feeding on their eggs that the Ichneumon reduces the number of these intolerable pests. The Ichneumon, from its diminutive size and timid disposition, has neither the power to overcome nor the courage to attack such formidable adversaries. Nor is it an animal of the most decidedly carnivorous appetite. Urged by its instinct of destruction, and guided, at the same time, by the utmost prudence, it may be seen, at the close of day, gliding through the ridges and inequalities of the soil, fixing its attention on everything that strikes its senses, with the view of evading danger or discovering prey. If chance favours its researches, it never limits itself to the momentary gratification of its appetite: it destroys every living thing within its reach which is too feeble to offer it any effectual resistance. It particularly seeks after eggs, of which it is extremely fond, and through this taste it proves the means of destruction to so many crocodiles. That it enters the mouth of this animal when asleep, as Diodorus gravely informs us, and, gliding down its throat, gnaws through its stomach, is as much true as that it attacks it when awake. This is either a fable which never had any foundation, or, like many other marvels, it has ceased in our unbelieving and less favoured era.—The colour of the Ichneumon is a deep brown, picked out with dirty white. The tail is terminated by a tuft of hairs entirely brown. The Ichneumon is about two feet seven inches in length, measuring from the end of the tail to the tip of the nose, the tail itself being one foot four inches. The mean stature of the animal is about eight inches."¹ The Ichneumon was particularly worshipped by the Heracleopolites, who lived in a nome situated in the valley of the Nile, a little to the south of the entrance to the modern district of Fayoom. This nome of Heracleopolis, and the vicinity of Cairo, still continue, according to Wilkinson, to be the chief resort of the animal in question; "and it is sometimes tamed and kept by the moderns, as it was by the ancient Egyptians, to protect their houses from rats. But, from its great predilection for eggs and poultry, they generally find that the injury it does far outbalances the good derived from its services as a substitute for the cat. Herodotus says little respecting the Ichneumon, except that it received the same honours of sepulture as the domestic animals. But Ælian tells us that it destroyed the eggs of the asp, and fought against that poisonous reptile. Pliny, Strabo, and Ælian relate the manner in which it attacked the asp, and was protected from the effect of its poisonous bite. Ælian says it covered itself with a coat of mud, which rendered its body proof against the fangs of its enemy; or, if no mud was near, it wetted its body with water, and rolled itself in the sand. Its nose, which alone remained exposed, was then enveloped in several folds of its tail, and it thus commenced the attack. If bitten, its death was inevitable; but all the efforts of the asp were unavailable against its

artificial coat of mail, and the Ichneumon, attacking it on a sudden, seized it by the throat, and immediately killed it. Thus much for the ancient story. Modern experience, on the other hand, proves that, without having recourse to a cuirass of mud, the Ichneumon fearlessly attacks snakes, and, the moment it perceives them raise their head from the ground, it seizes them at the back of the neck, and with a single bite lays them dead before it."¹

IGNOMINIA. (Vid. INFAMIA.)

IMPERATOR. (Vid. IMPERIUM.)

IMPERIUM. Gaius,² when making a division of judicia into those quæ legitimo jure consistent and those quæ imperio continentur, observes that the latter are so called because they continue in force during the imperium of him who has granted them. This division of judicia had merely reference to the time within which a judicium must be prosecuted, and to the jurisdictio of him who had granted them. Legitima judicia were those which were prosecuted in Rome or within the first miliarium, between Roman citizens, and before a single judex. By a lex Julia judicaria, such judicia expired unless they were concluded within a year and six months. All other judicia were said imperio contineri, whether conducted within the above limits before recuperatores or before a single judex, when either the judex or one of the litigant parties was a peregrinus, or when conducted beyond the first miliarium either between Roman citizens or peregrini. From this passage it follows that there were judicia quæ imperio continebantur, which were granted in Rome, which is made clearer by what follows. There was a distinction between a judicium ex lege, that is, a judicium founded upon a particular ex, and a judicium legitimum; for instance, if a man sued in the provinces under a lex, the Aquilia, for example, the judicium was not legitimum, but was said imperio contineri, that is, the imperium of the præses or proconsul who gave the judicium. The same was the case if a man sued at Rome ex lege, and the judicium was before recuperatores, or there was a peregrinus concerned. If a man sued under the prætor's edict, and, consequently, not ex lege, and a judicium was granted in Rome, and the same was before one judex, and no foreigner was concerned, it was legitimum. The judicia legitima are mentioned by Cicero;³ but it may, perhaps, be doubted if he uses the term in the sense in which Gaius does. It follows, then, that in the time of Gaius, so long as a man had jurisdictio, so long as he said to have imperium. Imperium is defined by Ulpian⁴ to be either merum or mixtum. To have the merum imperium is to have "*gladii potestatem ad animadvertendum in facinorosos homines*," that is, "*mixtum imperium cui etiam jurisdictio inest*." It appears, then, that there was an imperium which was incident to jurisdictio; but the merum or pure imperium was conferred by a lex.⁵ The mixtum imperium was nothing more than the power necessary for giving effect to the jurisdictio. There might, therefore, be imperium without jurisdictio, but there could be no jurisdictio without imperium.

Imperium is defined by Cicero⁶ to be that "*sine quo res militaris administrari, teneri cæcerulus, bellum geri non potest*." As opposed to potestas, it is the power which was conferred by the state upon an individual who was appointed to command an army. The phrases Consularis Potestas and Consulari Imperium might both be properly used; but the expression Tribunitia Potestas only could be

used, as the tribuni never received the Imperium. In Vell. Paterc., ii. 2, imperium is improperly used. A consul could not act as commander of an army (*attingere rem militarem*) unless he were empowered by a lex Curiata, which is expressed by Livy⁷ thus: "*Comitia curiata rem militarem continent*." Though consuls were elected at other comitia, the comitia curiata only could give them imperium.⁸ This was in conformity with the ancient constitution, according to which an imperium was conferred on the kings after they had been elected: "On the death of King Pompilius, the populus in the comitia curiata elected Tullus Hostilius king, upon the rogation of an interrex; and the king, following the example of Pompilius, took the votes of the populus according to their curiæ on the question of his imperium."⁹ Both Numa¹⁰ and Ancus Marcius,¹¹ the successor of Tullus, after their appointment as reges, are severally said "*De Imperio suo legem curiatam tulisse*." It appears, then, that from the kingly period to the time of Cicero, the imperium, as such, was conferred by a lex Curiata.

The imperium of the kings is not defined by Cicero. It is declared by modern writers to have been the military and the judicial power, but these writers have not explained what they precisely mean by the term "judicial power." It may be conjectured that the division of imperium, made by the jurists, was in accordance with the practice of the republican period: there was during the republican period an imperium within the walls which was incident to jurisdictio, and an imperium without the walls which was conferred by a lex Curiata. There are no traces of this separation in the kingly period, and it is probable that the king received the imperium in its full import, and that its separation into two parts belongs to the republican period. The imperium, which was conferred by a lex under the Republic, was limited, if not by the terms in which it was conferred, at least by usage: it could not be held or exercised within the city. It was sometimes specially conferred on an individual for the day of his triumph within the city, and, at least in some cases, by a plebiscitum.¹²

The imperium was as necessary for the governor of a province as for a general who merely commanded the armies of the Republic, as he could not, without it, exercise military authority (*rem militarem attingere*). So far as we can trace the strict practice of the Roman constitution, military command was given by a special lex, and was not incident to any office, and might be held without any other office than that of imperator. It appears that in the time of Cicero there were doubts as to the necessity of the lex in some cases, which may have gradually arisen from the irregular practices of the civil wars, and from the gradual decay of the old institutions. Cicero, in a passage which is not very clear,¹³ refers to a Cornelia lex, according to which an individual who had received a province ex senatus consulto thereby acquired the imperium without the formality of a lex Curiata.

The imperium (*merum*) of the Republic appears to have been (1), a power which was only exercised out of the city; (2), a power which was specially conferred by a lex Curiata, and was not incident to any office; (3), a power without which no military operation could be considered as done in the name and on the behalf of the state. Of this a notable example is recorded in Livy,¹⁴ where the senate refused to recognise a Roman as commander because he had not received the imperium in due form.

In respect of his imperium, he who received it

1. (Liv., vi., 37.)—2. (v., 52.)—3. (Liv., v., 52.)—4. (Cic., Republic, ii., 17.)—5. (ii., 13.)—6. (ii., 18.)—7. (Liv., xxvi., 21.—Id., xlv., 35.)—8. (ad Fam., i., 9.)—9. (xxvi., 2.)

was styled *imperator*: he might be a consul or a proconsul. It was an ancient practice, observes Tacitus,¹ for the soldiers of a victorious general to salute him by the title of *imperator*; but in the instance referred to by Tacitus, the Emperor Tiberius allowed the soldiers to confer the title on an individual who had it not already; while under the Republic, the title, as a matter of course, was given with the *imperium*; and every general who received the *imperium* was entitled to the name of *imperator*. After a victory it was usual for the soldiers to salute their commander as *imperator*; but this salutation neither gave nor confirmed the title. Under the Republic, observes Tacitus, there were several *imperatores* at a time: Augustus granted the title to some; but the last instance, he adds, of the title being conferred was in the case of Blæsus, under Tiberius. There were, however, later instances. The assumption of the *prænomen* of *imperator* by Julius Cæsar² was a manifest usurpation. Under the Republic the title came properly after the name; thus Cicero, when he was proconsul in Cilicia, could properly style himself M. T. Cicero *Imperator*, for the term merely expressed that he had the *imperium*. Tiberius and Claudius refused to assume the *prænomen* of *imperator*; but the use of it as a *prænomen* became established among their successors, as we see from the imperial coins. The title *imperator* sometimes appears on the imperial medals, followed by a numeral (VI. for instance), which indicates that it was specially assumed by them on the occasion of some great victory; for, though the victory might be gained by their generals, it was considered to be gained under the auspices of the *imperator*.

The term *imperium* was applied in the republican period to express the sovereignty of the Roman state. Thus Gaul is said by Cicero³ to have come under the *imperium* and *ditio* of the *populus Romanus*; and the notion of the *majestas populi Romani* is said to be "*in imperii atque in nominis populi Romani dignitate*."⁴

IMPUUVIUM. (*Vid.* HOUSE, ROMAN, p. 516.)

IMPUBES. An *infans* (*vid.* INFANS) was incapable of doing any legal act. An *impubes*, who had passed the limits of *infantia*, could do any legal act with the *auctoritas* of his tutor; without such *auctoritas* he could only do those acts which were for his benefit. Accordingly, such an *impubes*, in the case of obligatory contracts, could stipulate (*stipulari*), but not promise (*promittere*); in other words, as Gaius⁵ expresses it, a *pupillus* could only be bound by the *auctoritas* of his tutor, but he could bind another without such *auctoritas*. (*Vid.* INFANS.)

But this remark as to *pupilli* does not apply to those who are *infantes* or *infanti proximi*, though in the case of the *infanti proximi* a liberal interpretation was given to the rule of law (*benignior juris interpretatio*), by virtue of which a *pupillus*, who was *infanti proximus*, was placed on the same footing as one who was *pubertati proximus*, but this was done for their benefit only (*propter utilitatem eorum*), and, therefore, could not apply to a case where the *pupillus* might be a loser.⁶ An *impubes* who was in the power of his father could not bind himself even with the *auctoritas* of his father; for, in the case of a *pupillus*, the *auctoritas* of the tutor was only allowed in respect of the *pupillus* having property of his own, which a son in the power of his father could not have.

In the case of *obligationes ex delicto*, the notion of the *auctoritas* of a tutor was of course excluded,

as such *auctoritas* was only requisite for the purpose of giving effect to rightful acts. If the *impubes* was of sufficient capacity to understand the nature of his delict, he was bound by it; otherwise he was not. In the case of a person who was *pubertati proximus*, there was a legal presumption of such capacity; but still, this presumption did not exclude a consideration of the degree of understanding of the *impubes* and the nature of the act, for the act might be such as either to be perfectly intelligible, as theft, or it might be an act which an *impubes* imperfectly understood, as when he was made the instrument of fraud. These principles were applicable to cases of *furtum*, *dammum injuria datum*, *injuria*, and others; and also to crimes in which the nature of the act mainly determined whether or not guilt should be imputed.

An *impubes* could enter into a contract by which he was released from a debt, but he could not release a debt without the *auctoritas* of his tutor. He could not pay money without his tutor; nor could he receive money without his tutor, at least it was not a valid payment, because such payment was, as a consequence, followed by a release to the debtor. But since the rule as to the incapacity of an *impubes* was made only to save him from loss, he could not retain both the money and the claim.

An *impubes* could not be a plaintiff or a defendant in a suit without his tutor. He could acquire the ownership of property alone, but he could not alienate it without the consent of his tutor, nor could he manumit a slave without such consent. He could contract *sponsalia* alone, because the *auctoritas* of the tutor has reference only to property: if he was in his father's power, he was, of course, entirely under his father's control.

An *impubes* could acquire a *hereditas* with the consent of his tutor, which consent was necessary, because a *hereditas* was accompanied with obligations. But as the act of *cretion* was an act that must be done by the *heres* himself, neither his tutor nor a slave could take the *hereditas* for a *pupillus*, and he was, in consequence of his age, incapable of taking it himself. This difficulty was got over by the doctrine of *pro herede gestio*: the tutor might permit the *pupillus* to act as *heres*, which had the effect of *cretion*: and this doctrine would apply even in the case of *infantes*, for no expression of words was necessary in order to the *pro herede gestio*. In the case of the *bonorum possessio*, the father could apply for it on behalf of his child, and the tutor on behalf of his ward, without any act being done by the *impubes*. By the imperial legislation, a tutor was allowed to acquire the *hereditas* for his ward, and a father for his son, who was in his power; and thus the doctrine of the *pro herede gestio* was rendered unnecessary.

A *pupillus* could not part with a possession without the *auctoritas* of a tutor; for, though possession of itself was no legal right, legal advantages were attached to it. As to the acquisition of possession, possession in itself being a bare fact, and the fundamental condition of it being the *animus possidendi*, consequently the *pupillus* could only acquire possession by himself, and when he had capacity to understand the nature of the act. But with the *auctoritas* of his tutor he could acquire possession even when he was an *infans*, and thus the acquisition of possession by a *pupillus* was facilitated, *utilitatis causa*. There was no formal difficulty in such possession any more than in the case of *pro herede gestio*, for in neither instance was it necessary for words to be used. Subsequently the legal doctrine was established that a tutor could acquire possession for his *pupillus*.¹

1. (Ann., iii., 74.)—2. (Suet., Jul., 76.)—3. (Pro Font., i., 4.)—4. (Cic., Or. Part., 30.—Compare the use of "Imperium" in Horace, Carm., i., 37; iii., 5.)—5. (iii., 107.)—6. (Compare Inst., i., tit. 3, c. 19, s. 10, with Gaius, iii., 107.)

With the attainment of pubertas, a person obtained the full power over his property, and the tutela ceased: he could also dispose of his property by will; and he could contract marriage. According to the legislation of Justinian,¹ pubertas, in the case of a male, was attained with the completion of the fourteenth, and in a female, with the completion of the twelfth year. In the case of a female, it seems that there never had been any doubt as to the period of the twelve years, but a dispute arose among the jurists as to the period of fourteen years. The Sabiniani maintained that the age of pubertas was to be determined by physical capacity (*habitu corporis*), to ascertain which a personal examination might be necessary: the Proculiani fixed the age of fourteen complete, as that which absolutely determined the attainment of puberty.² It appears, therefore, that under the earlier emperors there was some doubt as to the time when pubertas was attained, though there was no doubt that with the attainment of puberty, whatever that time might be, full legal capacity was acquired.

Until a Roman youth assumed the toga virilis, he wore the toga praetexta, the broad purple hem of which (*prætexta*) at once distinguished him from other persons. The toga virilis was assumed at the Liberalia in the month of March; and though no age appears to have been positively fixed for the ceremony, it probably took place, as a general rule, on the feast which next followed the completion of the fourteenth year, though it is certain that the completion of the fourteenth year was not always the time observed. Still, so long as a male wore the praetexta, he was impubes, and when he assumed the toga virilis, he was pubes. Accordingly, *vesticeps*³ was the same as pubes, and *investis* or *prætextatus* the same as impubes.⁴ After the assumption of the toga virilis the son who was in the power of his father had a capacity to contract debts; and a pupillus was released from the tutela. But if neither the pupillus wished to get rid of his tutor, nor the tutor to be released from the responsibility of his office (for which he received no emolument), the period of assuming the toga virilis might be deferred. If the pupillus and the tutor could not agree, it might be necessary that there should be a judicial decision. In such case the Proculiani maintained as a theoretical question, that the age of fourteen should be taken as absolutely determining the question, fourteen being the age after the attainment of which the praetexta had been generally laid aside. The Sabiniani maintained that, as the time of puberty had never been absolutely fixed, but had depended on free choice, some other mode of deciding the question must be adopted, where free choice was out of the question, and therefore they adopted that of the physical development (*habitus corporis*). But, though there are allusions to this matter,⁵ there is no evidence to show that inspection of the person was ever actually resorted to in order to determine the age of puberty. It appears that the completion of fourteen years was established as the commencement of pubertas. The real foundation of the rule as to the fourteen and the twelve years appears to be, that in the two sexes respectively, puberty was, as a general rule in Italy, attained about these ages. In the case of females, the time had been fixed absolutely at twelve by immemorial custom, and had no reference to any practice similar to that among males of adopting the toga virilis, for women wore the toga praetexta till they were married. And, farther, though the pupillaris tutela ended with females

with the twelfth year, they were from that time subject to another kind of tutela.

A male had a capacity to make a will upon completing his fourteenth, and a female upon completing her twelfth year;⁶ and the same ages, as already observed, determined the capacity, in the two sexes, for contracting a legal marriage. The dispute between the two schools as to the time when the male attained the age of puberty, appears to have had reference to the termination of the tutela, and his general capacity to do legal acts; for the test of the personal examination could hardly, from the nature of the case, apply to the capacity to make a will or contract a marriage, as Savigny shows.

Spadones (males who could never attain physical pubertas) might make a testament after attaining the age of eighteen.⁷

INAUGURATIO was in general the ceremony by which the augurs obtained, or endeavoured to obtain, the sanction of the gods to something which had been decreed by man; in particular, however, it was the ceremony by which things or persons were consecrated to the gods, whence the terms *dedicatio* and *consecratio* were sometimes used as synonymous with inauguration.⁸ The ceremony of inauguration was as follows: After it had been decreed that something should be set apart for the service of the gods, or that a certain person should be appointed priest, a prayer was addressed to the gods by the augurs or other priests, soliciting them to declare by signs whether the decree of men was agreeable to the will of the gods.⁹ If the signs observed by the inaugurating priest were thought favourable, the decree of men had the sanction of the gods, and the inauguration was completed. The inauguration was, in early times, always performed by the augurs; but subsequently we find that the inauguration, especially that of the rex sacrificulus and of the flamines, was sometimes performed by the college of pontiffs in the comitia calata.¹⁰ But all other priests, as well as new members of the college of augurs, continued to be inaugurated by the augurs, or sometimes by the augurs in combination with some of the pontiffs;¹¹ the chief pontiff had the right to enforce the inauguration, if it was refused by the augurs, and if he considered that there was not sufficient ground for refusing it. Sometimes one augur alone performed the rite of inauguration, as in the case of Numa Pompilius;¹² and it would seem that in some cases a newly-appointed priest might himself not only fix upon the day, but also upon the particular augur by whom he desired to be inaugurated.¹³

During the kingly period of Rome, this inauguration of persons was not confined to actual priests; but the kings, after their election by the populus, were inaugurated by the augurs, and thus became the high-priests of their people. After the civil and military power of the kings had been conferred upon the consuls, and the office of high-priest was given to a distinct person, the rex sacrorum, he was, as stated above, inaugurated by the pontiffs in the comitia calata, in which the chief pontiff presided. But the high republican magistrates, nevertheless, likewise continued to be inaugurated,¹⁴ and for this purpose they were summoned by the augurs (*condictio, denunciatio*) to appear on the Capitol on the third day after their election.¹⁵ This inauguration conferred no priestly dignity upon the magistrates, but was merely a method of obtaining the sanction of the

gods to their election, and gave them the right to take auspica; and on important emergencies it was their duty to make use of this privilege. At the time of Cicero, however, this duty was scarcely ever observed.¹ As nothing of any importance was ever introduced or instituted at Rome without consulting the pleasure of the gods by augury, we read of the inauguration of the tribes, of the comitum, &c.

INAURIS, an Earring; called in Greek *ἐνώτιον*, because it was worn in the ear (*οὖς*), and *ἐλλόδιον*, because it was inserted into the lobe of the ear (*λόβος*), which was bored for the purpose.²

Earrings were worn by both sexes in Oriental countries,³ especially by the Lydians,⁴ the Persians,⁵ the Babylonians,⁶ and also by the Libyans⁷ and the Carthaginians.⁸ Among the Greeks and Romans they were worn only by females.

This ornament consisted of the ring (*κρίκος*⁹) and of the drops (*stalagmia*¹⁰). The ring was generally of gold, although the common people also wore earrings of bronze. See Nos. 1, 4, from the Egyptian collection in the British Museum. Instead of

a ring, a hook was often used, as shown in Nos. 6, 8. The women of Italy still continue the same practice, passing the hook through the lobe of the ear without any other fastening. The drops were sometimes of gold, very finely wrought (see Nos. 2, 7, 8), and sometimes of pearls¹¹ and precious stones (Nos. 3, 5, 6). The pearls were valued for being exactly spherical,¹² as well as for their great size and delicate whiteness; but those of an elongated form, called *elenchi*, were also much esteemed, being adapted to terminate the drop, and being sometimes placed two or three together for this purpose.¹³ In the *Iliad*,¹⁴ Juno, adorning herself in the most captivating manner, puts on earrings made with three drops resembling mulberries.¹⁵ Pliny observes¹⁶ that greater expense was lavished on no part of the dress than on the earring. According to Seneca,¹⁷ the earring No. 3, in the preceding woodcut, in which a couple of pearls are strung both above and below the precious stone, was worth a patrimony.¹⁸ All the earrings above engraved belong to the Hamilton collection in the British Museum.

In opulent families, the care of the earrings was the business of a female slave, who was called *Auriculæ Ornatrix*.¹ The Venus de' Medici, and other female statues, have the ears pierced, and probably once had earrings in them. The statue of Achilles at Sigeum, representing him in female attire, likewise had this ornament.²

INCENSUS. (*Vid. CAPUT.*)

INCESTUM. If a man married a woman whom it was forbidden for him to marry by positive morality, he was said to commit incestum.³ Such a marriage was, in fact, no marriage, for the necessary connubium between the parties was wanting.

There was no connubium between persons related by blood in the direct line, as parents and children. If such persons contracted a marriage, it was *nefarie et incestæ nuptiæ*. There was no connubium between persons who stood in the relation of parent and child by adoption, not even after the adopted child was emancipated. There were also restrictions as to connubium between collateral kinsfolk (*ex transverso gradu cognationis*): there was no connubium between brothers and sisters, either of the whole or of the half blood; nor between children of the blood and children by adoption, so long as the adoption continued, or so long as the children of the blood remained in the power of their father. There was connubium between an uncle and his brother's daughter, after the Emperor Claudius had set the example by marrying Agrippina; but there was none between an uncle and a sister's daughter. There was no connubium between a man and his *amita* or *matertera* (*vid. COGNAT.*); nor between a man and his *socrus*, *nurus*, *privigna*, or *noverca*. In all such cases, when there was no connubium, the children had a mother, but no legal father.

Incest between persons in the direct line was punishable in both parties; in other cases only in the man. The punishment was *relegatio*, as in the case of adultery. Concubinage between near kinsfolk was put on the same footing as marriage.⁴ In the case of *adulterium* and *stuprum* between persons who had no connubium, there was a double offence: the man was punished with *deportatio*, and the woman was subject to the penalties of the *lex Julia*.⁵ Among slaves there was no incestum, but after they became free their marriages were regulated according to the analogy of the connubium among free persons. It was incestum to have knowledge of a vestal virgin, and both parties were punished with death.

It does not appear that there was any legislation as to incestum: the rules relating to it were founded on usage (*moribus*). That which was *stuprum* was considered incestum when the connexion was between parties who had no connubium. Incestum, therefore, was *stuprum*, aggravated by the circumstance of real or legal consanguinity, and, in some cases, affinity. It was not the form of marriage between such persons that constituted the incestum; for the *nuptiæ* were incestæ, and therefore no marriage, and the incestuous act was the sexual connexion of the parties. Sometimes incestum is said to be *contra fas*, that is, an act in violation of religion.

INCITEGA, a corruption of the Greek *ἀγγοθήκη* or *ἐγγυθήκη*, a term used to denote a piece of domestic furniture, variously formed according to the particular occasion intended; made of silver, bronze, clay, stone, or wood, according to the circumstances of the possessor; sometimes adorned with figures; and employed to hold *amphoræ*, bottles, ala

bastra, or any other vessels which were round or pointed at the bottom, and therefore required a separate contrivance to keep them erect.¹ Some of those used at Alexandria were triangular.² We often see them represented in ancient Egyptian paintings. The annexed woodcut shows three *ἀγροθήκαι*, which are preserved in the British Museum. Those on the right and left hand are of wood, the one having four feet, the other six; they were found in Egyptian tombs. The third is a broad earthenware ring, which is used to support a Grecian amphora.

INCORPORABLES RES. (Vid. DOMINIUM.)
INCUNABULA or CUNABULA (σπάργανον),
swaddling-clothes.

The first thing done after the birth of a child was to wash it; the second, to wrap it in swaddling-clothes; and the rank of the child was indicated by the splendour and costliness of this, its first attire. Sometimes a fine white shawl, tied with a gold band, was used for the purpose;³ at other times a small purple scarf, fastened with a brooch* (*χλαμύδιον*⁵). The poor used broad fillets of common cloth (*panni*⁶). The annexed woodcut, taken from

a beautiful bas-relief at Rome, which is supposed to refer to the birth of Telephus, shows the appearance of a child so clothed, and renders, in some degree, more intelligible the fable of the deception practised by Rhea upon Saturn, in saving the life of Jupiter, by presenting a stone enveloped in swaddling-clothes, to be devoured by Saturn instead of his new-born child.⁷ It was one of the peculiarities of the Lacedæmonian education to dispense with the use of incunabula, and to allow children to enjoy the free use of their limbs.⁸

INCUS (*ἀκὺρ*), an Anvil. The representations of Vulcan and the Cyclopes on various works of

art, show that the ancient anvil was formed like that of modern times. When the artist wanted to make use of it, he placed it on a large block of wood (*ἀκμώθετον*;¹ *positis incudibus*²); and when he made the link of a chain, or any other object which was round or hollow, he beat it upon a point projecting from one side of the anvil. The annexed woodcut, representing Vulcan forging a thunderbolt

for Jupiter, illustrates these circumstances; it is taken from a gem in the Royal Cabinet at Paris. It appears that in the "brazen age," not only the things made upon the anvil, but the anvil itself, with the hammer and the tongs, were made of bronze.³ (Vid. MALLEUS.) At this early period anvils were used as an instrument of torture, being suspended from the feet of the victim.⁴

*INDICUM (*Ἰνδικόν*). "Dioscorides applies the term *Ἰνδικόν* to two distinct substances; the one is the vegetable pigment still called *Indigo*, which is prepared from the leaves and stalks of the Indigo plant. Several species are now cultivated for making indigo, but the one from which the ancients may be supposed to have procured their indigo is the *Indigofera tinctoria*. The other kind of indigo was, most probably, the mineral substance called *Indian Red*, and which is a variety of the red oxyda of iron."⁵

INDUSIUM. (Vid. TUNICA.)

INDUTUS. (Vid. AMICTUS, TUNICA.)

INFAMIS. (Vid. INFAMIA.)

INFAMIA. The provisions as to infamia, as they appear in the legislation of Justinian, are contained in Dig. 3, tit. 2, *De his qui notantur infamia*, and in Cod. 2, tit. 12, *Ex quibus causis infamia irrogatur*. The Digest contains⁶ the cases of infamia as enumerated in the prætor's edict. There are also various provisions on the subject in the lex Julia Municipalis (B.C. 45), commonly called the Table of Heraclea.

Infamia was a consequence of condemnation in any judicium publicum, of ignominious (*ignominia causa*) expulsion from the army,⁷ of a woman being detected in adultery, though she might not have been condemned in a judicium publicum, &c.; of condemnation for furtum, rapina, injuria, and dolus malus, provided the offender was condemned in his own name, or provided in his own name he paid a sum of money by way of compensation; of condemnation in an action pro socio, tutelæ, mandatum, depositum, or fiducia,⁸ provided the offender was condemned in his own name, and not in a judicium contrarium, and provided the person condemned

had not acted with good faith. Infamia was also a consequence of insolvency, when a man's bona were possessa, proscripta, vendita;¹ of a widow marrying within the time appointed for mourning; but the infamia attached to the second husband if he was a paterfamilias, and if he was not, then to his father, and to the father of the widow if she was in his power: the edict does not speak of the infamia of the widow, but it was subsequently extended to her. Infamia was a consequence of a man being at the same time in the relation of a double marriage or double sponsalia; the infamia attached to the man if he was a paterfamilias, and if he was not, to his father: the edict here also speaks only of the man, but the infamia was subsequently extended to the woman. Infamia was a consequence of prostitution in the case of a woman, of similar conduct in a man (*qui muliebricia passus est*); of lenocinium, or gaining a living by aiding in prostitution;² of appearing on a public stage as an actor; of engaging for money to appear in the fights of the wild beasts, even if a man did not appear; and of appearing there, though not for money.

It results from this enumeration that infamia was only the consequence of an act committed by the person who became infamis, and was not the consequence of any punishment for such act. In some cases it only followed upon condemnation; in others it was a direct consequence of an act, as soon as such act was notorious.

It has sometimes been supposed that the prætor established the infamia as a rule of law, which, however, was not the case. The prætor made certain rules as to postulation,³ for the purpose of maintaining the purity of his court. With respect to the postulation, he distributed persons into three classes. The second class comprehended, among others, certain persons who were *turpitudine notabiles*, who might postulate for themselves, but not for others. The third class contained, among others, all those "*qui edicto prætoris ut infames notantur*," and were not already enumerated in the second class. Accordingly, it was necessary for the prætor to enumerate all the infames who were not included in the second class, and this he did in the edict as quoted.⁴ Consistently with this, infamia was already an established legal condition; and the prætor, in his edicts on postulation, did not make a class of persons called infames, but he enumerated as persons to be excluded from certain rights of postulation those who were infames. Consequently, the legal notion of infamia was fixed before these edicts.

It is necessary to distinguish infamia from the nota censoria. The infamia does not seem to have been created by written law, but to have been an old Roman institution. In many cases, though not in all, it was a consequence of a judicial decision. The power of the censors was in its effects analogous to the infamia, but different from it in many respects. The censors could at their pleasure remove a man from the senate or the equites, remove him into a lower tribe, or remove him out of all the tribes, and so deprive him of his suffragium, by reducing him to the condition of an ærarius.⁵ They could also affix a mark of ignominy or censure opposite to a man's name in the list of citizens, nota censoria or subscriptio;⁶ and in doing this, they were not bound to make any special inquiry, but might follow general opinion. This arbitrary mode of proceeding was, however, partly remedied by the fact that such a censorian nota might be opposed by

a colleague, or removed by the following censoria or by a judicial decision, or by a lex. Accordingly the censorian nota was not perpetual, and therein it differed essentially from infamia, which was perpetual.

The consequences of infamia were the loss of certain political rights, but not all. It was not a capitis deminutio, but it resembled it. The infamis became an ærarius, and lost the suffragium and honores; that is, he lost the capacity for certain so-called public rights, but not the capacity for private rights. Under the Empire, the infamia lost its effect as to public rights, for such rights became unimportant.

It might be doubted whether the loss of the suffragium was a consequence of infamia, but the affirmative side is maintained by Savigny with such reasons as may be pronounced completely conclusive. It appears from Livy¹ and Valerius Maximus² that the actores atellanarum were not either removed from their tribe (*nec tribu moventur*), nor incapable of serving in the army: in other words, such actors did not become infames, like other actors. The phrase "*tribu moveri*" is ambiguous, and may mean either to remove from one tribe to a lower, or to move from all the tribes, and so make a man an ærarius. Now the mere removing from one tribe to another must have been an act of the censors only, for it was necessary to fix the tribe into which the removal was made: but this could not be the case in a matter of infamia, which was the effect of a general rule, and a general rule could only operate in a general way; that is, "*tribu moveri*," as a consequence of infamia, must have been a removal from all the tribes, and a degradation to the state of an ærarius.³

The lex Julia Municipalis does not contain the word infamia, but it mentions nearly the same cases as those which the edict mentions as cases of infamia. The lex excludes persons who fall within its terms from being senators, decuriones, conscripti of their city, from giving their vote in the senate of their city, and from magistracies which gave a man access to the senate: but it says nothing of the right of vote being taken away. Savigny observes that there would be no inconsistency in supposing that the lex refused only the honores in the municipal towns, while it still allowed infames to retain the suffragium in such towns, though the practice was different in Rome, if we consider that the suffragium in the Roman comitia was a high privilege, while in the municipal towns it was comparatively unimportant.

Cicero⁴ speaks of the *judicia fiduciæ, tutelæ, and societatis* as "*summæ existimationis et pene capitis*." In another oration⁵ he speaks of the *possessio bonorum* as a *capitis causa*, and, in fact, as identical with infamia. This *capitis minutio*, however, as already observed, affected only the public rights of a citizen; whereas the *capitis deminutio* of the imperial period, and the expression *capitis causa*, apply to the complete loss of citizenship. This change manifestly arose from the circumstance of the public rights of the citizens under the Empire having become altogether unimportant, and thus the phrase *capitis deminutio*, under the Empire, applies solely to the individual's capacity for private rights.

In his private rights the infamis was under some incapacities. He could only postulate before the prætor on his own behalf, and on behalf of certain persons who were very nearly related to him, but not generally on behalf of all persons. Consequently, he could not generally be a cognitor or a procu-

1. (Cic., Pro Quint., 15.—Tab. Heracl., i., 113–117.—Gaius, ii., 154.)—2. (Tab. Heracl., i., 123.)—3. (Dig. 3, tit. 1, s. 1.)—4. (Dig. 3, tit. 2, s. 1.)—5. (Cic., Pro Cluent., 43, 45.)—6. (Cic., Pro Cluent., 42, 43, 44, 46, 47.)

1. (vii., 2.)—2. (ii., 4, § 4.)—3. (Compare Liv., 45, 15.)—4. (Pro Rosc. Com., 6.)—5. (Pro Quint., 8, 9, 13, 15, 22.)

iator. Nor could a cause of action be assigned to him, for by the old law he must sue as the cognitor or procurator of the assignor;¹ but this incapacity became unimportant when the cessio was effected by the utiles actiones without the intervention of a cognitor or procurator. The infamis could not sustain a popularis actio, for in such case he must be considered as a procurator of the state. The infamis was also limited as to his capacity for marriage, an incapacity which originated in the lex Julia.² This lex prohibited senators, and the children of senators, from contracting marriage with libertini and libertinae, and also with other disreputable persons enumerated in the lex: it also forbade all freemen from marrying with certain disreputable women. The jurists made the following change: they made the two classes of disreputable persons the same, which were not the same before, and they extended the prohibition, both for senators and others, to all those whom the edict enumerated as infames. The provisions of the lex Julia did not render the marriage null, but it deprived the parties to such marriage of the privileges conferred by the lex; that is, such a marriage did not release them from the penalties of celibacy. A senatus consultum, under M. Aurelius, however, made such marriage null in certain cases.³

INFAMIA (GREEK) (*ἀτιμία*). A citizen of Athens had the power to exercise all the rights and privileges of a citizen as long as he was not suffering under any kind of atimia, a word which in meaning nearly answers to our outlawry, in as far as a person forfeited by it the protection of the laws of his country, and mostly all the rights of a citizen also. The atimia occurs in Attica as early as the legislation of Solon, without the term itself being in any way defined in the laws,⁴ which shows that the idea connected with it must, even at that time, have been familiar to the Athenians, and this idea was probably that of a complete civil death; that is, an individual labouring under atimia, together with all that belonged to him (his children as well as his property), had, in the eyes of the state and the laws, no existence at all. This atimia, undoubtedly the only one in early times, may be termed a total one, and in cases where it was inflicted as a punishment for any particular crime, was generally also perpetual and hereditary; hence Demosthenes, in speaking of a person suffering under it, often uses the expression *καθύπαρξ ἀτιμος*, or *ἄπλως ἀτιμίταις*.⁵ A detailed enumeration of the rights of which an atimos was deprived is given by Æschines.⁶ He was not allowed to hold any civil or priestly office whatever, either in the city of Athens itself, or in any town within the dominion of Athens; he could not be employed as herald or ambassador; he could not give his opinion, or speak either in the public assembly or in the senate; he was not even allowed to appear within the extent of the agora; he was excluded from visiting the public sanctuaries, as well as from taking part in any public sacrifice; he could neither bring an action against a person from whom he had sustained an injury, nor appear as a witness in any of the courts of justice; nor could, on the other hand, any one bring an action against him.⁷ The right which, in point of fact, included most of those which we have here enumerated, was that of taking part in the popular assembly (*λέγειν* and *χρῆσθαι*). Hence this one right is most frequently the only one which is mentioned as being

forfeited by atimia.¹ The service in the Athenian armies was not only regarded in the light of a duty which a citizen had to perform towards the state, but as a right and a privilege; of which, therefore, the atimos was likewise deprived.² When we bear that an atimos had no right to claim the protection of the laws if he was suffering injuries from others, we must not imagine that it was the intention of the law to expose the atimos to the insults or ill-treatment of his former fellow-citizens, or to encourage the people to maltreat him with impunity, as might be inferred from the expression *οἱ ἀτιμοὶ τοῦ θέλονται*; but all that the law meant to do was that, if any such thing happened, the atimos had no right to claim the protection of the laws. We have above referred to two laws mentioned by Demosthenes, in which the children and the property of an atimos were included in the atimia. As regards the children or heirs, the infamy came to them as an inheritance which they could not avoid. (*Vid.* HENES, p. 497.) But when we read of the property of a man being included in the atimia, it can only mean that it shared the lawless character of its owner, that is, it did not enjoy the protection of the law, and could not be mortgaged. The property of an atimos for a positive crime, such as those mentioned below, was probably never confiscated, but only in the case of a public debtor, as we shall see hereafter; and when Andocides⁴ uses the expression *ἄτιμοι ἦσαν τὰ σώματα, τὰ δὲ χρήματα εἶχον*, the contrary which he had in view can only have been the case of a public debtor. On the whole, it appears to have been foreign to Athenian notions of justice to confiscate the property of a person who had incurred personal atimia by some illegal act.⁵

The crimes for which total and perpetual atimia was inflicted on a person were as follow: The giving and accepting of bribes, the embezzlement of public money, manifest proofs of cowardice in the defence of his country, false witness, false accusation, and bad conduct towards parents;⁶ moreover, if a person, either by deed or by word, injured or insulted a magistrate while he was performing the duties of his office;⁷ if, as a judge, he had been guilty of partiality;⁸ if he squandered away his paternal inheritance, or was guilty of prostitution.⁹ We have above called this atimia perpetual: for if a person had once incurred it, he could scarcely ever hope to be lawfully released from it. A law, mentioned by Demosthenes,¹⁰ ordained that the releasing of any kind of atimos should never be proposed in the public assembly, unless an assembly consisting of at least 6000 citizens had previously, in secret deliberation, agreed that such might be done. And even then the matter could only be discussed in so far as the senate and people thought proper. It was only in times when the Republic was threatened by great danger that an atimos might hope to recover his lost rights, and in such circumstances the atimos were sometimes restored *en masse* to their former rights.¹¹

A second kind of atimia, which, though in its extent a total one, lasted only until the person subject to it fulfilled those duties for the neglect of which it had been inflicted, was not so much a punishment for any particular crime as a means of compelling a man to submit to the laws. This was the atimia of public debtors. Any citizen of Athens who owed money to the public treasury, whether his debt

arose from a fine to which he had been condemned, or from a part he had taken in any branch of the administration, or from his having pledged himself to the state for another person, was in a state of total atimia if he refused to pay or could not pay the sum which was due. His children during his lifetime were not included in his atimia; they remained *ἐντίμοι*.¹ If he persevered in his refusal to pay beyond the time of the ninth prytany, his debt was doubled, and his property was taken and sold.² If the sum obtained by the sale was sufficient to pay the debt, the atimia appears to have ceased; but if not, the atimia not only continued to the death of the public debtor, but was inherited by his heirs, and lasted until the debt was paid off.³ (Compare HERES, p. 496.) This atimia for public debt was sometimes accompanied by imprisonment, as in the case of Alcibiades and Cimon; but whether, in such a case, on the death of the prisoner, his children were likewise imprisoned, is uncertain. If a person living in atimia for public debt petitioned to be released from his debt or his atimia, he became subject to *ἐνδεΐξις*; and if another person made the attempt for him, he thereby forfeited his own property: if the proedros even ventured to put the question to the vote, he himself became atimos. The only, but almost impracticable, mode of obtaining release was that mentioned above in connexion with the total and perpetual atimia.

A third and only partial kind of atimia deprived the person on whom it was inflicted only of a portion of his rights as a citizen.⁴ It was called the *ἀτιμία κατὰ πρόστασιν*, because it was specified in every single case which particular right was forfeited by the atimos. The following cases are expressly mentioned: If a man came forward as a public accuser, and afterward either dropped the charge or did not obtain a fifth of the votes in favour of his accusation, he was not only liable to a fine of 1000 drachmæ, but was subjected to an atimia which deprived him of the right, in future, to appear as accuser in a case of the same nature as that in which he had been defeated or which he had given up.⁵ If his accusation had been a *γραφὴ ὁσεΐας*, he also lost the right of visiting particular temples.⁶ Some cases are also mentioned in which an accuser, though he did not obtain a fifth of the votes, was not subjected to any punishment whatever. Such was the case in a charge brought before the first archon respecting the ill-treatment of parents, orphans, or heiresses.⁷ In other cases the accuser was merely subject to the fine of 1000 drachmæ, without incurring any degree of atimia.⁸ But the law does not appear to have been strictly observed.⁹ Andocides mentions some other kinds of partial atimia, but they seem to have had only a temporary application at the end of the Peloponnesian war; and the passage¹⁰ is so obscure or corrupt, that nothing can be inferred from it with any certainty.¹¹ Partial atimia, when once inflicted, lasted during the whole of a man's life.

The children of a man who had been put to death by the law were also atimoi¹² (compare HERES, p. 497); but the nature or duration of this atimia is unknown.

If a person, under whatever kind of atimia he was labouring, continued to exercise any of the rights which he had forfeited, he might immediately be

Econ. of Athens, ii., p. 126.)—4. (Andocid., De Myst., p. 17 and 36.)—5. (Demosth., c. Aristot., p. 803.—Harpocrat., s. v. *Δόπον γραφή*.)—6. (Andocid., De Myst., p. 17.)—7. (Meier, De Ben. Damnat., p. 133.—8. (Pollux, Onom., viii., 53.)—9. (Bösch, Publ. Econ. of Athens, ii., p. 112, &c.)—10. (De Myst., p. 36.)—11. (Wachsmuth, Hellen. Alth., ii., 1, p. 247, &c.)—12. (Demosth., c. Anst. g., p. 778.)

subjected to *ἀπαγωγή* or *ἐνδεΐξις*: and if his transgression was proved, he might, without any farther proceedings, be punished immediately.

The offences which were punished at Sparta with atimia are not so well known; and in many cases it does not seem to have been expressly mentioned by the law, but to have depended entirely upon public opinion, whether a person was to be considered and treated as an atimos or not. In general, it appears that every one who refused to live according to the national institutions lost the rights of a full citizen (*ἄπολος*).¹ It was, however, a positive law, that whoever did not give or could not give his contribution towards the *syssitia*, lost his rights as a citizen.² The highest degree of infamy fell upon the coward (*τρίσας*) who either deserted from the field of battle, or returned home without the rest of the army, as Aristodemus did after the battle of Thermopylæ,³ though in this case the infamy itself, as well as its humiliating consequences, were manifestly the mere effect of public opinion, and lasted until the person labouring under it distinguished himself by some signal exploit, and thus wiped off the stain from his name. The Spartans who in Sphacteria had surrendered to the Athenians, were punished with a kind of atimia which deprived them of their claims to public offices (a punishment common to all kinds of atimia), and rendered them incapable of making any lawful purchase or sale. Afterward, however, they recovered their rights.⁴ Unmarried men were also subject to a certain degree of infamy, in as far as they were deprived of the customary honours of old age, were excluded from taking part in the celebration of certain festivals, and occasionally compelled to sing defamatory songs against themselves. No atimos was allowed to marry the daughter of a Spartan citizen, and was thus compelled to endure the ignominies of an old bachelor.⁵ Although an atimos at Sparta was subject to a great many painful restrictions, yet his condition cannot be called outlawry; it was rather a state of infamy properly so called. Even the atimia of a coward cannot be considered equivalent to the civil death of an Athenian atimos, for we find him still acting to some extent as a citizen, though always in a manner which made his infamy manifest to every one who saw him.

(Lelyveld, *De Infamia ex Jure Attico*, Amstelod., 1835.—Wachsmuth, *Hellen. Alth.*, ii., 1, p. 243, &c.—Meier, *De Bonis Damnat.*, p. 101, &c.—Schömann, *De Comit. Ath.*, p. 67, &c., transl.—Hermann, *Polit. Ant. of Greece*, § 124.—Meier and Schömann, *Att. Proc.*, p. 563. On the Spartan atimia in particular, see Wachsmuth, ii., 1, p. 358, &c.—Müller, *Dor.*, iii., 10, § 3.)

INFANS, INFANTIA In the Roman law there were several distinctions of age which were made with reference to the capacity for doing legal acts. 1. The first period was from birth to the end of the seventh year, during which time persons were called *infantes*, or *qui fari non possunt*. 2. The second period was from the end of seven years to the end of fourteen or twelve years, according as the person was a male or a female, during which persons were defined as those *qui fari possunt*. The persons included in these first two classes were *impubes*. 3. The third period was from the end of the twelfth or fourteenth to the end of the twenty-fifth year, during which period persons were *adulescentes*, *adulti*. The persons included in these three classes were *minores xxv. annis* or *annorum*, and were often, for brevity's sake, called *minores*

1. (Xen., *De Rep. Lacæd.*, x., 7.—Id. ib., iii., 3.)—2. (Aristot., *Polit.*, ii., 5, p. 56, ed. Götting.)—3. (Herod., vii., 231.)—4. (Thucyd., v., 24.)—5. (Plut., *2^a Isid.*, 30.—Müller, *Dorianæ*, iv., 4, § 3.)

only (*vid.* CUBATOR); and the persons included in the third and fourth class were puberes. 4. The fourth period was from the age of twenty-five, during which persons were majores.

The term *impubes* comprehends infans, as all infants are *impuberes*, but all *impuberes* are not infants. Thus the *impuberes* were divided into two classes: *infantes*, or those under seven years of age, and those above seven, who are generally understood by the term *impuberes*. *Pupillus* is a general name for all *impuberes* not in the power of a father.¹

The commencement of *pubertas* was the commencement of full capacity to do legal acts. Before the commencement of *pubertas*, a person, according to the old civil law, could do no legal act without the *auctoritas* of a tutor. This rule was made for those *impuberes* who had property of their own; for it could have no application to *impuberes* who were in the power of a father. Now the age of *pubertas* was fixed as above mentioned, on the supposition that persons were then competent to understand the nature of their acts, and the age of twelve or fourteen was only fixed because it was necessary to fix some limit which might apply to all cases; but it was obvious that in many cases when a person bordered on the age of puberty (*pubertati proximus*), and had not yet attained it, he might have sufficient understanding to do many legal acts. Accordingly, a person who was *proximus pubertati* was in course of time considered competent to do certain legal acts without the *auctoritas* of a tutor; but, to secure him against fraud or mistake, he could only do such acts as were for his own advantage. This relaxation of the old law was beneficial both to the *impubes* and to others; but, owing to its being confined to such narrow limits of time, it was of little practical use, and, accordingly, it was extended as a positive rule to a longer period below the age of puberty, but still with the same limitation: the *impubes* could do no act to his prejudice without the *auctoritas* of a tutor. It was, however, necessary to fix a limit here also, and, accordingly, it was determined that such limited capacity to do legal acts should commence with the termination of *infantia*, which, legally defined, is that period after which a person, either alone or with a tutor, is capable of doing legal acts.

Infans properly means *qui fari non potest*; and he of whom could be predicated *fari potest*, was not *infans*, and was capable of doing certain legal acts. The phrase *qui fari potest* is itself ambiguous; but the Romans, in a legal sense, did not limit it to the mere capacity of uttering words, which a child of two or three years generally possesses, but they understood by it a certain degree of intellectual development; and, accordingly, the expression *qui fari potest* expressed not only that degree of intellectual development which is shown by the use of intelligible speech, but also a capacity for legal acts in which speech was required. Thus the period of *infantia* was extended beyond that which the strict etymological meaning of the word signifies, and its termination was fixed by a positive rule at the end of the seventh year, as appears by numerous passages.²

The expressions *proximus pubertati*, and *proximus infantie* or *infanti*,³ are used by the Roman jurists to signify respectively one who is near attaining *pubertas*, and one who has just passed the limit of *infantia*.⁴ (*vid.* IMPUBES.)

INFERRE. (*vid.* FUNUS, p. 462.)

INFULA, a flock of white and red wool, which

was slightly twisted, drawn into the form of a wreath or fillet, and used by the Romans for ornament on festive and solemn occasions. In sacrificing it was tied with a white band (*vid.* VITTA) to the head of the victim,¹ and also of the priest, more especially in the worship of Apollo and Diana.² The "torta infula" was worn also by the vestal virgins.³ Its use seems analogous to that of the lock of wool worn by the flamines and salii. (*vid.* APEX.) At Roman marriages, the bride, who carried wool upon a distaff in the procession (*vid.* FUSUS, p. 465), fixed it as an infula upon the door-case of her future husband on entering the house.⁴

INGENUI, INGENUITAS. According to Gaius,⁵ *ingenui* are those free men who are born free. Consequently, freedmen (*libertini*) were not *ingenui*, though the sons of *libertini* were *ingenui*; nor could a *libertinus* by adoption become *ingenuus*.⁶ If a female slave (*ancilla*) was pregnant, and was manumitted before she gave birth to a child, such child was born free, and therefore was *ingenuus*. In other cases, also, the law favoured the claim of free birth, and, consequently, of *ingenuitas*.⁷ If a man's *ingenuitas* was a matter in dispute, there was a *judicium ingenutatis*.⁸

The words *ingenuus* and *libertinus* are often opposed to one another; and the title of freeman (*liber*), which would comprehend *libertinus*, is sometimes limited by the addition of *ingenuus* (*liber et ingenuus*).⁹ According to Cincius, in his work on *Comitia*, quoted by Festus,¹⁰ those who, in his time, were called *ingenui*, were originally called *patricii*, which is interpreted by Goetting to mean that gentiles were originally called *ingenui* also: a manifest misunderstanding of the passage. If this passage has any certain meaning, it is this: originally the name *ingenuus* did not exist, but the word *patricius* was sufficient to express a Roman citizen by birth. This remark, then, refers to a time when there were no Roman citizens except *patricii*; and the definition of *ingenuus*, if it had then been in use, would have been a sufficient definition of a *patricius*. But the word *ingenuus* was introduced, in the sense here stated, at a later time, and when it was wanted for the purpose of indicating a citizen by birth, merely as such. Thus, in the speech of Appius Claudius Crassus,¹¹ he contrasts with persons of *patrician* descent, "*Unus Quiritium quilibet, duobus ingenuis ortus*." Farther, the definition of gentilis by Scævola (*vid.* GENS, p. 468) shows that a man might be *ingenuus* and yet not gentilis, for he might be the son of a freedman; and this is consistent with Livy.¹² If Cincius meant his proposition to be as comprehensive as the terms will allow us to take it, the proposition is this: All (now) *ingenui* comprehend all (then) *patricii*; which is untrue.

Under the Empire, *ingenuitas*, or the *jura ingenitatis*, might be acquired by the imperial favour; that is, a person not *ingenuus* by birth was made so by the sovereign power. A freedman who had obtained the *jus annulorum aureorum* was considered *ingenuus*; but this did not interfere with the *patronal* rights.¹³ By the *natalibus restitutio*, the princeps gave to a *libertinus* the character of *ingenuus*; a form of proceeding which involved the theory of the original freedom of all mankind, for the *libertinus* was restored, not to the state in which he had been born, but to his supposed original state of freedom. In this case the patron lost his patro-

nal rights by a necessary consequence, if the fiction were to have its full effect.¹ It seems that questions as to a man's *ingenuitas* were common at Rome, which is not surprising when we consider that patronal rights were involved in them.

**INGUINALIS*, a plant, the same with the *βουβώνιον*, or *δόκη ἀρτικό*, which see.

INJURIA. *Injuria* was done by striking or beating a man either with the hand or with anything; by abusive words (*convicium*); by the proscriptio bonorum, when the claimant knew that the alleged debtor was not really indebted to him, for the bonorum proscriptio was accompanied with infamia to the debtor;² by libellous writings or verses; by soliciting a materfamilias or a prætēxatus (*vid. IMPUBES*), and by various other acts. A man might sustain *injuria* either in his own person, or in the person of those who were in his power or in manu. No *injuria* could be done to a slave, but certain acts done to a slave were an *injuria* to his master, when the acts were such as appeared from their nature to be insulting to the master; as, for instance, if a man should flog another man's slave, the master had a remedy against the wrong-doer, which was given him by the prætor's formula. But in many other cases of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the prætor.

The Twelve Tables had various provisions on the subject of *injuria*. Libellous songs or verses were followed by capital punishment, that is, death, as it appears.³ In the case of a limb being mutilated, the punishment was *talio*.⁴ In the case of a broken bone, the penalty was 300 asses if the injury was done to a freeman, and 150 if it was done to a slave. In other cases the Tables fixed the penalty at 25 asses.⁵

These penalties, which were considered sufficient at the time when they were fixed, were afterward considered to be insufficient; and the injured person was allowed by the prætor to claim such damages as he thought that he was entitled to, and the *judex* might give the full amount or less. But in the case of a very serious injury (*atrox injuria*), when the prætor required security for the defendant's appearance to be given in a particular sum, it was usual to claim such sum as the damages in the plaintiff's declaration; and though the *judex* was not bound to give damages to that amount, he seldom gave less. An *injuria* had the character of *atrox*, either from the act itself, or the place where it was done, as, for instance, a theatre or forum, or from the status of the person injured, as if he were a magistratus, or if he were a senator and the wrong-doer were a person of low condition.

A *lex Cornelia* specially provided for cases of pulsatio, verberatio, and forcible entry into a man's house (*domus*). The jurists who commented on this *lex* defined the legal meaning of pulsatio, verberatio, and *domus*.⁶

The actions for *injuria* were gradually much extended, and the prætor would, according to the circumstances of the case (*causa cognita*), give a person an action in respect of any act or conduct of another, which tended, in the judgment of the prætor, to do him injury in reputation or to wound his feelings.⁷ Many cases of *injuria* were subject to a special punishment,⁸ as deportatio; and this proceeding *extra ordinem* was often adopted instead of the civil action. Various imperial constitutions

affixed the punishment of death to libellous writings (*famosi libelli*).

Infamia was a consequence of condemnation in an actio *injuriarum* (*vid. INFAMIA*.) He who brought such an action per calumniam was liable to be punished *extra ordinem*.¹

INJURIA RUM ACTIO. (*vid. INJURIA*.)

INOA (*Ἰνώα*), festivals celebrated in several parts of Greece, in honour of the ancient heroine Ino. At Megara she was honoured with an annual sacrifice, because the Megarians believed that her body had been cast by the waves upon their coast, and that it had been found and buried there by Cleso and Tanropolis.² Another festival of Ino was celebrated at Epidaurus Limeria, in Laconia. In the neighbourhood of this town there was a small but very deep lake, called the water of Ino, and at the festival of the heroine the people threw barley-cakes into the water. When the cakes sank, it was considered a propitious sign, but when they swam on the surface it was an evil sign.³ An annual festival, with contests and sacrifices, in honour of Ino, was also held on the Corinthian Isthmus, and was said to have been instituted by King Sisyphus.⁴

INOFFICIO SUM TESTAMENTUM. (*vid. TESTAMENTUM*.)

INQUILINUS. (*vid. BANISHMENT, ROMAN, p. 137*.)

INSANIA, INSANUS. (*vid. CURATOR*.)

***INSECTA.** (*vid. ENTOMA*.)

INSIGNE (*σημεῖον, ἐπίσημα, ἐπίσημον, παράσημον*), a Badge, an Ensign, a mark of distinction. Thus the *BULLA* worn by a Roman boy was one of the insignia of his rank.⁵ Five classes of insignia more especially deserve notice:

I. Those belonging to officers of state or civil functionaries of all descriptions, such as the *FASCES* carried before the Consul at Rome, the *laticlave* and shoes worn by senators (*vid. CALCEUS, p. 190; CLAVUS, p. 264*), the *carpentum* and the sword bestowed by the emperor upon the præfect of the prætorium.⁶ The Roman *EQUITES*⁷ were distinguished by the "eques publicus," the golden ring, the *angustus clavus*,⁸ and the seat provided for them in the theatre and the circus.⁹ The insignia of the kings of Rome, viz., the *trabea*, the *toga prætexta*, the crown of gold, the ivory sceptre, the *sella curulis*, and the twelve lictors with fasces, all of which, except the crown and sceptre, were transferred to subsequent denominations of magistrates, were copied from the usages of the Tuscans and other nations of early antiquity.¹⁰

II. Badges worn by soldiers. The centurions in the Roman army were known by the crests of their helmets (*vid. GALEA*), and the common men by their shields, each cohort having them painted in a manner peculiar to itself.¹¹ (*vid. CLYPEUS*.) Among the Greeks, the devices sculptured or painted upon shields (see woodcut, p. 84), both for the sake of ornament and as badges of distinction, employed the fancy of poets and of artists of every description from the earliest times. Thus the seven heroes who fought against Thebes, all except Amphiaraus, had on their shields expressive figures and mottoes, differently described, however, by different authors.¹² Alcibiades, agreeably to his general character, wore a shield richly decorated with ivory and gold, and

(Pans., iii., 23, § 5.)—4. (Tzetzes ad Lycophr.)—5. (Cic., Verr., ii., 1, 58.)—6. (Lydus, De Mag., ii., 3, 9.)—7. (p. 396.)—8. (p. 242.)—9. (C. G. Schwartz, Diss. Selectæ, p. 84-101.)—10. (Flor., i., 5.—Sall., B. Cat., 51.—Virg., Æn., vii., 158, 612.—Id. ib., xi., 334.—Lydus, De Mag., i., 7, 8, 37.)—11. (Veget., ii., 17.—Compare Cass. Bell. Gall., vii., 45.)—12. (Æschyl., Sept., c. Theb., 353-616.—Eurip., Phœn., 1125-1156.—Apollodor., Bibl., iii., 6, 1.)

1. (Dig. 40, tit. 11.)—2. (Cic., Pro Quint., 6, 15, 16.)—3. (Cic., Rep., iv., 10, and the notes in Maï's edition.)—4. (Festus, s. v. Talio.)—5. (Gellius, xvi., 10.—Id., xx., 1.—Dirksen, Uebersicht, &c.)—6. (Dig. 47, tit. 10, s. 5.)—7. (*vid. Dig. 47, tit. 10, s. 15; 22, 23, 24, &c.*)—8. (Dig. 47, tit. 11.)

exhibiting a representation of Cupid brandishing a thunderbolt.¹ The first use of these emblems on shields is attributed to the Carians;² and the fictitious employment of them to deceive and mislead an enemy was among the stratagems of war.³

III. Family badges. Among the indignities practised by the Emperor Caligula, it is related that he abolished the ancient insignia of the noblest families, viz., the torques, the cincinni, and the cognomen "Magnus."⁴

IV. Signs placed on the front of buildings. A figure of Mercury was the common sign of a Gymnasium; but Cicero had a statue of Minerva to fulfil the same purpose.⁵ Cities had their emblems as well as separate edifices; and the officer of a city sometimes affixed the emblem to public documents, as we do the seal of a municipal corporation.⁶

V. The figure-heads of ships. The insigne of a ship was an image placed on the prow, and giving its name to the vessel.⁷ Thus the ship figured in p. 58 would probably be called the Triton.⁸ (Compare woodcut, p. 480.) Paul sailed from Melite to Puteoli in the Dioscuri, a vessel which traded between that city and Alexandria.⁹ Enschedé has drawn out a list of one hundred names of ships which occur either in classical authors or in ancient inscriptions.¹⁰ The names were those of gods and heroes, together with their attributes, such as the helmet of Minerva, painted on the prow of the ship which conveyed Ovid to Pontus (*a picta casside nomen habet*);¹¹ of virtues and affections, as Hope, Concord, Victory; of countries, cities, and rivers, as the Po, the Mincius,¹² the Delia, the Syracuse, the Alexandria;¹³ and of men, women, and animals, as the boar's head, which distinguished the vessels of Samos¹⁴ (woodcut, p. 429), the swan (*vid. CHENISCUS*), the tiger,¹⁵ the bull (*προτομήν ταύρου*)¹⁶. Plutarch mentions a Lycian vessel with the sign of the lion on its prow, and that of the serpent on its poop.¹⁷ After an engagement at sea, the insigne of a conquered vessel, as well as its aplustre, was often taken from it, and suspended in some temple as an offering to the god.¹⁸ Figure-heads were probably used from the first origin of navigation. On the war-galleys of the Phœnicians, who called them, as Herodotus says,¹⁹ *πτακοί, ἰ. e., "carved images,"* they had sometimes a very grotesque appearance.

Besides the badge which distinguished each individual ship, and which was either an engraved and painted wooden image, forming part of the prow, or a figure often accompanied by a name and painted on both the bows of the vessel, other insignia, which could be elevated or lowered at pleasure, were requisite in naval engagements. These were probably flags or standards, fixed to the aplustre or to the top of the mast, and serving to mark all those vessels which belonged to the same fleet or to the same nation. Such were "the Attic" and "the Persic signals" (*τὸ Ἀττικὸν σημεῖον*)²⁰.

INSTITA (*περιπόδιον*), a Founce, a Fillet. The Roman matrons sometimes wore a broad fillet, with ample folds, sewed to the bottom of the tunic, and reaching to the instep. The use of it indicated a superior regard to decency and propriety of man-

ners.¹ It must have resembled a modern founce. By the addition of gold and jewelry, it took the form of the more splendid and expensive CYCLAS.

When this term denoted a fillet, which was used by itself, as in the decoration of a THYRSUS,² it was equivalent to VITTA or FASCIA. (*Vid. TUNICA*.)

INSTITOR. (*Vid. INSTITORIA ACTIO*.)
INSTITORIA ACTIO. This actio or formula was allowed against a man who had appointed either his son or a slave, and either his own or another man's slave, or a free person, to manage a taberna, or any other business for him. The contracts with such manager, in respect of the taberna or other business, were considered to be contracts with the principal. The formula was called institoria, because he who was appointed to manage a taberna was called an institor. And the institor, it is said, was so called, "*quod negotio gerendo instet sive insistat*." If several persons appointed an institor any one of them might be sued for the whole amount for which the persons were liable on the contract of their institor; and if one paid the demand, he had his redress over against the others by a societas iudicium or communi dividundo. A great deal of business was done through the medium of institores, and the Romans thus carried on various lucrative occupations in the name of their slaves, which they could not or would not have carried on personally. Institores are coupled with nautæ by Horace,³ and with the magister navis.⁴

INSTITUTIONES. It was the object of Justinian to comprise in his Code and Digest or Pandect a complete body of law. But these works were not adapted to the purpose of elementary instruction, and the writings of the ancient jurists were no longer allowed to have any authority, except so far as they had been incorporated in the Digest. It was, therefore, necessary to prepare an elementary treatise, for which purpose Justinian appointed a commission, consisting of Tribonianus, Theophilus, and Dorotheus. The commission was instructed to compose an institutional work which should contain the elements of the law (*legum cunabula*), and should not be encumbered with useless matter. Accordingly, they produced a treatise under the title of Institutiones, or Elementa,⁵ which was based on former elementary works of the same name and of a similar character, but chiefly on the Commentarii of Caius or Gaius, his Res Quotidianæ, and various other commentarii. The Institutiones were published with the imperial sanction, at the close of the year A.D. 533, at the same time as the Digest.

The Institutiones consist of four books, which are divided into titles. The first book treats chiefly of matters relating to personal status; the second treats chiefly of property and its incidents, and of testaments, legacies, and fideicommissa; the third treats chiefly of successions to the property of intestates, and matter incident thereto, and on obligations not founded on delict; the fourth treats chiefly of obligations founded on delict, actions and their incidents, interdicts, and of the judicia publica. The judicia publica are not treated of by Gaius in his Commentaries. Heineccius, in his Antiquitatum Romanarum Jurisprudentiam illustrantium Syntagma, has followed the order of the Institutiones. Theophilus, generally considered to be the person who was one of the compilers of the Institutiones, wrote a Greek paraphrase upon them, which is still extant, and is occasionally useful. The best edition of the paraphrase of Theophilus is that of W. O. Reitz, Haag, 1751, 2 vols. 4to. There are

1. (Athen., xii., 47.)—2. (Herod., i., 171.)—3. (Paus., iv., 28.)—4. (Virg., Æn., ii., 389-392.)—5. (Suet., Calig., 35.)—6. (ad Att., i., 4.)—6. (Antig., Caryst., 15.)—7. (Tacit., Ann., vi., 34.)—8. (Cæs., B. Civ., ii., 6.)—8. (Stat., Theob., v., 372.)—Virg., Æn., x., 209-212.—9. (Acts, xxvii., *11.)—10. (Diss., "De Tut. et Insignibus Navium," reprinted in Ruhnken's Opusc., p. 257-305.)—11. (Polyæn., iii., 11, 11; viii., 53, 1.—Becker, Char., ii., p. 63.)

1. (Hor., Sat., I., in, 29.—Ovid, Ars Amat., i., 32.)—2. (Stat., Theob., vii., 654.)—3. (Ep., xvii., 20.)—4. (Carm., III., vi., 30.)—Consult Gaius, iv., 71.—Dig., I., tit. 3.—5. (Procem. Inst.)—6. ("De Juns Decendi Ratione.")

numerous editions of the Latin text of the Institutions. The editio princeps is that of Mainz, 1468, fol.; that of Klenze and Boecking, Berlin, 1829, 4to, contains both the Institutions and the Commentarii of Gaius; the most recent edition is that of Schrader, Berlin, 1832 and 1836.

There were various institutional works written by the Roman jurists. There still remain fragments of the Institutiones of Ulpian, which appear to have consisted of two books. The four books of the Institutiones of Gaius were formerly only known from a few excerpts in the Digest, from the Epitome contained in the Breviarium, from the Collatio, and a few quotations in the Commentary of Boëthius on the Topica of Cicero, and in Priscian.

The MS. of Gaius was discovered in the library of the Chapter of Verona, by Niebuhr, in 1816. It was first copied by Göschen and Bethman-Hollweg, and an edition was published by Göschen in 1820. The deciphering of the MS. was a work of great labour, as it is a palimpsest, the writing on which has been washed out, and in some places erased with a knife, in order to adapt the parchment for the purposes of the transcriber. The parchment, after being thus treated, was used for transcribing upon it some works of Jerome, chiefly his epistles. The old writing was so obscure that it could only be seen by applying to it an infusion of gallnuts. A fresh examination of the MS. was made by Bluhme, but with little additional profit, owing to the condition of the manuscript. A second edition of Gaius was published by Göschen in 1824, with valuable notes, and an Index Siglarum used in the MS. The preface to the first edition contains the complete demonstration that the MS. of Verona is the genuine Commentaries of Gaius, though the MS. itself has no title.

The arrangement of the matter in the Institutiones of Gaius resembles that of the Institutiones of Justinian, which were founded on them. The first book treats of the status of persons; the second treats De Rerum Divisione et Acquisitione, and comprehends legacies and fideicommissa; the third book treats of successions ab intestato, and obligations founded on contract and delict; the fourth treats solely of actions, and matters connected therewith.

There has been a great difference of opinion as to the age of Gaius, but it appears from the Institutiones that he wrote that work under Antoninus Pius and M. Aurelius.

Many passages in the Fragments of Ulpian are the same as passages in Gaius, which may be explained by assuming that both these writers copied such parts from the same original. Though the Institutiones of Justinian were mainly based on those of Gaius, it is clear that the compilers of the Institutiones of Justinian often followed some other work; and, in some instances, the Institutiones of Justinian are more clear and explicit than those of Gaius. An instance of this occurs in Gaius' and the Institutiones of Justinian.²

Gaius belonged to the school of the Sabiniani. (*VID. JURISCONSULTI.*) The jurists whom he cites in the Institutiones are Cassius, Fufidius, Javolenus, Julianus, Labeo, Maximus, Q. Mucius, Ofilius, Proculus, Sabinus, Servius, Servius Sulpicius, Sextus, Tubero.

INSULA. (*VID. HOUSE, ROMAN, p. 519.*)

INTENTIO. (*VID. ACTIO, p. 20.*)

INTEGRUM RESTITUTIO, IN. (*VID. RESTITUTIO.*)

INTERCESSIO. The verb intercedere is variously applied to express the act of him who in any

way undertakes an obligation for another. Sponsors, fidepromissores, and fidejussores, may be said intercedere. With respect to one another, sponsors were consponsors.¹ Sponsors and fidepromissores were nearly in the same condition; fidejussores were in a somewhat different legal relation.

Sponsors and fidepromissores could only become parties to an obligatio verborum, though in some cases they might be bound, when their principal (*qui promiserit*) was not, as in the case of a pupillus who promised without the auctoritas of his tutor, or of a man who promised something after his death. A fidejussor might become a party to all obligations, whether contracted re, verbis, literis, or consensu. In the case of a sponsor, the interrogatio was, Idem dare spondes! in the case of a fidepromissor, it was, Idem fidepromittis! in the case of a fidejussor, it was, Idem fide tua esse jubes! The object of having a sponsor, fidepromissor, or fidejussor, was greater security to the stipulator. On the other hand, the stipulator had an adstipulator only when the promise was to pay something after the stipulator's death; for if there was no stipulator, the stipulatio was inutilis or void.² The adstipulator was the proper party to sue after the stipulator's death, and he could be compelled by a mandati judicium to pay to the heres whatever he recovered.

The heres of a sponsor and fidepromissor was not bound, unless the fidepromissor were a peregrinus, whose state had a different law on the matter; but the heres of a fidejussor was bound. By the lex Furia, a sponsor and fidepromissor were free from all liability after two years, which appears to mean two years after the obligation had become a present demand. All of them who were alive at the time when the money became due could be sued, but each only for his share. Fidejussores were never released from their obligation by length of time, and each was liable for the whole sum; but by a rescript (*epistola*) of Hadrian, the creditor was required to sue the solvent fidejussores separately, each according to his proportion.

A lex Apuleia, which was passed before the lex Furia, gave one of several sponsors or fidepromissores, who had paid more than his share, an action against the rest for contribution. Before the passing of this lex Apuleia, any one sponsor or fidepromissor might be sued for the whole amount; but this lex was obviously rendered useless by the subsequent lex Furia, at least in Italy, to which country alone the lex Furia applied, while the lex Apuleia extended to places out of Italy.

A fidejussor, who had been compelled to pay the whole amount, had no redress if his principal was insolvent; though, as already observed, he could, by the rescript of Hadrian, compel the creditor to limit his demand against him to his share.

A creditor was obliged formally to declare his acceptance of the sponsors or fidepromissores who were offered to him, and also to declare what was the object as to which they were security: if he did not comply with this legal requisition, the sponsors and fidepromissores might, within thirty days (it is not said what thirty days, but probably thirty days from the time of the sureties being offered), demand a præjudicium (*præjudicium postulare*), and if they proved that the creditor had not complied with the requisitions of the law, they were released.

A lex Cornelia limited the amount for which any person could be a security for the same person to the same person within the same year, but with some exceptions, one of which was a security "*dotis nomine*." No person could be bound in a greater amount than his principal, but he might be bound

1. (iii., 109.)—2. (iii., tit. 19, s. 10.)

1. (Cic. ad Att., xii., 17.)—2. (Gaius, iii., 100, 117.)

in less; and every surety could recover on a *mandati iudicium* from his principal whatever he had been compelled to pay on his account. By a *lex Publilia*, *sponsores* had a special action in *duplum*, which was called an *actio depensi*.

There is a passage in the *Epitome* of *Gaius* in the *Breviarius*,¹ which is not taken from *Gaius*; it is to this effect: The creditor may sue either the debtor or his *fidejussor*; but after he has chosen to sue one of them, he cannot sue the other.—*Cicero* appears to allude to the same doctrine² in a passage which is somewhat obscure, and is variously explained. The subject of the *sponsio* often occurs in *Cicero's* letters; and in one case he was called upon in respect of a *sponsio* alleged to have been given by him twenty-five years before.³ *Cicero* does not raise any difficulty as to the time that had elapsed, from which it must be inferred either that the obligation had only recently become a demand, or that the rule about the two years did not exist in his time. *Cicero* uses the expression "*appellare*" to express calling on a surety to pay.⁴

Women generally were incapacitated from doing many acts on account of the weakness of the sex. It was a general rule that any person might "*intercedere*," who was competent to contract and to dispose of his property; but *minores xxv.* and women had only a limited capacity in respect of their contracts and the disposition of their estates. In the early part of the reign of *Augustus* and in that of *Claudius*, it was declared by the edict that women should not "*intercedere*" for their husbands. Subsequently, in the consulship of *M. Silanus* and *Velleius Tutor* (A.D. 10), the *senatus consultum Velleianum* was passed, which absolutely prohibited all *intercessio* by women; and the *Novella*, 134, c. 8, had for its special object to make null all *intercessio* of a wife for her husband. A woman who was sued in respect of her *intercessio* or her *heres*, might plead the *senatus consultum*, and she might recover anything that she had paid in respect of her *intercessio*. The *senatus consultum*, though it made null the *intercessio* of a woman, protected the creditor so far as to restore to him a former right of action against his debtor and *fidejussores*: this action was called *restitutoria* or *rescissoria*. In the case of a new contract, to which the woman was a party, the *intercessio* was null by the *senatus consultum*, and the creditor had the same action against the person for whom the woman "*intercessit*" as he would have had against the woman: this action, inasmuch as the contract had no reference to a former right, but to a right arising out of the contract, was *institutoria*. In certain cases, a woman was permitted to renounce the benefit of the *senatus consultum*.⁵

INTERCESSIO was the interference of a magistratus to whom an appeal (*vid. APPELLATIO*) was made. The object of the *intercessio* was to put a stop to proceedings, on the ground of informality or other sufficient cause. Any magistratus might "*intercedere*" who was of equal rank with, or of rank superior to the magistratus from or against whom the *appellatio* was. Cases occur in which one of the *prætors* interposed (*intercessit*) against the proceedings of his colleague.⁶ The *intercessio* is most frequently spoken of with reference to the *tribunes*, who originally had not jurisdiction, but used the *intercessio* for the purpose of preventing wrong which was offered to a person in their presence.⁷ The *intercessio* of the *tribunes* of the *plebs* was *auxilium*.⁸

and it might be exercised either in *jure* or in *iudicio*. The *tribune qui intercessit* could prevent a *iudicium* from being instituted. That there could be an *intercessio* after the *litis contestatio* appears from *Cicero*.¹ The *tribunes* could also use the *intercessio* to prevent execution of a judicial sentence.² *T. Gracchus* interfered (*intercessit*) against the *prætor Terentius*, who was going to order execution in the case of *L. Scipio*, who was condemned for *peculation*,³ and he prevented *Scipio* being sent to prison, but he did not interfere to prevent execution being had on his property. A single *tribune* could effect this, and against the opinion of his colleagues, which was the case in the matter of *L. Scipio*. (*Vid. TRIBUNI*.)

INTERCISI DIES. (*Vid. Dies*, p. 362.)

INTERDICTIO AQUÆ ET IGNIS. (*Vid. BANISHMENT, ROMAN*.)

INTERDICTUM. "In certain cases (*certis ex causis*), the *prætor* or *proconsul*, in the first instance (*principaliter*), exercises his authority for the termination of disputes. This he chiefly does when the dispute is about possession or quasi-possession; and the exercise of his authority consists in ordering something to be done, or forbidding something to be done. The *formulae* and the terms, which he uses on such occasions, are called either *interdicta* or *decreta*. They are called *decreta* when he orders something to be done, as when he orders something to be produced (*exhiberi*) or to be restored: they are called *interdicta* when he forbids something to be done, as when he orders that force shall not be used against a person who is in possession rightfully (*sine vitio*), or that nothing shall be done on a piece of sacred ground. Accordingly, all *interdicta* are either *restitutoria*, or *exhibitoria*, or *prohibitoria*."⁴

This passage contains the essential distinction between an *actio* and an *interdictum*, so far as the *prætor* or *proconsul* is concerned. In the case of an *actio*, the *prætor* pronounces no order or decree, but he gives a *julex*, whose business it is to investigate the matter in dispute, and to pronounce a sentence consistently with the *formula*, which is his authority for acting. In the case of an *actio*, therefore, the *prætor* neither orders nor forbids a thing to be done, but he says *iudicium dabo*. In the case of an *interdict*, the *prætor* makes an order that something shall be done or shall not be done, and his words are accordingly words of command: *restituas*, *exhibeas*, *vim fieri veto*. This immediate interposition of the *prætor* is appropriately expressed by the word "*principaliter*," the full effect of which is more easily seen by its juxtaposition with the other words of the passage, than by any attempt to find an equivalent English expression.

Savigny observes that it may be objected to this exposition, that in one of the most important *interdicts*, that *De Vi*, the *formula* is *iudicium dabo*.⁵ But, as he observes, the old genuine *formula* was *restituas*;⁶ and the "*iudicium dabo*" must have been introduced when the *formulae* of the two old *interdicts*⁷ were blended together, and at a time when the distinctions between the old *formulae* had become a matter of indifference.

The mode of proceeding as to the *interdict* was as follows: The party aggrieved stated his case to the *prætor*, which was the foundation of his demand of an *interdict*, and was therefore analogous to the *postulatio actionis*. If the *prætor* saw sufficient reason, he might grant the *interdict*, which was often nothing more than the words of the edict addressed to the litigant parties; and in doing so, he

C. *Velleianum*.—*Paulus*, S. R., ii., tit. 11.)—6. (*Cic.* in *Verr.*, i., 46.)—7. (*Gell.*, xiii., 12.)—8. *Cic.* *Pro Quinat.*, 7, 20.)

1. (*Cic.*, *Pro Tullio*, c. 38.)—2. (*Liv.*, vi., 27.)—3. (*Liv.*, xxxviii., 60.—*Gell.*, vii., 19.)—4. (*Gaius*, iv., 139, 140.)—5. (*Dig.* 43, tit. 1, s. 1.)—6. (*Cic.*, *Pro Cæcina*, 8, 30.)—7. ("De Vi Ar mata" and "De V. Quotidianus.")

used as "auctoritas finiendis controversiis" in the first instance or immediately, and without the intervention of a *iudex* (*principaliter*), and also "*certis ex causis*," that is, in cases already provided for by the edict. If the defendant either admitted the plaintiff's case before the interdict was granted, and complied with its terms, or submitted to the interdict after it was granted, the dispute was, of course, at an end. This is not stated by Gaius, but follows of necessity from the nature of the case; and when he goes on to say "that when the *prætor* has ordered anything to be done or forbidden anything to be done, the matter is not then ended, but the parties go before a *iudex* or *recuperatores*," he means that this farther proceeding takes place if the *prætor*'s interdict does not settle the matter. The whole form of proceeding is not clearly stated by some modern writers, but the following is consistent with Gaius:

The complainant either obtained the interdict or he did not, which would depend upon the case he made out before the *prætor*. If he failed, of course the litigation was at an end; and if he obtained the interdict, and the defendant complied with its terms, the matter in this case also was at an end. If the defendant simply did not obey the terms of the interdict, it would be necessary for the complainant again to apply to the *prætor*, in order that this fact might be ascertained, and that the plaintiff might give full satisfaction. If the defendant was dissatisfied with the interdict, he might also apply to the *prætor* for an investigation into the facts of the case: his allegation might be that there was no ground for the interdict. He might also apply to the *prætor* on the ground that he had satisfied the terms of the interdict, though the plaintiff was not satisfied, or on the ground that he was unable to do more than he had done. In all these cases, when the *prætor*'s order did not terminate the dispute, he directed an inquiry by certain formulæ, which were the instruction of the *iudex*, *recuperatores*, or *arbitrator*. The inquiry would be, Whether anything had been done contrary to the *prætor*'s edict; or Whether that had been done which he had ordered to be done: the former inquiry would be made in the case of a prohibitory interdict, and the latter in the case of an exhibitory or restitutory interdict. With regard to the expression just used, namely, "the *prætor*'s edict," it must be observed that "edict" is the word used by Gaius, but that he means "interdict." He uses "edict" because the "interdict" would only be granted in such cases as were provided for by the "edict" (*certis ex causis*), and thus an interdict was only an application of the "edict" to a particular case.

In the case of *interdicta prohibitoria* there was always a *sponsio*; that is, the parties were required to deposit or give security for a sum of money, the loss of which was in the nature of a penalty (*pœna*) to the party who failed before the *iudex*: this *sponsio* was probably required by the *prætor*. In the case of *interdicta restitutoria* and *prohibitoria*, the proceeding was sometimes per *sponsionem*, and therefore before a *iudex* or *recuperatores*, and sometimes, without any *sponsio*, per *formulam arbitriam*, that is, before an *arbitrator*. In the case of these two latter interdicts, it seems to have depended on the party who claimed the inquiry whether there should be a *sponsio* or not: if such party made a *sponsio*, that is, proffered to pay a sum of money if he did not make out his case, the opposite party was required to make one also. In the case of *Cæcina*¹ a *sponsio* had been made: Cicero says, addressing the *recuperatores*, "*sponsio facta est: hac de sponsione vobis iudicandum est.*" In fact, when the

matter came before a *iudex* or *arbitrator*, the form of proceeding was similar to the ordinary *iudicium*.

The chief division of interdicts has been stated. Another division of interdicts was into those for the purpose of acquiring possession, retaining possession, or recovering possession.²

The *interdictum adipiscendæ possessionis* was given to him to whom the *bonorum possessio* (*vid. BONORUM POSSESSIO*) was given, and it is referred to by the initial words *quorum bonorum*.³ Its operation was to compel a person, who had possession of the property of which the *bonorum possessio* was granted to another, to give it up to such person, whether the person in possession of such property possessed it *pro herede* or *pro possessore*. The *bonorum emptor* (*vid. BONORUM EMPTOR*) was also entitled to this interdict, which was sometimes called *possessorium*. It was also granted to him who bought goods at public auction, and in such case was called *sectorium*, the name "*sectores*" being applied to persons who bought property in such manner.⁴

The *interdictum salvianum* was granted to the owner of land, and enabled him to take possession of the goods of the *colonus*, who had agreed that his goods should be a security for his rent.

This interdict was not strictly a possessorial interdict, as Savigny has shown.⁵ It did not, like the two other interdicts, presuppose a lawful possession, that is, a *jus possessionis* acquired by the fact of a rightful possession: the complainant neither alleged an actual possession nor a former possession.

The *interdictum retinendæ possessionis* could only be granted to a person who had a rightful possession, and he was entitled to it in respect of injury sustained by being disturbed in his possession, in respect of anticipated disturbance in his possession, and in the case of a dispute as to ownership, in which the matter of possession was first to be inquired into. Its effect in the last case would be, as Gaius states, to determine which of two litigant parties should possess, and which should be the claimant. There were two interdicts of this class, named respectively *uti possidetis* and *utrubi*, from the initial words of the edict. The *interdictum uti possidetis* applied to land or houses, and the other to movables. The *uti possidetis* protected the person who at the time of obtaining the interdict was in actual possession, provided he had not obtained the possession against the other party (*adversarius*) *vi*, *clam*, or *precario*, which were the three *vitia possessionis*.⁶ In the case of the *interdictum utrubi*, the possession of the movable thing was by the interdict declared to belong to him who had possessed the thing against the other party during the greater part of that year, "*nec vi nec clam nec precario.*" There were some peculiarities as to possession of movable things.⁶

The *interdictum recuperandæ possessionis* might be claimed by him who had been forcibly ejected (*vi dejectus*) from his possession of an immovable thing, and its effect was to compel the wrong-doer to restore the possession, and to make good all damage. The initial words of the interdict were "*unde tu illum vi deieccisti,*" and the words of command were "*eo restituas.*"⁷ There were two cases of *vis*: one of *vis simpliciter*, to which the ordinary interdict applied, which Cicero calls *quodidianum*: the other of *vis armata*, which had been obtained by *Cæcina* against *Æbutius*. The plaintiff had to prove that he was in possession of the premises,

1. (Gaius, iv., 144.)—2. (Dig. 43, tit. 2, s. 1.)—3. (Cic., Pro Rosc. Amer., 36.)—4. (Das Recht des Besitzes, p. 410.)—5. (Festus, s. v. Possessio.—Gaius, iv., 160.)—6. (Gaius, iv., 151.)—7. (Cic., Pro Cæcin., 30.—Id., Pro Tull., 4, 29, 44.—Gaius, v. 154.)

1. (Cic., Pro Cæcin., 8.)

and had been ejected by the defendant or his agents (*familia* or *procurator*¹). If the matter came before a *iudex*, the defendant might allege that he had complied with the interdict, "*restituisset*," though he had not done so in fact; but this was the form of the *sponsio*, and the defendant would succeed before the *iudex* if he could show that he was not bound to restore the plaintiff to his possession.²

The defendant might put in an answer (*exceptio*) to the plaintiff's claim for restitution: he might show that the plaintiff's possession commenced either *vi*, *clam*, or *precario* with respect to the defendant;³ but this *exceptio* was not allowed in the case of *vis armata*.⁴ The defendant might also plead that a year had elapsed since the violence complained of, and this was generally a good plea, for the interdict contained the words "*in hoc anno*." But if the defendant was still in possession after the year, he could not make this plea, nor could he avail himself of it in a case of *vis armata*.⁵

A *clandestina possessio* is a *possessio* in which the possessor takes a thing (which must, of course, be a movable thing) secretly (*furtive*), and without the knowledge of the person whose adverse claim to the possession he fears. Such a *possessio*, when it was a disturbance of a rightful possession, gave the rightful possessor a title to have the interdict *de clandestina possessione* for the recovery of his possession. All traces of this interdict are nearly lost; but its existence seems probable, and it must have had some resemblance to the interdictum *de vi*. The *exceptio clandestinæ possessionis* was quite a different thing, inasmuch as a clandestine *possessio* did not necessarily suppose the lawful possession of another party.

The interdictum *de precaria possessione* or *de precario* applied to a case of *precarium*. It is *precarium* when a man permits another to exercise ownership over his property, but retains the right of demanding the property back when he pleases. It is called *precarium* because the person who received such permission usually obtained it by request (*prece*), though request was not necessary to constitute *precarium*, for it might arise by tacit permission.⁶ The person who received the detention of the thing, obtained at the same time a legal possession, unless provision to the contrary was made by agreement. In either case the permission could at any time be recalled, and the *possessio*, which in its origin was *iusta*, became *injusta*, *vitiata*, as soon as restitution was refused. Restitution could be claimed by the interdictum *de precario*, precisely as in the case of *vis*; and the sole foundation of the right to this interdict was a *vitiata possessio*, as just explained. The *precarium* was never viewed as a matter of contract. The interdictum *de precario* originally applied to land only, but it was subsequently extended to movable things. The obligation imposed by the edict was to restore the thing, but not its value, in case it was lost, unless *dolus* or *lata culpa* could be proved against the defendant. (*Vid. Culpa*.) But from the time that the demand is made against the defendant, he is *in mora*, and, as in the case of the other interdicts, he is answerable for all *culpa*, and for the fruits or profits of the thing; and generally he is bound to place the plaintiff in the condition in which he would have been if there had been no refusal. No exceptions were allowed in the case of a *precarium*.

The origin of the *precarium* is referred by Savigny to the relation which subsisted between a *patronus* and his *cliens*, to whom the *patronus* gave the use of a portion of the *ager publicus*. If the

cliens refused to restore the land upon demand, the *patronus* was entitled to the interdictum *de precario*. As the relation between the *patronus* and the *cliens* was analogous to that between a parent and his child, it followed that there was no contract between them, and the *patron's* right to demand the land back was a necessary consequence of the relation between him and his *cliens*.¹ The *precarium* did not fall into disuse when the old *ager publicus* ceased to exist, and in this respect it followed the doctrine of *possessio* generally. (*Vid. AGRARIÆ LEGES*.) It was, in fact, extended and applied to other things, and, among them, to the case of pledge. (*Vid. PIGNUS*.)

Gaius² makes a third division of interdicta into *simplicia* and *duplicia*. *Simplicia* are those in which one person is the plaintiff (*actor*), and the other is the defendant (*reus*): all *restitutoria* and *exhibitoria* interdicta are of this kind. *Prohibitoria* interdicta are either *simplicia* or *duplicia*: they are *simplicia* in such cases as those, when the *prætor* forbids anything to be done in a *locus sacer*, in a *flumen publicus*, or on a *ripa*. They are *duplicia* as in the case of the interdictum *uti possidetis* and *utrobi*; and they are so called, says Gaius, because each of the litigant parties may be indifferently considered as *actor* or *reus*, as appears from the terms of the interdict.³

Interdicta seem to have been also called *duplicia* in respect of their being applicable both to the acquisition of a possession which had not been had before, and also to the recovery of a possession. An interdict of this class was granted in the case of a *vindicatio*, or action as to a piece of land against a possessor who did not defend his possession, as, for instance, when he did not submit to a *judicium*, and give the proper *sponsiones* or *satisfactions*. A similar interdict was granted in the case of a *vindicatio* of an *hereditas* and a *usufructus*. Proper security was always required from the person in possession, in the case of an *in rem actio*, in order to secure the plaintiff against any loss or injury that the property might sustain while it was in the possession of the defendant. If the defendant refused to give such security, he lost the possession, which was transferred to the plaintiff (*petitor*).⁴

(For other matters relating to the interdict, see Gaius, iv., 138-170. — Paulus, S. R., v., tit. 6. — Dig. 43. — Savigny, *Das Recht des Besitzes*, p. 403-516. — Savigny and Haubold, *Zeitschrift*, vol. iii., p. 305, 358.)

INTEREST OF MONEY. Under this head it is proposed to give an account of the conditions upon which money was lent among the Greeks and Romans.

I. GREEK INTEREST. At Athens, Solon, among other reforms, abolished the law by which a creditor was empowered to sell or enslave a debtor, and prohibited the lending of money upon a person's own body (*ἐπὶ τοῖς σώματι μὴ δένα μισθεῖν*¹). No other restriction, we are told, was introduced by him, and the rate of interest was left to the discretion of the lender (*τὸ ἀργύριον στάσιμον εἶναι ἐφ' ὅπως ἂν βούληται ὁ δανείζων*²). The only case in which the rate was prescribed by law was in the event of a man separating from his lawful wife, and not refunding the dowry he had received with her. Her trustees or guardians (*οἱ κῆρυες*) could in that case proceed against him for the principal, with lawful interest at the rate of 18 per cent. (*Vid. DOS, GREEK*.)

Any rate might be expressed or repressed in

1. (Cic., *Pro Tull.*, 29.)—2. (*Pro Cæcili.*, 8, 32.)—3. (*Pro Cæcili.*, 32.—*Pro Tull.*, 44.)—4. (*Pro Cæcili.*, 8, 32.)—5. (Cic. ad *Fam.*, xv., 16.)—6. (Paulus, S. R., v., tit. 6, s. 11.)

two different ways : (1.) by the number of oboli or drachmæ paid by the month for every mina : (2.) by the part of the principal (τὸ ἀρχαῖον or κεφάλαιον) paid as interest, either annually or for the whole period of the loan. According to the former method, which was generally used when money was lent upon real security (τόκοι ἐγγυοῖ or ἐγγυεῖοι), different rates were expressed as follows : 10 per cent. by ἐπὶ πέντε ὀβολοῖς, i. e., 5 oboli per month for every mina, or 60 oboli a year = 10 drachmæ = $\frac{1}{6}$ of a mina. Similarly,

12 per cent. by ἐπὶ δραχμῇ per month.

16 per cent. by ἐπ' ὀκτὼ ὀβολοῖς "

18 per cent. by ἐπ' ἑννέα ὀβολοῖς "

24 per cent. by ἐπὶ δυοῖ δραχμαῖς "

36 per cent. by ἐπὶ τριῶν δραχμαῖς "

5 per cent. by ἐπὶ τρίτῳ ἡμιὀβολῳ, probably.

(2.) Another method was generally adopted in cases of bottomry, where money was lent upon the ship's cargo or freightage (ἐπὶ τῷ ναύλῳ), or the ship itself, for a specified time, commonly that of the voyage. By this method the following rates were thus represented :

10 per cent. by τόκοι ἐπιδέκατοι, i. e., interest at the rate of a tenth ; $12\frac{1}{2}$, $16\frac{2}{3}$, 20, $33\frac{1}{3}$, by τόκοι ἑξήκδοι, ἑφεκτοί, ἰπένεμτοι, and ἐπίτριτοι, respectively. So that, as Böckh¹ remarks, the τόκος ἐπιδέκατος is equal to the ἐπὶ πέντε ὀβολοῖς :

The τόκος ἐπιδέκατος = the ἐπὶ δραχμῇ nearly.

" ἑφεκτος = the ἐπ' ὀκτὼ ὀβολοῖς "

" ἰπένεμτος = the ἐπ' ἑννέα ὀβολοῖς "

" ἐπίτριτος = the ἐπὶ τριῶν δραχμαῖς "

These nearly corresponding expressions are not to be considered as identical, however closely the rates indicated by them may approach each other in value ; although, in the age of Justinian, as Salmassius² observes, the τόκος ἐπιδέκατος, or $12\frac{1}{2}$ per cent., was confounded with the centesima, which is exactly equal to the interest at a drachma, or 12 per cent.

The rates above explained frequently occur in the orators ; the lowest in ordinary use at Athens being the τόκος ἐπιδέκατος, or 10 per cent., the highest the τόκος ἐπίτριτος, or $33\frac{1}{3}$ per cent. The latter, however, was chiefly confined to cases of bottomry, and denotes more than it appears to do, as the time of a ship's voyage was generally less than a year. Its near equivalent, the ἐπὶ τριῶν δραχμαῖς, or 36 per cent., was sometimes exacted by bankers at Athens.³ The ἐπὶ δραχμῇ, or rate of 12 per cent., was common in the time of Demosthenes,⁴ but appears to have been thought low. The interest of eight oboli, or 16 per cent., occurs in that orator ;⁵ and even in the age of Lysias (B.C. 440) and Isæus (B.C. 400), nine oboli for the mina, or 18 per cent., appears to have been a common rate.⁶ Æschines also⁷ speaks of money being borrowed on the same terms ; so that, on the whole, we may conclude that the usual rates of interest at Athens about the time of Demosthenes varied from 12 to 18 per cent. That they were nearly the same in range, and similarly expressed, throughout the rest of Greece, appears from the authorities quoted by Böckh.⁸ No conclusions on the subject of the general rate of interest can be drawn from what we are told of the exorbitant rates exacted by common usurers (τοκογυλοῖ, τοκυλλήτες, ἡμεροδανεισταί). Some of these⁹ exacted as much as an obolus and a half per day for each drachma ; and money-lenders and bankers in general, from the high profits which they realized, and the severity with which they exacted their dues, seem to have been as unpopular among their

fellow-citizens as Jews and usurers in more modern times. Demosthenes,¹ indeed, intimates that the fact of a man being a money-lender was enough to prejudice him, even in a court of law, among the Athenians (Μισοῦσιν οἱ Ἀθηναῖοι τοὺς δανείζοντας). It is curious, also, to observe that Aristotle² objects, on principle, to putting money out at interest (ἐὺλογώτατα μισεῖται ἡ ὀβολοστατική), as being a perversion of it from its proper use, as a medium of exchange, to an unnatural purpose, viz., the reproduction or increase of itself ; whence, he adds, comes the name of interest or τόκος, as being the offspring (τὸ γιγνόμενον) of a parent like itself.

The arrangement of a loan would, of course, depend upon the relation between the borrower and the lender, and the confidence placed by one in the other. Sometimes money was lent, e. g., by the banker Pasion at Athens, without a security, or written bond, or witnesses.³ But generally either a simple acknowledgment (χειρόγραφον) was given by the borrower to the lender (vid. CHIROGRAPHUM), or a regular instrument (συγγραφή), executed by both parties and attested by witnesses, was deposited with a third party, usually a banker.⁴ Witnesses, as we might expect, were also present at the payment of the money borrowed.⁵ The security for a loan was either a ὑποθήκη or an ἐνέχυρον : the latter was put into the possession of the lender ; the former was merely assured to him, and generally, though not always, consisted of real or immovable property. The ἐνέχυρα, on the contrary, generally consisted of movable property, such as goods or slaves.⁶ At Athens, when land was given as security, or mortgaged (οὐσία ὑπόθρεως), pillars (δροῖ or στήλαι) were set up on it, with the debt and the mortgagee's name inscribed. Hence an unencumbered estate was called an ἀστικτὸν χωρίον.⁷ (Vid. HOROI.) In the rest of Greece there were public books of debt, like the German and Scotch registers of mortgages ; but they are not mentioned as having existed at Athens.⁸

Bottomry (τὸ ναυτικόν, τόκοι ναυτικοί or ἐκδοσίς) was considered a matter of so much importance at Athens, that fraud or breach of contract in transactions connected with it was sometimes punished with death.⁹ In these cases the loans were generally made upon the cargo shipped, sometimes on the vessel itself, and sometimes on the money received or due for passengers and freightage (ἐπὶ τῷ ναύλῳ). The principal (ἐκδοσίς, οἰσινεῖ ἔξω δόσις¹⁰), as well as the interest, could only be recovered in case the ship met with no disaster in her voyage (σωθείσης τῆς νεώς¹¹) ; a clause to this effect being generally inserted in all agreements of bottomry or ναυτικαὶ συγγραφαί. The additional risk incurred in loans of this description was compensated for by a high rate of interest, and the lenders took every precaution against negligence or deception on the part of the borrowers ; the latter also were careful to have witnesses present when the cargo was put on board for the purpose of depositing, if necessary, to a bona fide shipping of the required amount of goods.¹² The loan itself was either a δάνειαμα ἐτερόπλοον, i. e., for a voyage out, or it was a δάνειαμα ἀμφοτερόπλοον, i. e., for a voyage out and home. In the former case, the principal and interest were paid at the place of destination, either to the creditor himself if he sailed in the ship, or to an authorized agent.¹³ In the latter case the payment was made on the return of the ship, and it was specially provided in

the agreement between the contracting parties, that she should sail to some specified places only. A deviation from the terms of the agreement, in this or other respects, was, according to a clause usually inserted in the agreement, punishable by a fine of twice the amount of the money lent.¹ Moreover, if the goods which formed the original security were sold, fresh articles of the same value were to be shipped in their place.² Sometimes, also, the trader (ὁ ἔμπορος) was himself the owner of the vessel (ὁ ναύκληρος), which in that case might serve as a security for the money borrowed.³

The rate of interest would, of course, vary with the risks and duration of the voyage, and therefore we cannot expect to find that it was at all fixed. Xenophon⁴ speaks of the fifth and third parts of the capital lent as being commonly given in bottomry, referring, of course, to voyages out and home. The interest of an eighth, or $12\frac{3}{8}$ per cent., mentioned by Demosthenes,⁵ was for money lent on a trireme, during a passage from Sestos to Athens, but upon condition that she should first go to Hierum to convoy vessels laden with corn; the principal and interest were to be paid at Athens on her arrival there.⁶

The best illustration of the facts mentioned above is found in a *ναυτικὴ συγγραφή*, given in the speech of Demosthenes against Lacritus. It contains the following statement and conditions.

Two Athenians lent two Phaselitans 3000 drachmæ upon a cargo of 3000 casks of Mendeian wine, on which the latter were not to owe anything else, or raise any additional loan (οὐδ' ἐπιδανείσονται). They were to sail from Athens to Mende or Scione, where the wine was to be shipped, and thence to the Bosphorus, with liberty, if they preferred it, to continue their voyage on the left side of the Black Sea as far as the Borysthenes, and then to return to Athens; the rate of interest being fixed at 225 drachmæ in 1000, or 25 per cent. for the whole time of absence. If, however, they did not return to Hierum, a port in Bithynia close to the Thracian Bosphorus,⁷ before the early rising of Arcturus, i. e., before the 20th of September or thereabout, when navigation began to be dangerous, they had to pay a higher rate of 30 per cent., on account of the additional risk. The agreement farther specified that there should be no change of vessel for the return cargo, and that, if it arrived safe at Athens, the loan was to be repaid within twenty days afterward, without any deductions except for loss by payments made to enemies, and for jettisons (ἐντελὲς πλὴν ἐκβολῆς, κ. τ. λ.) made with the consent of all on board (οἱ σύμπλοι); that, till the money was repaid, the goods pledged (τὰ ὑποκείμενα) should be under the control of the lenders, and be sold by them, if payment was not made within the appointed time; that if the sale of the goods did not realize the required amount, the lender might raise the remainder by making a levy (πρᾶξις) upon the property of both or either of the traders, just as if they had been cast in a suit, and became *ὑπερήμεροι*, i. e., had not complied with a judgment given against them within the time appointed. Another clause in the agreement provides for the contingency of their not entering the Pontus; in that case they were to remain in the Hellespont, at the end of July, for ten days after the early rising of the dog-star (ἐπὶ κυνί), discharge their cargo (ἐξέλθουσι) in some place where the Athenians had no right of reprisals (ὅπου ἂν μὴ σῦλαι ὦσι τοῖς Ἀθηναίοις), (which might be executed unfairly, and would lead to retaliations), and then, on their

return to Athens, they were to pay the lower rate of interest, or 25 per cent. Lastly, if the vessel were to be wrecked, the cargo was, if possible, to be saved; and the agreement was to be conclusive on all points.

From the preceding investigation, it appears that the rate of interest among the ancient Greeks was higher than in modern Europe, and at Rome in the age of Cicero.¹ This high rate does not appear to have been caused by any scarcity of money, for the rent of land and houses in Athens and its neighbourhood was not at all proportional to it. Thus Isæus² says that a house at Thriæ was let for only 8 per cent. of its value, and some houses at Melite and Eleusis for a fraction more. We should, therefore, rather refer it to a low state of credit, occasioned by a variety of causes, such as the division of Greece into a number of petty states, and the constitution and regulation of the courts of law, which do not seem to have been at all favourable to money-lenders in enforcing their rights. Böckh assigns as an additional cause "the want of moral principles."

II. ROMAN INTEREST. The Latin word for interest, *fenus* or *fœnus*, originally meant any increase, and was thence applied, like the Greek *τόκος*, to denote the interest or increase of money. "*Fenus*," says Varro,³ "*dictum a fetu et quasi a fetura quadam pecunia parentis atque incrementis.*" The same root is found in *fecundus*. *Fenus* was also used for the principal as well as the interest.⁴ Another term for interest was *usura*, generally found in the plural, and also *impendium*, on which Varro⁵ remarks, "*a quo (pondere) usura quod in sorte accedebat, impendium appellatum.*"

Towards the close of the Republic, the interest of money became due on the first of every month: hence the phrases *tristes* or *celeris calendæ* and *calendarium*, the latter meaning a debt-book or book of accounts. The rate of interest was expressed in the time of Cicero, and afterward, by means of the *as* and its divisions, according to the following table:

Asses usuræ, or one as per month	
for the use of one hundred . . .	=12 per cent.
Deunces usuræ	11 "
Dextantes "	10 "
Dodrantēs "	9 "
Besses "	8 "
Septunces "	7 "
Semisses "	6 "
Quincunces "	5 "
Trientes "	4 "
Quadrantes "	3 "
Sextantes "	2 "
Unciæ "	1 "

Instead of the phrase *asses usuræ*, a synonyme was used, viz., *centesimæ usuræ*, inasmuch as at this rate of interest there was paid in a hundred months a sum equal to the whole principal. Hence *binæ centesimæ* = 24 per cent., and *quaternæ centesimæ* = 48 per cent. So, also, in the line of Horace,⁶ "*Quinas hic capiti mercedes exsecat*," we must understand *quinas centesimas*, or 60 per cent., as the sum taken from the capital. Niebuhr⁷ is of opinion that the monthly rate of the *centesimæ* was of foreign origin, and first adopted at Rome in the time of Sulla. The old yearly rate established by the Twelve Tables (B.C. 450) was the *unciarium fenus*. This has been variously interpreted to mean (1) one twelfth of the *centesima* paid monthly, i. e., one per cent. per annum; and (2) one twelfth of the principal paid monthly, or a hundred per cent. per

1. (Demosth., c. Dionys., 1294.)—2. (Demosth., c. Phorm., 909, 26.)—3. (Demosth., c. Dionys., 1284, 11.)—4. (Περὶ Πόρων: iii., 7, 14.)—5. (C. Polycl., 1212.)—6. (Böckh, i, p. 181.)—7. (Wulf ad Lept., p. 259.)

annum. Niebuhr¹ refutes at length the two opinions; but it may be sufficient to observe that one is inconsistent with common sense, and the other with the early history of the Republic. A third and satisfactory opinion is as follows: The uncia was the twelfth part of the as, and since the full (12 oz.) copper coinage was still in use at Rome when the Twelve Tables became law, the phrase *unciarium fenus* would be a natural expression for interest of one ounce in the pound; i. e., a twelfth part of the sum borrowed, or $8\frac{1}{2}$ per cent., not per month, but per year. This rate, if calculated for the old Roman year of ten months, would give 10 per cent. for the civil year of twelve months, which was in common use in the time of the decemvirs. The analogy of the Greek terms *τόκος*, *ἐπίτοκος*, &c., confirms this view, which, as Niebuhr observes, is not invalidated by the admission that it supposes a yearly, and not a monthly payment of interest; for, though in the later times of the Republic interest became due every month, there is no trace of this having been the case formerly.² Nor is it difficult to account for the change: it probably was connected with the modifications made from time to time in the Roman law of debtor and creditor (such as the abolition of personal slavery for debt), the natural effect of which would be to make creditors more scrupulous in lending money, and more vigilant in exacting the interest due upon it.

If a debtor could not pay the principal and interest at the end of the year, he used to borrow money from a fresh creditor to pay off his old debt. This proceeding was very frequent, and called a "*versura*,"³ a word which Festus⁴ thus explains: "*Versuram facere, mutuum pecuniam sumere, ex eo dictum est, quod initio qui mutuabantur ab aliis, ut aliis solverent, velut verterent creditorem.*" It amounted to little short of paying compound interest, or an *anatocisnus* anniversarius, another phrase for which was *usura renovata*; e. g., *centesimæ renovatæ* is twelve per cent. compound interest, to which Cicero⁵ opposes *centesimæ perpetuo fenore* = 12 per cent. simple interest. The following phrases are of common occurrence in connexion with borrowing and lending money at interest: "*Pecuniam apud aliquem collocare*," to lend money at interest; "*relegere*," to call it in again; "*cavere*," to give security for it; "*opponere*" or "*opponere pignori*," to give as a pledge or mortgage: hence the pun in Catullus,⁶

"*Furi, villula nostra non ad Austri
Flatus opposita est, nec ad Favoni:
Verum ad millia quindecim et ducentos.
O ventum horribilem atque pestilentem.*"

The word *nomen* is also of extensive use in money transactions. Properly it denoted the name of a debtor, registered in a banker's or any other account-book: hence it came to signify the articles of an account, a debtor, or a debt itself. Thus we have "*bonum nomen*," a good debt; "*nomina facere*," to lend moneys,⁷ and also to borrow money.⁸ Moreover, the Romans generally discharged debts through the agency of a banker (*in foro et de mensæ scriptura*) rather than by a direct personal payment (*ex arca domoque*); and as an order or undertaking for payment was given by writing down the sum to be paid, with the receiver's name underneath or alongside it,⁹ hence came the phrases "*scribere nummos alicui*," to promise to pay;¹⁰ "*rescribere*," to pay back, of a debtor.¹¹ So also "*perscribere*," to give a bill or draught (*perscriptio*) on a banker

for payment, in opposition to payment by ready money.¹

The Roman law of debtor and creditor is given under *NEXT*. It is sufficient to remark here that the Licinian laws (*vid. LICINIÆ LEGES*), by which the grievances of debtors were to a certain extent redressed, did not lay any restriction on the rate of interest that might be legally demanded; and it is clear, from various circumstances,² that the scarcity of money at Rome after the taking of the city by the Gauls had either led to the actual abolition of the old uncial rate (*unciarium fenus*) of the Twelve Tables, or caused it to fall into disuse. Nine years, however, after the passing of these laws,³ the rate of the Twelve Tables was re-established, and any higher rate prohibited by the bill (*rogatio*) of the tribunes Duilius and Mænius.

Still this limitation of the rate of interest did not enable debtors to pay the principal, and what Tacitus⁴ calls the "*fenebre malum*" became at last so serious that the government thought it necessary to interfere, and remedy, if possible, an evil so great and inveterate. Accordingly, fourteen years after the passing of the Licinian laws, five commissioners were appointed for this purpose under the title of *mensarii* or bankers. These opened their banks in the Forum, and in the name of the treasury offered ready money to any debtor who could give security (*cavere*) to the state for it: moreover, they ordered that land and cattle should be received in payment of debts at a fair valuation, a regulation which Cæsar adopted for a similar purpose.⁵ By these means, Livy⁶ tells us that a great amount of debt was satisfactorily liquidated. Five years afterward, the legal rate of interest was still farther lowered to the "*semunciarium fenus*," or the twenty-fourth part of the whole sum (*ad semuncias redacta usura*); and in B.C. 346 we read of several usurers being punished for a violation of the law,⁷ by which they were subjected to a penalty of four times the amount of the loan.⁸ But all these enactments were merely palliatives; the termination and cure of the evil was something more decisive—neither more nor less than a species of national bankruptcy—a general abolition of debts, or *χρεῶν ἀποκοπή*.¹⁰ This happened in B.C. 341, a year remarkable for political changes of great importance, and was followed up by the passing of the Genucian laws, which forbade the taking of usury altogether.¹¹ A law like this, however, was sure to be evaded, and there was a very simple way of doing so; it only affected Roman citizens, and therefore the usurers granted loans, not in the name of themselves, but of the Latins and allies who were not bound by it.¹² To prevent this evasion, the Sempronian law was passed (B.C. 194), which placed the Latins and allies on the same footing, in respect of lending money, as the full Roman citizens. At last, after many futile attempts to prevent the exaction of interest at any rate and in any shape, the idea was abandoned altogether, and the *centesima*, or 12 per cent. per annum, became the legal and recognised rate. Niebuhr,¹³ as we have already observed, is of opinion that it was first adopted at Rome in the time of Sulla; but whether it became the legal rate by any special enactment, or from general consent, does not appear. Some writers have inferred¹⁴ that it was first legalized by the edicts of the city prætors, an inference drawn from the general resemblance between the prætorian and proconsular edicts, coupled with the fact that some proconsular edicts

are extant, by which the centesima is fixed as the legal rate in proconsular provinces (*in edicto tralatitio centesimas me observatum habui*).¹ Whether this supposition is true or not, it is admitted that the centesima, or 12 per cent., was the legal rate towards the close of the Republic, and also under the emperors. Justinian reduced it to 6 per cent.²

In cases of *fenus nauticum*, however, or bottomry, as the risk was the money-lender's, he might demand any interest he liked while the vessel on which the money was lent was at sea; but after she reached harbour, and while she was there, no more than the usual rate of 12 per cent. or the centesima could be demanded.

Justinian made it the legal rate for *fenus nauticum* under all circumstances.³

INTERPRES, an Interpreter. This class of persons became very numerous and necessary to the Romans as their empire extended. Embassies from foreign nations to Rome, and from Rome to other states, were generally accompanied by interpreters to explain the objects of the embassy to the respective authorities.⁴ In large mercantile towns, the interpreters, who formed a kind of agents through whom business was done, were sometimes very numerous, and Pliny⁵ states that at Dioscurias in Colchis, there were at one time no less than 130 persons who acted as interpreters to the Roman merchants, and through whom all their business was carried on.

All Roman prætors, proconsuls, and quæstors, who were intrusted with the administration of a province, had to carry on all their official proceedings in the Latin language;⁶ and as they could not be expected to be acquainted with the language of the provincials, they had always among their servants (*vid. APPARITORES*) one or more interpreters, who were generally Romans, but in most cases undoubtedly freedmen.⁷ These interpreters had not only to officiate at the *conventus* (*vid. CONVENSUS*), but also explained to the Roman governor everything which the provincials might wish to be laid before him.⁸

INTERREGNUM. (*Vid. INTERREX*.)

INTERREX. This office is said to have been instituted on the death of Romulus, when the senate wished to share the sovereign power among themselves instead of electing a king. For this purpose, according to Livy,⁹ the senate, which then consisted of one hundred members, was divided into ten decuries, and from each of these decuries one senator was nominated. These together formed a board of ten, with the title of *Interreges*, each of whom enjoyed in succession the regal power and its badges for five days; and if no king was appointed, at the expiration of fifteen days, the rotation began anew. The period during which they exercised their power was called an *Interregnum*. Dionysius¹⁰ and Plutarch¹¹ give a different account of the matter, but that of Livy appears the most probable. Niebuhr¹² supposes that the first interreges were exclusively Ramnes, and that they were the *decem primi*, or ten leading senators, of whom the first was chief of the whole senate.¹³

The interreges agreed among themselves who should be proposed as king,¹⁴ and if the senate approved of their choice, they summoned the assembly of the curiæ, and proposed the person whom

they had previously agreed upon; the power of the curiæ was confined to accepting or rejecting him. The choice of the senate was called *patrum auctoritas*;¹ the putting of his acceptance or rejection to the vote in the curiæ, *rogare*;² and the decree of the curiæ on the subject, *jussus populi*.³

Interreges were appointed under the Republic for holding the comitia for the election of the consuls, when the consuls, through civil commotions or other causes, had been unable to do so in their year of office.⁴ Each held the office for only five days, as under the kings. The comitia were hardly ever held by the first interrex; more usually by the second or third;⁵ but in one instance we read of an eleventh, and in another of a fourteenth interrex.⁶ The comitia for electing the first consuls were held by Spurius Lucretius as interrex,⁷ whom Livy⁸ calls also *præfectus urbis*. The interreges under the Republic, at least from B.C. 482, were elected by the senate from the whole body, and were not confined to the *decem primi*, or ten chief senators, as under the kings.⁹ Plebeians, however, were not admissible to this office; and, consequently, when plebeians were admitted into the senate, the patrician senators met without the plebeian members to elect an interrex.¹⁰ For this reason, as well as on account of the influence which the interrex exerted in the election of the magistrates, we find that the tribunes of the plebs were strongly opposed to the appointment of an interrex.¹¹ The interrex had jurisdiction.¹²

Interreges continued to be appointed occasionally till the time of the second Punic war;¹³ but after that time we read of no interrex till the senate, by command of Sulla, created an interrex to hold the comitia for his election as dictator, B.C. 82.¹⁴ In B.C. 55 another interrex was appointed to hold the comitia, in which Pompey and Crassus were elected consuls;¹⁵ and we also read of interreges in B.C. 53 and 52, in the latter of which years an interrex held the comitia, in which Pompey was appointed sole consul.¹⁶

INTERULA. (*Vid. TUNICA*.)

INTESTABILIS. In the Twelve Tables it was declared "*qui se sieri testarier libripensve fuerit, n testimonium fariatur, improbus intestabilisque esto*."¹ According to these passages, a person who had been a witness on any solemn occasion, such as the making of a will, and afterward refused to give his testimony, was "*intestabilis*," that is, disqualified from ever being a witness on any other occasion. The word afterward seems to have had its meaning extended, and to have been used to express one who could not make a will, and who laboured under a general civil incapacity.¹⁸

INTESTATO, HEREDITATES AB. (*Vid. HERES, ROMAN*, p. 497.)

INTESTATUS. (*Vid. HERES, ROMAN*, p. 497.)

*INTUBUM or INTYBUM, a plant, of which two kinds, the wild and the cultivated, are mentioned by the ancient writers. The former is the *Cichorium*, or *Intubum erraticum* of Pliny;¹ our bitter Succory, or the *Cichorium Intybus* of Linnaeus; the latter is Pliny's *Intubum sativum*, called also Σέου,

and our Endive, the *Cichorium endivia*, L. The Intybum is said to have come originally from Egypt, where great use was made of it; and, when introduced into Europe, it brought along with it its Egyptian or Coptic name, which became in Greek *κικώριον* or *κικώρη*. The Arabians call it *Chikou-rieh*, by a name corrupted from the preceding. By the epithet *erraticum* Pliny means "wild" or "savage," as appears from his own words: "*Erraticum, quod apud nos quidam ambuleiam appellavere, in Ægypto cichorium vocant, quod sylvestre sit.*" Fée, however, insists, and with much appearance of reason, that the term in question refers rather to the long, numerous, and spreading roots of the plant, whence Virgil speaks of the "*amaris intuba fibris.*"¹ The modern name *Endive*, as given to the cultivated kind, comes from the barbarous word *endivia*, which was used in the Middle Ages, and was evidently corrupted from the Arabic *hendib* or the classical Latin term *intybum*, most probably the former.²

INVENTARIUM. (Vid. HERES, ROMAN, p. 500.)
INVESTIS. (Vid. IMPUBES.)

*INULA, Elecampane, the *Ἐλενιον* of the Greeks, and *Inula* (or *Enula*) *Campana* of the school of Salerno. (Vid. HELENIUM.)

*ION (*ἰόν*), the Violet. The *Viola odorata*, or Sweet Violet, is the *ἰὼν μέλαν* of Theophrastus,³ the *ἰὼν πορφύρεον* of Dioscorides,⁴ and the species of Violet so often celebrated by the poets. According to Schneider, the *ἰὼν χλωρόν* of Theophrastus is the *Cheiranthus cheiri*, or Wall-flower. Fée, however, seems disinclined to adopt this extension of the term *viola* or *ἰὼν*, notwithstanding the immense erudition which Sprengel has employed in favour of enlarging the limits of the genus *Viola* (*ἰὼν*) among the ancients. The *Viola pallens* of Virgil appears to have been the *V. palustris* of Linnæus, or else the *V. montana* of the same botanist.⁵

*IONIA (*ἰωνία*), a term properly denoting "a bed of violets," but also applied to several species of the Violet, and especially to the *Viola odorata*.⁶

*IPH'YON (*ἰφύων*), a species of plant. Bauhin states that some held the *Asphodelus luteus* to be the *ἰφύων* of Theophrastus. Stackhouse proposes the *Lavandula spica*, or Spike Lavender.⁷

*IPS (*ἴψ*), an insect mentioned by Theophrastus, most probably the same as the *Cynips*, L. "The Cynipes," observes Adams, "pierce the leaves of plants with their sting, and deposit their eggs in the wound: the extravasated juices rise round it, and form a gall which becomes hard; in this the larva lives and feeds, and changes to a pupa. In this country, the gall most common is that found on the *Rosa canina*. It is worthy of remark, that the grammarians Ammonius and Cyrillus restrict this term to the *Cynips* of the Vine and Carob-nut (*κεράριον*, so I propose to read instead of *κεράτων*)."⁸

IREN. (Vid. ΕΙΡΕΝ.)

*IRIS (*ἰρίς*), a plant, the Iris. The description given of its flowers by Dioscorides makes them of various colours, white, yellow, purple, &c., from which it would clearly appear that under this name were comprehended more than one species of Iris. Sprengel thinks that the *Iris Germanica* and *Florentina* are more particularly applicable to the description of Dioscorides. Adams states that, as long as the Galenical Pharmacopœia continued in repute in France, the *Iris Florentina* was invariably substituted for the ancient Iris.⁹

IRPEX, HIRPEX, or URPEX,¹ a Harrow, used to clear the fields of weeds, and to level and break down the soil. The harrow of the ancients, like ours, had iron teeth, and was drawn by oxen.²

*IS'ATIS (*ἰσαρίς*), a plant, the *Glastum* of the Latins, and the modern Wood, yielding a beautiful blue dye. (Vid. GLASTUM.)

ISELA'STICI LUDI. (Vid. ATHLETÆ, p. 120.)
ISOPOLITEIA. (Vid. CIVITAS, GREEK, p. 259.)

*ISOPYRON (*ἰσόπυρον*), a plant, probably the Bog Bean, or *Menyanthes trifoliata*. "From the account of Galen and Paulus Ægineta," observes Adams, "it might be taken for the Kidney Bean or Fasel, but Dioscorides clearly distinguishes between these. Dodonæus advanced the opinion that the *Menyanthes trifoliata*, or Bog Bean, is the *ἰσόπυρον* of Dioscorides; but, as Sprengel remarks, its botanical characters do not agree with those of the *Isopyrum* as given by Dioscorides. At the same time, it is worthy of remark, as a singular coincidence, that the Bog Bean is still used by the common people in Scotland for the cure of those complaints for which Dioscorides recommends the *Isopyrum*. The opinion of Dodonæus is farther countenanced by Bauhin."³

ISOTELEIA, ISOTELEIS. (Vid. CIVITAS, GREEK, p. 259.)

ISTHMIAN GAMES (*Ἰσθμία*), one of the four great national festivals of the Greeks. This festival derived its name from the Corinthian Isthmus, where it was held. Where the isthmus is narrowest, between the coast of the Saronic Gulf and the western foot of the Cenean hills, was the Temple of Poseidon, and near it was a theatre and a stadium of white marble.⁴ The entrance to the temple was adorned with an avenue of statues of the victors in the Isthmian games, and with groves of pine-trees. These games were said originally to have been instituted by Sisyphus in honour of Melicertes, who was also called Palæmon.⁵ Their original mode of celebration partook, as Plutarch⁶ remarks, more of the character of mysteries than of a great and national assembly with its various amusements, and was performed at night. Subsequent to the age of Theseus, the Isthmia were celebrated in honour of Poseidon; and this innovation is ascribed to Theseus himself, who, according to some legends, was a son of Poseidon, and who, in the institution of the Isthmian solemnities, is said to have imitated Heracles, the founder of the Olympian games. The celebration of the Isthmia was henceforth conducted by the Corinthians, but Theseus had reserved for his Athenians some honourable distinctions: those Athenians who attended the Isthmia sailed across the Saronic Gulf in a sacred vessel (*θεωρίς*), and an honorary place (*προεδρία*), as large as the sail of their vessel, was assigned to them during the celebration of the games.⁷ In times of war between the two states, a sacred truce was concluded, and the Athenians were invited to attend at the solemnities.⁸ The Eleans did not take part in the games, and various stories were related to account for this singular circumstance.⁹ It is a very probable conjecture of Wachsmuth,¹⁰ that the Isthmia, after the changes ascribed to Theseus, were merely a panegyris of the Ionians of Peloponnesus and those of Attica; for it should be observed that Poseidon was an Ionian deity, whose worship appears originally to have been unknown

to the Dorians. During the reign of the Cypselids at Corinth, the celebration of the Isthmian games was suspended for seventy years.¹ But after this time they gradually rose to the rank of a national festival of all the Greeks. In Olymp. 49 they became periodical, and were henceforth celebrated regularly every third year, twice in every Olympiad, that is, in the first and third year of every Olympiad. The Isthmia held in the first year of an Olympiad fell in the Corinthian month Panemus (the Attic Hecatombeon); and those which were held in the third year of an Olympiad fell either in the month of Munychion or Thargelion.² Pliny³ and Solinus⁴ erroneously state that the Isthmia were celebrated every fifth year. With this regularity the solemnities continued to be held by the Greeks down to a very late period. In 228 B.C., the Romans were allowed the privilege of taking part in the Isthmia;⁵ and it was at this solemnity that, in 196 B.C., Flaminius proclaimed before an innumerable assembly the independence of Greece.⁶ After the fall of Corinth in 146 B.C., the Sicyonians were honoured with the privilege of conducting the Isthmian games; but when the town of Corinth was rebuilt by J. Cæsar,⁷ the right of conducting the solemnities was restored to the Corinthians, and it seems that they henceforth continued to be celebrated till Christianity became the state-religion of the Roman Empire.⁸

The season of the Isthmian solemnities was, like that of all the great national festivals, distinguished by general rejoicings and feasting. The contests and games of the Isthmia were the same as those at Olympia, and embraced all the varieties of athletic performances, such as wrestling, the pancratiun, together with horse and chariot racing.⁹ Musical and poetical contests were likewise carried on, and in the latter women were also allowed to take part, as we must infer from Plutarch,¹⁰ who, on the authority of Polemo, states, that in the treasury at Sicyon there was a golden book, which had been presented to it by Aristomache, the poetess, after she had gained the victory at the Isthmia. At a late period of the Roman Empire, the character of the games at the Isthmia appears greatly altered; for in the letter of the Emperor Julian above referred to, it is stated that the Corinthians purchased bears and panthers for the purpose of exhibiting their fights at the Isthmia, and it is not improbable that the custom of introducing fights of animals on this occasion commenced soon after the time of Cæsar.

The prize of a victor in the Isthmian games consisted at first of a garland of pine-leaves, and afterward of a wreath of ivy; but in the end the ivy was again superseded by a pine garland.¹¹ Simple as such a reward was, a victor in these games gained the greatest distinction and honour among his countrymen; and a victory not only rendered the individual who obtained it a subject of admiration, but shed lustre over his family, and the whole town or community to which he belonged. Hence Solon established by a law, that every Athenian who gained the victory at the Isthmian games should receive from the public treasury a reward of one hundred drachmæ.¹² His victory was generally celebrated in lofty odes, called Epinikia, or triumphal odes, of which we still possess some beautiful specimens among the poems of Pindar. (See Massieu in the *Mém. de l'Acad. des Inscriptions et Bel. Lett.*, v., p. 214, &c.—Disson, *De Ratione Poetica Carminum*

Pindaricorum, prefixed to the first volume of his edition of Pindar, and Müller, *Hist. of Greek Lit.*, i., p. 220, &c.)

ITALIA. (Vid. COLONIA, p. 232.)

ITER. (Vid. SERVITUDES.)

JUDEX, JUDICIUM. A Roman magistratus generally did not investigate the facts in dispute in such matters as were brought before him: he appointed a judex for that purpose, and gave him instructions. (Vid. ACTIO.) Accordingly, the whole of civil procedure was expressed by the two phrases *ius* and *judicium*, of which the former comprehended all that took place before the magistratus (*in iure*), and the latter all that took place before the judex (*in iudicio*). Originally even the magistratus was called judex, as, for instance, the consul and prætor;¹ and under the Empire the term judex often designated the præses. In the intermediate period it designated a person whose functions may be generally understood from what follows.

In many cases a single judex was appointed; in others, several were appointed, and they seem to have been sometimes called recuperatores, as opposed to the single judex.² Under certain circumstances, the judex was called arbiter: thus judex and arbiter are named together in the Twelve Tables.³

A judex, when appointed, was bound to discharge the functions of the office, unless he had some valid excuse (*excusatio*). A person might also be disqualified from being a judex. There were certain seasons of the year when legal business was done at Rome (*cum res agebantur*), and at these times the services of the judges were required. These legal terms were regulated according to the seasons, so that there were periods of vacation:⁴ in the provinces, the terms depended on the conventus. A judex was liable to a fine if he was not in attendance when he was required. In any given case, the litigant parties agreed upon a judex, or accepted him whom the magistratus proposed. A party had the power of rejecting a proposed judex, though there must have been some limit to this power.⁵ In cases where one of the litigant parties was a peregrinus, a peregrinus might be judex.⁶ The judex was sworn to discharge his duty faithfully.⁷

When Italy had received its organization from the Romans, the magistratus of the several cities had *jurisdictio*, and appointed a judex as the prætor did at Rome (*lex Rubria de Gallia Cisalpina*). In the provinces, the governors appointed a judex or recuperatores, as the case might be, at the conventus which they held for the administration of justice; and the judex or recuperatores were selected both from Roman citizens and natives.

When the judex was appointed, the proceedings *in iure* or before the prætor were terminated, which was sometimes expressed by the term *Litis Contestatio*, the phrases *Lis Contestata* and *Judicium Acceptum* being equivalent in the classical jurists. (Vid. *Litis Contestatio*.) The parties appeared before the judex on the third day (*con percontatio*), unless the prætor had deferred the *judicium* for some sufficient reason. The judex was generally aided by advisers (*jurisconsulti*) learned in the law, who were said "in consilio adesse;"⁸ but the judex alone was empowered to give judgment. The matter was first briefly stated to the judex (*causa coniectio, collectio*), and the advocates of each party supported his cause in a speech. The evidence seems to have been given at the same time that the

(Cic., Pro Cluent., 43.)—7. (Gaius, iv., 105.)—8. (Cic., De Invent., i., 39.)—9. (Cic., Pro P. Quinctio, 2, 6.—Id., Top., 17.)

speeches were made, and not to have been heard before the advocates made their address.¹ But it is probable that the practice in this respect might vary in different cases. Witnesses were produced on both sides, and examined orally; the witnesses on one side were also cross-examined by the other.² Written documents, such as instruments and books of account, were also given in evidence; and sometimes the deposition of an absent witness was read, when it was confirmed by an oath.³ There were no means of compelling a person to give evidence before the legislation of Justinian, unless they were slaves, who in some cases might be put to the torture.

After all the evidence was given and the advocates had finished, the judex gave sentence: if there were several judices, a majority decided. If the matter was one of difficulty, the hearing might be adjourned as often as was necessary (*ampliatio*); and if the judex could not come to a satisfactory conclusion, he might declare this upon oath, and so release himself from the difficulty. This was done by the form of words "non liquere" (N. L.).⁴ The sentence was pronounced orally, and was sometimes first written on a tablet. If the defendant did not make his appearance after being duly summoned, judgment might be given against him.

The sentence was either of absolutio or condemnatio. That part of the formula which was called condemnatio (*vid. Actio*, p. 20), empowered the judex to condemn or acquit (*condemnare, absolvere*).⁵ The defendant might satisfy the plaintiff after the judicium had been constituted by the *litis contestatio* (*post acceptum judicium*),⁶ and before judgment was given; but in this case it was a disputed question between the two schools whether the judex should acquit, or whether he should condemn on the ground that, at the time when the judicium was constituted, the defendant was liable to be condemned, and it was the business of the judex merely to follow his instructions. The dispute accordingly involved one of those principles on which the schools were theoretically divided—the following out of a legal principle to all its logical consequences; but, like many other questions between the schools, this question was practically of no importance, as the plaintiff would not be allowed to have satisfaction twice. (*Vid. JURISCONSULTI*.)

While the *legis actiones* were in force, the judgment was for the restitution of a thing, if a given thing (*corpus*) was the object of the action; but under the process of the formula, the judex gave judgment, pursuant to the formula, in a sum of money, even when a piece of property was the object of dispute. This sum of money was either fixed or not fixed in the formula. If the claim was for a certain sum of money, the amount was inserted in the condemnatio, and the judex was bound to give that or nothing to the plaintiff. If the claim was for damages or satisfaction, the amount of which was not ascertained, the condemnatio was either limited to a sum named in the formula, and which the judex could not exceed except at his own peril (*litem suam faciendo*); or, if the action was for the recovery of property from the possessor, or if it was an *actio ad exhibendum*, the condemnatio empowered the judex to condemn the defendant in the value of the thing. The judex was always bound to condemn in some definite sum, even though the formula did not contain a definite sum: the reason of which is obvious; for, unless the condemnatio was definite, there would be no judgment.⁷

The following is the distinction between an *arbitrium* and *judicium*, according to Cicero:¹ In a *judicium* the demand was of a certain sum or definite amount (*pecunia certæ*); in an *arbitrium* the amount was not determined (*incerta*). In a *judicium* the plaintiff obtained all that he claimed or nothing, as the words of the formula show: "*Si paret H. S. 1000 dari oportere*."² The corresponding words in the formula *arbitraria* were, "*Quantum æquius melius id dari*;" and their equivalents were, "*Ex fide bona, Ut inter bonos bene agier*."³ In a dispute about dos, which Cicero calls "*arbitrium rei uxoriæ*," the words "*quid æquius, melius*," were added.⁴ If the matter was brought before a judex, properly so called, the *judicium* was constituted with a *pœna*, that is, per sponsionem; there was no *pœna* when an arbiter was demanded, and the proceeding was by the formula *arbitraria*. The proceeding by the *sponsio*, then, was the strict one (*angustissima formula sponsionis*);⁵ that of the *arbitrium* was *ex fide bona*, and the arbiter, though he was bound by the instructions of the formula, was allowed a greater latitude by its terms. The engagement between the parties who accepted an arbiter, by which they bound themselves to abide by his *arbitrium*, was *compromissum*;⁶ but this term was also employed, as it appears, to express the engagement by which parties agreed to settle their differences by arbitration, without the intervention of the prætor. Cicero appears to allude to this arbitration.⁷

According to Cicero,⁸ all *judicia* had for their object either the settlement of disputes between individuals (*controversiæ*), or the punishment of crimes (*maleficia*). This passage refers to a division of *judicia*, which appears in the jurists, into *publica* and *privata*. The term *privata judicia* occurs in Cicero,⁹ where it refers to the class of *judicia* which he indicates in the *Cæcina* by the term *controversiæ*. The term *publica judicia* might not then be in use, but the term *publica causa* is used by Cicero¹⁰ with reference to a *judicium*, which by the jurists would be called *publicum*. In the *Digest*¹¹ it is stated that all *judicia* are not *publica* in which a crime was the matter in question, but only those in which the offence was prosecuted under some *lex*, such as the *Julia Majestatis*, *Cornelia de Sicariis*, and others there enumerated. *Judicia* were called *extraordinaria* when the inquiry was *extra ordinem*, that is, not according to the usual practice; and this might happen when the offence was one not provided for by law (*legibus*), but one that was punishable by immemorial usage and general opinion, of which there is an instance in *Livy* (*seu legibus seu moribus malit anquireret*).¹² The *judicia popularia*, or *populares actiones*, as they are called,¹³ are defined to be those by which "*sum jus populus tuetur*;" and they agreed with the *publica judicia* in this, that any person might be the prosecutor who was not under some legal disqualification. The *judicia populi*¹⁴ were those in which the *populus* acted as *judices*; and, accordingly, Cicero enumerates the *populi judicia* among others when he says¹⁵ that "*nihil de capite civis, aut de bonis, sine judicio senatus aut populi aut eorum qui de quaque re constituti judices sint, detrahi posse*." As the *judicia publica* are defined by the jurists to be those in which *crimina* were tried by a special *lex*, it appears that the *judicia populi*, strictly so called, must have fallen into disuse, or have gradually become unnecessary after the *judi-*

ia publica were regulated by special leges; and thus the judicia publica of the later republican period represent the judicia populi of the earlier times. The judicia populi were originally held in the comitia curiata, and subsequently in the centuriata and tributa. A lex of Valerius Publicola¹ gave an appeal (*provocatio*) to the populus from the magistratus; and a law of C. Sempronius Gracchus² declared to the same effect: "*Ne de capite civium Romanorum injussu populi judicaretur.*"

The kings presided in the judicia populi, and the consuls succeeded to their authority. But after the passing of the lex Valeria de Provocatione (B.C. 507), the consul could not sit in judgment on the caput of a Roman citizen, but persons were appointed to preside at such inquiries, who were, accordingly, called *quæstiores*, or *quæstores paricidii*, or *rerum capitalium*. In some cases³ a plebiscitum was passed, by which the senate was empowered to appoint one of the prætors or some other magistrate to preside at the judicial investigation. In course of time, as cases were of more frequent occurrence, these quæstiones were made *perpetuæ*, that is, particular magistrates were appointed for the purpose. In the year 149 B.C., the tribune L. Calpurnius Piso Frugi carried a lex De Pecuniis Repetundis, from which time the *quæstio repetundarum* became *perpetua*. L. Sulla gave to one prætor the quæstiones de majestate, and to others those of *peculatus* and *ambitus*; and he also added four other quæstiones *perpetuæ*. Thus he carried out the principle of the lex Calpurnia, by establishing permanent courts for the trial of various specified offences, and the prætors determined among themselves in which of these new courts they should severally preside. The ordinary functions of the prætor urbanus and peregrinus were not interfered with by these new arrangements. The quæstiones of Sulla were, De Repetundis, Majestatis, De Sicariis et Veneficiis, De Parricidiis, Peculatus, Ambitus, De Nummis Adulterinis, De Falsis et Testamentaria, and De Vi Publica. But in special cases the senate still sometimes, by a decretum, appointed the consuls as quæstiores, of which an example occurs in Cicero:⁴ "this was a case of *quæstio* or *judicium extra ordinem*."

Any person might be an accuser (*accusator*) in a *judicium publicum*. On such an occasion the prætor generally presided as quæstor, assisted by a *judex quæstionis* and a body of judges called his *consilium*. The *judex quæstionis* was a kind of assistant to the presiding magistratus, according to some opinions; but others consider him to be a quæstor, who was sometimes specially appointed to preside on the occasion of a quæstio.⁵ The judges were generally chosen by lot out of those who were qualified to act; but in some cases the accuser and the accused (*reus*) had the privilege of choosing (*edere*) a certain number of judges out of a large number, who were thence called *edititi*.⁶ Both the accuser and the reus had the privilege of rejecting or challenging (*rejicere*) such judges as they did not like.⁷ In many cases a lex was passed for the purpose of regulating the mode of procedure. In the matter of Clodius and the Bona Dea, the senate attempted to carry a lex by which the prætor who was to preside at the trial should be empowered to select the judges, the effect of which would have been to prevent their being challenged by Clodius. After a violent struggle, a lex for the regulation of the trial was proposed by the tribune Fufius and carried: it only differed from the lex recommended by the senate in the mode of determining who

should be the judges (*judicum genus*): a difference, however, which was not unimportant, as it secured the acquittal of Clodius. The judges voted by ballot, at least generally, and a majority determined the acquittal or condemnation of the accused. Each *judex* was provided with three tablets (*tabulæ*), on one of which was marked A., Absolvo; on a second, C., Condemno; and on a third, N. L., Non liquet. The judges voted by placing one of these tablets in the urns (*urnæ*), which were then examined for the purpose of ascertaining the votes. It was the duty of the magistratus to pronounce the sentence of the judges: in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be farther investigated (*amplius cognoscendum*).

Mention is often made of the judicia populi in the Latin writers. A *judicium* was commenced by the accuser, who must be a magistratus, declaring in a contio that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase "*diem dicere*" (*Virgilius Casoni capitis diem dicit*). If the offender held any high office, it was necessary to wait till his time of service had expired before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called *vades* in a *causa capitalis*, and *prædes* when the penalty for the alleged offence was pecuniary. If such security was not given, the accused was kept in confinement.⁸ If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called *anquisitio* with reference to the proposed penalty: accordingly, the phrases *pecunia*, *capite* or *capitis anquiere*, are used.⁹ When the investigation was concluded, the magistratus promulgated a *rogatio*, which comprehended the charge and the punishment or fine. It was a rule of law that a fine should not be imposed together with another punishment in the same *rogatio*.¹⁰ The *rogatio* was made public during three *nundinæ*, like any other lex, and proposed at the comitia for adoption or rejection. The form of the *rogatio*, the effect of which was to drive Cicero into banishment, is given in the Oration Pro Domo, c. 18. The accused sometimes withdrew into exile before the votes were taken; or he might make his defence, of which we have an instance in the oration of Cicero for Rabirius. Though these were called judicia populi, and properly so in the early ages of the state, the leges passed in such judicia in the latter period of the Republic were often *plebiscita*.

The offences which were the chief subject of judicia populi and publica were majestas, adulteria and stupra, parricidium, falsum, vis publica and privata, peculatus, repetundæ, ambitus, which are treated under their several heads.

With the passing of special enactments for the punishment of particular offences was introduced the practice of forming a body of judges for the trial of such offences as the enactments were directed against. Thus it is said that the lex Calpurnia De Pecuniis Repetundis established the *album judicum*, or the body out of which judges were to be chosen. It is not known what was the number of the body so constituted, but it has been conjectured that the number was 350, and that ten were chosen from each tribe, and thus the origin of the phrase *decuriæ judicum* is explained. It is easy to conceive that the judicia populi, properly so called,

1. (Liv., ii., 8.)—2. (Cic., Pro Rabir., 4.)—3. (Liv., iv., 51.)—4. (Brett., 22.)—5. (Walter, Geschichte des Röm. Rechts, p. 861.)—6. (Cic., Pro Muræna, c. 25; Pro Plancio, 15, 17.)—7. (Cic. ad Att., i., 16.)

1. (Juv., Sat., v., 4.)—2. (Liv., iii., 11.)—3. (Liv., ii., 12.)—4. (Liv., xxvi., 3.)—5. (Cic., Pro Domo, c. 17.)

would be less frequent as special leges were framed for particular offences, the circumstances of which could be better investigated by a smaller body of judges than by the assembled people. It is affirmed that up to the passing of the Calpurnia lex, the judges were chosen from the senators only, but after this time they were not taken from that body exclusively; and farther, that not only the judges in the quæstiones de repetundis, but also the judges in private matters, were, from the date of this lex, taken from the album iudicum that was annually made,¹ for which there appears to be no evidence. The lex Servilia (B.C. 104) enacted that the judges should not be under thirty nor above sixty years of age; that the accuser and accused should severally propose one hundred judges, and that each might reject fifty from the list of the other, so that one hundred would remain for the trial. This lex also made some provisions for the mode of conducting the prosecution and the defence. The terms of the Sempronia lex of Gracchus, which was passed B.C. 123, about twenty years before the lex Servilia, are variously stated; but in general terms it is said that it took the iudicia from the senators and gave them to the equites; and this state of things lasted nearly fifty years,² till Sulla (B.C. 80) restored the iudicia to the senate, and excluded the equites from the album iudicum. The lex Servilia apparently did not interfere with the main object of the lex Sempronia. Tacitus, indeed,³ speaks of the Servilian leges restoring the iudicia to the senate; but the passage is encumbered with difficulty. A lex Aurelia (B.C. 70) enacted that the judges should be chosen from the three classes—of senators, equites, and tribuni ærarii; and, accordingly, the iudicia were then said to be divided between the senate and the equites. The tribuni ærarii were taken from the rest of the citizens, and were, or ought to have been, persons of some property. Thus the three decuriæ of judges were formed; and it was either in consequence of the lex Aurelia or some other lex, that, instead of one urn for all the tablets, the decuriæ had severally their balloting urn, so that the votes of the three classes were known. Dion Cassius⁴ ascribes this regulation to a lex Fufia; and he says that the object was, that the votes of the decuriæ (*ἐθύν, γένυν*) might be known, though those of individuals could not, owing to the voting being secret. It is not known if the lex Aurelia determined the number of judges in any given case. The lex Pompeia de Vi and De Ambitu (B.C. 52) determined that eighty judges were to be selected by lot, out of whom the accuser and the accused might reject thirty. In the case of Clodius, in the matter of the Bona Dea, there were fifty-six judges. It is conjectured that the number fixed for a given case by the lex Aurelia was seventy judges.

Another lex Pompeia, passed in the second consulate of Pompey (B.C. 55), seems to have made some modifications in the lex Aurelia as to the qualification of the judges; but the new provisions of this lex are only known from Asconius, who explains them in terms which are very far from being clear. A lex Judiciaria of Julius Cæsar took away the decuria of the tribuni ærarii, and thus reduced the judges to two classes (*genera*, the *γένυν* of Dion Cassius). A lex judiciaria, passed after his death by M. Antonius, restored the decuria of the tribuni ærarii, but required no pecuniary qualification from them: the only qualification which this lex required was, that a person should have been a centurion or have served in the legions. It appears that the

previous lex Pompeia, lex Aurelia, and a lex of Cæsar had given to those who had been centurions (*qui ordines duxerant*) the privilege of being judges (*iudicatus*), but still they required a pecuniary qualification (*census*). The lex of Antonius, besides taking away the pecuniary qualification, opened the iudicia to the soldiers.¹ It seems probable that the expression *ex centuriis*, which is used by Asconius in speaking of the change introduced by this lex Pompeia, had reference to the admission of the centuriones into the third class of judges.

Augustus added to the existing three decuriæ iudicum a fourth decuria, called that of the Duce-narii, who had a lower pecuniary qualification, and only decided in smaller matters (*de levioribus summis*).² Caligula³ added a fifth decuria, in order to diminish the labours of the judges. Augustus had already allowed each decuria, in its turn, an exemption for one year, and had relieved them from sitting in the months of November and December.

As to the whole number of judges included at any given time in the album iudicum, it seems almost impossible to state anything with precision; but it is obvious, from what has been said, that the number must have varied with the various changes already mentioned. After the time of Augustus, the number was about four thousand; and from this period, at least, there is no doubt that the album iudicum contained the whole number of persons who were qualified to act as judges, both in iudicia privata and iudicia publica. The fourth decuria of Augustus was limited in its functions to the iudicia privata, in which the matter in dispute was of small value. It is often stated by modern writers, without any qualification, that the various changes in the judiciary body from the time of the lex Calpurnia to the end of the Republic had reference both to the iudicia publica and privata; though it is also stated that the objects of these various enactments were to elevate or depress one of the great parties in the state, by extending or limiting the body out of which the judges in any given case were to be chosen. But it is obvious that these reasons do not apply to the matter of iudicia privata, in which a single iudex generally acted, and which mostly concerned matter of property and contract. Accordingly, a recent writer⁴ has observed, with more caution than some of his predecessors, that "there is no doubt that, from the time of Augustus, the album iudicum had reference to the judges in civil matters, but that as to earlier times a difficulty arises from the fact that, while the lex Sempronia was in force, by which the senators were excluded from the album iudicum, a consularis is mentioned as a iudex;⁵ and, on the other hand, an eques is mentioned as a iudex at a time when the lex of Sulla was in force, and, consequently, senators only could be judges."⁶ These instances certainly are inconsistent with the fact of the iudicia privata being regulated by the various leges judiciariæ; but they are of small weight compared with the reasons derivable from the character of the two kinds of iudicia and the difference in the mode of procedure, which render it almost a matter of demonstration that the various changes in the judiciary body had reference to the quæstiones and iudicia publica. It is true that some of these leges may have contained provisions even as to iudicia privata, for many of the Roman leges contained a great variety of legislative provisions, and it is also true that we are very imperfectly acquainted with the provisions of these leges judiciariæ; but that the

1. (Götting, Geschichte der Röm. Staatsverfassung, p. 425.)
2. (Cic. in Verr., Act. Prim., c. 13.)—3. (Ann., xii., 60.)—4. xxxviii., 8

1. (Cic. Phil., i., 8; v., 5.—Suet., Jul., 41.)—2. (Suet., Octav., 32.)—3. (Suet., Calig., 16.)—4. (Walter, Geschichte des Röm. Rechts, p. 716.)—5. (Cic., De Off., ii., 19.)—6. (Cic., Pro Rosc. Com., c. 14.)

regulation of the *judicia privata* was included in their provisions, in the same form and to the same extent as that of the *judicia publica*, is an assertion totally unsupported by evidence, and one which leads to absurd conclusions. Two *leges Juliae*, together with a *lex Æbutia*, put an end to the *legis actiones*;¹ and a *lex Julia Judiciaria* limited the time of the *judicia legitima*;² but it does not appear whether these *leges* were passed solely for these objects, or whether their provisions were part of some other *leges*.

Though the general character of the Roman *judicia*, and the modes of procedure both in civil and criminal matters, are capable of a sufficiently clear exposition, there is much uncertainty as to many details, and the whole subject requires a careful examination by some one who combines with a competent knowledge of the original authorities an accurate acquaintance with the nature of legal procedure.

The following works may be referred to: Walter, *Geschichte des Röm. Rechts*.—Götting, *Geschichte der Röm. Staatsverfassung*.—Heineccius, *Syntagma*, &c.—Tigerström, *De Judiciis apud Romanos*, Berl., 1826, valuable only for the collection of the original authorities.—Keller, *Ueber Litis Contestation und Urtheil*, &c., Zürich, 1827.—Also Gaius, iv.; Dig. 5, tit. 1, *De Judiciis*; Dig. 48, *De Judiciis Publicis*; Inst., iv., tit. 18.

JUDEX ORDINARIUS. (*Vid.* JUDEX PEDANEUS.)

JUDEX PEDANEUS. The origin and meaning of this term seem to be entirely unknown. The *judices* to whom the *prætor* or *præses* referred a matter in litigation with the usual instructions, were sometimes called *pedanei*.³ Subsequently the *præses*, who was now sometimes designated *judex ordinarius*, or *judex* simply,⁴ decided most matters without the intervention of a *judex*; but still he was empowered to appoint a permanent body of *judices* for the decision of less important matters, and these also were called *judices pedanei*, "*hoc est qui negotia humilia discerptent*."⁵ The proceedings before this new kind of *judices pedanei* were the same as before the *præses*. Some modern writers are of opinion that these new *pedanei judices* did not form a permanent court, but only decided on matters which were referred to them by a superior authority.⁶

JUDEX QUESTIONIS. (*Vid.* JUDEX, p. 552.)

JUDICATI ACTIO. A thing was a *res judicata* when the matter in dispute had been determined by a judicial sentence, and the *actio judicati* was a mode which the successful party might adopt for obtaining a decree of the *magistratus*, by which he could take possession of the property of the person who had lost the cause and had not satisfied the judgment. The plaintiff in the *actio judicati* was also protected in his possession of the defendant's property by a special interdict, and he was empowered to sell it. The party condemned was limited as to his defence. Originally the *judicatus* was obliged to find a *vindex* (*vindicem dare*); but in the time of Gaius it had become the practice for him to give security to the amount of the judgment (*judicatum solvi satisdare*). If the defendant pleaded that there was no *res judicata*, he was mulcted in double the amount of the judgment if his plea was false.⁷

JUDICES EDITITII. (*Vid.* JUDEX, p. 552.)

JUDICIA LEGITIMA. (*Vid.* IMPERIUM, page 530.)

JUDICIA QUÆ IMPERIO. (*Vid.* IMPERIUM, p. 530.)

JUDICIUM. (*Vid.* JUDEX.)

JUDICIUM POPULI. (*Vid.* JUDEX, p. 551, 552.)

JUDICIUM PRIVATUM, PUBLICUM. (*Vid.* JUDEX, p. 551.)

JUGERUM, a Roman measure of surface, 240 feet in length and 120 in breadth, containing, therefore, 28,800 square feet.¹ It was the double of the *actus quadratus*, and from this circumstance, according to some writers, it derived its name.² (*Vid.* ACTUS QUADRATUS.) The uncial division (*vid.* AS) was applied to the *jugerum*, its smallest part being the *scrupulum* of 10 feet square, =100 square feet. Thus the *jugerum* contained 288 *scrupula*.³ The *jugerum* was the common measure of land among the Romans. Two *jugera* formed an *heredium*, a hundred *heredia* a *centuria*, and four *centurie* a *salus*. These divisions were derived from the original assignment of landed property, in which two *jugera* were given to each citizen as heritable property.⁴

*JUGLANS, the Wallnut, or *Juglans regia*, L., the same with the *κάρπυον* or *κάρνα* of the Greeks. (*Vid.* CARYUM.)

JUGUM (*ζυγός, ζυγόν*) signified, in general, that which united two things together. It denoted more especially,

1. The transverse beam which united the upright posts of a loom, and to which the warp was attached.⁵ (*Vid.* TELA.)

2. The transverse rail of a trellis,⁶ joining the upright poles (*perlicæ, χάρακες*) for the support of vines or other trees. (*Vid.* CAPISTRUM.) Hence, by an obvious resemblance, the ridges uniting the tops of mountains were called *juga montium*.⁷

3. The crossbar of a lyre.⁸

4. A scalebeam, and hence a pair of scales. (*Vid.* LIBRA.) The constellation *Libra* was consequently also called *Jugum*.⁹

5. The transverse seat of a boat.¹⁰ This gave origin to the term *ζυγίτης*, as applied to a rower. A vessel with many benches or banks for the rowers was called *πῦρς πολυζύγος* or *ἐκατόζυγος*.¹¹

6. The yoke by which ploughs and carriages were drawn. This was by far the most common application of the term. The yoke was in many cases a straight wooden plank or pole laid upon the horses' necks; but it was commonly bent towards each extremity, so as to be accommodated to the part of the animal which it touched (*curva juga*).¹² The following woodcut shows two examples of the yoke, the upper from a MS. of Hesiod's Works and Days, preserved at Florence, the lower from a MS. of Terence, belonging to the Vatican library. These may be compared with the still ruder forms of the yoke as now used in Asia Minor, which are introduced in the article ARATRUM. The practice of having the yoke tied to the horns, and pressing upon the forehead of the oxen (*capite, non cervicibus junctis*), which is now common on the Continent of Europe, and especially in France, is strongly condemned by Columella on grounds of economy as well as of humanity.¹⁴ He recommends that their heads should be left free, so that they may raise them aloft, and thus make a much handsomer ap-

(Cic., *Div.*, ii., 47.)—10. (Æschyl., *Agam.*, 1606.—Soph., *Ajax*, 247.—Virg., *Æn.*, vi., 411.)—11. (Hom., *Il.*, ii., 293.—Id. *ib.*, xx., 247.)—12. (Ovid, *Fast.*, iv., 216.—Id., *Trist.*, iv., 6, 2.)—13. (Plin., *H. N.*, viii., 70.)—14. (*De Re Rust.*, ii., 2.)

1. (Gaius, iv., 30.)—2. (Gaius, iv., 104.)—3. (Theophil., iv., 15.—Cod. 3, tit. 3.)—4. (Cod. Theod., i., tit. 7.)—5. (Cod. 3, tit. 3, § 5.)—6. (Cod. 3, tit. 3.)—7. (Gaius, iv., 9, 25, 171, 102.—Cic., *Pro Flacco*, 20.—Paulus, S. R., i., tit. 19.—Dig. 42, tit. 1.)

pearance. (Compare woodcut, p. 225¹). All this was effected by the use either of the two collars (*subjugia*,² μέσσαβα,³ ζεύγλαι⁴), shown in the upper figure of the woodcut, or of the excavations (γλύφαι) cut in the yoke, with the bands of leather (*lora*); *vincle*,⁵ ταινροδέτω βύρσαν ἐπαυχευμένη,⁶ λεπάδνα), which are seen in the lower figure.

This figure also shows the method of tying the yoke to the pole (*temu*, ῥυμός) by means of a leathern strap (*ζυγόδεσμον*), which was lashed from the two opposite sides over the junction of the pole and yoke. These two parts were still more firmly connected by means of a pin (*ἐμβολός*;⁹ ἔστωρ;⁹ ἐμβρυνον;¹⁰ *vid.* CURRUS, p. 332), which fitted a circular cavity in the middle of the yoke (*ὀμφαλός*).¹¹ Homer represents the leathern band as turned over the fastening thrice in each direction. But the fastening was sometimes much more complicated, especially in the case of the celebrated Gordian knot, which tied the yoke of a common cart, and consisted only of flexible twigs or bark, but in which the ends were so concealed by being inserted within the knot, that the only way of detaching the yoke was that which Alexander adopted.¹²

Besides being variegated with precious materials and with carving, the yoke, especially among the Persians, was decorated with elevated plumes and figures. Of this an example is presented in a bas-relief from Persepolis, preserved in the British Museum. The chariot of Darius was remarkable for the golden statues of Belus and Ninus, about eighteen inches high, which were fixed to the yoke over the necks of the horses, a spread eagle, also wrought in gold, being placed between them.¹³ The passages above cited show that when the carriage was prepared for use, the yoke, which had been laid aside, was first fastened to the pole, and the horses were then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art representing chariots.

Morning and evening are often designated in poetry by the act of putting the yoke on the oxen¹⁴ and taking it off¹⁵ (*βούλους, βουλῆς*;¹⁶ *βουλῆς* *ῥῳπ*).¹⁷

By metonymy *jugum* meant the quantity of land which a yoke of oxen could plough in a day.¹⁸ It

was used as equivalent to the Latin *par* and the Greek ζεύγος,¹ as in *aquilarum jugum*.² By another figure the yoke meant slavery, or the condition in which men are compelled against their will, like oxen or horses, to labour for others.³ Hence, to express symbolically the subjugation of conquered nations, the Romans made their captives pass under a yoke,⁴ which, however, in form and for the sake of convenience, was sometimes made, not like the yoke used in drawing carriages or ploughs, but rather like the jugum described under the first two of the preceding heads; for it consisted of a spear supported transversely by two others placed upright.

JULIÆ LEGES is a term by which various leges are designated, most of which were passed in the time of C. J. Cæsar and Augustus.

JULIA LEX DE ADULTE'RIIS. (*Vid.* ADULTERIUM.)

JULIA LEX AGRA'RIA is referred to by Suetonius,⁵ and in the Digest, *De Termino Moto*.⁶ But the lex of C. Cæsar, referred to in the Pandect, is probably a lex of Caligula. The Agraria lex of the dictator Cæsar was passed B.C. 59, when he was consul.⁷

JULIA LEX DE AMBITU. (*Vid.* AMBITUS.)

JULIA LEX DE ANNO'NA.⁸

JULIA LEX DE BONIS CEDENDIS. This lex provided that a debtor might escape all personal molestation from his creditors by giving up his property to them for the purpose of sale and distribution.⁹ It is doubtful if this lex was passed in the time of J. Cæsar or of Augustus, though probably of the former.¹⁰ The beneficium of the lex was extended to the provinces by the imperial constitutions.¹¹

JULIA LEX CADUCA'RIA is the same as the LEX JULIA ET PAPIA POPPÆA.

JULIA LEX DE CÆDE ET VENEFI'CIO,¹² perhaps the same as the lex De Vi Publica.

JULIA LEX DE CIVITA'TE was passed in the consulship of L. J. Cæsar and P. Rutilius Lupus, B.C. 90. (*Vid.* CIVITAS, FEDERATÆ CIVITATES.)

JULIA LEX DE FENORE, or, rather, De Pecuniis Mutuis or Creditis (B.C. 47), passed in the time of J. Cæsar.¹³ The object of it was to make an arrangement between debtors and creditors for the satisfaction of the latter. The possessiones and res were to be estimated at the value which they had before the civil war, and to be surrendered to the creditors at that value; whatever had been paid for interest was to be deducted from the principal. The result was, that the creditor lost about one fourth of his debt; but he escaped the loss usually consequent on civil disturbance, which would have been caused by novæ tabulæ.¹⁴ A passage of Tacitus¹⁵ is sometimes considered as referring to this lex, and sometimes to the lex De Bonis Cedendis; but it does not seem to refer to either of them. The passage of Dion Cassius¹⁶ seems to refer to this lex De Mutuis Pecuniis.

JULIA LEX DE FUNDO DOTA'LI. The provisions as to the fundus dotalis were contained in the lex Julia de Adulteriis.¹⁷ This Julia lex was commented on by Papinian, Ulpian, and Paulus. (*Vid.* ADULTERIUM.)

JULIÆ LEGES JUDICIA'RIÆ. The lex re-

ferred to in the Digest,¹ by which a person under twenty years of age was not compelled to be a judge, is probably one of the leges Juliæ Judiciariæ.² As to the other Juliæ leges Judiciariæ, *vid. JUDEX.*

JULIA LEX DE LIBERIS LEGATIO'NIBUS.³ (*Vid. LEGATUS.*)

JULIA LEX MAJESTATIS.⁴ The lex Majestatis of the Digest⁵ is probably a lex of Augustus. (*Vid. MAJESTAS.*)

JULIA LEX MUNICIPALIS, commonly called the Table of Heraclea. In the year 1732 there were found near the Gulf of Tarentum and in the neighbourhood of the ancient city of Heraclea large fragments of a bronze tablet, which contained on one side a Roman lex, and on the other a Greek inscription. The whole is now in the Museo Borbonico at Naples. The lex contains various provisions as to the police of the city of Rome, and as to the constitution of communities of Roman citizens (*municipia, colonia, prefectura, fora, conciliabula civium Romanorum*). It was, accordingly, a lex of that kind which is called *Satura*.

It is somewhat difficult to determine the date of this lex, but there seem to be only two dates that can be assumed as probable; one is the time immediately after the Social War, or shortly after B.C. 89; the other is that which shortly followed the admission of the Transpadani to the civitas (B.C. 49). This latter date, in favour of which various considerations preponderate, seems to be fixed about the year B.C. 44 by a letter of Cicero.⁶ Compare the tablet l. 94, 104, as to persons whom the lex excluded from the office of decurio.

It seems that the lex of the year B.C. 49, which gave the civitas to the Transpadani, enacted that a Roman commissioner should be sent to all the towns for the purpose of framing regulations for their municipal organization. The lex Julia empowered the commissioners to continue their labours for one year from the date of the lex, the terms of which were so extended as to comprise the whole of Italy. The lex was therefore appropriately called *Municipalis*, as being one which established certain regulations for all municipia; and this sense of the term *municipalis* must be distinguished from that which merely refers to the local usages or to the positive laws of any given place, which is expressed by such terms as *lex Municipi*, *lex Civitatis*, and other equivalent terms.

The name lex Julia rests mainly on the fact (assumed to be demonstrated) that this lex was passed when J. Cæsar was in the possession of full power; that it is the lex referred to by Cicero; and that it is improbable that it would have been called by any other personal appellation than that of Julia. It is farther proved, by a short inscription found at Padua in 1696, that there was a lex Julia Municipalis; and the contents of the inscription (*un. vir aditiciæ potestat. e lege Julia Municipali*), compared with Cicero (*eratque rumor de Transpadanis eos jussos un. viros creare*), render it exceedingly probable that the lex Julia Municipalis of the inscription is the lex of the Table of Heraclea and the lex Municipalis of the Digest.⁸

(Savigny, *Volkschluss der Tafel von Heraclea*, *Zeitschrift*, vol. ix., p. 300; the tablet is printed in the work of Mazochi, *Comm. in antea Tab. Herac.*, p. 1, 2, Neap., 1754, 1755, fol., with a commentary which contains much learning, but no sound criticism.)

JULIA LEX ET PAPIA POPPÆA. Augustus appears to have caused a lex to be enacted about

B.C. 18, which is titled as the lex Julia de Maritandis Ordinibus,¹ and is referred to in the *Carmen Seculare* of Horace, which was written in the year B.C. 17. The object of this lex was to regulate marriages, as to which it contained numerous provisions; but it appears not to have come into operation till the year B.C. 13. In the year A.D. 9, and in the consulship of M. Papius Mutilus and Q. Poppæus Secundus (*consules suffecti*), another lex was passed as a kind of amendment and supplement to the former lex, and hence arose the title of lex Julia et Papiæ Poppææ, by which this lex is often quoted. It is not known whether these leges were passed by the centuriæ or the tribus. The lex is often variously quoted, according as reference is made to its various provisions: sometimes it is called lex Julia, sometimes Papiæ Poppææ, sometimes lex Julia et Papiæ, sometimes lex De Maritandis Ordinibus, from the chapter which treated of the marriages of the senators,² sometimes lex Caducaria, *Decimaria*, &c., from the various chapters.³

There were many commentaries on this lex by the Roman jurists, of which considerable fragments are preserved in the Digest: Gaius wrote 15 books, Ulpian 20, and Paulus 10 books at least, on this lex. The lex contained at least 35 chapters;⁴ but it is impossible to say to which of the two leges included under the title of lex Julia and Papiæ Poppææ the several provisions, as now known to us, belong. Attempts have been made, both by J. Gothofredus and Heineccius, to restore the lex, proceeding on the assumption that its provisions are reducible to the two general heads of a lex Maritalis and lex Caducaria.

The lex Julia forbade the marriage of a senator or a senator's children with a libertina, with a woman whose father or mother had followed an *ars ludicra*, and with a prostitute; and also the marriage of a libertinus with a senator's daughter. If an hereditas or a legatum was left to a person on condition of not marrying, or on conditions which in effect prevented marriage, the conditions were illegal, and the gift was unconditional. The condition, however, might be not to marry a certain specified person or certain specified persons, or it might be to marry a particular person; but then the person must be such a one as would be a suitable match, otherwise the condition would be, in effect, a condition not to marry, and therefore void.⁵

In order to promote marriage, various penalties were imposed on those who lived in a state of celibacy (*calibatus*) after a certain age. Celibates could not take an hereditas or a legacy (*legatum*); but if a person was cælebs at the time of the testator's death, and was not otherwise disqualified (*jure civili*), he might take the hereditas or legatum if he obeyed the lex within one hundred days, that is, if he married within that time.⁶ If he did not comply with the lex, the gift became caducum. (*Vid. CADUCA.*) The lex Julia allowed widows a term of one year (*vacatio*) from the death of a husband, and divorced women a term of six months from the time of the divorce, within which periods they were not subject to the penalties of the lex: the lex Papiæ extended these periods, respectively, to two years, and a year and six months.⁷ A man when he attained the age of sixty, and a woman when she attained the age of fifty, were not included within the penalties of the lex; but if they had not obeyed the lex before attaining those respective ages, they were perpetually bound by its penalties

1. (Dig. 38, tit. 11; 23, tit. 2.)—2. (Gaius, i., 178—Ulp., Frag., xi., 20.—“Lex Marita.” Hor., Carm. Sec.)—3. (Ulp., Frag., xxviii., tit. 7.—Dion Cass., liv., 16.—Id., lvi., 1, &c.—Tacit., Ann., iii., 25.)—4. (Dig. 22, tit. 2, s. 19.)—5. (Dig. 35, tit. 1, s. 63.)—6. (Ulp., Frag., xvii., tit. 1.)—7. (Ulp., Frag., xiv.)

1. (iv., tit. 8, s. 41.)—2. (Gell., iv., 2.)—3. (Cic. ad Att., xv., 11.)—4. (Cic., Phil., i., 91.)—5. (48, tit. 4.)—6. (ad Fam., vi., 18.)—7. (ad Att., v., 2.)—8. (50, tit. 0, s. 3.—Cod. 7, tit. 9, s. 1; and Dig. 50, tit. 1, “ad Municipalem et de Incolis.”)

by a *senatus consultum Pernicianum*. A *senatus consultum Claudianum* so far modified the strictness of the new rule as to give to a man who married above sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; the ground of which rule was the legal notion that a woman under fifty was still capable of having children.¹ If the woman was above fifty and the man under sixty, this was called *impar matrimonium*, and by a *senatus consultum Calvitanum* it was entirely without effect as to releasing from incapacity to take legata and dotes. On the death of the woman, therefore, the dos became *caduca*.

By the *lex Papia Poppæa* a candidate who had several children was preferred to one who had fewer.² Freedmen who had a certain number of children were freed "*operarum obligatione*;"³ and libertæ who had four children were released from the tutela of their patrons.⁴ Those who had three children living at Rome, four in Italy, and five in the provinces, were excused from the office of tutor or curator.⁵ After the passing of this lex, it became usual for the senate, and afterward the emperor (*princeps*), to give occasionally, as a privilege, to certain persons who had not children, the same advantage that the lex secured to those who had children. This was called the *jus liberorum*. Pliny says⁶ that he had lately obtained from the emperor for a friend of his the *jus trium liberorum*.⁷ This privilege is mentioned in some inscriptions, on which the abbreviation I. L. H. (*jus liberorum habens*) sometimes occurs, which is equivalent to "*jura parentis habere*." The Emperor M. Antoninus provided that children should be registered by name, within thirty days after their birth, with the *præfectus æarii Saturni*.⁸

The lex also imposed penalties on *orbi*, that is, married persons who had no children (*qui liberos non habent*), from the age of twenty-five to sixty in a man, and from the age of twenty to fifty in a woman. By the *lex Papia*, *orbi* could only take one half of an *hereditas* or *legatum* which was left to them.⁹ It seems that an attempt had been made to evade this part of the lex by adoptions, which a *senatus consultum Neronianum* declared to be ineffectual for the purpose of relieving a person from the penalties of the lex.¹¹

As a general rule, a husband and wife could only leave to one another a tenth part of their property; but there were exceptions in respect of children either born of the marriage or by another marriage of one of the parties, which allowed of the free disposal of a larger part. This privilege might also be acquired by obtaining the *jus liberorum*.¹²

JULIA LEX PECULATUS. (*Vid. PECULATUS.*)

JULIA LEX ET PLAUTIA, which enacted that there could be no *usucapion* in things obtained by robbery (*vi possessæ*). The Twelve Tables had already provided that there could be no *usucapion* in stolen things.¹³ This lex was probably passed B.C. 89.

JULIA LEX DE PROVINCIIS. (*Vid. PROVINCIÆ.*)

JULIA LEX REPETUNDARUM. (*Vid. REPETUNDÆ.*)

JULIA LEX DE RESIDUIS. (*Vid. PECULATUS.*)

JULIA LEX DE SACERDOTIIS.¹⁴

JULIA LEX DE SACRILEGIS. (*Vid. PÆCULATUS.*)

JULIA LEX SUMTUARIA, passed in the time of J. Cæsar,¹ and one under Augustus.² (*Vid. SUMTUARIÆ LEGES.*)

JULIA LEX THEATRALIS,³ which permitted Roman equites, in case they or their parents ever had a census equestris, to sit in the fourteen rows (*quatuordecim ordines*) fixed by the *lex Roscia Theatralis*, B.C. 69.

JULIA LEX ET TITIA, passed under Augustus B.C. 32,⁴ which empowered the præses of a province to appoint a tutor for women and pupilli who had none.⁵ A *lex Atilia* of earlier but uncertain date had given the same power at Rome to the prætor urbanus and the majority of the *tribuni plebis*; and the new lex was passed in order to extend the same advantages to the provinces. There are some reasons for supposing that there were two leges, a Julia and a Titia; and among those reasons is the circumstance that it is not usual to unite by the word *et* the two names which belong to one lex, though this is done by Cicero⁶ in speaking of the *lex Licinia* and *Mucia*.

JULIA LEX DE VI PUBLICA AND PRIVATA. (*Vid. VIS.*)

JULIA LEX VICESIMARIA. (*Vid. VICESIMA.*)

***JUNCUS**, the Rush, in Greek *ῥαίνας*. (*Vid. SCHÆNUS.*) In the second Eclogue of Virgil,⁷ that poet speaks of "interweaving osiers with soft rushes" ("*Viminibus mollique paras detextere junco*"). Fée thinks that he here refers, not to the common Rush, but to the *Scirpus lacustris* of Linnæus.⁸

JUNEA OR JUNIA NORBANA. (*Vid. LIBERTI.*)

JUNIA LEX, REPETUNDARUM. (*Vid. REPETUNDÆ.*)

***JUNIPERUS** (*ῥακευθος*), the Juniper-trees, or *Juniperus communis*, L. The Juniper is a very common tree, of which botanical writers mention two species, distinguished from each other by the size of their fruit. It grows in Europe in all latitudes. The berry, which the Greeks called *ῥακευθίς*, has a strong odour, from which the tree itself is not exempt. Theophrastus states that the *ῥακευθος* is like the *κρόνος*, and that, in fact, some applied the same generic name to both, calling the *ῥακευθος*, for distinction's sake, the *κρόνος ὀξύκεδρος*. Dioscorides describes two species of Juniper, which Sprengel decides to be the *Juniperus macrocarpa*, Sibth., and the *J. oxycedrus*.⁹

JURA IN RE. (*Vid. DOMINIUM*, p. 374.)

JURE ACTIO, IN. (*Vid. JURISDICTIO.*)

JURE CESSIO, IN. was a mode of transferring ownership by means of a fictitious suit, and so far resembled the forms of conveyance by fine and by common recovery which, till lately, were in use in England. The *jure cessio* was applicable to things *mancipi* and *non mancipi*, and also to *res incorporales*, which, from their nature, were incapable of tradition. The parties to this transaction were the owner (*dominus qui cedit*), the person to whom it was intended to transfer the ownership (*vindicans, cui ceditur*), and the magistratus, *qui addicit*. (*Vid. JURISDICTIO.*) The person to whom the ownership was to be transferred, claimed the thing as his own in the presence of the magistratus and the real owner; the magistratus called upon the owner for his defence, and, on his declaring that he had none to make, or remaining silent, the magistratus decreed (*addixit*) the thing to the claimant. This proceeding was a *legis actio*.

1 (Ulp., Frag., xvi.—Suet., Claud., 23.)—2. (Tacit., Ann., xv., 19.—Plin., Ep., vii., 16.)—3. (Dig., 38, tit. 1, "De Operis Libertorum.")—4. (Ulp., Frag., tit. 29.)—5. (Ulp., 72.)—8. (Fée, Flore de Virgile, p. lxxiii.)—9. (Fée, Flore de Virgile, p. lxxiii.—Adams Append., s. v. ῥακευθος.)

An hereditas could be transferred by this process *vid. HERES, ROMAN, p. 500*); and the *res corporales*, which belonged to the hereditas, passed in this way just as if they had severally been transferred by the *in jure cessio*.

The *in jure cessio* was an old Roman institution, and there were provisions respecting it in the Twelve Tables.¹

JURISCONSULTI or JURECONSULTI. The origin among the Romans of a body of men who were expounders of the law may be referred to the separation of the *jus civile* from the *jus pontificium*. (*Vid. JUS CIVILE FLAVIANUM.*) Such a body certainly existed before the time of Cicero, and the persons who professed to expound the law were called by the various names of *jurisperiti*, *jurisconsulti*, or *consulti* simply. They were also designated by other names, as *jurisprudentes*, *prudentiores*, *peritiores*, and *juris auctores*. Cicero² enumerates the *jurisperitorum auctoritas* among the component parts of the *jus civile*. The definition of a *jurisconsultus*, as given by Cicero,³ is a "person who has such a knowledge of the laws (*leges*) and customs (*consuetudo*) which prevail in a state as to be able to advise (*respondendum*), act (*agendum*), and to secure a person in his dealings (*cavendum*): Sexius Elius Catus (*vid. JUS ELIANUM*), M. Manilius, and P. Mucius are examples." In the oration *Pro Muræna*, Cicero uses "scribere" in the place of "agere." The business of the early *jurisconsulti* consisted both in advising and acting on behalf of their clients (*consultores*) gratuitously. They gave their advice or answers (*responsa*) either in public places which they attended, at certain times, or at their own houses;⁴ and not only on matters of law, but on anything else that might be referred to them. The words "scribere" and "cavere" referred to their employment in drawing up formal instruments, such as contracts or wills, &c. At a later period, many of these functions were performed by persons who were paid by a fee, and thus there arose a body of practitioners distinct from those who gave *responsa*, and who were writers and teachers. Tiberius Coruncanus, a plebeian, who was consul B.C. 281, and also pontifex maximus, is mentioned as the first who gave advice publicly (*publice professus est*), and he was distinguished both for his knowledge of the law and his eloquence. He left no writings. Long before the time of Cicero the study of the law had become a distinct branch from the study of oratory, and a man might raise himself to eminence in the state by his reputation as a lawyer, as well as by his oratorical power or military skill. There were many distinguished jurists in the last two centuries of the republican period, among whom are M. Manilius; P. Mucius Scævola, pontifex maximus (B.C. 131); Q. Mucius Scævola, the *augur*; and Q. Mucius Scævola, the son of Publius, who was consul B.C. 95, and afterward pontifex maximus, and one of the masters of Cicero (*jurisperitorum eloquentissimus, eloquentium jurisperitissimus*⁵). This Scævola the pontifex was considered to have been the first who gave the *jus civile* a systematic form, by a treatise in eighteen books.⁶ Servius Sulpicius Rufus, the friend and contemporary of Cicero,⁷ was as great an orator as the pontifex Scævola, and more distinguished as a jurist. Many persons, both his predecessors and contemporaries, had a good practical knowledge of the law, but he was the first who handled it in a scientific manner, and, as he had both numerous scholars and was a voluminous writer, we may view him as the founder of that method-

ical treatment of the matter of law which characterized the subsequent Roman jurists,¹ and in which they have been seldom surpassed.

The jurists of the imperial times are distinguished from those of the republican period by two circumstances, the *jus respondendi*, and the rise of two sects or schools of law.

It is said that Augustus determined that the *jurisconsulti* should give their *responsa* under his sanction (*ex auctoritate ejus responderent*), and, accordingly, Gaius² speaks of the *responsa* and opinions of those jurists "*quibus permissum est jura condere*." The object of Augustus was probably to obtain, by this indirect method, that control over the administration of the law which he could not obtain in any other way. It does not appear that the jurists who had not obtained this mark of imperial favour were excluded from giving opinions; but the opinions of such jurists would have little weight in comparison with those of the privileged class. The unanimous opinion of the jurists was to have the force of law (*legis vicem*): if they were not unanimous, the *judex* might follow which opinion he pleased. Gaius refers the establishment of this rule to a rescript of Hadrian;³ but it seems probable that this rescript must be rather considered as confirmatory of the established practice. The constitution of this body of jurists, and the mode of proceeding as to taking their opinions, are not known. It is a reasonable conjecture that they formed a kind of college; otherwise it is not easy to suppose how the opinions were taken. The power of making or declaring the law was limited to a decision in the cases which came before them, which, however, would doubtless be received as law in all cases of the same kind, and would serve as a guide in cases of a similar kind. The earlier *jurisconsulti* gave their opinions either orally or in writing; but in the time of Tiberius probably, the jurists, that is, the privileged jurists, gave their answers "*signata*," that is, in an official form. The matter proposed for the opinion of the *jurisconsulti* was sometimes stated in the *responsum*, either fully or briefly; and the *responsum* itself was sometimes short, sometimes long; sometimes it contained the grounds of the opinion, and sometimes it did not, which circumstance, however, did not invalidate its force.⁴

In the time of Augustus there arose two schools (*scholæ*) or sects of jurists, the nominal heads of which were respectively Ateius Capito and Antistius Labeo, while, in fact, they derived their name and reputation from the two most distinguished teachers connected with them, Sabinus and Proculus. The followers of Labeo, whom we know with certainty to have been such, were Nerva, Proculus, Nerva the son, Pegasus, Celsus, Celsus the son, and Neratius Priscus. The followers of Capito were Massurius Sabinus, C. Cassius Longinus, Longinus Coelius Sabinus, Priscus Javolenus, Aburnus Valens Tuscianus, Gaius (*vid. INSTITUTIONES*), and probably Pomponius. But the schools did not take their names from Labeo and Capito. The followers of Labeo were named Proculiani from Proculus. The followers of Capito derived their name of Sabiniani from Massurius Sabinus, who lived under Tiberius, and as late as the reign of Nero: they were sometimes also called Cassiani, from C. Cassius Longinus. It is not easy to state with precision the differences which characterized the two schools. Whatever may have been the origin of these differences, which may, perhaps, be partly referred to the personal character of Capito and Labeo, the schools were subsequently distinguished by a difference in their manner of handling the matter of the law.

¹ (Frag. Vat., s. 50.—Gaius, ii., 24.—Ulp., Frag., tit. 19, s. 9.)

² (Top., 5.)—3. (De Or., i., 48.)—4. (Cic., De Or., iii., 33.)

³ (Cic., De Or., i., 39.)—6. (Dig. i., tit. 2, s. 2, § 41.)—7. (Brut., 7, 40.)

1. (Cic., Brut., 41.—Dig. i., tit. 2, s. 2, § 43.)—2. (i., 7.)—3. (i., 7.)—4. (Brisson. De Form., iii., c. 85–87.)

The school of Capito adhered more closely to what was established, and to the letter of what was written. Labeo was a man of greater acquirements than Capito, and his school looked more to the internal meaning than to the external form, and thus, while apparently deviating from the letter, they approached nearer to true results, though the strict logic of this school might sometimes produce a result less adapted to general convenience than the conclusions of the Sabiniani, which were based on the prevailing notions of equity.

The juriconsulti were both teachers and writers. Their writings consisted of commentarii on the Twelve Tables, on the Edict, on particular leges, more especially on some of the Julæ leges, and on other special matters. The later jurists also commented on the writings of the earlier jurists. They also wrote elementary treatises (*elementa, commentarii*), such as the Institutions of Gaius, which is the earliest work of the kind that we know to have been written; books called *Regulæ* and *Definitiones*, which probably were collections of principles of law; collections of cases and answers, under the various names of *responsa*, *epistolæ*, *sententiæ*, and *opiniones*; systems of law; and various works of a miscellaneous character with a great variety of names, such as *disputationes*, *questiones*, *enchiridia*, *res quotidianæ*, and various other titles.

The juristical writers were very numerous: they formed a continued series, beginning with those already enumerated, and ending, about the time of Alexander Severus, with Modestinus, who was a pupil of Ulpian. With the exception of the fragments preserved in the Digest, this great mass of literature is nearly lost. (*Vid. PANDECTÆ.*)

JURISDICTION. The "officium" of him "qui jus dicit" is defined as follows: "Bonorum possessionem dare potest, et in possessionem mittere, pupillis non habentibus tutores constituere, judices litigantibus dare." This is the general signification of the word jurisdiction, which expresses the whole "officium jus dicentis." The functions which are included in the "officium jus dicentis" belong either to the jurisdiction (in its special sense) or to the imperium mixtum, or they are those which are exercised by virtue of some *lex*, *senatus consultum*, or authority delegated by the princeps, as the "Tutoris datio."¹ The jurisdiction of those magistrates who had no imperium was limited, in consequence of not having the imperium, and, therefore, was not jurisdiction in the full meaning of that term. (*Vid. MAGISTRATUS.*) Inasmuch as jurisdiction in its special sense, and the imperium mixtum, are component parts of jurisdiction in its wider sense, imperium may be said to be contained in, or incident to, jurisdiction (*imperium quod jurisdictioni coheret*).² Sometimes imperium is viewed as the term which designates the full power of the magistratus; and when so viewed, it may be considered as equivalent to jurisdiction in its wider sense, or as comprehending jurisdiction in its narrower sense. Thus imperium may be considered as containing or as contained in jurisdiction, according as we give to each term respectively its wider or its narrower meaning.³ The jurisdiction was either *voluntaria* or *contentiosa*.⁴ The jurisdiction *voluntaria* rendered valid certain acts done before the magistratus, for which certain forms were required, as adoption and manumission. Thus adoption, properly so called, could take place before the præses of a province;⁵ but in Rome it took place before the prætor, and was said to be effected "*imperio magistratus*." The juris-

dictio contentiosa had reference to legal proceedings before a magistratus, which were said to be *in jure*, as opposed to the proceedings before a *judex*, which were said to be *in judicio*. The magistratus, therefore, was said *jus dicere* or *reddere* with respect to what he did personally, and though he might not declare the law truly, still he was said "*jus dicere*." Accordingly, "magistratus" and "qui Romæ jus dicit" are equivalent.¹ The functions included in jurisdiction in this, its special sense, were the *addictio* in the *legis actiones*, the giving of the formula in proceedings conducted according to the newer process, and the appointment of a *judex*. The appointing of a *judex*, "*judicis datio*," was for the purpose of inquiring into the facts in dispute between the parties. The words of the formula are "*Judex esto*," &c.;² and the terms of the edict in which the prætor declares that he will give a *judex*, that is, will recognise a right of action, are "*Judicium dabo*."³ *Addictio* belongs to that part of jurisdiction by which the magistratus himself makes a decree or gives a judgment: thus, in the case of the *in jure cessio*, he is said "*rem addicere*."⁴ *Addicere* is to adjudge a thing or the possession of a thing to one of the litigant parties. In the case of *furtum manifestum*, inasmuch as the facts would be certain, there was an *addictio*.⁵

Other uses of the word *addictio* are collected in *Facciolati*.

It is with reference to the three terms, *do, dico, addico*, that Varro⁶ remarks that the prætor must use one of these words "*cum lege quid peragitur*." Accordingly, those days were called *Nefasti* on which no legal business could be done, because the words of legal force could not be used.⁷

JUS. "All people," says Gaius,⁸ "who are governed by leges and mores, use partly their own law (*jus*), partly the law (*jus*) that is common to all mankind; for the law (*jus*) which a state establishes for itself is peculiar to such state, and is called *jus civile*, as the peculiar law (*jus*) of that state. But the law (*jus*) which natural reason (*naturalis ratio*) has established among all mankind is equally observed by all people, and is called *jus gentium*, as being that law (*jus*) which all nations follow. The Roman populus, therefore, follows partly its own peculiar law (*suum proprium jus*), partly the common law (*commune jus*) of all mankind."

According to this view, all law (*jus*) is distributed into two parts, *jus gentium* and *jus civile*, and the whole body of law peculiar to any state is its *jus civile*.⁹ The Roman law, therefore, which is peculiar to the Roman state, is its *jus civile*, sometimes called *jus civile Romanorum*, but more frequently designated by the term *jus civile* only, by which is meant the *jus civile* of the Romans.

The *jus gentium* is here viewed by Gaius as springing out of the *naturalis ratio* common to all mankind, which is still more clearly expressed in another passage,¹⁰ where he uses the expression "*omnium civitatum jus*" as equivalent to the *jus gentium*, and as founded on the *naturalis ratio*. In other passages he founds the acquisition of property, which was not regulated by Roman law, on the *naturalis ratio* and on the *naturale jus* indifferently, thus making *naturalis ratio* and *naturale jus* equivalent.¹¹ He founds *cognatio* on *naturalis ratio*, as being common to all mankind, and *agnatio* on *civilis ratio*, as being purely a Roman institution.¹² In two passages in the Digest,¹³ he calls the same thing *naturale jus* in s. 2, and *jus gentium* in s. 3, 5. The *naturale jus* and the *jus gentium* are there-

more identical. Cicero¹ opposes *natura* to *leges*, where he explains *natura* by the term *jus gentium*, and makes *leges* equivalent to *jus civile*. In the *Partitiones*² he also divides *jus* into *natura* and *lex*.

There is a threefold division of *jus* made by Ulpian and others, which is as follows: *jus civile*; *jus gentium*, or that which is common to all mankind; and *jus naturale*, which is common to man and beasts. The foundation of this division seems to have been a theory of the progress of mankind from what is commonly termed a state of nature, first to a state of society, and then to a condition of independent states. This division had, however, no practical application, and must be viewed merely as a curious theory. Absurd as it appears at first sight, this theory is capable of a reasonable explanation; and Savigny shows that it is not meant to say that beasts have law, but only the matter of law; that is, some of those natural relations on which legal relations are founded, exist among beasts as well as men. Such natural relations are those by which the species is propagated. In the *Institutes* the three divisions are confounded;³ for the explanation of *jus naturale* is first taken from the threefold division of Ulpian, and then the *jus gentium* and *civile* are explained according to the twofold division of Gaius already quoted, so that we have in the same section the *jus naturale* explained in the sense of Ulpian, and the *jus gentium* explained in the sense of Gaius, as derived from the *naturalis ratio*. Farther, in the second book,⁴ the *jus naturale* is explained to be the same as *jus gentium*, and the *jus naturale* is said to be coeval with the human race. Notwithstanding this confusion in the *Institutes*, there is no doubt that the twofold division of Gaius was that which prevailed in Roman jurisprudence.⁵ This twofold division appears clearly in Cicero, who says that the old Romans separated the *jus civile* from the *jus gentium*, and he adds, that the *jus civile* (of any state) is not, therefore, *jus gentium*, but that what is called *jus gentium* ought to be *jus civile*.⁶

The *jus civile* of the Romans is divisible into two parts, the *jus civile* in the narrower sense, and *jus pontificum*, or the law of religion. This opposition is sometimes expressed by the words *jus* and *fās* (*fās et jura iuncta*); and the law of things not pertaining to religion and of things pertaining to it, are also respectively opposed to one another by the terms *res juris humanæ* et *divinæ*.⁷ (*VID. DOMINIUM.*) Thus the pontifices magistri, P. Crassus and T. Cornelianus, are said to have given responsa de omnibus divinis et humanis rebus.⁸

The law of religion, or the *jus pontificum*, was under the control of the pontifices, who, in fact, originally had the control of the whole mass of the law, and it was only after the separation of the *jus civile* in its wider sense into the two parts of the *jus civile* in its narrower sense and the *jus pontificum*, that each part had its proper and peculiar limits. But after this separation was fully made, the *auctoritas pontificum* had the same operation and effect with respect to the law of religion that the *auctoritas prudentium* had on the *jus civile*.⁹ Still, even after the separation, there was a mutual relation between these two branches of law; for instance, an *adrogatio* was not valid by the *jus civile* unless it was valid by the *jus pontificum*.¹⁰ (*VID. ADOPTION.*) Again, *jus pontificum*, in its wider sense, as the law of religion, had its subdivisions, as into *jus augurum*, *pontificum*, &c.¹²

"Law," says Gaius,¹ meaning the Roman civil law (*jura*), "is composed of *leges*, *plebiscita*, *senatus consulta*, *constitutiones principum*, the *edicta* of those who have the *jus edicendi*, and the *responsa prudentium*." The component parts enumerated by Cicero² are "*leges* (which include *plebiscita*), *senatus consulta*, *res judicatae*, *jurisperitorum auctoritas*, *edicta magistratum*, *mos*, and *aquitas*." A consideration of the different epochs at which these writers lived will account for part of the discrepancy; but the addition of *mos* in Cicero's enumeration is important.

Some of these component parts are also opposed; thus, *jus civile* is opposed to the *jus prætorium* or *honorarium*, which originated in the *jus edicendi*. (*VID. EDITION.*) In this sense *jus civile* consists of *leges* and *senatus consulta*, and apparently of *mos*.

The component parts of this narrower *jus civile*, that is, of *jus civile* as opposed to *prætorium*, are also opposed to one another, that is, *lex* and *mos* are sometimes opposed to one another, as parts component of the *jus civile* (in this its limited sense), but different in their origin. Horace³ speaks of "*Mos et lex*;" Juvenal⁴ opposes "*Juris nodos et legum ænigmata*;" *jus civile* is opposed to *leges*,⁵ to *lex*,⁶ and to *senatus consultum*.⁷ As then opposed to *leges*, *jus civile* appears to be equivalent to *mos*. In fact, the opposition between *lex* and *mos* follows the analogy of that between *jus scriptum* and *non scriptum*. "When there are *scriptæ leges*, we must follow that which has been introduced by *more*s and *consuetudo*.—Immemorial (*inveterata*) *consuetudo* is properly observed as a *lex* (*pro lege*), and this is the *jus* which is said to be '*moribus constitutum*.'"⁸ Thus immemorial usage was the foundation of the "*jus moribus constitutum*." (See the article *INFAMIA* as to the origin of *infamia*.) This branch of law seems sometimes to have been considered by the Roman jurists as law merely by force of custom, whereas such custom was only law when it had been recognised by a competent authority. There is, however, a passage of Ulpian,⁹ in which he distinctly speaks of confirming a *consuetudo* in a *judicium*, which can have no other meaning than that its force as law depended on a decision in *judicium*. And the meaning is clear, whether we read *contradictio* or *contradicta* in the passage just referred to.

The Roman writers, indeed, frequently refer to a large part of their law as founded on *more*s or on the *mos majorum*, and not on *leges*.¹⁰ Thus Ulpian¹¹ says that the *jus patriæ potestatis* is *moribus receptum*. But *mos* contained matters relating to religion as well as to the ordinary affairs of life; and, therefore, we may also view *mos* and *lex*, when opposed, as component parts of the *jus civile* in its wider sense, but not as making up the whole of it. *Mores* in the sense of immorality, that which positive morality disapproves of, must not be confounded with *jus* founded on *more*s: the former is *mali more*s in respect of which there was often a *jus moribus constitutum*. Thus in the matter of the *dos* there was a *retentio* in respect of the *more*s *graviore*s or *major*es, which was adultery.¹²

The terms *jus scriptum* and *non scriptum*, as explained in the *Institutes*,¹³ comprehended the whole of the *jus civile*; for it was all either *scriptum* or *non scriptum*, whatever other divisions there might be.¹⁴ *Jus scriptum* comprehended everything, except that "*quod usus approbavit*." This division of *jus scriptum* and *non scriptum* does not appear in Gaius. It was borrowed from the Greek writers.

ers, and seems to have little or no practical application among the Romans.

A division of *jus* into *publicum* and *privatum* is mentioned by the Roman jurists.¹ The former is defined to be that which relates to the status rei Romanæ, or to the Romans as a state; the latter is defined to be that which relates "ad singulorum utilitatem." The *publicum jus* is farther said by Ulpian² "in sacris, in sacerdotibus, in magistratibus consistere." According to this view, it comprehends the law of religion, and all the rest of the *jus civile* which is not *privatum*. There are other significations of the *jus publicum* in the Roman jurists, but the whole division of *jus* into *publicum* and *privatum* seems to be founded on no principle, and is very confused. The elementary treatise of Gaius does not mention this division, and it is limited to the *jus privatum*. Justinian in his Institutes, after making this division of *jus* into *publicum* and *privatum*, says, "we must therefore treat of *jus privatum*," from which it appears that he did not contemplate treating of *jus publicum*. The title *De Judiciis Publicis*, the last in the Institutes, does not belong to *jus publicum* as above defined; and yet it is difficult to conceive how some of the matters involved in *judicia publica* were not viewed as belonging to *publicum jus*, though certainly all of them could not so be viewed.³

The *jus quiritium* is equivalent to the *jus civile Romanorum*. Accordingly, we find the expressions *dominus* and *dominium ex jure quiritium*, as contrasted with *in bonis* (*vid. Dominum*); and a Latinus, if he obtained from the emperor the *jus quiritium*, obtained the Roman *cititas*.⁴ The terms *jus quiritium* and the *Romana cititas* are therefore identical in this passage. Such part of the Roman law, in its widest sense, as related to buying, selling, letting, hiring, and such obligations as were not founded on the *jus civile*, were considered to belong to the *jus gentium*,⁵ that is, the *jus naturale*.⁶ Accordingly, when ownership could be acquired by tradition, occupation, or in any other way not specially provided for by the *jus civile*, such ownership was acquired by the *jus gentium*. When the *jus civile* prescribed certain forms by which ownership was to be transferred, and such forms were not observed, there was no ownership *jure civili* or *jure quiritium*, but there was that interest which was called *in bonis*. It is not said by Gaius⁷ that the *in bonis* arose by virtue of the *jus gentium*, and it may perhaps be concluded that he did not so view it; for in another passage⁸ he speaks of alienation or change of ownership being effected either by the *jus naturale*, as in the case of tradition, or by the *jus civile*, as in the case of *manipatio*, in *jure cessio*, and *usucapio*. In this passage he is speaking of alienation, which is completely effected by tradition, so that there is a legal change of ownership recognised by Roman law; not by Roman law specially as such, but by Roman law as adopting or derived from the *jus gentium*. In the other case,⁹ there is no ownership either as recognised by Roman law as such, or by Roman law as adopting the *jus gentium*: the *in bonis* is merely recognised by the prætorian law, to which division it therefore belongs. So far as the equity of the prætor may be said to be based on the *jus gentium*, so far may the *in bonis* be said to be founded on it also. Properly speaking, the *jus gentium* was only received as Roman law when it did not contradict the *jus civile*; that is, it could only have its full effect as the *jus gentium* when it was not contradicted or limited by the *jus civile*. When

it was so contradicted or limited, the prætor could only give it a partial effect, but in so doing, it is obvious that he was endeavouring to nullify the *jus civile*, and so to make the *jus gentium* as extensive in its operation as it would have been but for the limitation of the *jus civile*. The bounds that were placed to this power of the prætor were not very definite. Still he generally fashioned his *jus prætorium* after the analogy of the *jus civile*, and though he made it of no effect as against his *jus prætorium*, he maintained its form and left it to its full operation, except so far as he necessarily limited its operation by his own *jus prætorium*.

Jus, used absolutely, is defined to be "*ars boni et æqui*,"¹⁰ which is an absurd definition. What it really is may be collected from the above enumeration of its parts or divisions. Its general signification is law, and in this sense it is opposed to *lex* or a law. *Lex*, however, as already shown, is sometimes used generally for law, as in the instance from Cicero where it is opposed to *natura*. *Lex*, therefore, in this general sense, comprehends *leges* and all the other parts of the *jus civile*. In its special sense of a law, it is included in *jus*. *Jus* is also used in the plural number (*jura*) apparently in the sense of the component parts of *jus*, as in Gaius,¹¹ where he says, "*Constant autem jura ex legibus*," &c.; and in another passage,¹² where he says, with reference to the agnations *jus*, or law of agnation, and the cognations *jus*, or law of cognation, "*Civilis ratio civilia quidem jura corrumpere potest*." Indeed, in this passage, agnationis *jus* and cognationis *jus* are two of the *jura* or parts of *jus*, which with other *jura* make up the whole of *jus*. Again,¹³ that provision of the *lex Julia de Adulteriis*, which forbade the alienation of the *fundus dotalis*, is referred to thus: "*quod quidem jus*," "which rule of law," or "which law," it being a law comprehended in another law, which contained this and many other provisions. Thus, though *lex*, in its strict sense of a law, is different from *jus* in its large sense, and though *jus*, in its narrower sense, is perhaps never used for a *lex*, still *jus*, in this its narrower sense, is used to express a rule of law, or a law. Thus Gaius¹⁴ speaks of the *jura*, or legal provisions comprised in the *lex Aelia Sextia*, and of *jura* as based on the *responsa Præditorum*.

Jus has also the special meaning of a faculty or legal right. Thus Gaius says, "it is an actio in rem when we claim a corporeal thing as our own, or claim some *jus* as our own, such as a *jus utendi*, *eundi*, *agendi*." The parental power is called a "*jus proprium civium Romanorum*." The meaning of law generally, and of a legal right, are applied to *jus* by Cicero in the same sentence: "If a man ignorant of law (*imperitus juris*) seek to maintain my right (*meum jus*) by the interdict."¹⁵ As the several rules of law which are often comprised in one *lex*, or which make up the whole body of *jus* (law), may be called *jura* with reference to their object, so the various legal rights which are severally called *jus* with reference to some particular subject may be collectively called *jura*. Thus we find the phrase *jura parentis* to express all the rights that flow from the fact of paternity.

The phrase *jura prædiorum*, which is used by the Roman jurists, is somewhat peculiar, and open to objection.

The potestas which a Roman father had over his children being a *jus* or legal right, there hence arose the distinction of persons into those who are *sui* and those who are *alieni juris*. All the rights of such persons severally are represented by the collective phrase "*jus personarum*," or that division of the

1. (Dig. 1, tit. 1, s. 1.)—2. (Dig. 1, tit. 1, s. 1.)—3. (Vid. Cic. Pro Balbo, 15.—(d. Pro Mil., 26.)—4. (Ulp., Frag., tit. 3.)—5. (Dig. 1, tit. 1, s. 5.)—6. (Gaius, ii., 65.)—7. (ii., 40.)—8. (ii., 6.)—9. (ii., 40.)

1. (Dig. 1, tit. 1, s. 1.)—2. (i., 2.)—3. (i., 158.)—4. (Gaius, i., 62.)—5. (i., 47.)—6. (Pro Cæcina, c. 11.)

whole matter of jus which treats of the status of persons, in other words, the law of persons.

This leads to the mention of another division of the matter of law which appears among the Roman jurists, namely, the law of persons; the law of things, which is expressed by the phrase "*ius quod ad res pertinet*;" and the law of actions, "*ius quod ad actiones pertinet*."¹ In his first book Gaius treats of the law of persons, in the fourth he treats of the law of actions; and, accordingly, the second and third contain the law of things, to express which he does not use a phraseology analogous to that of "*ius personarum*," but he says he will treat De Rebus. This division of the "*ius quod ad actiones pertinet*" is explained in the article *ACTIO*.

The adjective *justum* often occurs in the Latin writers in the sense of that which is consistent with jus or law, or is not contrary to law. Thus it is a *justum* (legal) *matrimonium* if there is consubium between the two parties to the marriage. The word *justum* has many varieties of meaning, which may generally be derived, without much difficulty, from the meanings of *jus*.

Jus is opposed to *judicium*, and a thing was said to be done in *jure* or in *judicio*, according as it was done before the *magistratus* or before a *iudex*. (*VID. JUDICIUM*.) Thus all matters of legal question were said to be done "*aut ad populum, aut in jure, aut ad iudicem*."² *Jus*, in the sense of the place "*in quo jus redditur*," is only an application of the name of what is done to the place in which it is done. The expression *ius dicere* is explained under *JURISDICTION*. There are other meanings of *jus*, but they are unimportant, or may be deduced from what is here said.

JUS ÆLIANUM was a compilation by Sextus Ælius Pætus, surnamed Catus, who was consul B.C. 198,³ and who is called by his contemporary Ennius "*egregie cordatus homo*." He is also frequently mentioned with praise by Cicero.⁴ The *Jus Ælianum*, also called *Triperita*, contained the laws of the Twelve Tables, an *interpretatio*, and the *legis actiones*. This work existed in the time of Pomponius.⁵ Cicero also speaks of some commentarii by Ælius.⁶

JUS APPLICATIONIS. (*VID. BANISHMENT, ROMAN*, p. 137.)

JUS CIVILE. (*VID. JUS*.)

JUS CIVILE FLAVIANUM. Appius Claudius Cæcus, who was censor B.C. 312, is said to have drawn up a book of *actiones* or forms of procedure, which his clerk Cn. Flavius made public.⁷ According to one story,⁸ Flavius surreptitiously obtained possession of the book of Appius, and was rewarded by the people for his services by being made *tribunus plebis* and *curule ædile*. The effect of this publication was to extend the knowledge and the practice of the law to the *plebeians*, and to separate the *ius civile* from the *ius pontificum*.

JUS CIVILE PAPIRIANUM or *PAPISIANUM* was a compilation of the *leges regie*, or laws passed in the kingly period of Rome. This compilation was commented on by Granius Flaccus in the time of Julius Cæsar,⁹ to which circumstance we probably owe the preservation of existing fragments of the *leges regie*. There is great doubt as to the exact character of this compilation of *Papirius*, and as to the time when it was made. Even the name of the compiler is not quite certain, as he is variously called Caius, Sextus, and Publius. The best notice of the fragments of the *leges regie* is by

Dirksen, in his "*Versuchen zur Kritik und auslegung der Quellen des Römischen Rechts*." See also Zimmern, *Geschichte des Röm. Privatrechts*.

JUSTITIUM. (*VID. FUNUS*, p. 462.)

JUSSU, QUOD, ACTIO, is a *prætorian actio* which a man had against a father or master of a slave (*dominus*), if a *filiusfamilias* or a slave had entered into any contract at the bidding (*jussu*) of the father or master, for the full amount of the matter in dispute. He who thus contracted with a *filiusfamilias* or a slave, was not considered to deal with them on their own credit, but on that of the father or master. This *actio* is classed by Gaius with the *exercitoria* and *institoria*.¹

**LYNX* or *YUNX* (λύξ), a species of Bird, the Wryneck, or *Yunx torquilla*, L. It is a bird of the size of a lark, brown above, and prettily marked with little blackish waves, and longitudinal yellow and black reticulations; whitish striped across, with black underneath. "The Wryneck," observes Griffith,² "derives its name from a singular habit it has of turning its head towards the back, and closing its eyes: this movement appears to be the result of surprise, terror, or astonishment at the sight of some novel object. It is also an effort which the bird appears to make to disengage itself when it is held; but as it executes it equally in a state of liberty, and as the young, even in the nest, have the same habit, it is clear that it must be the result of a peculiar conformation. This species of bird, without being numerous, is extended throughout all Europe from Greece to Lapland."—The *lynx* was celebrated in the magical incantations of antiquity, the entrails, or the bird itself, being attached to a kind of brazen wheel, which was made to revolve while the charm was sung. In one of the *Idyls* of Theocritus, a female adopts this as one of the means of recalling the affections of a faithless lover. The *lynx* was for a time erroneously confounded with a species of *Motacilla*, or Wagtail, upon the doubtful authority of the *Etymologicum Magnum*, and some of the scholiasts. The description of the λύξ, however, by Tzetzes applies very well to the Wryneck. The German lexicographers also set down the *Wendchals*, or Wryneck, as the λύξ of the Greeks.³

brax lupus of Cuvier. Some of the commentators on the classics, observes Adams, refer the *Lupus* to the Pike, but Rondelet is at great pains to disprove this opinion.¹

LABYRINTHUS (λαβύρινθος). This word appears to be of Greek origin, and not of Egyptian, as has generally been supposed; it is probably a derivative form of *λάβρος*, and etymologically connected with *λαύραι*. Accordingly, the proper definition of labyrinthus is a large and complicated subterranean cavern, with numerous and intricate passages similar to those of a mine.² Hence the caverns near Nauplia in Argolis were called labyrinths.³ And this is, indeed, the characteristic feature of all the structures to which the ancients apply the name labyrinth, for they are always described as either entirely or partially under ground.

The earliest and most renowned labyrinth was that of Egypt, which lay beyond Lake Mæris, at a short distance from the City of Crocodiles (Arsinoë), in the province now called Faioum. Herodotus⁴ ascribes its construction to the dodecarchs (about 650 B.C.), and Mela⁵ to Psammetichus alone. But other and more probable accounts refer its construction to a much earlier age.⁶ This edifice, which in grandeur even excelled the Pyramids, is described by Herodotus and Pliny.⁷ It had 3000 apartments, 1500 under ground, and the same number above it, and the whole was surrounded by a wall. It was divided into courts, each of which was surrounded by colonnades of white marble. At the time of Diodorus and of Pliny the Egyptian labyrinth was still extant. But the ruins which modern travellers describe as relics of the ancient labyrinth, as well as the place where they saw them, do not agree with what we know from the best ancient authorities respecting its architecture and its site.⁸ The purpose which this labyrinth was intended to serve can only be matter of conjecture. It has been supposed by some writers that the whole arrangement of the edifice was a symbolical representation of the zodiac and the solar system. Herodotus, who saw the upper part of this labyrinth, and went through it, was not permitted by the keepers to enter the subterranean part, and he was told by them that here were buried the kings by whom the labyrinth had been built, and the sacred crocodiles.

The second labyrinth mentioned by the ancients was that of Crete, in the neighbourhood of Cnossus: Dædalus was said to have built it after the model of the Egyptian, and at the command of King Minos.⁹ This labyrinth is said to have been only one hundredth part the size of the Egyptian, and to have been the habitation of the monster Minotaurus. Although the Cretan labyrinth is very frequently mentioned by ancient authors, yet none of them speaks of it as an eyewitness; and Diodorus and Pliny expressly state that not a trace of it was to be seen in their days. These circumstances, together with the impossibility of accounting for the objects which a Cretan king could have had in view in raising such a building, have induced almost all modern writers to deny altogether the existence of the Cretan labyrinth. This opinion is not only supported by some testimonies of the ancients themselves, but by the peculiar nature of some parts of the island of Crete. The author of the *Etymologicum Magn.* calls the Cretan labyrinth "a mountain with a cavern," and Eustathius¹⁰ calls it "a subterraneous cavern;" and similar statements are made by sev-

eral other writers quoted by Meursius.¹ Such large caverns actually exist in some parts of Crete, especially in the neighbourhood of the ancient town of Gortys; and it was probably some such cavern in the neighbourhood of Cnossus that gave rise to the story of a labyrinth built in the reign of Minos.²

A third labyrinth, the construction of which belongs to a more historical age, was that in the island of Lemnos. It was commenced by Smilis, an Æginetan architect, and completed by Rhæcus and Diodorus of Samos, about the time of the first Olympiad.³ It was in its construction similar to the Egyptian, and was only distinguished from it by a greater number of columns. Remains of it were still extant in the time of Pliny. It is uncertain whether this labyrinth was intended as a temple of the Cabiri, or whether it had any connexion with the art of mining.⁴

Samos had likewise a labyrinth, which was built by Theodorus, the same who assisted in building that of Lemnos; but no particulars are known.⁵

Lastly, we have to mention a fabulous edifice in Etruria, to which Pliny applies the name of labyrinth. It is described as being in the neighbourhood of Clusium, and as the tomb of Lar Porsenna. But no writer says that he ever saw it, or remains of it; and Pliny, who thought the description which he found of it too fabulous, did not venture to give it in his own words, but quoted those of Varro, who had probably taken the account from the popular stories of the Etruscans themselves. It was said to have been built partly under and partly above ground, whence the name labyrinth is correctly applied to it. But a building like this, says Niebuhr,⁶ is absolutely impossible, and belongs to the Arabian Nights.

LABRUM. (Vid. ΒΑΤΗΣ.)

*LABRUSCA, the wild Vine, the *ὑμπελος ἀγρία* of the Greeks. "The *Labrusca*, or wild Vine of the ancients," remarks Martyn, "did not probably differ specifically from that which was cultivated. Pliny informs us that the grapes of the *Labrusca* were gathered before the flowers were gone off, dried in the shade upon linen cloths, and laid up in casks; that the best sort came from Parapatamia, the next from Antioen and Laodicea, and the third from the mountains of Media; that this last was the fittest for medical uses; that some, however, preferred the kind which grew in Cyprus; that the African sort was used only in medicine, and was called *mas-saris*, and that the white was better than the black, and that it was called *ananthe*. In another place he tells us that the *Labrusca* is called by the Greeks *ampelos agria*; that it has thick and whitish leaves, is jointed, has a chapped bark, and bears red berries. From these and other authorities, we may venture to affirm that the *Labrusca* is a real vine, running wild, without any culture." (Vid. AMPELOS.)

LACERNA (μανδύας, *μανδύη*) was a cloak worn by the Romans over the toga, whence it is called by Juvenal "munimentum togæ."¹ It differed from the pænula in being an open garment like the Greek pallium, and fastened on the right shoulder by means of a buckle (*fibula*), whereas the pænula was what is called a *vestimentum clausum*, with an opening for the head. (Vid. PÆNULA.) The Lacerina appears to have been commonly used in the army,² but in the time of Cicero was not usually worn in the city.³ It soon afterward, however, became quite common at Rome, as we learn from Suetoni-

us, who says¹ that Augustus, seeing one day a great number of citizens before his tribunal dressed in the lacerna, which was commonly of a dark colour (*pallati*), repeated with indignation the line of Virgil,

"*Romanos rerum dominos, gentemque togatam,*"

and gave orders that the ædiles should henceforth allow no one to be in the Forum or circus in that dress.

Most persons seem to have carried a lacerna or pænula with them when they attended the public games, to protect them from the cold or rain;² and thus we are told that the equites used to stand up at the entrance of Claudius, and lay aside their lacernæ.³

The lacerna was usually, as already remarked, of a dark colour (*fusci colores*),⁴ and was frequently made of the dark wool of the Bætic sheep (*Bætica lacernæ*).⁵ It was, however, sometimes dyed with the Tyrian purple and with other colours.⁶ Martial⁷ speaks of lacernæ of the former kind, which cost as much as 10,000 sesterces. When the emperor was expected at the public games, it was the practice to wear white lacernæ only.⁸

The lacerna was sometimes thrown over the head for the purpose of concealment;⁹ but a *cucullus* or cowl was generally used for that purpose, which appears to have been frequently attached to the lacerna, and to have formed a part of the dress.¹⁰ (*Vid. CUCULLUS.*)

*LACERTA, the Lizard. (*Vid. ASCALABOTES* and SAURA.)

LACINIÆ, the angular extremities of the toga, one of which was brought round over the left shoulder. It was generally tucked into the girdle, but sometimes was allowed to hang down loose. Plautus¹¹ indicates that it occasionally served for a pocket-handkerchief (*At tu edepol sume laciniam atque absterge sudorem tibi*): Velleius Paterculus¹² represents Scipio Nasica as wrapping the lacinia of his toga round his left arm for a shield¹³ before he rushed upon Tiberius Gracchus; while, according to Servius,¹⁴ the cinctus gabinus was formed by girding the toga tight round the body by one of its laciniæ, or loose ends. These expressions are quite irreconcilable with the opinion of Ferrarius and others, that the lacinia was the lower border or skirt of the toga, while all the passages adduced by them admit of easy explanation according to the above view. The lacinia was undoubtedly permitted by some to sweep the ground, especially by such as wore their garments loosely. Thus Macrobius¹⁵ remarks upon one of Cicero's witticisms, "*Jocatus in Casarem quia ita præcegebatur, ut trahendo laciniam velut mollis incederet,*" which corresponds with the well-known caution of Sulla addressed to Pompey, "*Cave tibi illum præterum male præinctum;*" and Suetonius tells how the Emperor Caius, being filled with jealousy on account of the plaudits lavished on a gladiator, hurried out of the theatre in such haste, "*ut calcata lacinia togæ præceps per gradus iret.*" Moreover, the secondary and figurative meanings of the word, namely, a rag,¹⁶ a narrow neck of land,¹⁷ the point of a leaf,¹⁸ the excrescences which hang down from the neck of a she-goat,¹⁹ &c., accord perfectly with the idea of the angular extremity of a piece of cloth, but can scarcely be connected naturally with the notion of a border or skirt.

The corresponding Greek term was *κράσπεδον*, and perhaps *πτερόνιον* (Pollux considers these sy-

nonymous); and, accordingly, Plutarch¹ and Appian² employ the former in narrating the story of Scipio alluded to above, with this difference, however, that they describe him as throwing *τὸ κράσπεδον τοῦ ἱματίου* over his head instead of twisting it round his arm.
